Bar-it

FOR DEODORANT AND ANTI-PERSPIRANT.
Claims use since July 1, 1947.

Ser. No. 546,855. ROSEMARIE LEWIS, doing business as Vogarell Products Company, Los Angeles, Calif. Filed Jan. 13, 1948.

HĒMEX

Applicant claims ownership of registration No. 318,765.
FOR PILE SUPPOSITORIES AND OINTMENTS.
Claims use since May 1, 1934.

Ser. No. 547,296. UNIVERSAL CHEMICAL CORPORATION, Easthampton, Mass. Filed Jan. 16, 1948.

ONE SHOT

FOR LIGHTER FLUID.
Claims use since Dec. 22, 1947.

Ser. No. 549,854. VAN PELT AND BROWN, INCORPORATED, Richmond, Va. Filed Feb. 16, 1948.

VANAPHEN

FOR PREPARATION IN LIQUID FORM USED AS A SEDATIVE IN THE TREATMENT OF VARIOUS NERVOUS DISORDERS.
Claims use since Jan. 26, 1948.

Ser. No. 550,176. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Feb. 19, 1948.

DELMINITE

FOR PROTEIN, CARBOHYDRATE PREPARATION CONTAINING LIVER, MINERALS, AND VITAMINS.
Claims use since Feb. 4, 1948.

Ser. No. 550,177. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Feb. 19, 1948.

DELMOR

FOR PROTEIN, CARBOHYDRATE PREPARATION CONTAINING LIVER, MINERALS, AND VITAMINS.
Claims use since Feb. 4, 1948.

Ser. No. 550,939. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Mar. 1, 1948.

PROMACETIN

FOR CHEMOTHERAPEUTIC AGENT FOR USE IN THE TREATMENT OF MYCO-BACTERIAL DISEASES.
Claims use since Dec. 9, 1947.

Ser. No. 551,041. OLD 97 COMPANY, Tampa, Fla. Filed Mar. 2, 1948.

PAN ZER

FOR LINIMENT.
Claims use since Sept. 5, 1945.

Ser. No. 552,726. KENNETH G. AGNEW, doing business as Agnew & Tomlinson, Long Island City, N. Y. Filed Mar. 23, 1948.

TEKSAG

FOR HYDROUS COLLOID HAVING AN INHERENT INHIBITOR USED FOR REMOVAL AND PREVENTION OF RUST AND SCALE FROM HEATING AND POWER BOILERS.
Claims use since Mar. 1, 1948.

Ser. No. 553,134. SCHERING CORPORATION, Bloomfield, N. J. Filed Mar. 26, 1948.

TRIMETON

FOR PROPHENPYRAMINE USED IN THE TREATMENT OF ASTHMA, HAYFEVER, URTICARIA, AND OTHER ALLERGIC MANIFESTATIONS.
Claims use since Jan. 15, 1948.

Ser. No. 553,496. S. B. LEONARDI & CO. INC., New Rochelle, N. Y. Filed Mar. 31, 1948. Under section 2f of the act of 1946.

RENO

Applicant claims ownership of registrations Nos. 190,228 and 248,977.
FOR PREPARATIONS FOR THE TREATMENT OF DISEASES PECULIAR TO WOMEN.
Claims use since 1908.

618 O. G.—24

Ser. No. 553,974. HENRY H. OTTENS MFG. CO., INC., Philadelphia, Pa. Filed Apr. 6, 1948.

QUAKER BRAND

No exclusive claim is made to the word "Brand" apart from the mark. The hatching shown on the drawing represents shading. Applicant claims ownership of registrations Nos. 88,075, 148,500, and 439,878.
FOR FOOD COLORS.
Claims use since Apr. 8, 1902.

Ser. No. 554,007. EDMUND J. COLLETTE, doing business as Favreau & Collette, Spencer, Mass. Filed Apr. 7, 1948. Under section 2f of the act of 1946.

MATHIEU'S HEADACHE POWDERS

Exclusive use of the words "Headache Powders" is hereby disclaimed, apart from the mark. Applicant claims ownership of registrations Nos. 285,799 and 286,092.
FOR POWDERS FOR SIMPLE HEADACHE OR SIMPLE NEURALGIA.
Claims use since Oct. 9, 1929.

Ser. No. 559,600. THOMAS R. GIBBS, JR., Washington, D. C. Filed June 18, 1948.

PUSH

Applicant claims ownership of registration No. 243,763.
FOR MEDICINAL PREPARATION FOR RELIEF OF ACID INDIGESTION, GAS, AND HEARTBURN.
Claims use since Nov. 18, 1937.

Ser. No. 566,087. LAKESIDE LABORATORIES, INC., Milwaukee, Wis. Filed Sept. 29, 1948.

ANDROLIN

FOR PREPARATION OF THE MALE SEX HORMONE, INDICATED IN THE TREATMENT OF SEXUAL IMPOTENCY AND NEURASTHENIA, CLIMACTERIUM OF THE MALE, CRYPTORCHIDISM, INFANTILISM, ADIPOSE GENITAL DYSTROPHY, MODERATE PROSTATIC HYPERTROPHY AND EMASCULATION.
Claims use since May 28, 1943.

CLASS 7

Ser. No. 544,668. THE OHIO MATCH COMPANY, Wadsworth,

CLASS 12

Ser. No. 543,884. THE CASEMENT HARDWARE COMPANY,

CLASS 7

CORDAGE

Ser. No. 552,572. THE COLORADO FUEL AND IRON CORPORATION, Denver, Colo. Filed Mar. 20, 1948.

WISSCOTE

FOR WIRE ROPE.
Claims use since Sept. 26, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 543,763. VAN CLEEF & ARPELS, INC., New York, N. Y. Filed Dec. 8, 1947.

MYSTERIOUS LIGHTER

The word "Lighter" is disclaimed apart from the mark.
FOR CIGARETTE LIGHTERS.
Claims use since Oct. 15, 1947.

Ser. No. 544,051. BUXTON, INCORPORATED, Springfield, Mass. Filed Dec. 11, 1947.

Pack-Tainer

The word "Pack" is disclaimed apart from the mark.
Applicant claims ownership of registrations Nos. 153,132, 202,838, 214,165, 214,189, 218,545, 221,068, and 338,036.
FOR CIGARETTE CASES FORMED MAINLY OF LEATHER.
Claims use since 1937.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 544,667. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

OHIO BLUE TIP MATCHES

The word "Matches" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 155,579.
FOR MATCHES.
Claims use since Mar. 6, 1905.

Ser. No. 544,668. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

THE OHIO NOISELESS MATCH

The word "Match" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 155,580.
FOR MATCHES.
Claims use since Sept. 9, 1907.

CLASS 10

FERTILIZERS

Ser. No. 531,314. THE CONSOLIDATED MINING AND SMELTING COMPANY OF CANADA LIMITED, Montreal, Quebec, Canada. Filed Aug. 14, 1947.

ELEPHANT BRAND

No claim is made to the exclusive use of the word "Brand" apart from the mark as shown. Applicant claims ownership of Canadian registration 89, dated Apr. 15, 1946.
FOR CHEMICAL FERTILIZERS.

Ser. No. 538,316. SCIENTIFIC SOIL IMPROVEMENT CORP., New York, N. Y., assignor to Scientific Soil Products, Inc., New York, N. Y., a corporation of Delaware. Filed Oct. 18, 1947.

ATOMITRON

FOR MINERAL FERTILIZER INGREDIENTS USED AS SOIL STIMULANTS.
Claims use since Oct. 6, 1947.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 533,910. MARKWELL MANUFACTURING CO., INC., New York, N. Y. Filed Sept. 9, 1947. Under section 2f of the act of 1946.

"METLINK"

FOR MARKING AND STENCILLING ON METALS, WOOD, AND PAPER.
Claims use since Oct. 19, 1928.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 511,117. TRIM-SET CORPORATION, Seattle, Wash. Filed July 15, 1947; originally filed, act of 1905, Oct. 18, 1946.

Trim-Set

FOR METAL WINDOWS, WINDOW FRAMES, AND DOORS.
Claims use since May 28, 1946.

Ser. No. 527,479. SOULÉ STEEL COMPANY, San Francisco and Los Angeles, Calif., Portland, Oreg., and Houston, Tex. Filed July 5, 1947.

SSCO

The term "Co." is disclaimed apart from the mark.
FOR STEEL WINDOWS AND DOORS, REINFORCING COMMODITIES—NAMELY, REINFORCING STEEL BARS, STEEL WELDED FABRIC, EXPANDED METAL, STEEL CONSTRUCTION CLAMPS FOR CONCRETE FORMS, EXPANSION JOINTS, COMPRISING A DOWEL AND SLEEVE FORMED OF STEEL AND USED IN BUILDING AND HIGHWAY CONCRETE CONSTRUCTION TO ALLOW FOR LATERAL EXPANSION AND CONTRACTION OF CONCRETE BLOCKS OCCASIONED BY THERMAL CHANGE, CONCRETE PIPE REINFORCING IN THE FORM OF STEEL WIRE OR RODS, CONCRETE JOIST FORMS, STEEL JOIST FORMS, PREFABRICATED STEEL BUILDINGS, METAL LATH, STUCCO NETTING, STUCCO MESH AND STEEL BUILDING FRAMES.
Claims use since Mar. 16, 1927.

Ser. No. 538,687. WARREN PORTAHOME COMPANY, INC., Mays Landing, N. J. Filed Oct. 22, 1947.

PORTAHOME

FOR COMPLETE AND SECTIONAL PRE-BUILT DWELLINGS, COTTAGES, BUNGALOWS, TOURIST CABINS, OFFICES, STORES, AND GARAGES OF WOOD OR METAL AND WOOD.
Claims use since January 1940.

Ser. No. 543,884. THE CASEMENT HARDWARE COMPANY, Chicago, Ill. Filed Dec. 10, 1947. CERTIFICATION MARK.

✓Tech-Check'd

The word "Check'd" is disclaimed apart from the mark as shown.
FOR CASEMENT WINDOW UNITS (I. E., WINDOW UNITS OF THE CASEMENT TYPE COMPRISING APPROPRIATELY ASSEMBLED SASH, FRAME, AND HARDWARE).
Claims use since Nov. 12, 1947.

Ser. No. 552,276. SERVICE INDUSTRIES, Philadelphia, Pa. Filed Mar. 18, 1948.

HYDROK

FOR MATERIAL FOR TEMPERING, HARDENING, AND CURING PORTLAND CEMENT.
Claims use since Oct. 2, 1946.

Ser. No. 552,566. BLACK, SIVALLS & BRYSON, INC., Kansas City, Mo. Filed Mar. 20, 1948. Under section 2f of the act of 1946.

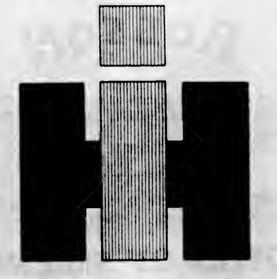
SAFWALK

Applicant claims ownership of registration No. 287,040.
FOR STEEL WALKWAYS AND STAIRWAYS.
Claims use since June 24, 1930.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 474,901. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill. Filed July 12, 1947; originally filed, act of 1905, Oct. 4, 1944.



The drawing is lined for the color red.
FOR NUTS, NAILS, STAPLES, BRADS, TACKS, THREADED AND NON-THREADED BOLTS, SCREWS, COTTER-PINS, FLAT METAL WASHERS, LOCK-WASHERS, LOCK-NUTS, AND SOLID RIVETS.
Claims use since Aug. 26, 1944.

Ser. No. 555,676. THE INTERNATIONAL NICKEL COMPANY,

Ser. No. 528,614. ELECTRIC STEEL FOUNDRY, Portland, Oreg. Filed July 15, 1947.

"SCREWY"

FOR GUY LINE HOOKS PRIMARILY INTENDED FOR USE IN LOGGING OPERATIONS.
Claims use since May 19, 1947.

Ser. No. 529,520. G. F. WRIGHT STEEL & WIRE CO., Worcester, Mass. Filed July 25, 1947. Under section 2f of the act of 1946.

WRIGHT

FOR FABRICATED WIRE PRODUCTS—NAMELY, WIRE NETTING, WIRE FENCE, WIRE CLOTH, WIRE SCREEN, WOVEN WIRE LATH, AND WIRE STRAND.
Claims use since July 1, 1939.

Ser. No. 529,731. THE UNITED STATES AIR COMPRESSOR COMPANY, Cleveland, Ohio. Filed July 26, 1947. Under section 2f of the act of 1946.

BOWES

Applicant claims ownership of registration No. 155,882.
FOR HOSE COUPLINGS.
Claims use since May 1904.

Ser. No. 532,687. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Aug. 28, 1947. Under section 2f of the act of 1946.

ROBSON

Applicant claims ownership of registration No. 295,251.
FOR POTTERY — NAMELY, LAVATORIES, BATHTUBS, AND TOILETS.
Claims use since June 1, 1931.

Ser. No. 533,346. ROBERT E. MILLER & CO. INC., New York, N. Y. Filed Sept. 4, 1947.

DOMES OF SILENCE

Applicant claims ownership of registration No. 77,891.
FOR FURNITURE CASTERS, FURNITURE RESTS, FURNITURE SLIDES, FURNITURE LEVELERS, EXPANSION GLIDES, DRAWER GLIDES, AND NAILS.
Claims use since Apr. 2, 1909.

Ser. No. 533,681. ROBERT E. MILLER & CO. INC., New York, N. Y. Filed Sept. 6, 1947.

REMCO

Applicant claims ownership of registration No. 257,348.
FOR FURNITURE CASTERS, FURNITURE RESTS, AND FURNITURE SLIDES AND FOR DRAWER GLIDES, THUMB TACKS, AND NAILS.
Claims use since January 1925.

Ser. No. 535,803. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

WYNGATE

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since May 1933.

Ser. No. 535,805. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

WARWICK

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since April 1933.

Ser. No. 535,806. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

WINDSOR

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since May 1933.

Ser. No. 535,807. W. A. CASE AND SON MANUFACTURING COMPANY, Buffalo, N. Y. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

WESTBROOK

FOR PLUMBING FIXTURES—NAMELY, VITREOUS CHINA LAVATORIES.
Claims use since April 1933.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 533,251. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

AMSCO No. 6

Applicant claims ownership of registration No. 109,306.
FOR BARE AND COATED METAL WELDING RODS.
Claims use since Jan. 31, 1947.

Ser. No. 533,252. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

AMSCO No. 217

Applicant claims ownership of registration No. 109,306.
FOR BARE AND COATED METAL WELDING RODS.
Claims use since December 1930.

Ser. No. 533,253. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

AMSCO No. 1

Applicant claims ownership of registration No. 109,306.
FOR BARE AND COATED METAL WELDING RODS.
Claims use since May 21, 1947.

Ser. No. 533,254. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

AMSCO No. 459

Applicant claims ownership of registration No. 109,306.
FOR BARE AND COATED METAL WELDING RODS.
Claims use since Aug. 5, 1935.

Ser. No. 533,256. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Sept. 4, 1947.

MANG-CO

Applicant claims ownership of registrations Nos. 399,197 and 414,309.
FOR COATED METAL WELDING RODS.
Claims use since Dec. 21, 1946.

Ser. No. 554,822. SOULE STEEL COMPANY, San Francisco, and Los Angeles, Calif., Portland, Oreg., and Houston, Tex. Filed Apr. 16, 1948.

SSCo

FOR WIRE, HOT ROLLED RODS, HOOPS, AND BANDS AND SHEETS OF STEEL.
Claims use since Mar. 16, 1927.

Ser. No. 555,676. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y. Filed Apr. 27, 1948.

DURANICKEL

FOR AGE-HARDENABLE, CORROSION-RESISTANT, HIGH-NICKEL ALLOYS.
Claims use since Mar. 30, 1948.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 527,599. MINNESOTA LINSEED OIL PAINT COMPANY, doing business as Chi-Namel Paint & Varnish Co., Minneapolis, Minn., and Fort Wayne, Ind. Filed July 5, 1947.

Applicant claims ownership of registration No. 36,611.
FOR READY MIXED PAINTS, VARNISHES, WOOD STAINS IN THE NATURE OF A COATING, GRAINING COMPOSITIONS IN THE NATURE OF A PAINT, AND WALL FINISHING PAINTS IN READY MIXED POWDER AND PASTE FORM.
Claims use since 1904.

Ser. No. 530,302. M. EWING FOX CO., INC., New York, N. Y. Filed Aug. 2, 1947. Under section 2f of the act of 1946.

MURALITE

Applicant claims ownership of registration No. 64,609.
FOR DECORATIVE WALL FINISH OR CALCIMINE IN THE NATURE OF A PAINT.
Claims use since January 1892.

Ser. No. 530,927. THE FASKI COMPANY, Pasadena, Calif. Filed Aug. 9, 1947.

FASKI

Applicant disclaims the representation of the skis and the syllable "Ski" apart from the mark.
FOR WAXES USED ON BOTTOM SURFACES OF SKIS.
Claims use since Dec. 10, 1946.

Ser. No. 533,355. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

Phelan's

Applicant claims ownership of registrations Nos. 186,209, 154,364, 196,948, 216,048, and 362,984.
FOR HOUSE PAINT, CONCRETE PAINT, AND PAINT COLORS.
Claims use since August 1919.

Ser. No. 536,021. WESSON OIL & SNOWDRIFT CO., INC., New Orleans, La. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

SOUTHPORT

Applicant claims ownership of registration No. 366,510.
FOR READY-MIXED PAINTS, PAINT ENAMELS, PRIMERS IN THE NATURE OF PAINTS, UNDERCOATERS IN THE NATURE OF PAINTS, WASHABLE PAINTS, SEMI-PASTE PAINTS, VARNISHES, WOOD STAINS, CHEMICAL PAINT AND VARNISH REMOVERS, PREPARED SHELLACS AND PAINT DRIERS.
Claims use since September 1934.

Reg. No. 240,802. Registered Apr. 10, 1928. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

MULSOID-SULFUR

The word "Sulfur" is disclaimed apart from the mark as shown.
FOR INSECTICIDES AND FUNGICIDES.
Claims use since June 26, 1926.

Reg. No. 244,136. Registered July 10, 1928. ALBERT EDWARD MALLARD, Detroit, Mich. Republished by A. E. Mallard Laboratories, Inc., Detroit, Mich., a corporation of Michigan.

SALETO

FOR TABLETS AND CAPSULES FOR THE RELIEF OF PAIN, COMPOSED OF ANTIPYRETIC, ANALGESIC, ANTI-RHEUMATIC, ACID, ACETYLSALICYCLIC: PHENACETINE, CAMPHOR MONOBROMATE, CAFFEINE SALICYLATE.
Claims use since 1918.

Reg. No. 263,042. Registered Oct. 29, 1929. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

D-L-S DUST

The word "Dust" is disclaimed apart from the mark as shown.
FOR INSECTICIDES AND FUNGICIDES.
Claims use since May 22, 1929.

Reg. No. 263,943. Registered Nov. 12, 1929. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

WINTER-MULSION

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Dec. 8, 1925.

Reg. No. 263,944. Registered Nov. 12, 1929. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SUMMER-MULSION

FOR INSECTICIDES, FUNGICIDES, AND GERMICIDES.
Claims use since Sept. 23, 1925.

Reg. No. 274,075. Registered Aug. 19, 1930. PUBLICKER INCORPORATED, Philadelphia, Pa., assignor to De Lancey Chemical Corporation. Republished by Delancey Chemical Corporation, Philadelphia, Pa., a corporation of Pennsylvania.

Thermice

FOR SOLIDIFIED CARBON DIOXIDE.
Claims use since April 2, 1930.

Reg. No. 282,540. Registered Apr. 21, 1931. OSCAR P. RUBARDT, doing business as O. P. Rubardt & Co., Chicago, Ill. Republished by registrant.

PRO-DURA

FOR DYES AND DYESTUFFS.
Claims use since 1918.

Reg. No. 284,768. Registered July 7, 1931. ROSS MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Stop-N-Seal

The words "Stop" and "Seal" are disclaimed apart from the mark as shown.
FOR COMPOUND FOR STOPPING LEAKS IN BOILERS.
Claims use since July 11, 1930.

Reg. No. 287,147. Registered Sept. 15, 1931. ROSS MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Kleen-N-Heat

The words "Kleen" and "Heat" are disclaimed apart from the mark as shown.
FOR BOILER CLEANING COMPOUND.
Claims use since Feb. 23, 1931.

Reg. No. 291,952. Registered Feb. 23, 1932. ALBERT E. MALLARD, Detroit, Mich. Republished by A. E. Mallard Laboratories, Inc., Detroit, Mich., a corporation of Michigan.

TAURACRINE

FOR TABLETS USED AS A BILIARY STIMULANT AND ANTISEPTIC SOLVENT OF EFFETE MUCUS.
Claims use since Oct. 23, 1931.

Reg. No. 297,077. Registered Aug. 30, 1932. LA COMPAGNIE PHARMACEUTIQUE DESBERGERS, Montreal, Quebec, Canada. Republished by Desbergers Limited, Montreal, Quebec, Canada, a corporation of Canada.

UPNOS

FOR SOPORIFIC MEDICINE.
Claims use since August 1927.

Reg. No. 298,206. Registered Oct. 18, 1932. VERITAS PRODUCTS COMPANY, New York, N. Y. Republished by Veritas Products Company, Inc., New York, N. Y., a corporation of New York.

Verithol

FOR ANTISEPTIC JELLY.
Claims use since Mar. 22, 1932.

Reg. No. 298,223. Registered Oct. 18, 1932. HARSFELD'S, INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

Petticoat Lane

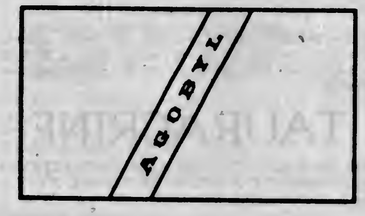
FOR PERFUME.
Claims use since Apr. 1, 1932.

Reg. No. 298,232. Registered Oct. 18, 1932. THE WILBUR WHITE CHEMICAL COMPANY, Owego, N. Y. Republished by Franklin Research Company, Philadelphia, Pa., a corporation of Pennsylvania.

WAX LAC

The word "Wax" is disclaimed apart from the mark as shown.
FOR EMULSION FOR THE PRESERVATION OF FRUITS AND VEGETABLES.
Claims use since Aug. 29, 1931.

Reg. No. 298,678. Registered Nov. 1, 1932. LA COMPAGNIE PHARMACEUTIQUE DESBERGERS, Montreal, Quebec, Canada. Republished by Desbergers Limited, Montreal, Quebec, Canada, a corporation of Canada.



FOR LIVER POWDER.
Claims use since April 1928.

Reg. No. 313,845. Registered June 12, 1934. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ROTO-DUST

The word "Dust" is disclaimed apart from the mark as shown.
FOR INSECTICIDES.
Claims use since Jan. 16, 1934.

Reg. No. 314,509. Registered July 3, 1934. A. E. MALLARD, Detroit, Mich. Republished by A. E. Mallard Laboratories, Inc., Detroit, Mich., a corporation of Michigan.

The representation of a tablet is disclaimed apart from the mark as shown.
FOR TABLETS AND CAPSULES FOR THE RELIEF OF PAIN, COMPOSED OF ANTIPYRETIC, ANALGESIC, ANTIRHEUMATIC; ACID ACETYLSALICYLIC; PHENACETINE; CAMPHOR MONOBROMATE; CAFFEINE SALICYLATE.
Claims use since Dec. 1, 1933.

Reg. No. 315,871. Registered Aug. 14, 1934. WILLIAM L. BECHTOLD, Newark, N. J. Republished by Albert Wigler, Newark, N. J.

THYMODINE

FOR SKIN OINTMENTS, HEALING SALVES, ANTISEPTIC LINIMENT, SKIN TONIC, TOILET POWDERS, AND ROUGE.
Claims use since June 1, 1911.

Reg. No. 316,710. Registered Sept. 4, 1934. SCOVILL, BROWN & COMPANY, Wellsville, N. Y., a corporation of New York. Republished by registrant.

HEART'S DELIGHT

FOR GLOSS LAUNDRY STARCH.
Claims use since 1894.

Reg. No. 319,017. Registered Nov. 13, 1934. GASES INCORPORATED, Chicago, Ill. Republished by National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware.

FOR COMPRESSED GASES.
Claims use since June 29, 1934.

Reg. No. 322,364. Registered Mar. 5, 1935. WILLIAM L. BECHTOLD, Newark, N. J. Republished by Albert Wigler, Newark, N. J.

PYRL

FOR PREPARATION FOR THE TREATMENT OF INFLAMED, SPONGY, AND RECEDED GUMS.
Claims use since May 1, 1928.

Reg. No. 324,780. Registered May 28, 1935. ALBERT E. MALLARD, Detroit, Mich. Republished by A. E. Mallard Laboratories, Inc., Detroit, Mich., a corporation of Michigan.

HALERCOL

FOR HALIBUT LIVER OIL.
Claims use since Feb. 1, 1934.

Reg. No. 331,670. Registered Jan. 14, 1936. THE BIRD-ARCHER COMPANY, New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

PREFERRED BOILER TONE

FOR PREPARATION TO PREVENT RUST AND CORROSION AND TO REMOVE SCALE FORMATION IN STEAM BOILERS.
Claims use since July 1, 1933.

Reg. No. 331,957. Registered Jan. 28, 1936. LA COMPAGNIE PHARMACEUTIQUE DESBERGERS, Montreal, Quebec, Canada. Republished by Desbergers Limited, Montreal, Quebec, Canada, a corporation of Canada.

BISMIX

FOR MEDICINAL POWDER FOR THE TREATMENT OF PATHOLOGICAL AFFECTIONS OF THE STOMACH.
Claims use since Nov. 1, 1933.

Reg. No. 350,551. Registered Sept. 28, 1937. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SPRALASTIC

FOR INSECTICIDES, FUNGICIDES, AND FLOCCULATORS.
Claims use since Mar. 31, 1937.

Reg. No. 353,267. Registered Dec. 28, 1937. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SULFIX

FOR INSECTICIDES AND FUNGICIDES.
Claims use since July 18, 1937.

Reg. No. 355,903. Registered Apr. 5, 1938. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SUMMER-TEX

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Sept. 27, 1937.

Reg. No. 356,325. Registered Apr. 26, 1938. ALBERT E. MALLARD, Detroit, Mich. Republished by A. E. Mallard Laboratories, Inc., Detroit, Mich., a corporation of Michigan.

SEPTOSAN

FOR PROPHYLACTIC SUPPOSITORIES.
Claims use since 1920.

Reg. No. 358,106. Registered June 28, 1938. FRIENDLY

Reg. No. 403,984. Registered Oct. 26, 1943. KOCH

RYING CAPACITY OF THE LUBRICANT TO PREVENT SCORING OF GEAR TEETH, BEARINGS OR OTHER

Reg. No. 417,762. Registered Nov. 13, 1945. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville,

Reg. No. 358,106. Registered June 28, 1938. FRIENDLY LABORATORIES, Shawnee, Okla., a corporation of Oklahoma. Republished by registrant.

KAM

FOR DIURETIC STIMULANT.
Claims use since on or about Aug. 15, 1937.

Reg. No. 361,955. Registered Nov. 8, 1938. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ROTO-SPRA

The word "Spra" is disclaimed apart from the mark as shown.
FOR INSECTICIDES.
Claims use since Oct. 22, 1937.

Reg. No. 381,074. Registered Sept. 10, 1940. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SOLCOPPER

FOR INSECTICIDES.
Claims use since Feb. 19, 1940.

Reg. No. 386,062. Registered Mar. 25, 1941. FRIENDLY LABORATORIES, Shawnee, Okla., a corporation of Oklahoma. Republished by registrant.

VAK

FOR LAXATIVE.
Claims use since on or about Mar. 5, 1938.

Reg. No. 395,315. Registered May 19, 1942. THE BIRD-ARCHER CO., New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

TANALGINATE

FOR PREPARATION USED TO CONDITION WATER USED IN BOILERS IN THE GENERATION OF STEAM.
Claims use since September 1941.

Reg. No. 403,984. Registered Oct. 26, 1943. KOCH BUTCHERS' SUPPLY COMPANY, North Kansas City, Mo., a corporation of Missouri. Republished by registrant.

SUICIDE

FOR INSECTICIDES.
Claims use since on or about May 12, 1943.

Reg. No. 418,336. Registered Dec. 18, 1945. GIBBS & COMPANY, Chicago, Ill. Republished by Models' Cosmetics, Inc., Chicago, Ill., a corporation of Delaware.

Models Special

The word "Special" is disclaimed apart from the mark as shown.
FOR MAKE-UP AND LIPSTICK.
Claims use since Apr. 10, 1941.

Reg. No. 423,782. Registered Sept. 10, 1946. I. LOWER, Marion, Ohio. Republished by registrant.

OIL OF SEVEN TEMPLES

The word "Oil" is disclaimed apart from the mark as shown.
FOR INSECTICIDES.
Claims use since 1930.

Reg. No. 424,217. Registered Sept. 24, 1946. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

PESTROY

FOR PEST INHIBITING COMPOSITIONS.
Claims use since Sept. 4, 1919.

Reg. No. 432,420. Registered Sept. 2, 1947. THE ELCO LUBRICANT CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SCL

FOR CHEMICAL CONCENTRATE ADAPTED TO BE USED IN LUBRICANTS SUCH AS MINERAL OILS, TO IMPART EXTREME PRESSURE FILM STRENGTH THERETO THEREBY INCREASING THE LOAD CARRYING CAPACITY OF THE LUBRICANT TO PREVENT SCORING OF GEAR TEETH, BEARINGS OR OTHER MATING METAL SURFACES.
Claims use since Feb. 21, 1945.

Reg. No. 433,160. Registered Sept. 30, 1947. PLOUGH, INC., Memphis, Tenn., a corporation of Delaware. Republished by registrant.

PENETROIL

FOR MEDICINAL LINIMENT FOR RELIEF OF HEAD AND CHEST COLDS, SUNBURN, CHAPPED HANDS, BRUISES, TIRED AND SORE FEET, MUSCULAR ACHES AND PAINS, INSECT BITES, IN FACT, A GENERAL HOUSEHOLD SALVE.
Claims use since Jan. 1, 1914.

CLASS 7
CORDAGE

Reg. No. 193,741. Registered Jan. 6, 1925. BLAKE, MOFFITT AND TOWNE, San Francisco, Calif., a corporation of California. Republished by registrant.

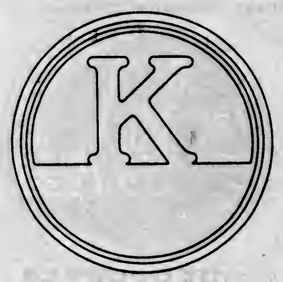
The word "Paper" is disclaimed apart from the mark as shown.
FOR TWINE.
Claims use since January 1914.

Reg. No. 282,631. Registered Apr. 28, 1931. FREYDBERG BROTHERS, INCORPORATED, New York, N. Y. Republished by Freydberg Bros.-Strauss, Inc., New York, N. Y., a corporation of New York.

CELLO

FOR RIBBON COMPOSED OF CELLULOSE COMPOSITION MATERIAL FOR TYING PACKAGES AND OTHER USES.
Claims use since Nov. 17, 1930.

Reg. No. 417,762. Registered Nov. 13, 1945. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J., a corporation of New York. Republished by registrant.



FOR WIRE ROPE OR CABLE.
Claims use since on or about Dec. 1, 1940.

Reg. No. 426,166. Registered Dec. 17, 1946. RIVERSIDE & DAN RIVER COTTON MILLS, INC., doing business as Dan River Mills, Danville, Va., now by change of name to Dan River Mills, Incorporated. Republished by Dan River Mills, Incorporated, Danville, Va., a corporation of Virginia.

FLORABOND

FOR FLORISTS' TWINE.
Claims use since Mar. 30, 1946.

CLASS 9
EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 365,715. Registered May 14, 1939. SCOVILLE, BROWN & COMPANY, Wellsville, N. Y., a corporation of New York. Republished by registrant.

Heart's Delight

FOR MATCHES.
Claims use since Oct. 31, 1938.

CLASS 10
CHEMICAL PRODUCTS

Reg. No. 138,960. Registered Jan. 18, 1921. DE-FI MANUFACTURING COMPANY, New York, N. Y., a corporation

Reg. No. 79,002. Registered July 26, 1910. THE PARAFFINE PAINT COMPANY, San Francisco, Calif. Republ-

Reg. No. 180,902. Registered Mar. 11, 1924. MARBLEHEAD LIME COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CLASS 10

FERTILIZERS

Reg. No. 435,273. Registered Dec. 16, 1947. ANNVILLE STONE COMPANY, Conshohocken, Pa., a corporation of Pennsylvania. Republished by registrant.

The drawing is lined to indicate the color red. All of the wording is disclaimed apart from the mark as shown.

FOR PULVERIZED AGRICULTURAL LIMESTONE, AND FERTILIZERS.

Claims use since Nov. 7, 1946.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 138,234. Registered Dec. 21, 1920. DE-FI MANUFACTURING COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

SO-LITE

FOR CARBON PAPER AND TYPEWRITER RIBBONS.
Claims use since June 1908.

Reg. No. 138,802. Registered Jan. 11, 1921. DE-FI MANUFACTURING COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

CONQUEROR

FOR CARBON-PAPER AND TYPEWRITER RIBBONS.
Claims use since June 1, 1908.

Reg. No. 138,960. Registered Jan. 18, 1921. DE-FI MANUFACTURING COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FOR CARBON-PAPER AND TYPEWRITER RIBBONS.
Claims use since June 1, 1908.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 24,272. Registered Feb. 20, 1894. HARBISON & WALKER, Pittsburgh, Pa. Republished by Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR FIRE BRICK, TILE, AND ARTICLES MADE OF FIRE-CLAY.
Claims use since 1868.

Reg. No. 24,273. Registered Feb. 20, 1894. HARBISON, & WALKER, Pittsburgh, Pa. Republished by Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania.

FOR FIRE BRICK, TILE, AND ARTICLES MADE OF FIRE CLAY.
Claims use since 1873.

Reg. No. 79,002. Registered July 26, 1910. THE PARAFFINE PAINT COMPANY, San Francisco, Calif. Republished by The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware.

FOR BUILDING-PAPER AND COMPOSITE ROOFING.
Claims use since March 1885.

Reg. No. 132,772. Registered June 29, 1920. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

PABCO
PRODUCTS

The word "Products" is disclaimed apart from the mark as shown.

FOR WATERPROOF ROOFINGS AND BUILDING-PAPERS MANUFACTURED FROM WATERPROOF MATERIALS COMBINED WITH FELT OR PAPER OR A COMBINATION OF SUCH MATERIALS.

Claims use since June 1918.

Reg. No. 158,137. Registered Mar. 14, 1922. THE CLEVELAND BUILDERS SUPPLY AND BRICK COMPANY, Cleveland, Ohio. Republished by The Cleveland Builders Supply Company, Cleveland, Ohio, a corporation of Ohio.

Cemenlopping

FOR PREPARED MIXTURE OF WHICH THE MAIN INGREDIENTS ARE SAND, GRAVEL, AND CEMENT FOR USE IN THE CONSTRUCTION OF SIDEWALKS, FLOORS, CELLAR BOTTOMS, DRIVEWAYS, AND THE LIKE.

Claims use since about Sept. 13, 1919.

Reg. No. 180,902. Registered Mar. 11, 1924. MARBLEHEAD LIME COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The word "Lime" is disclaimed apart from the mark as shown.

FOR HYDRATED LIME.

Claims use since Mar. 1, 1923.

Reg. No. 190,973. Registered Oct. 28, 1924. BLAKE, MOFFITT & TOWNE, San Francisco, Calif., a corporation of California. Republished by registrant.

The word "Paper" is disclaimed apart from the mark as shown.

FOR BUILDING PAPER.

Claims use since about Feb. 15, 1901.

Reg. No. 336,646. Registered July 14, 1936. THE NEW HAVEN COPPER CO., Seymour, Conn., a corporation of Connecticut. Republished by registrant.

KENMAR

FOR COPPER SHINGLES.
Claims use since Dec. 14, 1935.

Reg. No. 353,109. Registered Dec. 28, 1937. PORCELAIN ENAMELING COMPANY, Chicago, Ill. Republished by Lustron Corporation, Chicago, Ill., a corporation of Delaware.

LUSTRON

FOR PORCELAIN ENAMEL FINISH FOR METAL.
Claims use since Nov. 1, 1937.

Reg. No. 397,501. Registered Sept. 8, 1942. ASH GROVE LIME & PORTLAND CEMENT COMPANY, Kansas City, Mo., a corporation of Missouri.

ASH GROVE

FOR HYDRATED LIME.
Claims use since Aug. 1, 1942.

Reg. No. 145,068. Registered July 26, 1921. E. M. DART MFG. CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant.

DART

FOR CARBON-PAPER AND TYPEWRITER RIBBONS.
Claims use since June 1, 1908.

Reg. No. 231,257. Registered Aug. 16, 1927. MUELLER CO., Decatur, Ill., a corporation of Illinois. Republished by registrant.

MUELLER

FOR BUILDING PAPER.
Claims use since about Feb. 15, 1901.

Reg. No. 353,109. Registered Dec. 28, 1937. PORCELAIN PRODUCTS COMPANY, Cicero, Ill. Republished by Lustron Corporation, Columbus, Ohio, a corporation of Illinois.

LUSTRON

FOR BUILDING MATERIALS IN THE NATURE OF STRUCTURAL AND ARCHITECTURAL SHEETS OR SHAPES FOR USE AS EXTERIOR OR INTERIOR FACING FOR WALLS, FLOORS OR CEILINGS, FOR PARTITIONS, DOORS, COUNTERS, SHELVES, SIGNS, CABINETS, COMPARTMENTS, CHUTES, OR OTHER ARCHITECTURAL, INDUSTRIAL OR COMMERCIAL PRODUCTS IN WHICH FLAT OR CURVED SURFACES ARE AN ESSENTIAL ELEMENT.
Claims use since Aug. 24, 1936.

Reg. No. 386,207. Registered Apr. 1, 1941. CONNORS STEEL COMPANY, Birmingham, Ala., a corporation of Delaware. Republished by registrant.

FOR CONCRETE REINFORCEMENT STEEL BARS.
Claims use since February 1931.

Reg. No. 386,213. Registered Apr. 1, 1941. SHALLOW WATER REFINING COMPANY, Scott City, Kans., a corporation of Missouri. Republished by registrant.

FOR STRAIGHT PETROLEUM ROOFING ASPHALT MANUFACTURED FOR HOT APPLICATION.
Claims use since Jan. 1, 1939.

Reg. No. 397,501. Registered Sept. 8, 1942. ASH GROVE LIME & PORTLAND CEMENT COMPANY, Kansas City, Mo., a corporation of Maine. Republished by registrant.

DURA WHITE

The word "White" is disclaimed apart from the mark as shown.
FOR POWDERED CEMENT.
Claims use since Feb. 28, 1942.

Reg. No. 411,946. Registered Feb. 13, 1945. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

A-B-K

FOR PLASTIC TILES AND PLASTIC SLABS FOR USE AS FLOOR COVERINGS, WALL COVERINGS, STAIR TREADS, ETC.
Claims use since on or about Sept. 12, 1942.

Reg. No. 434,724. Registered Dec. 2, 1947. THE ALUMILINE CORP., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

FOR STORE FRONT AND WINDOW MOULDINGS OF ALUMINUM, ALUMINUM ALLOYS, AND MIXTURES THEREOF.
Claims use since Jan. 7, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 140,618. Registered Mar. 22, 1921. KNICKERBOCKER MFG. CO., Chicago, Ill. Republished by Knickerbocker Rubber Company, Chicago, Ill., a firm.

Knickerbocker

FOR MASSAGE SHOWER BATH SPRAYS.
Claims use since 1903.

Reg. No. 145,068. Registered July 26, 1921. E. M. DART MFG. CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant.

DART

FOR METAL PIPE FITTINGS.
Claims use since Jan. 1, 1895.

Reg. No. 165,484. Registered Mar. 13, 1923. STANDARD STEEL WORKS COMPANY, Philadelphia, Pa. Republished by The Baldwin Locomotive Works, Eddystone, Pa., a corporation of Pennsylvania.

FOR FORGED AND ROLLED STEEL PIPE FLANGES.
Claims use since June 1893.

Reg. No. 203,750. Registered Sept. 22, 1925. AMERICAN RUBBER PRODUCTS CORPORATION, Jersey City, N. J. Republished by American Rubber Products Corporation, New York, N. Y., a corporation of New York.

COPRTOP

FOR TANK BALLS.
Claims use since Sept. 1, 1924.

Reg. No. 229,813. Registered July 5, 1927. MUELLER CO., Decatur, Ill., a corporation of Illinois. Republished by registrant.

HM

FOR SOLDERING NIPPLES.
Claims use since on or about Feb. 15, 1887.

Reg. No. 231,257. Registered Aug. 16, 1927. MUELLER CO., Decatur, Ill., a corporation of Illinois. Republished by registrant.

H◇M

FOR VALVES AND FAUCETS.
Claims use since on or about May 1, 1890.

Reg. No. 231,322. Registered Aug. 16, 1927. MUELLER CO., Decatur, Ill., a corporation of Illinois. Republished by registrant.

H
◇
M

FOR VALVES AND COCKS.
Claims use since on or about Oct. 1, 1900.

Reg. No. 234,663. Registered Nov. 1, 1927. SCOVILL MANUFACTURING COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

M-VB

FOR BALL COCKS, FLUSH VALVES; TANK FITTINGS—NAMELY, LEVERS, FLOATS, RODS, ELBOWS, FLANGES, HOOKS, AND METAL TUBING, AND HINGES.
Claims use since August 1909.

Reg. No. 304,975. Registered July 25, 1933. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

Reg. No. 120,800. Registered Mar. 5, 1918. TITAN METAL COMPANY, Milesburg and Bellefonte, Pa. Republished by Titan Metal Manufacturing Company, Bellefonte, Pa., a

Reg. No. 408,610. Registered Aug. 22, 1944. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

Reg. No. 433,727. Registered Oct. 28, 1947. ACE MANUFACTURING CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Reg. No. 304,975. Registered July 25, 1933. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

HITENSILOY

FOR HIGH TENSILE BRASS AND BRONZE LAVATORY HANDLES, BATHROOM SOAP DISHES, FLUSH VALVE HANDLES, AND ESCUTCHEONS.
Claims use since Nov. 1, 1931.

Reg. No. 304,976. Registered July 25, 1933. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

TINICOSIL

FOR HIGH TENSILE BRASS AND BRONZE LAVATORY HANDLES, BATHROOM SOAP DISHES, FLUSH VALVE HANDLES, AND ESCUTCHEONS.
Claims use since Nov. 1, 1931.

Reg. No. 423,227. Registered Aug. 27, 1946. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J., a corporation of New York. Republished by registrant, present address Belleville, N. J.

FOR BRACKETS FOR SUPPORTING INDIVIDUAL, OR A PLURALITY OF, CYLINDERS OF FIRE EXTINGUISHING MEDIUM.
Claims use since on or about July 15, 1944.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 64,766. Registered Aug. 20, 1907. THE WM. CRAMP & SONS SHIP & ENGINE BUILDING CO., Philadelphia, Pa. Republished by The Baldwin Locomotive Works, Eddystone, Pa., a corporation of Pennsylvania.

CRAMP

FOR METALS COMPRISING BABBITT METAL AND MANGANESE-BRONZE.
Claims use since 1885.

Reg. No. 120,800. Registered Mar. 5, 1918. TITAN METAL COMPANY, Milesburg and Bellefonte, Pa. Republished by Titan Metal Manufacturing Company, Bellefonte, Pa., a corporation of Pennsylvania.

TITAN

FOR BRONZES, ROUND, SQUARE, AND HEXAGONAL BRONZE BARS, ROLLED AND COLD-DRAWN BRONZE BARS.
Claims use since June 1, 1915.

Reg. No. 120,801. Registered Mar. 5, 1918. TITAN METAL COMPANY, Milesburg and Bellefonte, Pa. Republished by Titan Metal Manufacturing Company, Bellefonte, Pa., a corporation of Pennsylvania.

"NITTANY"

FOR BRASS RODS, NAVAL BRASS, MUNTZ'S METAL, AND OTHER BRASSES.
Claims use since Feb. 1, 1917.

Reg. No. 133,691. Registered Aug. 3, 1920. HALL & PICKLES LIMITED, Manchester, England, a corporation of Great Britain. Republished by registrant.

HYDRA

FOR STEEL FOR TOOLS AND IRON AND STEEL IN THE FORM OF PIGS, INGOTS, BILLETS, RAILS, BARS, RODS, HOOPS, SHEETS, PLATES, ANGLES, AND OTHER FORMS IN WHICH IRON AND STEEL IS SUPPLIED TO ENGINEERS, MACHINE-MAKERS, AND SHIPBUILDERS.
Claims use since about the year 1888.

Reg. No. 288,569. Registered Nov. 3, 1931. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR BRASS AND BRONZE RODS, SHAPES, AND FORGINGS AND AUTOMATIC SCREW MACHINE PARTS UNFINISHED AND IN THE ROUGH.
Claims use since 1927.

Reg. No. 408,610. Registered Aug. 22, 1944. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR BRASS FORGINGS, BRASS CASTINGS, AND WELDING RODS.
Claims use since April 1943.

Reg. No. 411,284. Registered Jan. 9, 1945. CONTINENTAL STEEL CORPORATION, Kokomo and Indianapolis, Ind., and Canton, Ohio, a corporation of Indiana. Republished by registrant, present address Kokomo, Ind.

kokote

FOR GALVANIZED WIRE.
Claims use since July 28, 1944.

Reg. No. 413,926. Registered May 22, 1945. BENDIX AVIATION CORPORATION, doing business as Eclipse-Pioneer Division, Teterboro, N. J., a corporation of Delaware. Republished by registrant.

FOR CASTINGS OF NON-FERROUS METALS AND ALLOYS, AND CASTINGS INCLUDING IN PART AT LEAST A FERROUS CONSTITUENT.
Claims use since July 10, 1942.

Reg. No. 433,727. Registered Oct. 28, 1947. ACE MANUFACTURING CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ACE

FOR UNFINISHED OR PARTIALLY FINISHED METAL STAMPINGS, CASTINGS, AND FORGINGS.
Claims use since August 1931.

CLASS 15

OILS AND GREASES

Reg. No. 299,061. Registered Nov. 22, 1932. BLACK EAGLE OIL COMPANY, West Allis, Wis., a corporation of Wisconsin. Republished by registrant, present address Milwaukee, Wis.

The word "Quality" is disclaimed apart from the mark as shown.
FOR GASOLINE AND LUBRICATING OILS.
Claims use since Dec. 25, 1927.

Reg. No. 386,295. Registered Apr. 1, 1941. NORMA-HOFFMANN BEARINGS CORPORATION, Stamford, Conn., a corporation of New York. Republished by registrant.

NORMA

FOR GREASE FOR BALL AND ROLLER BEARINGS.
Claims use since Oct. 27, 1939.

Reg. No. 407,622. Registered June 13, 1944. THE ELCO GREASE AND OIL COMPANY, Cleveland, Ohio, now by change of name to The Elco Lubricant Corporation. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

ELCO "22"

The number "22" is disclaimed apart from the mark as shown.
FOR LUBRICATING OILS AND GREASES.
Claims use since on or about Apr. 15, 1935.

Reg. No. 413,784. Registered May 15, 1945. THE ELCO GREASE AND OIL COMPANY, Cleveland, Ohio. Republished by The Elco Lubricant Corporation, Cleveland, Ohio, a corporation of Ohio.

The word "Gear" and "22" are disclaimed apart from the mark as shown.

FOR LUBRICATING OILS AND GREASES.

Claims use since on or about July 1, 1936.

Reg. No. 413,792. Registered May 15, 1945. THE ELCO LUBRICANT CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

GEAR SAFETY No. 26
ELCO

The words "Gear" and "No. 26" are disclaimed apart from the mark as shown.

FOR LUBRICATING OILS AND GREASES.

Claims use since on or about Apr. 3, 1935.

Reg. No. 416,305. Registered Sept. 4, 1945. THE ELCO LUBRICANT CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SCL

FOR LUBRICANT CONCENTRATE WHICH IS ADDED TO MINERAL OILS TO IMPART EXTREME PRESSURE FILM STRENGTH THERETO THEREBY INCREASING THE LOAD CARRYING CAPACITY OF SAID MINERAL OILS TO PREVENT SCORING OF GEAR TEETH OR BEARINGS OR OTHER MATING METAL SURFACES.

Claims use since Feb. 21, 1945.

Reg. No. 430,561. Registered June 17, 1947. THE ELCO LUBRICANT CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

The words "Sulfo-Chloro-Lead" are disclaimed apart from mark as shown.

FOR LUBRICANT CONCENTRATE WHICH IS ADDED TO MINERAL OILS TO IMPART EXTREME PRESSURE FILM STRENGTH THERETO THEREBY INCREASING THE LOAD CARRYING CAPACITY OF SAID MINERAL OILS TO PREVENT SCORING OF GEAR TEETH OR BEARINGS OR OTHER MATING METAL SURFACES.

Claims use since Feb. 21, 1945.

Reg. No. 430,562. Registered June 17, 1947. THE ELCO LUBRICANT CORPORATION, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

The words "Sulfo-Chloro-Lead" are disclaimed apart from the mark as shown. The drawing is lined for the colors orange, red, blue, and yellow.

FOR LUBRICANT CONCENTRATE WHICH IS ADDED TO MINERAL OILS TO IMPART EXTREME PRESSURE FILM STRENGTH THERETO THEREBY INCREASING THE LOAD CARRYING CAPACITY OF SAID MINERAL OILS TO PREVENT SCORING OF GEAR TEETH, BEARINGS, OR OTHER MATING METAL SURFACES.

Claims use since Feb. 21, 1945.

Reg. No. 406,201. Registered Mar. 14, 1944. SEBASTIANI CANNING CO., Grand Junction, Colo. Republished by S. J. Miller Packing Company, Grand Junction, Colo., a corporation of Colorado.

The word "Brand" and the representation of a label are disclaimed apart from the mark as shown.
FOR CANNED FOOD PRODUCTS — NAMELY, CANNED VEGETABLES.
Claims use since Sept. 29, 1943.

Reg. No. 412,859. Registered Mar. 27, 1945. FRANK A. SMITH, Elsa, Tex. Republished by registrant.

F-A-S

FOR FRESH VEGETABLES.
Claims use since Oct. 13, 1944.
618 O. G.—30

Reg. No. 430,574. Registered June 17, 1947. PLACENTIA ORANGE GROWERS ASSOCIATION, Fullerton, Calif., a corporation of California. Republished by registrant.

CALIFORNIA BELLE

The word "California" is disclaimed apart from the mark as shown.
FOR FRESH CITRUS FRUITS.
Claims use since 1905.

Reg. No. 431,248. Registered July 15, 1947. THE KREIER PRESERVING COMPANY, Belgium, Wis., a corporation of Wisconsin. Republished by registrant.

Belle of Belgium

The word "Belgium" is disclaimed apart from the mark as shown.
FOR CANNED VEGETABLES.
Claims use since July 31, 1919.

Reg. No. 431,917. Registered Aug. 12, 1947. ROBERT F. HUNSICKER, doing business as Allen Products Company, Allentown, Pa. Republished by registrant.

FOR CANNED AND FROZEN DOG FOOD.
Claims use since Aug. 22, 1944.

Reg. No. 434,189. Registered Nov. 11, 1947. COASTAL VALLEY CANNING CO., Oxnard, Calif., a corporation of California. Republished by registrant.

CO-VA-CO

FOR CANNED PIMIENTOS.
Claims use since Sept. 30, 1946.

CLASS 47

WINES

Reg. No. 316,152. Registered Aug. 14, 1934. DEXHEIMER AND BECKER CO., St. Louis, Mo. Republished by Mound City Products Company, St. Louis, Mo., a corporation of Missouri.

TUCALI

FOR WINES—NAMELY, SAUTERNE, BURGUNDY, CLARET, PORT, SHERRY, MUSCATEL, AND ANGELICA.
Claims use since Dec. 20, 1933.

Reg. No. 317,601. Registered Oct. 2, 1934. BOHEMIAN DISTRIBUTING CO. LTD., Los Angeles, Calif. Republished by Bohemian Distributing Company, Los Angeles, Calif., a corporation of California.

CABRILLO

FOR WINES.
Claims use since on or about Jan. 26, 1934.

Reg. No. 322,518. Registered Mar. 12, 1935. CHRISTOPHER & CO. LIMITED, London, England, a limited liability company registered unnder the laws of Great Britain. Republished by registrant.

CHRISTOPHER'S

FOR WINES.
Claims use since 1931.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 67,369. Registered Jan. 28, 1908. THEO. HAMM BREWING CO., St. Paul, Minn., a corporation of Minnesota. Republished by registrant.

Digesto

FOR MALT EXTRACT.
Claims use since about June 18, 1907.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 22,771. Registered Apr. 11, 1893. THE DISTILLERS COMPANY, LIMITED, Edinburgh, Scotland. Republished by The Distillers Agency Limited, Edinburgh, Scotland, a limited liability company of Great Britain.

FOR WHISKY.
Claims use since Mar. 15, 1890.

Reg. No. 302,146. Registered Mar. 28, 1933. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

The words "Rare Old Scots Whisky" and Distillers Edinburgh" are disclaimed apart from the mark as shown.
FOR SCOTCH WHISKY.
Claims use since April 1896.

Reg. No. 302,727. Registered Apr. 25, 1933. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

FOR RUM, WHISKY, GIN, AND BRANDY.
Claims use since 1914.

Reg. No. 302,728. Registered Apr. 25, 1933. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

FOR WHISKY, RUM, GIN, AND BRANDY.
Claims use since 1913.

Reg. No. 308,053. Registered Nov. 21, 1933. JAMES BURROUGH LIMITED, London, England, a limited liability company registered under the laws of Great Britain. Republished by registrant.

The words appearing on the drawing with the exception of "Burrough's Beefeater," "James Burrough" (a facsimile signature), and "Established 1820," and the name of the company are disclaimed apart from the mark as shown.
FOR GIN.
Claims use since Nov. 11, 1909.

Reg. No. 312,855. Registered May 8, 1934. BOHEMIAN DISTRIBUTING CO. LTD., Los Angeles, Calif. Republished by Bohemian Distributing Company, Los Angeles, Calif., a corporation of California.

ROYAL TASTE

FOR WHISKEYS, COCKTAILS, CORDIALS, GIN, AND BRANDIES.
Claims use since on or about Jan. 5, 1934.

Reg. No. 318,360. Registered Oct. 23, 1934. E. KAHN & CO., INC., Baltimore, Md. Republished by The Distillers Agency Limited, Edinburgh, Scotland, a limited liability company of Great Britain.

PRINCE GEORGE

FOR WHISKY, BRANDY, GIN, RUM, AND ALCOHOLIC CORDIALS.
Claims use since July 5, 1934.

Reg. No. 322,959. Registered Mar. 26, 1935. CHRISTOPHER & CO. LIMITED, London, England, a limited liability company registered under the laws of Great Britain. Republished by registrant.

CHRISTOPHER'S

FOR WHISKY, KUMMEL, CRÈME DE MENTHE, ALCOHOLIC CORDIALS, GIN, AND BRANDY.
Claims use since at least the year 1831.

Reg. No. 329,446. Registered Oct. 29, 1935. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

Highland Club
Very [illegible] Blended
Scotch
Whisky
The Distillers Agency Ltd
Edinburgh

No claim is made to any of the wording appearing on the drawing except the applicant's name and the words "Highland Club," and no exclusive use is claimed in the word "Club" apart from the mark as shown.
FOR SCOTCH WHISKY.
Claims use since at least the year 1896.

Reg. No. 355,278. Registered Mar. 8, 1938. DEXHEIMER & BECKER COMPANY, St. Louis, Mo. Republished by Mound City Products Company, St. Louis, Mo., a corporation of Missouri.

Lonshire

FOR GIN.
Claims use since Apr. 5, 1934.

Reg. No. 369,637. Registered Aug. 1, 1939. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

All the words with exception of the monogram and the name of applicant are disclaimed apart from the mark as shown.

FOR SCOTCH WHISKY.

Claims use since Sept. 30, 1895.

Reg. No. 407,434. Registered June 6, 1944. THE DISTILLERS AGENCY LIMITED, Edinburgh, Scotland, a limited liability company of Great Britain. Republished by registrant.

The outline representation of a label, together with all wording appearing on the drawing excepting "King George IV," is disclaimed apart from the mark as shown.

FOR SCOTCH WHISKY.

Claims use since 1934.

Reg. No. 418,481. Registered Dec. 25, 1945. PADRE VINEYARD COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

Padre

FOR BRANDY.

Claims use since Oct. 10, 1942.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 111,159. Registered July 4, 1916. AMERICAN VULCANISED FIBRE CO., Wilmington, Del. Republished by National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware.

FOR VULCANIZED FIBER.

Claims use since about July 1909.

Reg. No. 121,745. Registered May 28, 1918. AMERICAN VULCANISED FIBRE COMPANY, Wilmington, Del. Republished by National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware.

VUL-COT

FOR VULCANIZED FIBER.

Claims use since about January 1915.

Reg. No. 181,795. Registered Mar. 25, 1924. SCHMIDT & AULT PAPER CO., York, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR INDENTED PAPER CARPET LINING.

Claims use since Apr. 3, 1923.

Reg. No. 355,080. Registered Mar. 8, 1938. RICH SIGNS CORPORATION, Wichita, Kans. Republished by Miro-Flex Company, Inc., Wichita, Kans., a corporation of Kansas.

MIRO-FLEX

FOR HIGHWAY MARKERS.

Claims use since July 23, 1937.

REISSUES

JANUARY 11, 1949

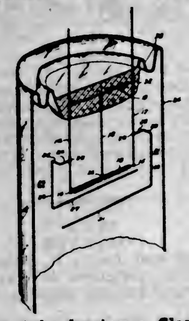
23,073

SPACE DISCHARGE TUBE AND ELECTRODE THEREFOR

Charles Philippe Boucher, deceased, late of Newark, N. J., by National Inventions Corporation, New York, N. Y., a corporation of New Jersey, assignee

Original No. 2,384,007, dated September 4, 1945, Serial No. 458,273, September 14, 1942. Application for reissue August 30, 1946, Serial No. 693,842

5 Claims. (Cl. 176—126)



5. A gaseous tube having a filament therein and having current conducting leads attached thereto and extending through a wall of the tube, and a short-circuiting bar connected across said leads intermediate their lengths.

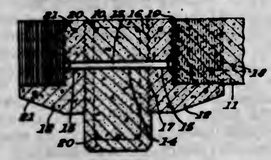
23,074

PRECAST CONCRETE CORRUGATED CONNECTION

Albert Henderson, Pittsburgh, Pa., assignor, by mesne assignments, to The Cementstone Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Original No. 2,414,738, dated January 21, 1947, Serial No. 593,375, May 12, 1945. Application for reissue January 14, 1948, Serial No. 2,186

10 Claims. (Cl. 72—106)



10. In a building construction, a static concrete structure comprising a precast concrete support member, a precast concrete bracket member carried by the support member and another member bearing against the bracket member and normally exerting force thereagainst tending to shear the bracket member from the support member, the support member and the bracket member having opposed faces through which they bear against each other, said faces having interfitting corrugations extending transversely of the direction of said force.

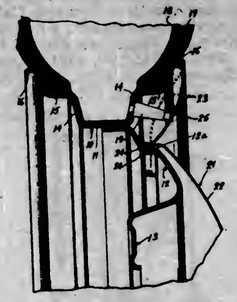
23,075

WHEEL COVER

George Albert Lyon, Allenhurst, N. J.

Original No. 2,386,225, dated October 9, 1945, Serial No. 474,647, February 4, 1943. Application for reissue August 29, 1946, Serial No. 693,603

14 Claims. (Cl. 301—37)



1. As an article of manufacture a wheel cover member including a ring portion of thin resiliently deflectable material and a central cover portion of relatively stronger material, said ring portion having an enlarged inner edge, said central portion having its peripheral marginal portion protectively embracing said enlarged edge of the ring portion to provide a unitary assembly, said peripheral marginal portion of the central cover portion being arranged for sliding under stress into retaining engagement with retaining means on an outer part of a wheel, said ring portion being constructed and arranged to be locally, manually deflectable to provide access between said ring and a wheel when said unitary structure is mounted on said outer part of the wheel.

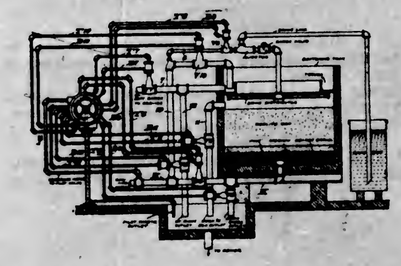
23,076

PLURAL VALVE ACTUATION AND CONTROL

Eric Pick, East Rockaway, N. Y., assignor to The Permutit Company, New York, N. Y., a corporation of Delaware

Original No. 2,076,321, dated April 6, 1937, Serial No. 45,133, October 15, 1935. Application for reissue September 20, 1945, Serial No. 617,657

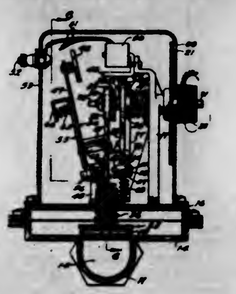
4 Claims. (Cl. 137—144)



2. In a valve system for coordinating a plurality of fluid flows which comprises a plurality

of main valves operated by a fluid under pressure, pilot valve means controlling the pressure fluid and pressure fluid connections between the main valves and the pilot valve means, means for preventing the opening of one of said main valves until a second of said main valves is closed, said last named means comprising an auxiliary valve in a pressure fluid connection to said one main valve, and means for opening said auxiliary valve automatically actuated by the closing of said second main valve.

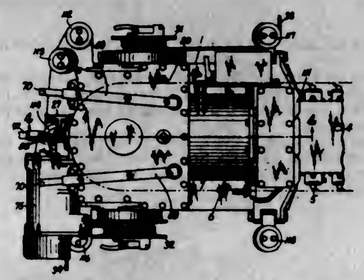
23,077
CONTROL APPARATUS
William A. Ray, North Hollywood, Calif., assignor to General Controls Co., a corporation
Original No. 2,381,926, dated August 14, 1945, Serial No. 394,338, May 20, 1941. Application for reissue September 16, 1946, Serial No. 697,171
15 Claims. (Cl. 74—1)



1. In a condition control apparatus: a device to be actuated; an actuating member; means interconnecting said device and said member and including a pair of continuously-interconnected elements one of which is continuously responsive to movement of said member, said elements being normally so movable relative to each other that movement of said one of the elements is ineffective to actuate said device; means maintaining said one of the elements in potential driving relation to the other of said elements; and means, responsive to a condition of said apparatus which must be maintained during the entire period of operation thereof, for so controlling the operation of said one of said elements that it is capable of imparting movement to the other of said elements to permit actuation of the device by the member, only while said required condition exists.

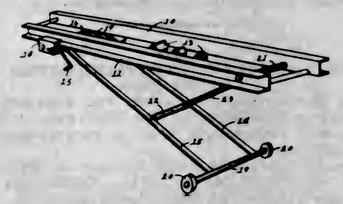
23,078
MINING MACHINE
Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Original No. 2,349,311, dated May 23, 1944, Serial No. 389,016, April 17, 1941. Application for reissue May 7, 1945, Serial No. 592,297
6 Claims. (Cl. 262—30)

1. In a mining machine, the combination comprising a horizontal plane cutter bar having spaced apart parallel rearward portions, a cutter chain movable in an orbit about the margin of said cutter bar, and a horizontal motor for driving said cutter chain having a motor casing provided with a bottom projection, a bottom step plate, the rearward bar portions extending along



the opposite sides of said motor casing projection and engaging surfaces on said step plate and the bottom of said motor casing, and a bar hanger mounted upon said step plate and having a portion projecting between said rearward bar portions and with which said cutter bar is slidingly engaged.

23,079
CONVEYER
Bert Woldring and James R. Sebastian, Grand Rapids, Mich., assignors to Rapids-Standard Co., Inc., Grand Rapids, Mich., a corporation of Michigan
Original No. 2,347,308, dated April 25, 1944, Serial No. 511,232, November 22, 1943. Application for reissue March 5, 1945, Serial No. 580,944
3 Claims. (Cl. 193—35)



1. A gravity conveyer having a pair of rails spacedly secured together and means for selectively adjustably varying the inclination of the spaced rails comprising; a pair of members each longitudinally slidable on a rail and secured together by a shaft rotatably disposed therebetween, supporting means for the conveyer secured at one end to the shaft, a second shaft rotatably secured between the rails in spaced relation to the first shaft, a connecting link secured between the second shaft and said supporting means, and an eccentric collar rotatably carried adjacent each opposite end of the first shaft whose cammed surface is adapted to be manually rotated into engagement with its proximate rail.

PLANT PATENTS

GRANTED JANUARY 11, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

819
APPLE TREE
Curtis C. Aller, Yakima County, Wash.
Application January 22, 1947, Serial No. 723,542
1 Claim. (Cl. 47—62)

The new and distinct variety of apple tree, substantially as herein shown and described, identical with the Yellow Newtown in foliage, growth, tree type and fruit flesh, but characterized as to novelty by its long fruit spurs which easily separate from the fruit in picking; its freedom from susceptibility to scald or bitter pit; its habit of bearing annually; and its somewhat elongated blocky fruit having bright green color, deep cavity, and long stems.

820
MAGNOLIA PLANT
Carl Edward Kern, Wyoming, Ohio
Application May 31, 1947, Serial No. 751,578
1 Claim. (Cl. 47—60)

A new and distinct variety of *Magnolia stellata* plant substantially as shown and described, characterized particularly by its floriferousness, the coloring of its blooms, its compact upright growth, the lateness and length of its blooming season, and its healthy, vigorous growth.

PATENTS

GRANTED JANUARY 11, 1949

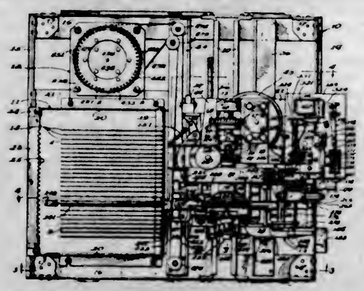
2,458,494
STABILIZATION OF VINYL COMPOUNDS
John R. Durland, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application September 21, 1946, Serial No. 698,432
2 Claims. (Cl. 260—666.5)

2. A liquid composition comprising a styrene monomer and a proportion sufficient to inhibit polymerization of a monosulfide of mono butylated meta cresol.

2,458,495
PROCESSES OF FERMENTATION
Jackson Walter Foster, Austin, Tex., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application July 2, 1948, Serial No. 36,822
10 Claims. (Cl. 195—36)

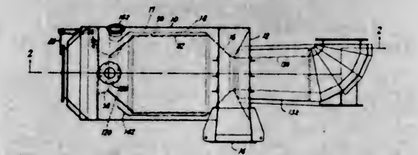
1. Process for the production of penicillin, comprising fermenting an aqueous nutrient medium under submerged aerated conditions by means of the fungus *Penicillium chrysogenum* var. *brevisterigma*.

2,458,496
AUTOMATIC PHONOGRAPH
Edward F. Andrews, Chicago, Ill., assignor, by mesne assignments, to N. Marshall Seeburg, Chicago, Ill.
Application May 4, 1942, Serial No. 441,625
28 Claims. (Cl. 274—10)



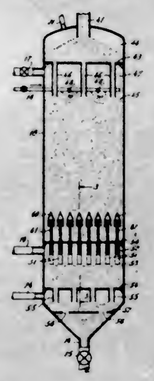
1. In a phonograph of the type including, a pair of record clamping and rotating members for supporting a record for rotation about an axis in playing position, one of said members being movably mounted relative to the other and movable toward and away from said position, means including record engaging pickup and a player arm pivotally mounted to one side of said position and movable toward the axis for reproducing a record, a generally arcuate record stripping member positioned at that side of the playing position at which said one member is located and spaced a short distance from said position, said arcuate member defining a central opening through which said one clamping member is movable and having its ends spaced apart at the side nearest the pickup to enable said pickup to move toward the axis of rotation of the record.

2,458,497
COMBUSTION CHAMBER
Ervin G. Bailey, Easton, Pa., assignor to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey
Application May 5, 1945, Serial No. 592,257
8 Claims. (Cl. 263—19)



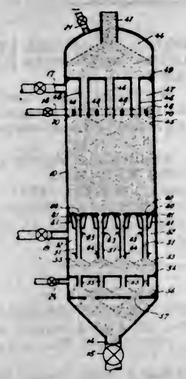
1. In a combustion chamber installation, a sheet metal cylindrical wall of single sheet thickness construction enclosing a combustion space, a burner injecting burning fuel into the combustion space, a Venturi-like construction forming a gas mixing outlet, and means maintaining a moving envelope of cooling gas externally of said wall, said wall being formed over its entire operating area with a multiplicity of closely spaced wall openings with inner and outer gas deflecting wall parts associated with each opening, the inner deflecting parts being offset inwardly of said wall and extending downstream beyond their associated openings and thereby maintaining an inner envelope of cooling gas along the inner surface of the wall.

2,458,498
METHOD AND APPARATUS FOR CONVERSION OF FLUID HYDROCARBONS
Eric V. Bergstrom, Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application August 31, 1946, Serial No. 694,334
16 Claims. (Cl. 196—52)



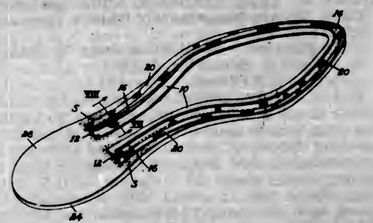
1. A method for conversion of fluid hydrocarbons to lower boiling gaseous hydrocarbons in the presence of a moving particle-form contact material which method comprises: introducing particle-form contact material into the upper section of a confined, elongated conversion zone at a suitable temperature for said hydrocarbon conversion, passing said contact material downwardly through an upper portion of said zone as a substantially compact column of downwardly flowing particles, introducing fluid hydrocarbons into the upper section of said zone and passing said hydrocarbons downwardly within said column to effect conversion to lower boiling gaseous hydrocarbons, collecting said gaseous products in a plurality of gas collecting spaces spaced apart within the lower section of said column, maintaining within a lower section of said zone a settling space, flowing the contact material in said column downwardly around said collecting spaces and passing contact material as at least one substantially compact confined stream from a level in said column below said gas collecting spaces through said settling space onto a substantially compact bed of said contact material below and exposed to said settling space, withdrawing contact material from said bed at a controlled rate, passing the collected gaseous products from each of said gas collecting spaces as a confined stream to said settling space and withdrawing gaseous products from said settling space.

2,458,499
METHOD AND APPARATUS FOR CONVERSION OF FLUID HYDROCARBONS
Eric V. Bergstrom, Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application September 13, 1946, Serial No. 696,856
11 Claims. (Cl. 196—52)



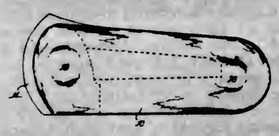
1. A method for conversion of fluid hydrocarbons in the presence of a particle-form contact mass material which comprises: introducing particle-form contact material into the upper section of a confined conversion zone and passing it downwardly within said zone as a substantially compact column, introducing fluid hydrocarbons into said zone to contact said contact material so as to be converted to gaseous hydrocarbon products, flowing contact material from the lower section of said conversion zone as a plurality of spaced downwardly extending streams onto an equal plurality of limited accumulations of downwardly flowing contact material maintained in the upper portion of a second confined zone below said conversion zone, said accumulations serving to throttle the flow of contact material from said streams and said accumulations having a total cross-sectional area at their broadest plane substantially less than that of said second confined zone, flowing the contact material from the bottom of each of said accumulations as at least one confined elongated, downwardly extending, substantially compact stream onto the surface of a bed of said contact material maintained in the lower portion of said second zone so as to provide a substantial gas space surrounding said accumulations and the confined streams therefrom above said bed, withdrawing used contact material from said bed at a controlled rate, flowing gaseous conversion products from the lower section of said conversion zone along with said streams of contact material delivering onto said accumulations and disengaging said gaseous products from the contact material substantially at the location of contact material delivery from said streams onto said accumulations, directing the disengaged gaseous products downwardly in said gas space in said second zone toward the surface of said bed of contact material in said second zone so as to cause any entrained solid particles to settle onto said bed and withdrawing gaseous conversion products from said gas space above said bed.

2,458,500
RIBBED STRIP FOR INSOLES
Frederic E. Bertrand, Lynn, and Alfred S. Clark, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 14, 1946, Serial No. 709,674
14 Claims. (Cl. 36—22)



1. As an article of manufacture, a ribbed strip adapted for attachment to insoles to provide sewing ribs thereon comprising a single strip folded to form an upstanding rib with integral flanges projecting laterally from opposite sides of the rib, and another strip completely covering both sides of the rib and overlying only one of said flanges.

2,458,501
FOOT SUPPORTING DEVICE FOR SHOES
George E. Burford, Oklahoma City, Okla.
Application January 30, 1946, Serial No. 644,312
4 Claims. (Cl. 36—71)



1. A shoe appliance for assuring the proper functioning of the different parts of the foot in distributing the weight of a walking person from the heel through the weight-bearing arch on the outer portion of the foot and to the metatarsal

bones, comprising a semi-circular heel structure adapted to be worn beneath the heel, having an upper surface which is inclined from the rear and side edges inwardly and downwardly to form a stadium-shaped formation with the open side thereof directed forwardly, spaced apart longitudinally and continuously extending elongated members positioned on opposite sides of said appliance and extending forwardly from said semi-circular heel structure, said spaced-apart longitudinally extending members provided with thickened outer edges and feathered inner edges which serve as foot supporting surfaces, the inner longitudinal edges of said members being spaced apart throughout the length of said members and extending in a substantially straight line throughout the central portion of said appliance, the elongated member supporting the outer or weight-bearing arch of the foot being wider and higher than the opposite member which supports the inner or spring arch of the foot, each of said longitudinally extending members formed with a forwardly and rearwardly inclined upper surface and provided with apices intermediate the lengths thereof which are positioned forward of the semi-circular heel structure, and a metatarsal bridge in the form of a transversely extending pad which connects the forward ends of the longitudinally extending members to provide a bearing for the ball of the foot and the metatarsal bones thereof.

2,458,502
STRUCTURAL ELEMENT FOR HIGH TEMPERATURE SERVICE USE

Arthur T. Cape, Columbus, Ohio, assignor to Coast Metals, Inc., Canton, Ohio, a corporation of Delaware

No Drawing. Application June 30, 1944, Serial No. 543,047

5 Claims. (75—171)

1. A structural element having at least a part which in use is subjected to abrasion and wear at elevated temperatures, and which is capable of resisting the corrosive action of lead oxide at those temperatures, said part comprising an alloy containing from about 55% to about 75% nickel, from about 10% to about 30% chromium, from about 10% to about 13.5% tungsten, and from about 1.75% to about 3.5% carbon, the balance of the alloy being substantially all iron, but the iron being not in excess of 10%.

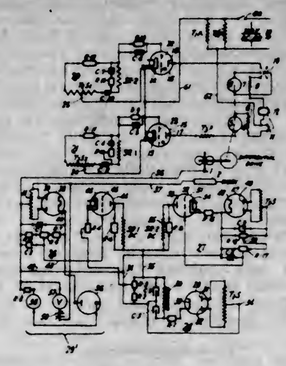
2,458,503
ELECTRICAL CONTROL SYSTEM

Otis R. Carpenter and Frank W. Armstrong, Jr., Barberton, Ohio, assignors to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey

Application November 9, 1946, Serial No. 708,858

6 Claims. (Cl. 314—64)

1. In an electric welding system including an electrode movable relative to the work by the driven element of a differential gearing having its driving elements rotated in opposite directions by a pair of high speed electric motors each connected to one driving element, and a source of electric current for said motors, a control circuit comprising, in combinaton, a pair of electric valve means each controlling the flow of current from the source to one of the motors; control means for one of said valve means operative, responsive to variations in the welding voltage from a predetermined value, to condition its controlled valve means to vary the current flow to the associated motor; and control means for the other valve means operative, responsive to such variation in the current flow, to condition its controlled valve means to vary the current flow to the other motor; the motors normally operating the driving elements at substantially the same speed, when the welding voltage is at said predetermined value, to maintain such driven



element stationary and the changes in relative motor speeds due to such variations in current flow effecting relatively inverse changes in the speeds of the differential driving elements to effect movement of such driven element to move the electrode to restore the welding voltage to said predetermined value.

2,458,504
REACTION PRODUCTS OF GELATIN AND ALDONIC ACIDS AND PROCESS FOR MAKING SAME

Allan E. Chester, Highland Park, and Frederick F. Reisinger, Waukegan, Ill., assignors to Poor & Company, Chicago, Ill., a corporation of Delaware

No Drawing. Application March 6, 1944, Serial No. 525,323

12 Claims. (Cl. 260—117)

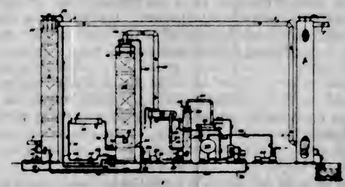
1. A composition comprising furfural and the reaction product of a gelatin with an aldonic acid dissolved in water.

2,458,505
GAS PURIFICATION PROCESS

Fred Denig, Pittsburgh, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware

Application November 2, 1945, Serial No. 626,248

7 Claims. (Cl. 23—151)



5. A process for the liquid purification of cooled coke-oven gas which has not been cooled so much as to condense out all the naphthalene and for the separation and recovery of improved yields of

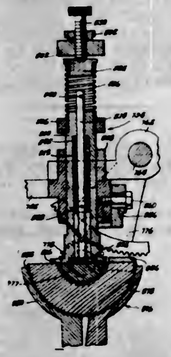
hydrogen sulphide and hydrogen cyanide therefrom, comprising: continuously scrubbing the cooled coke-oven gas with an aqueous alkali-metal carbonate solution at a temperature at least as high as the lowest temperature to which the coke-oven gas had previously been cooled to absorb hydrogen sulphide, hydrogen cyanide, and a minor amount of naphthalene from the gas; continuously flowing solution containing the absorbed constitutents into an actification zone of reduced pressure and therein heating the solution continuously to vaporize as actifier gases therefrom hydrogen sulphide, hydrogen cyanide and naphthalene; continuously washing the actifier gases with a hydrocarbon wash oil at a temperature at least higher than the dew point of the water vapor at the pressure in the actifier gases to absorb therefrom naphthalene; removing so-enriched wash oil from the washing step and revivifying it by distilling naphthalene therefrom; continuously recycling revivified wash oil to the said washing step; condensing water vapor from the actifier gases; and separating hydrogen sulphide and hydrogen cyanide from the so-treated actifier gases.

2,458,506
HALF FRUIT PEELER WITH COOPERATING RETAINER MEANS

Raymond L. Ewald and Henry A. Skog, Olympia, Wash., assignors to Special Equipment Company, Portland, Oreg., a corporation of Oregon

Original application October 21, 1946, Serial No. 363,596. Divided and this application July 31, 1948, Serial No. 496,884

20 Claims. (Cl. 146—43)



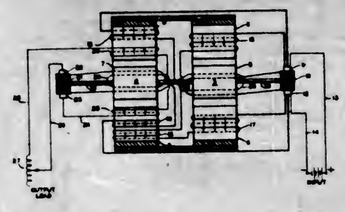
1. In a device of the class described, in combination with a half fruit holder adapted to receive and hold a half fruit with its cut face exposed, a peeling head, means for shifting the peeling head into position adjacent the cut face of the half fruit, a peeling knife, means for arcuately moving the knife through the flesh of the half fruit to peel the same, means carried by the peeling head for contacting the cut face of the half fruit during peeling comprising complemental parts, one of said parts being rigidly carried by the peeling head and overlying that portion of the cut face of the half fruit from which the peeling knife emerges, and another part overlying a portion of the cut face of the half fruit into which the peeling knife enters, said last mentioned part being resiliently mounted with respect to the peeling head.

2,458,507
DYNAMOTOR

Kenneth H. Fox, Red Bank, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application June 28, 1946, Serial No. 679,938

2 Claims. (Cl. 171—123)



1. A dynamoelectric machine including a stationary member and a rotatable member, said rotatable member being divided into a pair of magnetically substantially separate sections, a generator winding in both sections of said rotatable member, a motor winding in one of said sections, a first commutator connected to said generator winding, a second commutator connected to the motor winding, a first field winding on said stationary member and cooperating with said one section of the rotatable member, a second field winding on said stationary member and cooperating with the second section of said rotatable member, a source of electrical energy for exciting said first and second field windings, input brushes cooperating with the second commutator for connecting said motor winding to said source of electrical energy, a first compensating winding connected in series with said first field winding and having a like polarity to that of said second field winding, said compensating winding rapidly responsive to change in voltage of said source of energy and positioned adjacent said second field winding so as to effect rapid change in the magnetic flux of the second field winding upon variations in the electrical energy supplied by said source, output brushes cooperating with said first commutator, a second compensating winding on said stationary member and cooperating with said second section of the rotatable member, an electrical load, said second compensating winding connected in series with said load across said output brushes for compensating said generator winding for variations in the load, the portion of said generator winding in said second section having an opposite polarity to that of the other portion of the generator winding in the one section, and said portions of the generator winding being serially connected so as to compensate for variations in the input to said first and second field windings from said source of electrical energy to maintain a substantially constant output from said generator winding under varying load and electrical input conditions.

2,458,508
SAMPLING DEVICE

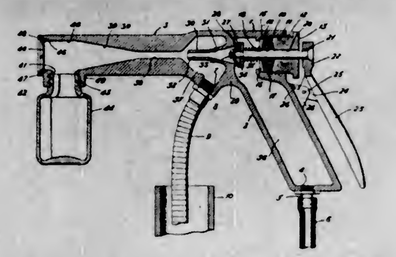
Henry E. Goetz, Brooklyn, N. Y.

Application October 8, 1946, Serial No. 701,972

4 Claims. (Cl. 73—421)

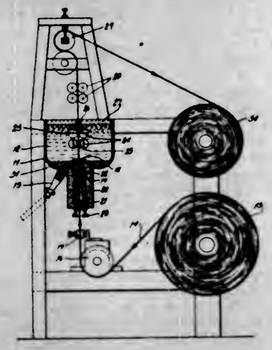
1. The combination of a barrel and a chambered handle, a spring pressed valve for interrupting communication from said handle to said barrel, a manually operated lever operatively connected to said valve to open the same and establish communication between said cham-

bered handle and said barrel, said chambered handle having an inlet, a conduit for connecting said barrel to a power oil reservoir, said barrel having two outlets, a container connected to one



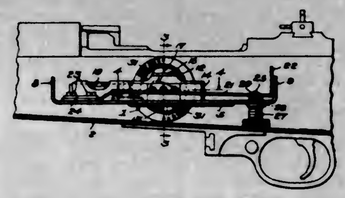
of said outlets to receive oil drawn into said barrel by suction when said valve is opened, and a screen for said other outlet to filter the oil from the air stream passing therethrough.

2,458,509
APPARATUS FOR TINNING STEEL
William F. Grupe, Lyndhurst, N. J., assignor to Interchemical Corporation, New York, N. Y., a corporation of Ohio
Original application August 28, 1942, Serial No. 456,569. Divided and this application June 18, 1943, Serial No. 491,313
4 Claims. (Cl. 91—12.5)



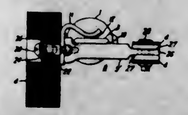
1. An apparatus for coating sheets of steel with molten tin, comprising a tank for molten tin an elongated, slot-like opening in the tank intermediate between the top and bottom thereof so that in normal operation, the opening will be above the level of the tin-iron alloy formed and below the level of the molten tin, each side and end of the slot carrying at least throughout its length a material that is not wet by molten tin, in such relation that the material on the sides and ends abut to form a barrier against the passage of molten tin, and a pair of rollers beneath the normal operation level of the molten tin with their axes parallel to and their bite aligned with the slot-like opening, whereby a sheet may be passed through the slot and the bite of the rolls in sequence, said rolls being provided with slotted grooves, extending axially along the rolls.

2,458,510
GRENADE SIGHT FOR FIREARMS
John C. Garand, Springfield, Ed G. Cooper, Framingham, and John R. Bird, Pittsfield, Mass., and Harold C. Miller, Billings, Mo.
Application November 9, 1945, Serial No. 627,774
11 Claims. (Cl. 33—58)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. A grenade launching sight for a firearm comprising a circular member arranged to be secured to a firearm, said circular member having a cylindrical recess therein generated about a horizontal axis transverse with respect to the firearm, a sighting bar, a mounting disc secured to said sighting bar and arranged to engage in said recess, a resilient clip member secured to said sighting bar, said clip member having bent end portions arranged to engage behind said circular member, thereby securing said sighting bar in rotatable relation to said circular member, a plurality of serrations arcuately disposed on the rear surface of said circular member, and toothed means on said bent over end portions of said resilient clip member cooperating therewith, whereby said sighting bar may be resiliently secured in any one of a plurality of angular positions with respect to the horizontal.

2,458,511
COMBINED SWITCH STUD AND FUSE CLIP
Winton G. Harlow, Upper Darby, Pa., assignor to General Electric Company, a corporation of New York
Application June 6, 1945, Serial No. 597,884
2 Claims. (Cl. 200—114)



1. A combination switch stud and fuse clip comprising a stud of relatively high conductivity having a cylindrical contact surface and an end portion provided with a flattened surface for hinging a switch blade, and means for holding a fuse having a blade type terminal with the terminal against the cylindrical contact surface of the stud in relatively high pressure substantial line-contact comprising a resilient member of relatively low conductivity provided with a contact surface opposed to said stud below the flattened surface thereof and shaped to engage the fuse blade terminal in approximate point-contact, said member being movable in a direction substantially perpendicular to the flattened surface of the stud.

2,458,512
ACYLATION OF THIOPHENE
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application December 21, 1945, Serial No. 636,512
15 Claims. (Cl. 260—329)

1. A process for nuclear acylation of a thiophene, comprising reacting the same with an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids in the presence of a porous, absorptive catalyst, comprising silica and at least one oxide of a metal selected from the group consisting of those in group IV, sub-group A, and those in the iron sub-group, of group VIII, of the Mendeléeff periodic table.

2,458,513
PROCESS FOR THE ACYLATION OF THIOPHENE
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application March 9, 1946, Serial No. 653,419
20 Claims. (Cl. 260—329)

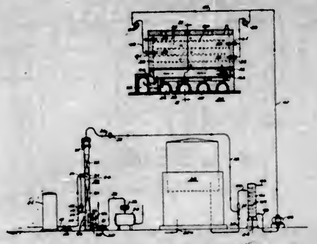
1. A process for nuclear acylation of an acylatable thiophene compound to yield a product having an acyl radical attached to the thiophene nucleus of said compound, which comprises reacting an acylatable thiophene compound with an acylating agent selected from the group consisting of acyl halides and carboxylic acid anhydrides in the presence of a porous absorptive material impregnated with a strong hydroxy acid having an initial ionization constant greater than about 1.0×10^{-2} and containing at least one element selected from the group consisting of sulfur, phosphorus, and fluorine.

2,458,514
CONTINUOUS CATALYTIC PROCESS FOR THE ACYLATION OF THIOPHENES
John Kellett, III, and Herbert E. Rasmussen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application February 12, 1946, Serial No. 647,174
17 Claims. (Cl. 260—329)

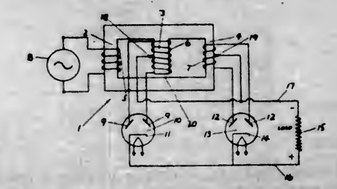
1. A continuous process for the acylation of thiophene, comprising reacting a mixture of thiophene and an acylating agent selected from the group consisting of acyl halides and carboxylic acid anhydrides in the presence of ortho phosphoric acid as a catalyst, separating the resultant reaction product mixture into its components and continuously withdrawing acylated thiophene from the system.

2,458,515
METHOD OF HEATING COKING RETORT OVENS WITH ENRICHED MIXTURES OF FUEL GAS
William O. Keeling, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application June 24, 1943, Serial No. 492,083
5 Claims. (Cl. 202—12)

5. In coke-oven operation, heating said coke oven with a non-regeneratively-preheated fuel-gas, by the steps of: withdrawing from reserve, in liquid state, at the coke-oven plant site and heating to vaporize a mixture of hydrocarbons containing up to and including hydrocarbons having seven carbon atoms in their molecular constitution; continuously flowing the heated vaporous mixture of hydrocarbon compounds containing up to and including hydrocarbons having seven carbon atoms in their molecular constitution, into admixture with a producer-gas having too low a calorific value effectively to heat said coke oven without a regenerative-preheating step for said producer-gas, and in proportion to provide the producer-gas with a calorific value effective to heat said coke oven but insufficient to raise the dewpoint temperature of the so-formed admixture above a temperature point reached therein during its traversal of a distribution system to the heating flues in said coke oven; applying heat to said admixture to maintain the temperature thereof, during its traversal to said coke oven, above the dewpoint temperature with respect to the condensible constituents of said admixture; and continuously delivering said admixture as fuel-gas to heating flues of said coke oven without a regenerative preheating step and burning the same therein.

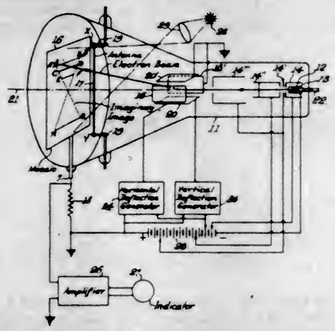


2,458,516
RECTIFYING SYSTEM
Hans Klemperer, Belmont, and William F. Huntley, Lowell, Mass., assignors to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 5, 1945, Serial No. 632,950
5 Claims. (Cl. 175—363)



1. A rectifying system comprising a three-legged transformer core with a primary winding around one leg, a secondary winding around a second leg, and a tertiary winding around the third leg, a source of alternating current connected to said primary winding, said second leg being adapted to produce in said secondary winding by transformer action from said source a double-lobed voltage wave with a depression between said lobes, said third leg being adapted to produce in said tertiary winding by transformer action from said source a peaked induced voltage wave, the peak of said last-mentioned wave occurring in time phase with the depression of said first-mentioned wave, and means for mixing and rectifying said waves.

2,458,517
CATHODE-RAY ULTRA HIGH FREQUENCY RECEIVER
Arthur R. Knight, Dayton, Ohio
Application November 23, 1942, Serial No. 466,973
11 Claims. (Cl. 250—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A device for detecting radio waves comprising antenna means for receiving the waves and setting up a non-uniform field due thereto, means for projecting a stream of electrons through said field, means for setting up a field independent of the first-recited field which acts on said stream for moving the stream in the first-named field, and means for detecting any change in the electron stream due to change in uniformity of the first-named field.

2,458,518
SNAP ACTING DEVICE
Everard F. Kohl, Lakewood, Ohio
Application May 15, 1944, Serial No. 535,709
15 Claims. (Cl. 200—67)

1. In combination, a switch having a resilient arm movable from a normal to an actuated position and mechanism for actuating said arm including a spring having upper and lower substantially flat arms with a portion of the lower arm engaging the resilient arm of said switch and the upper arm being biased away from the lower arm, means associated with the arms of said spring for maintaining them in spaced relation, and an actuator engaging the upper arm of said spring, said spring being of sufficient strength to move the resilient arm of said switch from its normal to its actuated position without flexing said spring when pressure is applied to said actuator, and the upper arm of said spring being flexible to permit overtravel of said actuator after the resilient arm of said switch is moved to its actuated position.

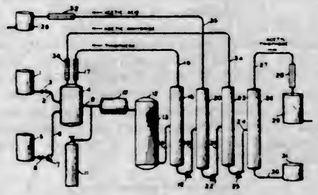
2,458,519
ACYLATING THIOPHENE WITH SILICA-ALUMINA CATALYST
Alvin I. Kosak, Columbus, Ohio, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 28, 1945, Serial No. 619,251
17 Claims. (Cl. 260—329)

1. A process for nuclear acylation of a thiophene, comprising reacting a thiophene with an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids in the presence of a porous absorptive silica-alumina catalyst.

2,458,520
ACYLATION OF THIOPHENE
Alvin I. Kosak, Columbus, Ohio, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application November 8, 1945, Serial No. 627,530
20 Claims. (Cl. 260—329)

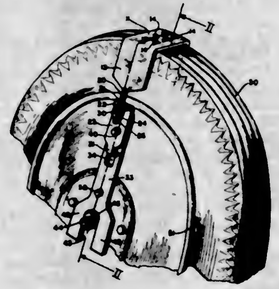
1. A process for nuclear acylation of an acylatable thiophene compound to yield a product having an acyl radical attached to the thiophene nucleus of said compound, which comprises reacting an acylatable thiophene compound with an acylating agent selected from the group consisting of acyl halides and carboxylic acid anhydrides in the presence of a strong hydroxy acid characterized by an initial ionization constant greater than 1.0×10^{-2} and containing at least one element selected from the group consisting of sulfur, phosphorus and fluorine.

2,458,521
ACYLATING THIOPHENE WITH SILICA-HYDROUS METALLIC OXIDE CATALYST
Alvin I. Kosak, Columbus, Ohio, and Howard D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application January 4, 1946, Serial No. 639,142
20 Claims. (Cl. 260—329)



1. A continuous vapor-phase process for nuclear acylation of thiophenes with an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids, comprising passing a mixture of said thiophene and said acylating agent through a bed of porous, absorptive silica-hydrous metallic oxide catalyst maintained at a temperature sufficient to vaporize said mixture, condensing vapors ensuing from said bed and treating the resultant condensate to give an acylated thiophene.

2,458,522
TRACTION AIDING DEVICE FOR SELF-PROPELLED VEHICLES
Raymond F. MacKay, Worcester, Mass.
Application November 7, 1946, Serial No. 708,364
6 Claims. (Cl. 152—229)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



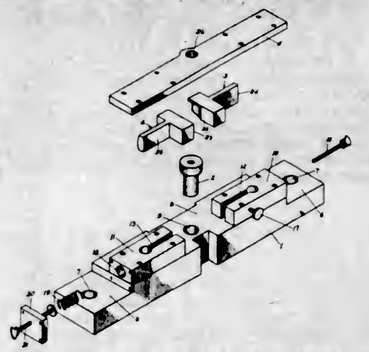
3. A traction aiding device for use on a vehicle having a pneumatic tire having a circular tread and spaced side walls attached to said tread at the edges thereof, said device comprising a first and a second gripping plate, means connecting said gripping plates and adapted to support said gripping plates on opposite sides of said pneumatic tire in a fixed space relationship, the spacing between said gripping plates being substantially less than the unrestrained width between the side walls of said tire at points in the vicinity of the point of contact of said tire with the highway whereby lateral pressure is exerted between the side walls of said tire and said gripping plates as said gripping plates approach said point of contact, means to secure one of said gripping plates to said drive wheel, and traction aiding means extending between said first and second gripping plates.

2,458,523
FROTH FLOTATION OF SULFIDE ORES IN THE PRESENCE OF A N-DICHLOROTHIOCARBANILIDE
Rhetherford B. Martin, New York, N. Y., assignor to Kennecott Copper Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 5, 1945, Serial No. 620,648
3 Claims. (Cl. 209—166)

1. The method of concentrating sulphide ore which comprises subjecting the ore in the form of a pulp to a froth flotation operation in the presence of a chlorinated thiocarbanilide compound in which a chloride atom is attached to a nitrogen atom.

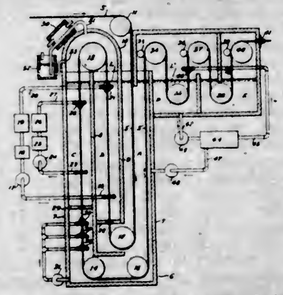
2,458,524
PUNCH JIG
James F. Murphy, Philadelphia, Pa.
Application December 14, 1945, Serial No. 635,132
4 Claims. (Cl. 164—59)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A jig adapted to be used in a punch press for guiding and punching a metal strip, comprising a base, a die mounted in said base over which said strip passes, a pair of oppositely disposed guide-holders mounted on said base adjacent said die, said guide-holders having slots extending outwardly from the opposed faces thereof substantially normal to the path of travel of said strip, a guide movably mounted in each of said slots for



guiding said strip, said guides being flared outwardly at the receiving ends thereof, means for fixedly adjusting one of said guides, and resilient means for urging the second guide toward said first guide.

2,458,525
METHOD AND APPARATUS FOR BRIGHTENING TIN PLATE
John S. Nachtman, Youngstown, Ohio
Application May 17, 1943, Serial No. 487,241
11 Claims. (Cl. 204—36)

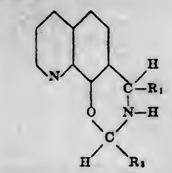


1. The method of continuously brightening steel strip electroplated with tin which includes the step of preheating the strip by passing the strip through a first body of liquid hydrocarbon heat conducting medium maintained at a temperature sufficient to preheat the tin to just below its melting point, then raising the temperature of the tin sufficiently to melt the tin while passing the strip through a zone containing a second body of liquid hydrocarbon medium, then quenching the tin by passing the strip through a third body of liquid hydrocarbon medium maintained at a temperature which will quench and solidify the tin, said bodies of heat conducting medium being in communication with each other for passage of the strip therebetween, and introducing the strip on its way to the first preheating body of medium through said third quenching body of medium in heat exchange relation therethrough with the quenched strip so as to utilize the heat absorbed by the quenching medium from the quenched strip to heat the incoming strip.

2,458,530
radiodic sweep currents alternating with retrace

2,458,526
MINERAL OIL COMPOSITION
Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application July 6, 1945, Serial No. 603,586
6 Claims. (Cl. 252—51.5)

1. An improved normally liquid hydrocarbon fraction selected from the group consisting of a normally liquid hydrocarbon fraction adapted for use as a fuel and a normally liquid hydrocarbon fraction adapted for use as a lubricant, said improved hydrocarbon fraction containing a minor proportion of a condensation product having the general formula:

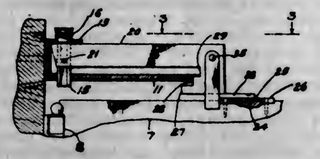


wherein R_1 and R_2 are aryl radicals.

2,458,527
MINERAL OIL COMPOSITION
Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application July 6, 1945, Serial No. 603,586
18 Claims. (Cl. 252—33.6)

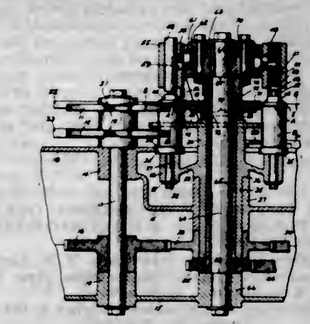
18. An improved mineral oil containing a minor proportion of a material selected from the group consisting of an oil-soluble, nitrogen-containing condensation product and a polyvalent metal salt of said condensation product; said product being obtained by reaction of an aldehyde, a hydroxy-aromatic carboxylic acid and a polyamine in which each amino group has at least one hydrogen atom, at a temperature falling within the range varying between about 20° C. and the reflux temperature of the reaction mixture and for a time sufficient to effect the condensation reaction; the ratio of reactants used on the basis of one molar equivalent of the aldehyde being at least about one-half molar equivalent of the polyamine and a sufficient amount of the hydroxy-aromatic carboxylic acid to provide about one molar equivalent of the hydroxyaromatic substituent thereof.

2,458,528
ADJUSTABLE DOOR HOLDER AND DOORSTOP
James E. Olvis, Glendale, Calif.
Application April 8, 1946, Serial No. 660,315
9 Claims. (Cl. 292—341)



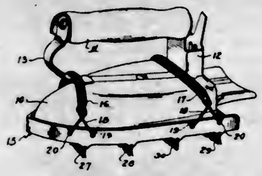
1. An adjustable door holder comprising a toothed, approximately semicircular segment mounted superadjacent to an upper corner of a door opening in a horisontally extending position, an upstanding mounting flange carried by the midlength portion of the straight side of said segment, said flange having an apertured lip extending laterally from it in an overhanging upwardly spaced relation to the segment, there being also an aperture through the segment in vertical alinement with the aperture of said lip, vertically movable means having a working fit in the apertures of said lip and segment, a swingable arm having an anchored end secured to said vertically movable means, the free end portion of said arm having a downward extension provided with a notch at times positioned to clear the teeth of the segment and a locking tooth subjacent to said notch at times positioned between adjacent teeth of said segment, and a spring normally holding said swingable arm up sufficiently to bring its locking tooth between adjacent teeth of said segment, said locking arm being manually depressible against the opposition of said spring thus to clear its tooth from the toothed portion of said segment preparatory to swinging the locking arm to a position for engaging its locking tooth with another part of the segment.

2,458,529
MECHANISM FOR CLINCHING COVERS ONTO CANS
Roland E. Renard, San Francisco, Calif., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application May 17, 1945, Serial No. 594,324
4 Claims. (Cl. 113—17)



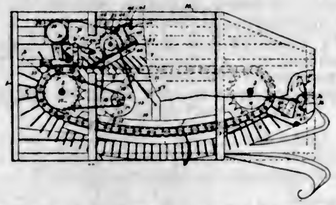
1. In a mechanism for clinching covers onto cans, the combination of a rotary can supporting member having means for positively rotating the same, separable can holding elements freely rotatable on fixed axes journaled on said member for removably engaging a can and its superimposed cover, means for positioning a can and cover between said holding elements, a clinching wheel journaled adjacent to and eccentrically of said rotating can supporting member, means for positively rotating said clinching wheel, and a universal connection between said clinching wheel and its rotating means for relative movement therebetween, the eccentric rotation of said wheel relative to said holding elements engaging its periphery with the can cover periphery while the cover and its can are bodily revolved with said supporting member to frictionally rotate the can and cover and said holding elements relative to said supporting member for clinching the cover on the can.

2,458,530
COMBING AND BRUSHING ATTACHMENT FOR SADIRONS
David Resnick, Los Angeles, Calif.
Application June 30, 1947, Serial No. 758,160
7 Claims. (Cl. 69—20)



1. In an attachment for sad irons, an angle iron skeletal shoe shaped to conform to the outline of the basal portion of a conventional sad iron, said shoe having a basal flange and a vertical flange upstanding from the outer margin of said basal flange, said vertical flange fitting around the basal part of the sad iron, brushes carried by and projecting downwardly from said basal flange, and means for detachably securing said shoe to a sad iron.

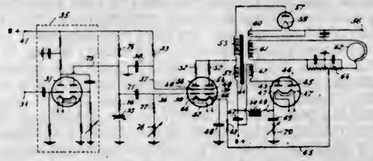
2,458,531
AUTOMATIC STOP FOR COTTON HARVESTERS
John D. Rust, Memphis, Tenn.
Application April 18, 1944, Serial No. 531,632
3 Claims. (Cl. 56—11)



2. In a cotton picking machine having a plurality of cotton gathering spindles, a set of stripping bars between which the spindles are drawn to receive cotton from the spindles and a rotary doffer located adjacent said bars in cooperative association with the bars and spindles; the invention which comprises a circuit closer having an element held in operative relation to said doffer for actuation by cotton on the doffer, a current generator for the power plant of the machine, and a connection between said circuit closer and said current generator by virtue of all of which when cotton accumulates on the doffer said circuit closer will ground said current generator.

2,458,532
CATHODE-RAY TUBE CIRCUIT
Kurt Schlesinger, New York, N. Y., assignor to Columbia Broadcasting System, Inc., New York, N. Y., a corporation of New York
Application August 7, 1946, Serial No. 688,895
11 Claims. (Cl. 315—27)

1. A high-efficiency deflection circuit for a cathode-ray tube having an associated deflecting coil for producing an electromagnetic deflecting field which comprises a sweep circuit including an electronic tube and associated anode circuit for supplying periodic sweep currents to said deflecting coil during sweep intervals, said periodic sweep currents alternating with retrace currents during relatively shorter retrace intervals, an anode power supply for said tube, a rectifier circuit coupled to said sweep circuit and connected to allow current flow during at least portions of said sweep intervals and to become substantially nonconductive during said retrace

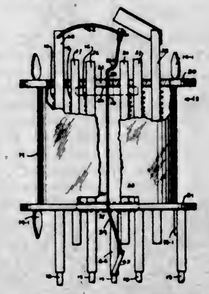


intervals, a first capacitor in said rectifier circuit connected to receive rectified current and develop a corresponding direct voltage, a second capacitor connected in shunt with said first capacitor through an inductance, said second capacitor being connected in said anode circuit in series with the anode power supply to supplement the voltage thereof.

2,458,533
MAGNESIA REFRACTORY
Robert A. Schoenlaub, Tiffin, Ohio, assignor to Basic Refractories, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application January 13, 1943, Serial No. 472,279
3 Claims. (Cl. 106—58)

3. Refractory matter comprising a ground magnesia-providing clinker having a large proportion of minus 200 mesh particles, volatilizing bonding means for the magnesia clinker at temperatures of 1000° to 1800° F. embodying 1–15 per cent of an agent which includes an element of the righthand column of periodic groups V and VI having atomic weight not less than sulphur nor greater than tellurium; and a small per cent each of a plasticizing agent and soluble silicate binder.

2,458,534
VIBRATION SUPPRESSING SUSPENSION FOR TENSIONED FILAMENTS OF ELECTRON SPACE CHARGE DEVICES
Paul Schwerin, White Plains, N. Y., assignor to Sonotone Corporation, Elmsford, N. Y., a corporation of New York
Application June 29, 1946, Serial No. 680,357
1 Claim. (Cl. 250—27.5)



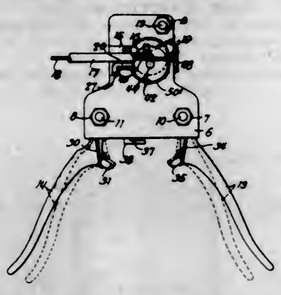
In an electrode assembly for an electron space-discharge device: a set of electrodes including at least one control electrode; said electrodes extend-

ing longitudinally generally parallel to a common axis; said electrode assembly including a generally-flat sheet-like insulating spacer extending transverse to said axis and supporting the projecting end portions of said electrodes in their spaced operative positions; a metallic filament constituting the cathode and having a mounting portion extending from one end of said filament; said spacer having a spacer perforation through which said mounting portion extends and the border edge of said spacer perforation being of a width which is a multiple of the thickness of said filament; said electrode assembly including a resilient tensioning element connected to said mounting portion for stretching the portion of the filament facing the other electrodes and for biasing a seating element of said mounting portion toward a seat portion of said border edge; the major part of the length of said mounting portion extending in a direction generally parallel to said common axis; a part of said mounting portion projecting through the perforation toward said tensioning element being offset in a direction transverse to the direction of its length for limiting and controlling the direction of the tensioning forces exerted thereby on said seating element whereby substantially the entire length of said seating element is held in engagement with the facing border edge of the spacer for imparting to the filament a vibration suppressing damping action.

2,458,535
MODIFIED HYDROCARBON COMPOSITIONS AND PETROLEUM DISTILLATES
Sol Shappirio, Washington, D. C.
No Drawing. Application December 29, 1943, Serial No. 516,119
5 Claims. (Cl. 252—54)

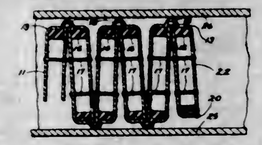
1. A petroleum distillate boiling above kerosene carrying a hydrogenated bacterial extract in an amount to exhibit antioxygenic properties for the distillate.

2,458,536
WIRE TERMINAL LOOP FORMER
C. Lawrence Sherman, Cherry Valley, Ill., assignor of one-half to Joe E. Tabor, Belvidere, Ill.
Application February 12, 1945, Serial No. 577,407
18 Claims. (Cl. 140—104)



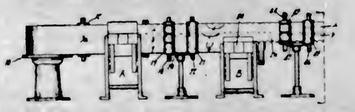
18. In a wire-bending device, the combination of a frame, wire-gripping means thereon, a rotary die, a slide slidable to a predetermined limited extent on the frame transversely with respect to the wire gripped by said gripping means rotatably supporting said die, a center pin projecting from said die and a companion pin on said die in radially spaced substantially parallel relation to the center pin between which the wire to be formed into a loop is adapted to be extended from the gripping means, a pinion for turning said die, a rack meshing with said pinion and reciprocable relative to said slide so as to transmit lineal movement to the slide to its limit position and thereafter turn the die through a predetermined angularity, and spring means for normally returning said slide to a retracted position.

2,458,537
FLEXIBLE WALL STRUCTURE
James J. Skelly, Cleveland Heights, Ohio
Application October 18, 1946, Serial No. 704,105
3 Claims. (Cl. 160—229)



1. In combination, a plurality of strips of resilient material with a U-shaped cross-section, the outline of which comprises a pair of base portions joined by a web portion, and a plurality of pairs of bent shapes with flanges to form L-shaped cross-section, each of said strips having each of its base portions enclosed between a pair of bent shapes, the flanges in said pairs of bent shapes being alternated so that each such base portion is overlapped by one of said flanges.

2,458,538
METHOD OF CUTTING BLANKS
John E. Socke, Pelham Manor, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application April 13, 1945, Serial No. 588,083
12 Claims. (Cl. 164—18).

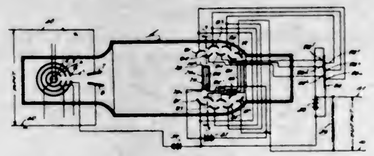


1. The method of cutting blanks from a strip of sheet material containing a plurality of parallel rows of potential blank spaces, which consists in providing a pair of rows of spaced gauging and feeding perforations disposed adjacent to and parallel with a row of said blank spaces, feeding the perforated strip longitudinally of said rows of perforations by engagement therein, and successively cutting blanks from the blank spaces in the different rows while reserving for final cutting the row of blank spaces adjacent the perforations, thereby insuring maintenance of perforations adjacent a rigid uncut portion of the strip for its complete feeding and gauging and until the last potential blank is removed from the strip.

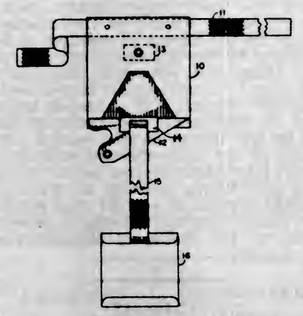
2,458,539
SECONDARY ELECTRON EMISSION TUBE
Walter Seller, Cincinnati, Ohio, assignor of one-half to William H. Woodin, Jr., San Mateo, Calif.
Original application August 19, 1943, Serial No. 499,260. Divided and this application August 28, 1944, Serial No. 551,513
4 Claims. (Cl. 250—27)

1. An electron tube system comprising an electron discharge device for propagating an

electron beam, means for controlling the angular sweep of the electron beam, a plate system disposed in the path of said electron beam, said plate system having a substantially V-shaped recess therein disposed on an axis transverse to the angular sweep of the electron beam a secondary electron emitting coating on said plate system, said coating varying from a minimum per unit section of said beam at substantially the central portion of the sweep path of said beam to a maximum at either of the limits of movement of said beam, a multiplicity of secondary electron collecting plates arranged in echelon with respect to each other and each provided with a secondary electron emitting coating thereon for multiplying the discharge of secondary electrons in a trajectory path shielded by the arrangement of said multiplicity of secondary electron collecting plates, an output circuit including the last of said secondary electron collecting plates and said plate system, and means for maintaining said secondary electron collecting plates at successively different positive potentials increasing according to the distance of said secondary electron collecting plates from said plate system.



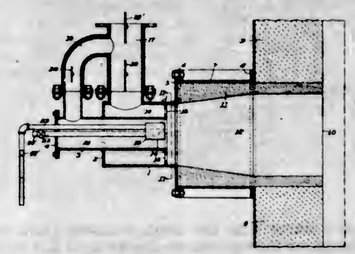
2,458,540
SHARK REPELLENT
Richard L. Tuve, Silver Spring, Md., John M. Fogelberg and Frederic E. Brinnick, Washington, D. C., and Horace Stewart Springer, Homestead, Fla.
Application October 7, 1944, Serial No. 557,716
5 Claims. (Cl. 167—16)



(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A carnivorous fish repellent composition consisting of a mixture of copper acetate, a highly water soluble dark colored dye and a water soluble wax binder.

2,458,541
LOW VELOCITY OIL BURNER
Norman J. Urquhart, Scenery Hill, Pa., assignor to Combustion Processes Company, a corporation of Pennsylvania
Application November 16, 1944, Serial No. 563,684
4 Claims. (Cl. 158—76)

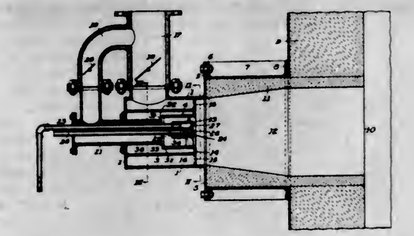


1. A low velocity oil burner comprising a chambered forwardly opening casing, a secondary air inlet duct including a chamber of said casing and having a forwardly directed opening therefrom, a combustion tunnel comprising a refractory wall surrounding the forward opening of said secondary air inlet duct and extending forwardly of the casing, a primary air inlet duct axially within the said casing and the said secondary air inlet duct and opening in the forward end of the casing into the said combustion tunnel, the said primary air inlet duct and secondary air inlet duct being arranged to supply an inner stream of low velocity primary air and a surrounding stream of low velocity secondary air for supporting combustion in the said tunnel, and a fluid projector structure in the said primary air inlet duct, said projector structure comprising a duct for high pressure gaseous fluid arranged to discharge a jet of gaseous fluid adjacent the forward opening of said primary air duct, means for supplying high pressure gaseous fluid to said duct therefor, an oil duct communicating with said duct for high pressure gaseous fluid to supply oil on the stream of gaseous fluid in the duct therefor adjacent the forward end thereof and supply oil to the outer surface of an expanding gaseous jet into the said combustion tunnel to give with surrounding primary air a primary core of fire blending with low velocity secondary air, the said refractory wall of the combustion tunnel being in direct heat exchanging relation with air and fuel issuing from said openings.

2,458,542
LOW VELOCITY OIL AND GAS BURNER
Norman J. Urquhart, Scenery Hill, Pa., assignor to Combustion Processes Company, a corporation of Pennsylvania
Application November 16, 1944, Serial No. 563,685
3 Claims. (Cl. 158—11)

1. The herein described method of producing a low velocity, luminous, unstratified combustion atmosphere comprising the steps of projecting a high velocity expanding gaseous jet within an expansion restraining heat-radiating bounding surface, supplying fuel oil to the outer surface of said expanding gaseous jet, substantially surrounding said expanding mixture of oil and gas with low velocity primary air and substantially surrounding said primary air with low velocity fuel gas, said primary air being sufficient to support combustion of a portion of said fuels, igniting and burning a portion of the said fuels and thereby producing a primary flame of high heat-

ing value, thereby highly heating said bounding surface by said primary flame, and surrounding the said primary flame with low velocity secondary air, whereby the heating effect of the



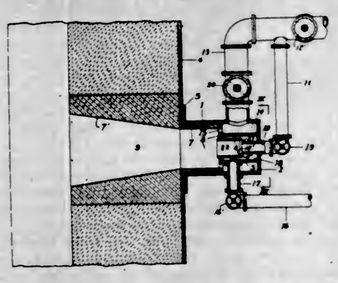
primary flame and the heat radiated from said bounding surface produces cracking of the excess of said fuels and restrained expansion of the several gases including the primary air, the secondary air and the cracked fuels.

2,458,543

LOW VELOCITY GAS BURNER

Norman J. Urquhart, Scenery Hill, Pa., assignor to Combustion Processes Company, a corporation of Pennsylvania

Application April 24, 1945, Serial No. 590,034
10 Claims. (Cl. 158—110)



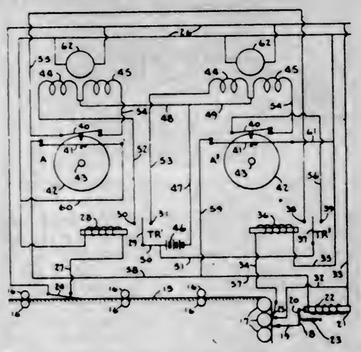
1. A low velocity gas burner comprising a rearwardly closed casing, a valved primary air inlet duct projected forwardly from the rear of the said casing, a tubular member forming a primary combustion and expansion chamber of greater diameter than said air inlet duct and extended forwardly from adjacent the forward end of the said duct, means forming a gas chamber in said casing around the wall of the said primary combustion and expansion chamber in communication with the said chamber at the rear thereof, a valved gas inlet duct in communication with said gas chamber in position to subject incoming gas to heat from the wall of the said primary combustion chamber, the said primary combustion chamber being dimensioned for incomplete combustion therein of the combustible mixture composed of the said primary air and preheated gas introduced at the rear thereof, means forming a secondary combustion chamber having a heat-radiating refractory wall arranged to receive expanding gases from the said primary combustion chamber and of cross-sectional area and length greater than that of the said primary combustion chamber to accommodate expansion of said gases, and a valved secondary air duct opening within the said casing and arranged to deliver secondary air to the said secondary combustion chamber around the expanding gases from the said primary combustion chamber.

2,458,544

TIMER FOR FOLDING APPARATUS

Thomas S. Watson, Milwaukee, Wis., assignor to Zephyr Laundry Machinery Company, Chicago, Ill., a corporation of Delaware

Application May 20, 1946, Serial No. 670,980
7 Claims. (Cl. 270—83)



1. In an apparatus for folding sheet material including a conveyor operating at a constant speed and folding mechanism including an electrically controlled folder to which the sheet material is fed by said conveyor, the combination of a movable timing member, an operating circuit for said folder including a folder control switch operated by said timing member, a pair of circuit closures spaced along the conveyor at a distance greater than that of the longest length of sheet material to be folded, the second of said closures being located adjacent said folder, each closure operable to close a circuit while in contact with an article of sheet material passing along said conveyor, electrically controlled means for moving said timing member in one direction at a speed proportional to that of the movement of the article by the conveyor and controlled by the closing of the first of said circuit closures by the full length of sheet material moving along the conveyor, electrically controlled means for moving said timing member in the opposite direction at a higher speed than that of its first mentioned direction and controlled by the closing of said second closure by a portion of the same sheet moving along said conveyor, said folder control switch being operated by said timing member at the end of its high speed movement to fold said sheet into a shorter length, said length being dependent upon the ratio of the speeds of movement of said timing member.

2,458,545

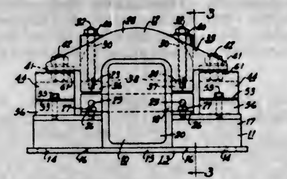
PERMANENT MAGNET VIBRATORY MOTOR

Carl S. Weyandt, Homer City, Pa.

Application December 19, 1946, Serial No. 717,146
6 Claims. (Cl. 172—126)

1. In a vibratory motor, the combination of a straight electromagnetic core member, a field winding mounted on the core with their axes coincident to provide spaced pole members when

the winding is energized with an alternating current supply, a massive permanent magnet armature providing a strong magnetic force, resilient means supporting the armature as an unloaded body in operative spaced relation rel-



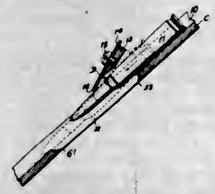
ative to the core member to permit the armature to vibrate with a greater amplitude and at the same frequency as the alternating current supply, a flat base, and means on the base at each end of the field winding to support the ends of the core.

2,458,546

APPARATUS FOR DISCHARGING FROM FEED CHUTES IMPROPERLY ORIENTED CARTRIDGES

John H. Woodberry and Frederick W. Hoewischer, Metuchen, N. J.

Original application July 24, 1942, Serial No. 452,174. Divided and this application May 26, 1945, Serial No. 596,073
2 Claims. (Cl. 209—72)



(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a round ordering device for case ammunition having a cartridge case with large base and reduced diameter shoulder, means to discard disordered rounds comprising an inclined chute having a bottom slot of a length less than that of a round, means to project rounds end first longitudinally therein at a speed sufficient to cause normally positioned rounds advancing nose first to cross the slot and move longitudinally therebeyond, and a deflector member positioned fixedly over the chute convergent to the chute bottom in the direction of movement of the cartridges with its proximal part intermediately of the length of the opening and spaced from a longitudinal projection of the chute bottom at the opening less than the major diametrical dimension of the cartridge case but more than the shoulder diameter of the cartridge case.

2,458,547

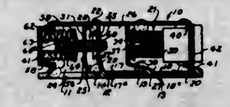
VALVE FOR OIL TEMPERATURE CONTROL UNITS

Weldon Worth, Dayton, Ohio

Application December 8, 1944, Serial No. 567,288
5 Claims. (Cl. 236—34)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An oil cooler valve for operative association with a cooler having an inlet, a by-pass outlet and a normal outlet, and also a by-pass section around the cooler, said valve comprising a body having an inlet and an outlet and having four chambers in series, three ports in said valve body to provide communication between any two adjacent chambers, the first chamber communicating with the cooler inlet, the second with the valve inlet, the third with the cooler by-pass outlet, and the fourth with the cooler normal outlet and the valve outlet, a valve member movably mounted in said body, spring means to normally hold the member in position closing the port between the second and third chambers, pres-



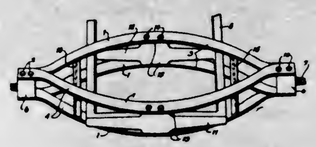
sure-responsive means in opposition to said spring means to move the member toward the port between the first and second chambers, and a thermal-responsive valve in the fourth chamber having an open position permitting oil to flow through the port between the third and fourth chambers and acting to reduce such flow when the temperature of the oil in said fourth chamber rises.

2,458,548

WHEEL SUSPENSION FOR VEHICLES

Charles N. Aronson, Niagara Falls, N. Y.

Application November 14, 1944, Serial No. 563,439
1 Claim. (Cl. 267—36)



The combination with the chassis frame of an automobile, and a pair of ground wheels, of a spring suspension for said wheels comprising flat bar leaves arranged in opposed pairs with the pairs straddling said chassis frame crosswise thereof, there being a single upper and lower leaf in each pair with flat sides confronting, and the pairs of leaves being arcuate edgewise intermediate the ends thereof with each pair arching edgewise away from the other pair, the ends of said pairs of leaves interlapping, blocks with wheel mounting spindles thereon interposed between said interlapping ends and rigidly connecting the same together, and means rigidly attaching the center portions of said pairs of leaves to said chassis frame with the remainder of said pairs of leaves clear of said chassis frame.

2,458,549

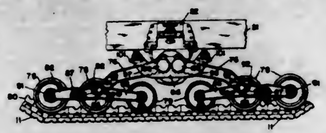
SUSPENSION SYSTEM

Benjamin B. Bachman, Philadelphia, and Donald J. Macklin, St. Davids, Pa.

Application December 11, 1945, Serial No. 634,280
15 Claims. (Cl. 305—9)

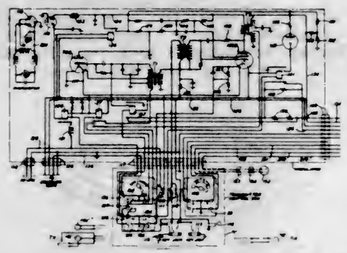
2. A vehicle of the class described, comprising a frame, a track, a plurality of groups of bogie wheels cooperating with said track, a bogie wheel suspension system comprising oppositely extending arms, means for supporting the adjacent inner

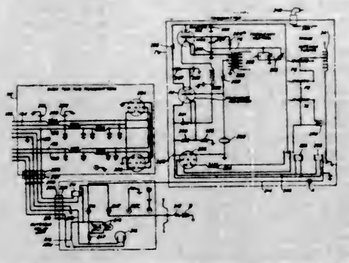
ends of said arms for oscillatory movement about axes extending transversely of the track, a group of bogie wheels associated with the outer end of each of said arms, means responsive to movement of the axis of a bogie wheel of a group for causing the outer end of the arm associated



with that group to pivot about the axis at the inner end of the latter arm and bearing means substantially encompassing the axes of said arms for supporting said frame for oscillatory movement, and means for supporting the axes of said arms for oscillatory movement about the axis of said bearing means.

2,458,550
TRAINER FOR ENABLING THE GIVING OF RADIO INSTRUCTION
Ernest L. Bauleh, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 9, 1944, Serial No. 567,446
10 Claims. (Cl. 35—14)





1. In a device for simulating the operation of radio transmitter, an oscillator for generating carrier frequency, means for controlling said frequency in accordance with signals which it is desired to transmit, tuning controls, an antenna current indicator, a source of current, and potentiometers operable by said controls for deriving a potential from said source and for applying it to said indicator whereby said indicator is operated in simulation of its usual operation in accordance with antenna loading in response to the actual tuning of the amplifier equipment of a regular radio transmitter.

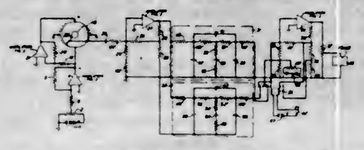
2,458,551
PREPARATION OF CARBON TETRAFLUORIDE
Anthony Francis Benning, Woodstown, N. J., Joseph Dal Park, Boulder, Colo., and Stanley Earl Krahler, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 18, 1947, Serial No. 729,420
10 Claims. (Cl. 260—653)

1. The process of preparing carbon tetrafluoride which comprises reacting a carbon tetrahalide, in which at least one halogen atom is chlorine and the rest of the halogen atoms are fluorine, in the vapor phase with at least a stoichiometric amount of anhydrous hydrogen fluoride in the presence of a catalyst of the group consisting of CrF_3 and FeF_3 at temperatures of from 700° C. to about 1000° C. for at least 8 seconds, and separating the carbon tetrafluoride.

2,458,552
METHOD OF MAKING ELECTRICAL CONTACTING ELEMENTS
David G. Blattner, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application December 26, 1943, Serial No. 514,943. Divided and this application November 9, 1946, Serial No. 708,855
7 Claims. (Cl. 29—155.55)

1. The method of manufacturing sheets of composite material from which bank terminal wipers having a noble metal contacting tip and a base metal shank may be punched comprising assembling a noble metal bar of a trapezoidal cross-section with a base metal bar located against at least one of the slanting sides of said noble metal bar, bonding said bars together and rolling said composite bar lengthwise until a thin flexible sheet is obtained wherein the bonding surface between said noble metal and said base metal is at an acute angle with the plane of said sheet.

2,458,553
ELECTRONIC COMPUTING DEVICE
William H. Boghosian, Forest Hills, and Henry G. Och, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 23, 1944, Serial No. 523,514
6 Claims. (Cl. 250—27)

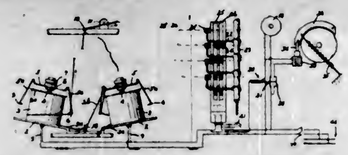


1. In a computer, a source of voltage, means connected to said source and adusted to draw from said source a voltage proportional to varying with a measured quantity, a first feedback amplifier having an input and an output circuit, a capacitor and a resistor connected in serial relationship from said means to the input circuit of said first amplifier, a second feedback amplifier having an input and an output circuit, and a network connected from the output circuit of said first amplifier to the input circuit of said second amplifier, said capacitor and resistor and said network being so proportioned that the indicial admittance to said voltage varies from zero through a single maximum to zero, and the output of said second amplifier is a smoothed, weighted average of the rate of change of the voltage drawn from said source.

2,458,554
PROCESS FOR TREATING FATTY OILS
Don Shelden Bolley, Brooklyn, and Edwin Charles Gallagher, Freeport, N. Y., assignors to National Lead Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 18, 1945, Serial No. 623,166
3 Claims. (Cl. 260—424)

1. A method for refining fatty oils which comprises admixing between about 0.045% and 5.0% by weight of sulfuric acid having a concentration between about 10% and 75% with an impure fatty oil, incorporating bleaching earth in the oil-acid mixture, heating it to a temperature between about 90° C. and about 120° C., allowing the oil to remain in contact with the acid and bleaching earth for a sufficient length of time to effect a refinement of the oil, and separating the so-treated oil from the bleaching earth.

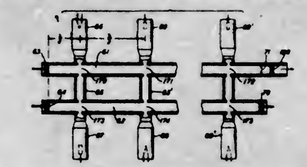
2,458,555
WINDING SYSTEM AND APPARATUS
René Bouvet, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application September 19, 1945, Serial No. 617,225
12 Claims. (Cl. 28—51)



1. In apparatus for winding thread and the like from wound packages, stationary supporting means for a wound supply package, flyer means carried by the support and having thread guide means arranged to receive the thread unwinding from the package and to turn about the package in response to the passage of the thread with respect thereto, electric braking means for bringing the flyer means to a stop, driven take-up means for winding the thread into a package, means for stopping the take-up means, and means for operating the braking means upon stoppage of the take-up means.

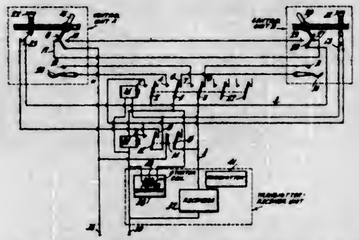
2,458,556
COUPLED CAVITY RESONATOR AND WAVE GUIDE APPARATUS
Arnold E. Bowen, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original application April 8, 1941, Serial No. 387,432. Divided and this application March 5, 1942, Serial No. 433,485
13 Claims. (Cl. 315—6)

5. In a coupling system, two wave guides each closed at one end and having their closed ends in proximity to each other, means defining a half-wave resonator in each of said wave guides at the respective closed end, means for positioning said wave guides with the regions of maximum electric intensity of the respective resonators substantially adjacent, beam forming means providing a path through said resonators for



projecting an electron stream through the said resonators of both of said guides, and spacing means comprising a hollow member separating said guides and surrounding said electron path to provide a drift space for said electron stream between said respective resonant end sections.

2,458,557
DUAL CONTROL AND LOCKOUT MEANS FOR TELEPHONE STATIONS
George G. Bradley, Great Neck, and Harry F. Mohr, Lynbrook, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application June 26, 1946, Serial No. 679,344
8 Claims. (Cl. 179—38)



1. Switching equipment for a radio-telephone installation of the type which provides that a call may be initiated or responded to at either of two operating stations A and B, the main assembly of components of said installation being situated at a location remote from each of said stations, said equipment comprising a first relay, at said location, energizable under control of a push-button switch located at station A and de-energizable under control of another push-button switch located at station B, said first relay constituting means for transferring control from station B to station A, a hand-set hook switch at each station, and a second relay, at said location, energizable in response to the closure of the hook switch at the station from which control is effective, said second relay having contacts through which circuits are established for protecting the used station against interference by the unused station.

2,458,558
RADIOTELEPHONE EQUIPMENT
George G. Bradley, Great Neck, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 26, 1946, Serial No. 686,265
17 Claims. (Cl. 250—6)

1. In a selective switching arrangement for a radio-telephone installation, a multiple-position

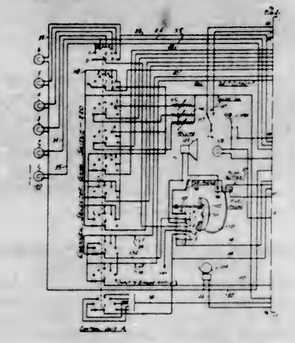
gang switch the wipers of which have selected po-

of the casing and having its inner end positioned

2,458,562

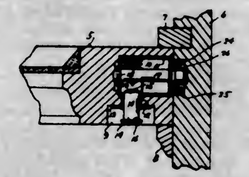
said side member moving means to selectively

gang switch the wipers of which have selected positions each corresponding to a selected communication channel, a plurality of receiving units each having one amplifier stage and each differently tuned to one of the channel frequencies to be used, an audible responsive device, volume regulators, and gain control circuits one of each corresponding to one amplifier stage in each of said receiving units, said gang switch being con-



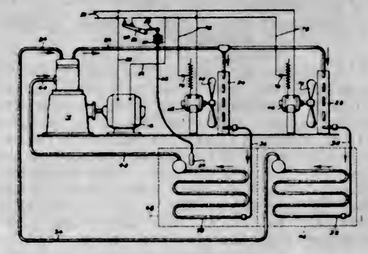
nected to said amplifier stages, said response device, and said volume regulators and gain control circuits, said gang switch being operable: (1) to connect a gain control circuit to the corresponding amplifier stage of the selected receiving unit through said volume regulator, (2) to connect the same selected receiving unit to said audible responsive device, and (3) to disconnect the gain control circuits from the remaining receiving units, thereby to silence the same.

2,458,559
WINDOW SASH LOCK
Rex O. Britton, Lebanon, Oreg.
Substituted for abandoned application Serial No. 83,575, June 4, 1936. This application September 1, 1945, Serial No. 613,974
1 Claim. (Cl. 292—214)



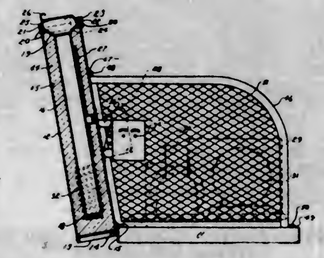
A device of the character described comprising in combination a casing, a rotary shaft extending through said casing and having its opposite ends journaled in the opposite end walls of said casing, a cross head on one end of said shaft and outside of the corresponding end of the casing, a lever on the opposite end of said shaft within the casing, an expanding spring operating between one side of the casing and said lever and normally positioning said shaft and said head in the locking position, and a push button mounted through the opposite side of the casing and having its inner end positioned to operatively engage said lever when said push button is pushed inwardly to turn said shaft and said head out of locking position.

2,458,560
TWO TEMPERATURE REFRIGERATION APPARATUS
Leslie B. M. Buchanan, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 13, 1946, Serial No. 690,158
7 Claims. (Cl. 62—3)



1. In refrigerating apparatus including refrigerant vapor compressing means and two evaporators connected to the inlet means of said compressing means, the combination with said evaporators of two condensers connected in parallel to the outlet means of said compressing means and two capillary flow-impeding tubes, one of said tubes conducting refrigerant from only one of said condensers to only one of said evaporators and the other of said tubes conducting refrigerant from only the other of said condensers to only the other of said evaporators.

2,458,561
PLATE DEVELOPER
James T. Campbell, Detroit, Mich.
Application October 31, 1945, Serial No. 625,712
3 Claims. (Cl. 257—4)

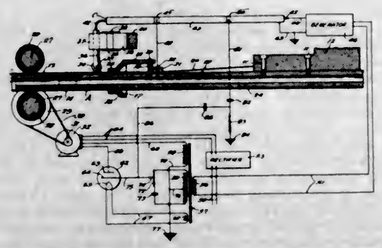


1. A plate developer comprising a base, a refrigerating mechanism supported thereon, a hollow rectangular angularly arranged frame secured thereto, a hollow developing tank suspended within said frame in insulated and spaced relation thereto, cooling means secured to the wall of said tank and joined to said refrigerating mechanism, and heating means positioned around a portion of said tank.

2,458,562
PROCESS FOR PRODUCING A MOLDING MATERIAL AND THE ARTICLE PRODUCED
James Andrew Clark, White Plains, N. Y., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,104
4 Claims. (Cl. 260—742)

1. A composition comprising a substantially dry and neutral, vulcanizable molding powder, the particles of which comprise a coagulated mixture of 1 to 12 parts by weight of an alkali-soluble, water-insoluble cellulose ether, 2 to 12 parts by weight of rubber, 0.1 to 1 part by weight of vulcanizing material, and an amount of a filler between 10 and 200 percent by weight of the other solids.

2,458,563
TUBE-FORMING DEVICE
Fred V. Collins, Des Plaines, Ill., assignor to William F. Stahl, Kenilworth, Ill.
Application December 31, 1947, Serial No. 794,848
10 Claims. (Cl. 154—42)

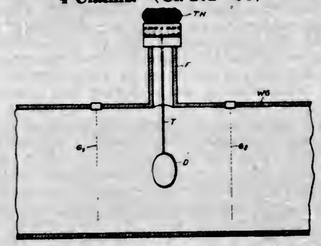


1. Apparatus for forming tubes from fusible flat web material, comprising a mandrel, means including a variable speed motor for advancing said web forwardly of said mandrel and into tubular form, means including a co-axial cable for subjecting the edge portions of said tube to the action of high frequency radio waves to fuse said portions, and a gaseous discharge tube controlling said motor and coupled to said co-axial cable for regulating the speed of said motor.

2,458,564
CEMENT SLAB MOLDING MACHINE
Benjamin G. Cooper, Holland, Mich., assignor to W. E. Dunn Manufacturing Company, Holland, Mich., a corporation of Michigan
Application January 4, 1947, Serial No. 720,203
11 Claims. (Cl. 25—42)

1. An apparatus of the type described, a horizontally located bottom pallet, supporting means therefor, vertically positioned side members, one at each longitudinal side edge of the pallet disconnected therefrom, means for mounting said side members on the supporting means for movement thereof into an upper operative position at the side edges of the pallet and to a lower inoperative position wherein said side members are located below said pallet, means for operating said side member moving means to selectively locate said side members at either of said positions, said side members, at the upper longitudinal edges thereof, having track sections the length thereof over which material depositing and material compressing and smoothing apparatus are adapted to be moved, and a second supporting means located at one end of and beyond said side members and pallet, having similar tracks alined with the tracks on said side members when they are in their upper position, said second supporting means having a length such that the material depositing and material compressing and smoothing apparatus may be located wholly thereabove.

2,458,565
APPARATUS FOR MEASURING FIELD INTENSITY IN HIGH-FREQUENCY ELECTRIC FIELDS
Edward Cecil Cork, Ealing, London, England, assignor to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application April 18, 1945, Serial No. 589,067
In Great Britain September 25, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 25, 1961
4 Claims. (Cl. 171—95)



1. Apparatus comprising a section of an electric wave guide and means for obtaining an indication of the intensity of the electric field in said section if high-frequency electric waves exist therein, said means comprising an element responsive to said field and of small dimensions compared with the diameter of said guide and mounted so as to be capable of angular displacement about an axis within said guide and capable of being positioned within said section so as to be subjected to a couple about said axis due to said field, the magnitude of said couple affording an indication of the intensity of the electric field said element being a conducting disc arranged to be capable of angular movement about an axis lying in its own plane and at right angles to the direction of said field, said disc being also arranged so that a line perpendicular to its plane is inclined at an angle substantially 45° to the direction of said field, said apparatus including means for applying an opposite couple to said disc so as to restore it to its original position after deflection by said electric field.

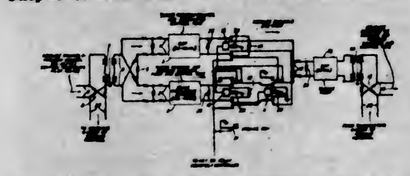
2,458,566
DISTORTION REDUCTION IN CHANNEL SWITCHING
Leslie R. Cox, Rutherford, and George H. Huber, Short Hills, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1948, Serial No. 5,564
9 Claims. (Cl. 178—44)

1. In combination, a source supplying at least two different types of signals, two transmission

operating between one side of the casing and said lever and normally positioning said shaft and said head in the locking position, and a push button mounted through the opposite side

relation thereto, cooling means secured to the wall of said tank and joined to said refrigerating mechanism, and heating means positioned around a portion of said tank.

paths fed in parallel from said source, one of said paths being adapted to effectively block transmission of signals of one of said types and to transmit the other types of supplied signals, the other transmission path being adapted to transmit all of the supplied signals including said one type, a third transmission path, relay switching means having make-before-break switching contacts associated with the outputs of said two transmission paths and said third transmission path, which contacts in one condition of operation of said relay switching means connect the output of said one path to said third path and effectively disconnect the output of said other path therefrom and in another condition of operation of said relay switching means connect the output of said other transmission path to said

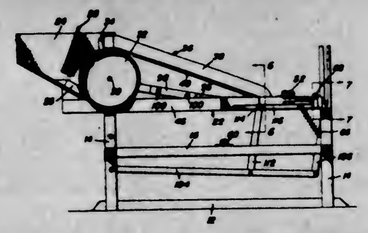


third path and effectively disconnect the output of said one transmission path therefrom, means for causing said relay switching means to be operated to said one condition or to said other condition and other means for reducing signal distortion due to the temporary increases in transmission to said third transmission path during the short time intervals in which said one and said other transmission paths are connected in parallel between said source and said third transmission path when said relay switching means is operated to said one or to said other condition comprising means for introducing a suitable compensating attenuation in the signals transmitted from said one and said other transmission paths to said third transmission path during said short time intervals only.

2,458,567
COMBINATION BAG AND SPECTACLE CASE
Martha K. Cramer, New York, N. Y.
Application August 14, 1945, Serial No. 610,836
2 Claims. (Cl. 150—35)

2. A device of the character described comprising a longitudinal blank of pliable material which is folded first upon itself along a middle folding line, and then the thus obtained double layer of said blank is again folded upon itself so that two adjoining sections of it form a box plait adjacent a portion of the blank, the two longitudinal edges and one short edge of said box plait being secured to the blank so as to form a longitudinal pocket which has a short open edge portion, while the lateral edges of the remainder of the blank are secured to one another so as to form a bag having an open upper longitudinal edge portion, those edge portions of said blank which are to be left open being provided with flap portions, all substantially as described.

2,458,568
POTATO SEED CUTTER
John A. Cummings and Frank B. Cummings, Bangor, Maine; said Frank B. Cummings assignor to said John A. Cummings
Application March 19, 1948, Serial No. 15,904
2 Claims. (Cl. 146—78)

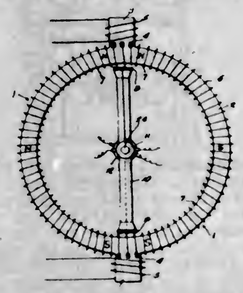


1. A potato seed cutter comprising a frame having a bed, a plurality of longitudinal bars on said bed forming channels for feeding potatoes in separate paths across said bed, a dispensing drum for selectively and simultaneously supplying potatoes to said channels, a motor mounted on said frame, means operatively connecting said motor to said dispensing drum for driving said drum, a potato-directing finger slidably mounted in said bed extending vertically into each of said channels, a stationary vertical knife in each channel supported by said bed for longitudinally halving potatoes passing thereby, adjustable centering means in each channel carried by said bed intermediate the directing finger and the stationary knife, slots in said frame beyond said stationary knives at the discharge end of said channels, a vertical blade slidably mounted in said slots extending transverse all of said channels for transversely dividing said potatoes, and adjustable means operatively connecting said blade to said dispensing drum for reciprocating said blade in said slots, said adjustable centering means including a bar extending transversely of said bed and overlying said channels, springs removably secured to the ends of said bar and to said frame, vertical spring members depending from said bar and extending into said channels, and angulated horizontal spring members depending from said channel bars and also extending into said channels, said reciprocating means including crank arms rotatably mounted on said drum, adjustable connecting links pivotally secured to said crank arms, longitudinal slots in said bed, a rod extending transversely of said channels and extending through said slots pivotally secured at its extremities to said adjustable links, a pair of pivotal arms carried by said frame, pitmans connecting said pivotal arms to said blade, and link means connecting said transverse rod to said pivotal arms for simultaneous actuation of said blade and said transverse rod.

2,458,569
DYNAMOELECTRIC MACHINE
Archibald M. Cummings, Port Angeles, Wash.
Application December 1, 1944, Serial No. 566,205
2 Claims. (Cl. 171—252)

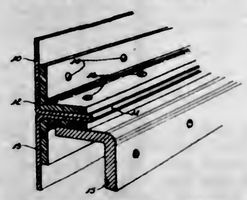
2. A dynamo electric machine comprising a rotating shaft, a rotating member mounted

thereon, contact brushes mounted on said rotating member, slip rings on said rotating member and fixed contacts cooperating therewith for supplying said contact brushes with current, a closed annular stator, provided with two outwardly projecting radial projections in diametrically opposed positions, said projections being provided with spaced passages, a continu-



ous closed field winding encircling the stator, with those turns arranged near the radial projections passing through the spaced passages of the said projections, said closed field winding being adapted for a sliding contact of its turns with the aforesaid brushes along a circumferential line, a further winding on each of said projections and means for supplying the slip ring contacts with current.

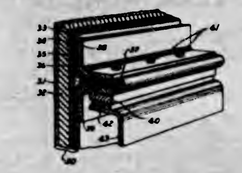
2,458,570
MOUNTING FOR FLUID CONTAINERS
William L. Davidson and Hubert W. Lewis, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 9, 1945, Serial No. 576,974
3 Claims. (Cl. 248—200)



1. A fluid container for a vehicle, said container comprising a hollow body having a wall comprising a plurality of layers of fabric, at least one of the outer layers of fabric having a portion folded upon itself to form an outwardly extending fold adapted to support substantially the entire weight of said body and contents, and means for supporting said body from a frame of said vehicle, said means comprising a clamping means for clamping said fold to said frame.

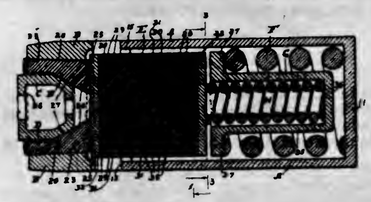
2,458,571
RESILIENT MOUNTING FOR FLUID CONTAINERS
Paul J. Dasher, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 16, 1945, Serial No. 578,331
3 Claims. (Cl. 248—358)

1. In combination, a fluid container for attachment to a vehicle and means for supporting said container from a frame of said vehicle, said means comprising a rigid plate member attached to a wall of said container and extending outwardly therefrom, a second rigid plate member attached to a frame of said vehicle and having



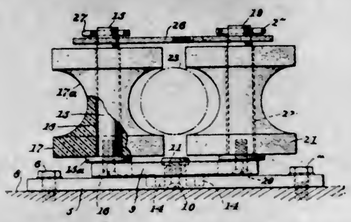
its surface in substantially parallel relationship with the surface of said first-mentioned plate member, and a body of rubber-like material disposed between said plate members and secured thereto, said supporting means constituting the sole support for said container.

2,458,572
FRICTION SHOCK ABSORBING MECHANISM FOR RAILWAY DRAFT RIGGINGS
Arnold E. Dentler, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application August 9, 1946, Serial No. 689,386
11 Claims. (Cl. 213—24)



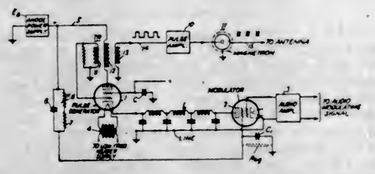
7. In a friction shock absorbing mechanism, the combination with a casing open at its front end and closed by a transverse wall at its rear end; of a friction shell having limited movement lengthwise toward and away from said open end of the casing; a wedge member adapted to receive the actuating force; friction shoes having sliding frictional engagement with the casing and wedging engagement with said wedge member; a rubber cushioning element within the casing bearing at its front end on said shoes; a floating spring follower thimble having a follower flange at its front end, said thimble being closed at its rear end, said flange being normally spaced from the cushioning element and engageable thereby after a predetermined compression of the mechanism; a main spring bearing at its front and rear ends, respectively, on said flange and the rear wall of the casing, said main spring normally holding the thimble with the rear end thereof spaced from the rear end wall of the casing, the normal clearance between said thimble and rear wall of the casing being greater than the normal clearance between the flange of the thimble and the cushioning element, and said combined clearance being less than the total movement of the friction shell with respect to the casing; and a preliminary spring extending into the thimble and having its front and rear ends bearing on said cushioning element and closed end of the thimble, respectively, said preliminary spring being under initial compression.

2,458,573
INSULATED CABLE AND ROPE SPOOLING GUIDE
Howard Donahue, Allais, Ky.
Application June 18, 1945, Serial No. 600,208
1 Claim. (Cl. 254—190)



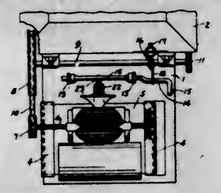
A safety roller guide for cables, comprising a stationary base member, a bar pivoted to the base member midway of its ends and provided with diagonal arms having lateral terminal stops to engage the base member, a shaft secured to each end of the bar, a ceramic spool provided with a central metal tube mounted on each shaft, a fibre plate mounted on the shafts, and cotter pins extending across said shafts to retain the fibre plate on said shafts and thereby prevent the upward displacement of the spools, said spools having deep cable receiving grooves.

2,458,574
PULSE COMMUNICATION
Orville E. Dow, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 10, 1943, Serial No. 482,578
20 Claims. (Cl. 179—171.5)



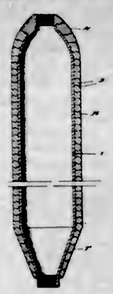
1. In a radio system having an electron discharge device, a pulse generator provided with a cathode, and a line of predetermined length having two ends, said line being connected at one end between said cathode and ground, method of generating a train of pulses which are each of short duration compared to the time interval between them, which includes initiating a voltage wave at the cathode end of said line at the start of current flow in said device, reflecting said wave from the other end of the line in a cophasal relation with the wave first traveling down the line to produce a resultant voltage of a magnitude appreciably greater than the initial voltage and in such sense as to completely extinguish the pulse at the time the reflected wave reaches said cathode end of the line, to thereby charge the capacity of the line at the value of said resultant voltage, and dissipating said voltage charge on the line in accordance with modulating potentials, whereby the reptition rate of the pulses generated by said device varies as a functional relation to said modulating potentials.

2,458,575
BELT TIGHTENING MEANS FOR ENGINE UNITS
Earl H. Ensinger, Cleveland, Ohio
Application December 11, 1944, Serial No. 567,631
8 Claims. (Cl. 74—242.13)



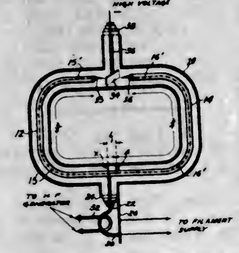
1. In combination, a machine unit, guide means thereon, an engine comprising a base removably engageable with said guide means so as to be displaced from the machine unit and including a driving pulley, an operable arm carried by the engine, an operating device on the machine unit including a shaft, a lever to turn said shaft, a moving arm on the shaft detachably interlocked to the said operable arm to move the engine when the lever is actuated, holding means detachably engageable with the shaft to hold the engine stationary in the guides, a pulley on the machine unit, and a belt to connect said pulleys.

2,458,576
FRAGMENTATION BOMB
Nicholas L. Etten, Waterloo, Iowa, assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application October 4, 1943, Serial No. 504,915
2 Claims. (Cl. 102—2)



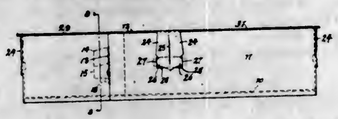
1. A fragmentation bomb casing comprising a thin-walled inner tube of malleable metal, said tube comprising an undeformed body portion and being diminished at the front end to a streamlined contour terminating in a point portion, a heavy malleable wire coil of substantially quadrilateral cross-section coiled on said tube including the diminished portion thereof, said wire being of a material readily frangible on explosion, the inner surface of said coil completely covering and contacting substantially all points of the outer surface of said tube adjacent said coil, the outer surface of said coil being formed to a smooth unbroken surface conforming generally to the streamlined contour of the inner tube, and the adjacent turns of said coil being in contact at substantially all points between the inner and the outer surfaces thereof to define lines of cleavage, the cross-section of the convolutions on said front end being of greater area than on the undeformed body portion.

2,458,577
HIGH-POTENTIAL POWER SUPPLY
John Evans, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 2, 1945, Serial No. 602,814
15 Claims. (Cl. 315—39)



1. A power supply system including means for coupling high frequency energy at low potential to said system, an evacuated casing having therein a pair of transmission line sections, each including a conductor having an electrical length equal to one quarter of the operating wavelength of a source of high frequency energy, with which said system is adapted to be operated, said line sections each being short circuited at one end, said coupling circuit introducing said energy into said lines near said one end, said conductors each carrying an electron emitting cathode at their free ends, and an anode structure in operative association with said cathodes.

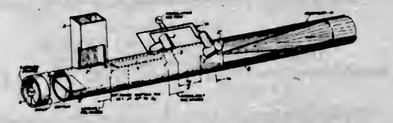
2,458,578
FOLDING BOX
Guy John Evans, Buffalo, N. Y.
Application May 31, 1946, Serial No. 673,532
1 Claim. (Cl. 229—41)



A holding box comprising a wall having opposing ends which overlap one another, and means for connecting said ends including a vertical slit formed in one of said wall ends, a tab arranged on the other wall end and projecting through said slit from one side of the respective wall to the other and engaging with opposite ends of said slit and also provided on its central part with a locking lip which is bent laterally relative to the tab and across the rear edge of said slit, and a retaining lug which is arranged on the rear edge of said slit and in a plane which is located between the plane of the tab and the plane of said locking lip, whereby the latter is prevented by said retaining lug from unfolding and the tab is prevented from being withdrawn from said slit.

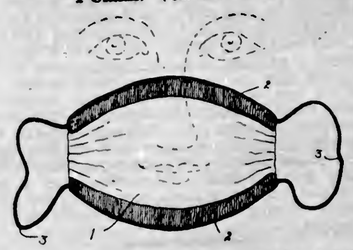
2,458,579
MICROWAVE MODULATOR
Carl B. H. Feldman, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 26, 1945, Serial No. 590,367
38 Claims. (Cl. 179—171.5)

1. In a wave guide modulator for microwaves, a cylindrical wave guide, a source connected thereto for propagating a linearly polarized carrier wave therein, means in said guide adapted to convert the carrier wave into a circularly polarized wave, means for reflectively modulating the circularly polarized wave without reaction upon



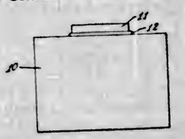
the carrier source, and a branching wave guide connected to said cylindrical guide between said source and polarization converting means for segregating and propagating the linearly polarized, modulated wave in a direction perpendicular to said cylindrical guide's principal axis.

2,458,580
MASK
Henry D. Fisketti and Joseph Gaeton Lenta, Duluth, Minn.
Application April 18, 1945, Serial No. 588,902
1 Claim. (Cl. 128—146)



A form fitting face mask comprising a central substantially elliptically shaped body portion, resilient yieldable binding strips fixed to the upper and lower side portions of said body, and elastic ear-encircling bight members fixed at each opposite end to its respective end of said yieldable binding strips whereby to provide yieldability throughout the extreme outer edges of the assembly.

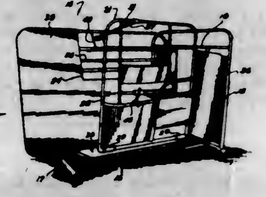
2,458,581
SUPERSONIC INSPECTION
Floyd A. Firestone, Washington, D. C., and Julian R. Frederick, Ann Arbor, Mich., assignors to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application May 21, 1946, Serial No. 671,347
4 Claims. (Cl. 73—67)



1. In the supersonic inspection of a solid object whose surface may be rough, in which supersonic waves are transmitted by a piezo-electric crystal into the object, a coupling between the crystal and the object comprising a fluid film which is unavoidably relatively thick because of the roughness of the object's surface and a sheet of solid material in the film of greater density than the film so as to divide the film into two

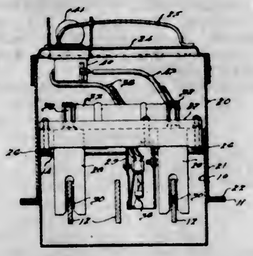
layers, one between the crystal and the solid sheet and the other between the solid sheet and the object, the said sheet being thin compared with the wave length in it of the supersonic waves.

2,458,582
CATTLE RESTRAINING DEVICE
Henry Flehr, Jr., Saratoga, Wyo.
Application November 8, 1946, Serial No. 708,485
4 Claims. (Cl. 119—163)



1. A cattle restraining device comprising in combination, a framework including a base, an upright wall at one end of said base, and an elevated support associated with said base and said wall, said wall being formed with an opening constituting a passage, a holder comprising a pair of spaced side members and a floor section secured to one of said members, the remaining member being hinged to said section, said holder normally communicating with said passage and being tiltable to a substantially horizontal position in contact with said support, means for releasably locking said side members in a predetermined, spaced relation, and means for automatically closing said passage upon tilting of said holder.

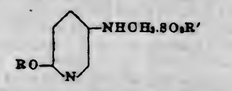
2,458,583
PROTECTIVE DEVICE FOR USE WITH ENCLOSED BUS BAR DISTRIBUTION SYSTEMS
William H. Frank, Detroit, Mich., assignor to Bulldog Electric Products Company, Detroit, Mich.
Continuation of application Serial No. 513,145, December 6, 1943. This application July 1, 1947, Serial No. 758,251
8 Claims. (Cl. 175—294)



1. For use with an enclosed bus bar distribution system comprising an enclosing casing surrounding bus bars and having numerous access apertures in the wall thereof at spaced points for receiving plug-in devices, a plug-in device comprising a support, means for removably mounting it on the outside of the casing at an aperture, projecting members mounted on the support and projecting from it so as to be insertable into the casing through such aperture, certain of the projecting members being formed as contact fingers to engage and make contact with the bus bars in the casing, another of the projecting members being in the form of a thermally responsive switch adapted to respond to the temperature within the casing near the bus bars, an electrically energizable protective means, and connections for connecting said contact fingers in series through said protective means and said switch, whereby such protective means may be energized by said bus bars through said contact fingers and switch.

2,458,584
METHYLENE SULFONATE DERIVATIVES OF ALKYL COMPOUNDS AND ARYL COMPOUNDS
Harris L. Friedman, New York, and Leo D. Braitberg, Yonkers, N. Y., assignors to Pyridium Corporation, Yonkers, N. Y., a corporation of New York
No Drawing. Application June 29, 1945, Serial No. 602,404
6 Claims. (Cl. 260—296)

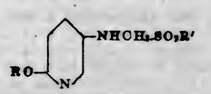
1. Compounds having the general formula:



in which R is a member selected from the group consisting of alkyl radicals having not more than eight carbon atoms and aryl radicals and in which R' is a member selected from the group consisting of hydrogen and alkali metals.

2,458,585
AMINOPYRIDINE COMPOUNDS
Harris L. Friedman, New York, and Leo D. Braitberg, Yonkers, N. Y., assignors to Pyridium Corporation, Yonkers, N. Y., a corporation of New York
No Drawing. Application June 29, 1945, Serial No. 602,405
6 Claims. (Cl. 260—296)

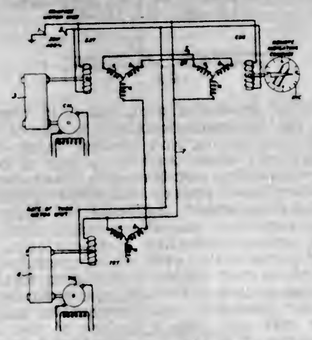
1. Compounds having the general formula:



in which R is a member of the group consisting of alkyl radicals and alkoxyalkyl radicals having not more than eight carbon atoms and aryl radicals and R' is an alkali metal.

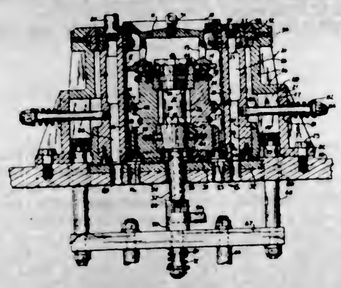
2,458,586
SELF-SYNCHRONOUS SYSTEM
Henry A. Giroud, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 12, 1945, Serial No. 622,064
2 Claims. (Cl. 318—24)

2. In a telemetric system a transmitter and a receiver each having a rotatable rotor winding and three stator windings connected in a three-phase space relationship, a source of alternating current for energizing the rotor windings of said transmitter and said receiver, conductors interconnecting the corresponding windings of said transmitter and receiver whereby the rotation of the rotor winding of said transmitter is effective to cause a corresponding rotation of the rotatable rotor winding of said receiver, a rotary transformer having its stator winding included in series



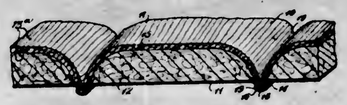
with one of said conductors and having its rotor winding energizable from said source, and means for rotating the rotor of said transformer to produce a variable phase shift between said transmitter and said receiver.

2,458,587
APPARATUS FOR TREATING HOLLOW BODIES
Joseph Gogan, Lakewood, Ohio
Application January 31, 1945, Serial No. 575,517
2 Claims. (Cl. 153—10)



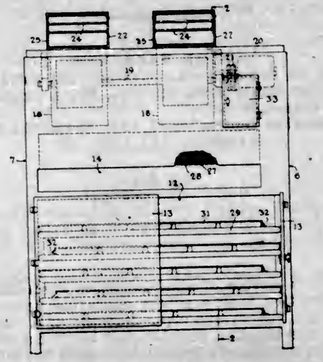
1. In apparatus of the character described, a base plate, a guide ring fixed to said base plate on one side thereof with its axis extending substantially normal thereto, an annular group of segments defining a contractible hollow die located within and extending substantially coaxially of said guide ring, said segments being movable substantially radially of said guide ring and being slidably supported on said base plate, an actuating ring disposed between said segments and guide ring and being axially slidable in the latter, said actuating ring and segments having cooperating tapered thrust portions for causing contraction of the die in response to axial movement of the actuating ring, a power device located on the other side of said base plate, means extending through said base plate and operably connecting the power device with said actuating ring for transmitting thrust to the latter, the tapered thrust portions of said segments being spaced apart axially of the hollow die and being located adjacent the ends of the segments, and spring-actuated die expanding means engaging said segments at a point between the tapered thrust portions thereof and acting on the segments to constantly hold their tapered thrust portions in engagement with the tapered thrust portions of said actuating ring.

2,458,588
UPHOLSTERY PAD
Le Roy Gordon, Richmond, Mich., and Leo L. Williams, Cleveland Heights, Ohio
Application November 10, 1945, Serial No. 627,876
6 Claims. (Cl. 154—54)



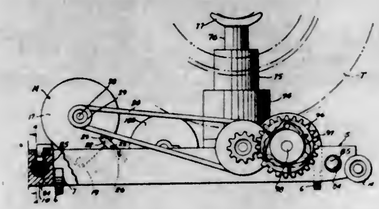
2. Upholstery padding comprising, a backing sheet, a layer of batts on said backing sheet and disposed in coextending contiguous relation to each other, a cover sheet extending over the batts, said cover and backing sheets having gathers therein forming pleats at points between and coextensive with said batts, and rows of stitching connecting said sheets between said batts with the stitches of said rows extending transversely of the pleats.

2,458,589
TWO TEMPERATURE REFRIGERATION UNIT
Keith P. Groat, York, Pa., assignor to York Corporation, York, Pa., a corporation of Delaware
Application February 1, 1945, Serial No. 575,652
9 Claims. (Cl. 62—115)



1. A combined space cooler and sharp-freezing unit, adapted to be mounted in a space to be cooled, comprising in combination, an air-cooling evaporator; a sharp-freezing evaporator; means for supporting material to be frozen in heat exchanging relation with the sharp-freezing evaporator; means for supplying volatile liquid refrigerant to said evaporators in parallel, and for withdrawing evaporated refrigerant therefrom; air circulating means; and guiding means for air circulated thereby, arranged to cause the circulating means to withdraw air from the space to be cooled, and after causing it to exchange heat with the air-cooling evaporator return said air to said space at different elevations, said guiding means being arranged to cause one part of the returning air to flow across said material-supporting means.

2,458,590
COMBINATION AUTOMOBILE JACK AND ENGINE STARTING DEVICE
George W. Harris, Ranseonville, N. C., and Hugh H. Hanshaw, Norfolk, Va.
Application April 19, 1946, Serial No. 663,488
4 Claims. (Cl. 74—14)



1. In a combined automobile jack and wheel-driving device, a base frame, a jack mounted on said base frame and extensible upwardly therefrom, a second frame, guide means carried by said base frame and slidably engaging said second frame to provide freedom of movement of said second frame toward and away from said base frame in a predetermined, relative direction, means operatively associated with said guide means controlling movement of said second frame relative to said base frame, a pair of spaced-apart wheel-driving rollers journaled on said second frame, an electric motor mounted on said second frame, and means drivingly connecting said motor with said rollers and said jack, operative to render said motor effective to drive said jack independently of said rollers.

2,458,591
DOOR FASTENER
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application September 22, 1945, Serial No. 618,016
2 Claims. (Cl. 292—241)

1. In a device of the character described, the combination with a rotary operating bar of rectangular, transverse cross section; of a supporting guide bracket, said bracket having a circular bearing opening through which said bar extends, said bracket having an opening at the inner side communicating with said bearing opening; of a one piece bearing block rotatably supported in said guide bracket, said block being insertable within said bracket through the opening at the inner side thereof, said block comprising sections at opposite sides of said bar closely embracing the same and in bearing engagement with the wall of the bearing opening of said bracket, and top and bottom flanges tying said sections together and engaged over the top and bottom sides of said bracket to hold said block against endwise movement with respect to said bracket, said flanges of the block projecting to one side of the same; and upstanding and depending stop lugs on said bracket in the path of rotation of said projecting flanges of said block for arresting rotary movement of said bar.

2,458,592
SAFETY MOUNTING FOR SPECTACLES
Thomas F. Healy, Washington, D. C., assignor to Saf-Mont, Inc., Washington, D. C., a corporation of Delaware
Application December 16, 1943, Serial No. 514,527
2 Claims. (Cl. 88—41)

1. Safety spectacles comprising, in combination, a pair of temple members, a pair of lenses each having convex and concave faces, means to secure said lenses together, a pair of flexible temple-supporting members each associated with one of said lenses, each of said temple-supporting members substantially following the contour of the top portion of its corresponding lens, each of said temple-supporting members being bent forward beyond the edge of its corresponding lens, each of said members extending forwardly to a point so that it first engages a flat surface when the spectacles are horizontally disposed thereon with the convex surface of the lenses downward, each of said members then being bent backward upon itself and extending to the concave side of its corresponding lens, each of said temple-supporting members being connected at one end thereof to said first mentioned means, and each of said temple-supporting members being connected at the other end thereof to its corresponding temple member.

2,458,593
SAFETY MOUNTING FOR LENSES
Thomas F. Healy, Washington, D. C., assignor to Saf-Mont, Inc., Washington, D. C., a corporation of Delaware
Application May 31, 1944, Serial No. 538,136
2 Claims. (Cl. 88—41)

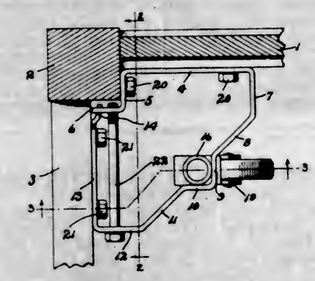
1. Safety spectacles comprising, in combination, a pair of temple members, a pair of lenses, means to secure said lenses together, a pair of temple-supporting members each associated with one of said lenses, each of said temple-supporting members substantially following the contour of the top portion of its corresponding lens, each of said temple-supporting members being bent forwardly around the outer peripheral edge of its corresponding lens and thence inwardly across a portion of said lens, thence perpendicularly, and thence outwardly beyond the edge of lens and thence rearwardly, each of said temple-supporting members being connected at one end thereof to said first mentioned means, and each of said temple-supporting members being connected at the other end thereof to its corresponding temple member.

2,458,594
SAFETY MOUNTING FOR LENSES
Thomas F. Healy, Washington, D. C., assignor to Saf-Mont, Inc., Washington, D. C., a corporation of Delaware
Application October 7, 1944, Serial No. 557,637
1 Claim. (Cl. 88—41)

Safety spectacles comprising, in combination, a pair of temples, a pair of lenses each having a concave and a convex side, means to secure said lenses together, a pair of flexible temple-supporting members each associated with one of said lenses and being adapted to flex independently relatively thereto, each of said temple-supporting members extending from the concave side of its corresponding lens to terminate in a pivot on the convex side thereof, said pivot being disposed beyond the foremost point on the convex side of

its corresponding lens so that said pivot first engages a flat surface when the spectacles are horizontally positioned thereon with convex faces downwardly, each of said temples being attached to its corresponding temple-supporting member by means of said pivot which is designed to permit said temple to fold forwardly across the face of its corresponding lens.

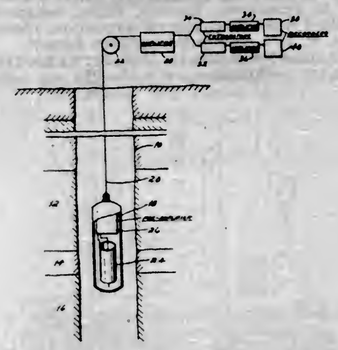
2,458,595
BED FASTENER, BRACE, AND CASTER SUPPORT
Jack H. B. Herts, Grand Rapids, Mich., assignor to John Widdicomb Company, Grand Rapids, Mich., a corporation of Michigan
Application January 8, 1945, Serial No. 571,751
4 Claims. (Cl. 5—282)



1. A construction as described made from a single length of metal and including a section adapted to be located against the inner side of a head or foot board and a second section adapted to be located against the inner side of a side bedrail, said second section having a free end and a tongue extending therefrom, and said first section having extending therefrom a short section at right angles thereto from which a second short section extends substantially at right angles and having an opening therethrough for the passage of the tongue, said frame being completed by intermediate portions integral with and between and connecting said first mentioned sections and including a further section extending inwardly at right angles from the second of said first mentioned sections, and an elongated headed screw passing through the last mentioned section and threading through the second of said short sections.

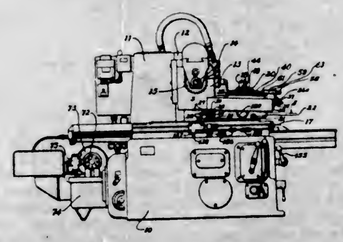
2. A construction containing the elements defined in claim 1, and a caster adjustably mounted for vertical adjustment secured to and extending downwardly from the frame at an inner portion thereof.

2,458,596
RADIOACTIVITY WELL LOGGING METHOD
Gerhard Herzog, Houston, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 10, 1946, Serial No. 715,204
6 Claims. (Cl. 250—83.6)



6. An apparatus for logging the formations traversed by a bore hole which comprises a housing, a cable for lowering and raising said housing through said hole, a radiation detector of the current pulse producing type in said housing, a preamplifier in said housing for amplifying the pulses from said detector, means associated with said cable for conducting the preamplified pulses to the surface, means at the surface for amplifying the pulses, two integrating circuits connected to receive the output of said amplifying means, one of said integrating circuits having a time constant from 5 to 15 times as long as the other integrating circuit, and means for simultaneously and separately recording the outputs of said integration circuits.

2,458,597
MILLING MACHINE
Walter Hoier and Richard N. Clifton, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application September 15, 1943, Serial No. 502,708
12 Claims. (Cl. 90—21.5)



1. In a milling machine having a rotatable cutter and a reciprocable table, the combination of means for supporting a work piece on the table including an oscillatable support and a superimposed indexible support, fluid operable means

pending stop lugs on said bracket in the path of rotation of said projecting flanges of said block for arresting rotary movement of said bar.

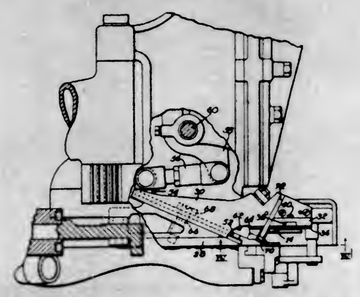
Safety spectacles comprising, in combination, a pair of temples, a pair of lenses each having a concave and a convex side, means to secure said

ed for vertical adjustment secured to and extending downwardly from the frame at an inner portion thereof.

including an oscillatable support and a superimposed indexible support, fluid operable means

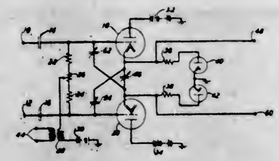
carried by the table for effecting the oscillation and the indexing respectively, and trip operable valve means for connecting fluid pressure to each of said means in a sequential manner.

2,458,598
MACHINE FOR TRIMMING SHOE PARTS
Eric A. Holmgren, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 21, 1946, Serial No. 711,239
3 Claims. (Cl. 12—67)



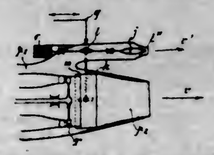
1. In a machine for operating on shoe parts, a fixed frame, a trimming knife, a movable carrier on which the knife is mounted for movement with relation thereto, means for actuating the carrier to impart to the knife a motion of translation along a predetermined path, and means connecting the knife to the frame and active as a result of the movement of translation of the knife to cause the knife to move with relation to the carrier without deviating from said predetermined path.

2,458,599
CIRCUIT FOR SAMPLING BALANCED SIGNALS
Luther W. Hussey, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 4, 1946, Serial No. 714,088
12 Claims. (Cl. 250—27)



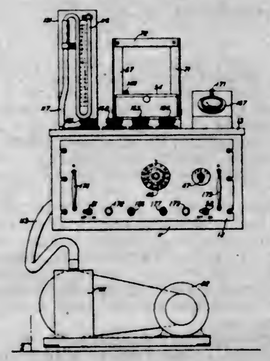
2. In a sampling circuit for operating on balanced signals, a pair of electron tubes each having at least an anode, a cathode and a control grid, a source of potential connected between said anodes and ground, a storage capacitor connected between the cathodes of said electron tubes, means effective to permit current flow to said storage capacitor only when the cathode of at least one of said tubes is positive with respect to ground, means for maintaining the space current of the electron tubes normally cut off, and means for rendering said tubes conductive at predetermined instants.

2,458,600
AERODYNAMIC PROPELLING MEANS OPERATING THROUGH DIRECT REACTION JET AND SCAVENGING
Roger Jean Imbert and Marcel Henri Louis Sédille, Paris, France, assignors to Societe Rateau (Societe Anonyme), Paris, France, a company of France, and Rene Anxionnaz, Paris, France
Application August 27, 1945, Serial No. 612,867
In France January 26, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires January 26, 1962
5 Claims. (Cl. 60—35.6)



1. In aircraft propelling means operating through direct reaction jet and scavenging, the combination of a compressor including a lower pressure and a higher pressure part, said higher pressure part being fed by part of the air from the lower pressure part, the remainder of which forms scavenging air, a combustion chamber at the outlet of the higher pressure part of the compressor, a turbine fed by the gases produced in said chamber, a circuit for the scavenging air produced by the lower pressure part of the compressor, said circuit being in ring formation about the higher pressure part of the compressor and the turbine and opening out at the rear of said turbine, a reaction jet nozzle fed by the turbine and by the circuit, an annular valve system inserted in the circuit for the scavenging air and means controlling the passage allowed for the scavenging air through said valve system.

2,458,601
METHOD OF AND APPARATUS FOR MEASURING PRESSURE
John B. Johnson, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 24, 1944, Serial No. 528,011
7 Claims. (Cl. 175—183)



1. In a device for testing the effectiveness of the seal of a closed container that has been sealed

at a certain gas pressure and has two spaced electrically conductive members extending from the exterior of said container to a point therewithin and constituting a plate for supporting a container being tested, said plate being provided with spaced apertures for receiving the respective terminal pins of said container mounted thereon, means including a sealable cover for said plate and containers for reducing the ambient pressure to a predetermined value which is lower than the pressure at which the container being tested was sealed, means for applying a regulated voltage across said conductive members while maintaining the pressure at the reduced value, and means for observing the magnitude of resulting ionic current flow between the respective portions of said conductive members within the container; and means for so spacing each container from the adjacent portion of the face of said plate that a passage is defined by the adjacent surfaces of the container and the plate of sufficient size to permit the free flow of air but sufficiently constricted to effectively prevent the ionization of the air passing therethrough.

2,458,602
SNOW PROTECTOR FOR SKIS
George Johnson, Ironwood, Mich.
Application July 17, 1945, Serial No. 605,596
2 Claims. (Cl. 280—11.35)

1. A protective attachment for skis, comprising a foot supporting plate having the general form of the sole of a shoe and adapted to be fastened on the top side of a ski, a body made of a flexible material and adapted to enclose the shod foot of a skier, said body being formed with an upper ankle engaging portion, a toe engaging portion, and a lower heel and arch enclosing portion, arranged in unitary assembly, said heel and toe portions being secured about the top side of the edge of said foot plate, said upper portion having a gap in its front side, a gusset closing said gap, and means for detachably securing the edges of said gap together to draw said upper portion firmly about the like part of the shoe worn by the skier, said lower portion having a fullness to admit of its bellows-like extension and contraction incident to the movements of the skier's foot in the performance of skiing manoeuvres.

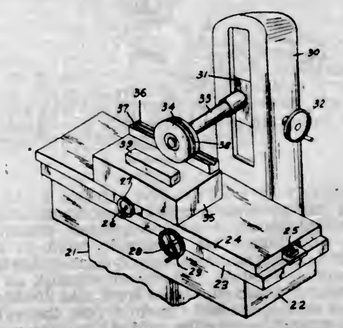
2,458,603
PREPARATION OF KETONES BY CATALYTIC REACTION OF OLEFINS AND ACID ANHYDRIDES
Carl E. Johnson, St. Louis, Mich., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application April 27, 1946, Serial No. 665,624
5 Claims. (Cl. 260—597)

2. The method of preparing a ketone product which comprises intimately mixing an olefin and a carboxylic acid anhydride in the presence of an alkanesulfonic acid catalyst, maintaining intimate contact between said olefin and said acid anhydride until a substantial reaction has taken place with the formation of the desired ketone and thereafter recovering said ketone from said reaction mixture.

2,458,604
GARAGE DOOR
Frank J. Kappes, San Mateo, Calif.
Application August 28, 1945, Serial No. 613,063
2 Claims. (Cl. 160—196)

1. A garage door comprising a door frame, an upper door section hinged to the frame top and swingable about a horizontal axis, the second door section of about twice the height of the first and being hinged to the first, the sides of the frame having vertical roller guides, rollers disposed at the sides of the second section and approximately midway between its top and bottom, said rollers being receivable in the guides, cables connected to the second section sides near the rollers and being passed over pulleys disposed at the frame top, a weight connected to the free ends of the cables and slightly more than counter-balancing the weight of the two door sections, whereby the door sections will be moved upwardly into open position by the weight, at least one of the hinge connections between the door sections having a slot therein, and a key pivoted to the frame and having a portion receivable in the slot when the door sections are closed for holding the door sections in closed position.

2,458,605
MEANS FOR CRUSH FORMING GRINDING WHEELS
Charles W. Kirin, Detroit, Mich.
Application December 22, 1945, Serial No. 636,728
2 Claims. (Cl. 125—11)



1. In a device of the character described, the combination of a grinding wheel, a longitudinally

the forward end of the strip and to carry away

of the electron tubes normally cut off, and means for rendering said tubes conductive at predetermined instants.

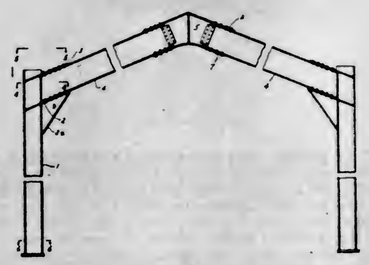
1. In a device for testing the effectiveness of the seal of a closed container that has been sealed

2. The method of preparing a ketone product which comprises intimately mixing an olefin and

1. In a device of the character described, the combination of a grinding wheel, a longitudinally

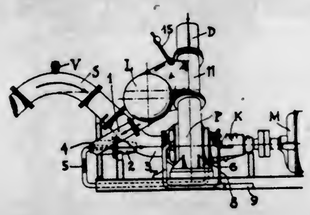
and laterally movable table below said grinding wheel, means on said table for supporting a forming bar having a contour intended to be imparted to said wheel, said means comprising a base having slots therein adjustable supports having cut out portions thereon adapted to accommodate the shape of said forming bar, and means cooperating between said slots and said supports for locking the latter in position on said base.

2,458,606
BUILDING STRUCTURE
Martin C. Knabe, Library, Pa.
Application February 16, 1946, Serial No. 648,403
4 Claims. (Cl. 108—1)



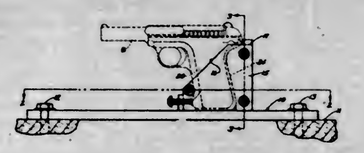
1. In a building structure, a frame comprising flanged columns and flanged inclined rafters constituting a continuous beam embodying a ridge splice for transmitting stresses uniformly throughout the beam, said splice comprising a prefabricated member having flanged ends engaging the flanges of the rafters and having anchor plates secured to the rafters and to the web of the ridge plate.

2,458,607
SELF-PRIMING CENTRIFUGAL PUMP
Hermann Lauchenauer, Zurich, Switzerland
Application April 21, 1945, Serial No. 589,492
In Switzerland June 13, 1944
8 Claims. (Cl. 103—113)



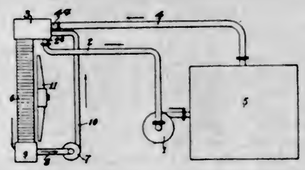
1. A self-priming pump system comprising a centrifugal pump, a suction conduit extending above said pump, an ejector inserted in and having a nozzle terminating and discharging into said suction conduit, a discharge conduit, an air separator disposed separated from said discharge conduit and connected for fluid flow therewith, and a conduit connecting said air separator and said ejector and conducting fluid from said separator into said nozzle.

2,458,608
PISTOL MACHINE REST
Ellis Lea, South Charleston, W. Va.
Application February 27, 1948, Serial No. 11,599
4 Claims. (Cl. 89—37)



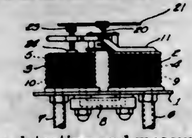
1. A pistol machine rest comprising a base formed with an opening adjacent one end thereof, a combined securing bolt and pivot extending through said opening, said base having an arcuate slot adjacent the opposite end thereof, a second bolt extending through said slot, a fixed pistol handle clamping plate rising from said base, a right angularly disposed lug extending from the forward end of said plate, a clamping bolt threaded through said lug for engagement with the forward lower end of a pistol handle, a movable clamping plate, and bolts for applying pressure extending through said fixed and movable plates and secured to the latter for clamping said plates on opposite sides of a pistol handle.

2,458,609
COOLING DEVICE BY VAPORIZATION FOR INTERNAL-COMBUSTION ENGINES
Georges Leveque du Rostu, Paris, France, assignor to Societe Anonyme Andre Citroen, Paris, France
Application July 20, 1945, Serial No. 606,227
In France July 20, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 20, 1962
7 Claims. (Cl. 123—174)



2. Cooling device for internal combustion engines by evaporation at atmospheric pressure, comprising a water condensate reservoir, an upper chamber, vertical tubes opening at their lower ends below the water level within said water condensate reservoir and at their upper ends with said upper chamber, said upper chamber being divided by baffles into a steam chamber arranged directly above said tubes, and a water chamber, this latter communicating by means of connecting pipes leading respectively to the water circuit of the motor and from said water condensate reservoir, the connecting branch with said water condensate reservoir being arranged at a determined level of the water within said water condensate reservoir, a hermetic tank within said water chamber, said hermetic tank communicating with a connecting pipe for the water from the motor and being provided with openings communicating with said water chamber.

2,458,610
GAS DETECTOR
Nils Erik Lindström, Stockholm, Sweden
Application July 28, 1944, Serial No. 547,089
In Sweden June 18, 1943
5 Claims. (Cl. 23—254)



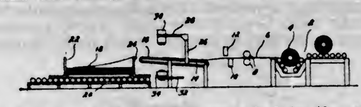
1. In a gas detecting and measuring apparatus, a reaction chamber provided with a gas inlet and a gas outlet said chamber being adapted to contain a substance capable of bringing about an exothermical reaction of the gas to be detected, a hermetically sealed vessel enclosing said reaction chamber, and provided with expansible outer walls, the unoccupied space within said vessel being filled with an expansible medium, an indicating means, and a mechanical motion transmitting means between said expansion vessel and said indicating means for transmitting motion of the vessel to the indicating means.

2,458,611
ILLUMINATING UNIT FOR CONVENTIONAL FISHING LURES OR BAIT
Tom K. Long, Akron, Ohio
Application September 16, 1946, Serial No. 697,335
3 Claims. (Cl. 43—44)

1. In fishing appliances of the kind wherein fishing lures are provided for connection to a line, the improvement which comprises a lure-illuminating unit which includes a tubular body, a light bulb countersunk within the rear end of said body, a bail secured to said body adjacent said rear end, a swivel connected to said bail, a member connected to said swivel, to which member a conventional lure may be connected for illumination by the beam from said light bulb, a battery cell in said tubular body, a front closure member for said body which member has battery cell engaging means, and a swivel connected with said front closure member and adapted for connection to a line, said front closure member itself being a sub-unit having a recess in its inner end and having a longitudinal bore, a draft wire passed through said bore and provided at its outer end with a loop and provided at its inner end with a battery-contacting element, and a compressible water-excluding element in the bottom of said recess against which said battery-contacting element seats and through which said wire also passes, said wire having limited longitudinal movement in said bore for purposes described.

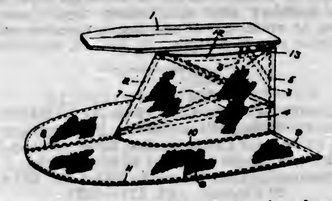
2,458,612
AUTOMATIC SHEARING APPARATUS
Ferdinand Lussatto and James C. Palmer, Gary, Ind.
Application September 20, 1945, Serial No. 617,536
8 Claims. (Cl. 164—49)

5. Apparatus for shearing strip into lengths comprising an intermittently operable shear having opposite shearing blades to cut off the strip, means in front of the shear for positively feeding strip between the blades of the shear, a power driven conveyor at the rear of the shear having frictional engagement with the strip to receive the forward end of the strip and to carry away the sheet sheared from the end thereof, means for driving the strip feeding means, constantly operating means for driving the conveyor at at least the same surface speed as the strip feeding means, means for driving the shear, said means including a constantly operating power means and a selectively operable clutch interposed between the power means and the shear, means including a solenoid for operating the



clutch, a control circuit connected to the solenoid, means responsive to movement of the forward end of the strip past a predetermined point on the conveyor to stop the means for feeding the strip to the shear and to energize the control circuit and thus energize the solenoid to engage the clutch, thereby to actuate the shear to cut a predetermined length of sheet from the strip, and a normally closed time delay relay having contacts in the control circuit and energized by said circuit for deenergizing the clutch operating solenoid and disconnecting the clutch after the shear has completed one cutting cycle.

2,458,613
PROTECTING APRON FOR IRONING BOARDS
Ethel S. Lyon, Williamsburg, Va.
Application September 16, 1947, Serial No. 774,333
1 Claim. (Cl. 38—141)



A protecting apron for an ironing board, of that type having a flat top and a supporting structure based on the floor, consisting of a skirt section and a flat base section of fabric, with the skirt section surrounding at least the front and sides of the supporting structure and extending from adjacent the top to the floor and terminating at the rear in substantially vertical free edges, with the base section secured to the lower edge of the skirt section and extending outward therefrom to cover an area of the floor substantially greater than the area of the top, thereby to protect articles depending from the top from injury by either the supporting structure or the floor, and means for securing the skirt section snugly in place on the supporting structure beneath the top.

2,458,614
DUST ASPIRATOR WITH A ROTATABLE FLEXIBLE TUBE CONNECTION
Johannes Andries Christiaan Malchus, Amsterdam, Netherlands
Application August 21, 1946, Serial No. 692,079
In the Netherlands July 7, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 7, 1962
6 Claims. (Cl. 285—25)

3. Attaching device for holding a tubular arrangement within an opening comprising in

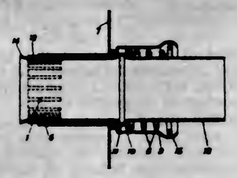
ing means for heating such air, a plurality of

2,458,619

separator into said nozzle.

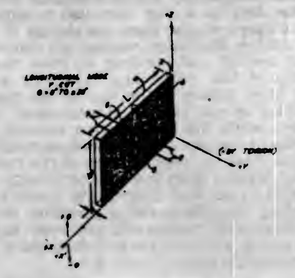
municating with said water chamber.

combination an outer sleeve member closely fitting into said opening; stop means at the outer end of said outer sleeve member preventing sliding of the same through said opening in inward direction; outwardly bendable stop means at the inner end of said outer sleeve member preventing when in outwardly bent position sliding of said outer sleeve member through said opening in outward direction; an inner sleeve member closely fitting into said outer sleeve member and arranged within the same projecting at both ends beyond said outer sleeve member; outwardly bent stop means on the inner project-



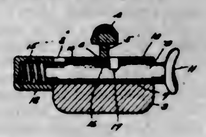
ing end portion of said inner sleeve member preventing sliding of the same through said outer sleeve member in outward direction and adapted to outwardly bend said outwardly bendable stop means at the inner end of said outer sleeve member when said inner sleeve member is pulled in outward direction; stop means arranged on the outer projecting end portion of said inner sleeve member preventing sliding of the same through said outer sleeve member in inward direction; and spring means mounted between said outer sleeve member and said inner sleeve member tending to slide said inner sleeve member within said outer sleeve member in inward direction.

2,458,615
PIEZOELECTRIC CRYSTAL APPARATUS
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 28, 1946, Serial No. 657,886
20 Claims. (Cl. 171—327)



1. Piezoelectric crystal apparatus comprising means including an ethylene diamine tartrate crystal body for producing a substantially zero temperature coefficient of vibrational frequency within a temperature range substantially between 0 and +40 degrees centigrade, said frequency being determined by the lengthwise or longest dimensional axis of said crystal body, said lengthwise axis dimension being made of a value corresponding to the value of said frequency, the angular orientation of said crystal body with respect to the mutually perpendicular X, Y and Z axes thereof being a value corresponding to and related to the value of said substantially zero temperature coefficient of frequency, and electric field-producing means for operating said crystal body at said frequency having said substantially zero temperature coefficient of frequency.

2,458,616
TRIGGER SAFETY FOE SHOTGUNS AND THE LIKE
Tracy L. Maynor, Beckley, W. Va.
Application June 13, 1945, Serial No. 599,138
1 Claim. (Cl. 42—70)

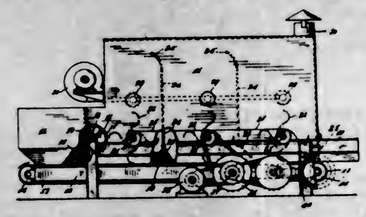


In a firearm, the combination, with a trigger guard having a transverse bore, a keyway extending longitudinally of and communicating with the bore, and a slot at right angles to and opening into the bore and keyway, and with a trigger movably mounted in the slot, of a cross-bolt slidable in the bore, a key on the cross-bolt slidable in the keyway to prevent rotation of the cross-bolt, a spring engaging and yieldably urging the cross bolt in one direction to one extreme position, a finger rest on one end of the cross-bolt positioned relative to the trigger to receive thrust from a user's finger approximately simultaneously with depression of the trigger by said finger, for movement of the cross-bolt in the other direction to an opposite extreme position against the action of the spring, the key having a cutaway portion to provide a seat receiving and preventing depression of the trigger when the cross-bolt is in the first-named position, the trigger when positioned in the seat engaging one end wall of the cutaway portion to provide a stop for preventing movement of the cross-bolt beyond the first-named extreme position, and said cross-bolt having a recess immediately adjacent and communicating with the seat to receive the trigger when the cross-bolt is moved to its second extreme position, to permit depression of the trigger, one end wall of the recess being flush with the other end wall of the cutaway portion to provide a stop engageable by the trigger to prevent movement of the cross-bolt beyond its second extreme position and to register the recess with the trigger as the trigger is depressed.

2,458,617
DRIER
Kenneth E. McConnaughay, West Lafayette, Ind.
Application March 10, 1943, Serial No. 478,600
4 Claims. (Cl. 34—216)

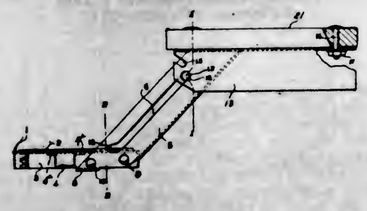
1. A drier for crushed stone and the like, comprising a horisontally elongated housing having side walls and a top wall and provided at opposite ends with inlet and discharge openings for the material to be dried, a conveyor in the lower portion of said housing for conveying material from the inlet opening to the discharge opening, said housing being provided above said conveyor and near opposite ends with air inlet and air discharge openings, means for causing air to flow upwardly thrown material from passing directly through said housing above said conveyor from the air inlet opening to the air discharge open-

ing, means for heating such air, a plurality of spaced rotatable shafts extending horizontally across said housing above and transversely of said conveyor, each of said shafts being provided with a plurality of axially extending rows of generally radial arms, said arms having a length such that their outer ends will pass close to said conveyor as the shaft rotates, and means for rotating said shaft at a speed such that said arms will throw material on said conveyor upwardly into the heated upper portion of the housing, and a rigid vertical partition extending transversely of said housing between adjacent shafts



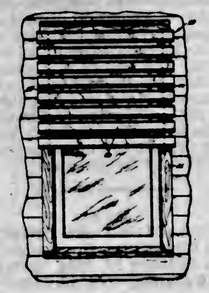
to divide the interior of the housing into compartments, said partition being arranged to permit communication between said compartments adjacent the top wall of the housing and having its lower edge spaced above said conveyor to provide an opening through which the material being dried can pass from one compartment to the other on the conveyor, said partition between its lower edges and a point adjacent the top wall of the housing being imperforate to intercept material thrown upwardly by the arms on the shaft in one compartment and thereby prevent such upwardly thrown material from passing directly into the adjacent compartment.

2,458,618
FOLDABLE STEP FOR TRAILERS
Albert W. McDonald, Elkhart, Ind.
Application July 1, 1946, Serial No. 680,676
4 Claims. (Cl. 280—166)



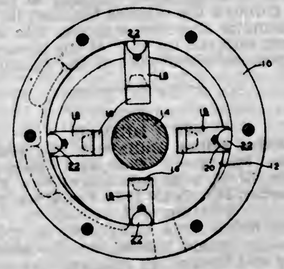
1. In a foldable step for trailers, a pair of spaced depending brackets secured to the under side of the body of the trailer, inwardly projecting rivets on said depending brackets, said rivets having their heads beveled on their inner surfaces; side arms having longitudinal slots through which each of said rivets project, said slots having offset extensions at their lower ends, the portions of the side arms adjacent to the upper ends of the slots being bent to snugly engage the inner beveled surfaces of the rivets when the side arms are moved to their unfolded position for use, whereby to firmly hold them in this position to prevent swaying, a foldable step pivotally mounted on the lower ends of said side arms, and means for holding said steps in horisontal position for use.

2,458,619
LOUVERED AWNING
Orman O. McKinley, Indianapolis, Ind.
Application May 3, 1946, Serial No. 667,164
3 Claims. (Cl. 20—57.5)



1 A louvered awning comprising a pair of parallel bars, a series of brackets for one bar, each bracket comprising an integral sheet metal piece having a portion embracing its bar and a portion angularly inclined downwardly and away from its bar, a corresponding series of brackets for the other bar, each comprising an integral sheet metal piece having a portion embracing its bar and a portion angularly inclined downwardly and away from its bar, said inclined portion of each bracket being coplanar with the corresponding portion of a mating bracket in the other series, and a slat extending between and secured to said inclined portion of each mating pair of brackets.

2,458,620
SLIDING VANE COMPRESSOR
David W. Megeber, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application May 28, 1945, Serial No. 596,285
2 Claims. (Cl. 230—152)



1. In a rotary pump, a housing having a compression chamber therein, said housing including port openings for the ingress and egress of fluid, a rotor mounted for rotation in said chamber, a unit comprising a vane and a shoe slidable within said rotor, said unit being loosely held within said rotor and movable outwardly thereof during its rotation to cause said shoe to engage the wall of said chamber for separating the incoming fluid from the outgoing fluid, said unit being freely retractable when the rotor stops rotating to cause disengagement of said shoe from said chamber wall, said vane having an arcuate recessed portion cooperating with an

arcuate surface portion on said shoe permitting

countersunk head set screw threaded in said

arm, an oscillatable support, a bell crank pivot-

of the bowl, a central inlet pipe connected with

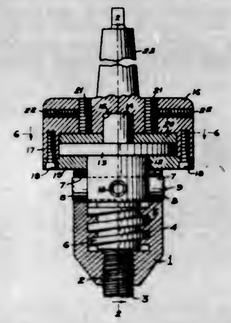
arcuate surface portion on said shoe permitting oscillating movement of said shoe relative to the vane, said arcuate recessed portion on said vane extending throughout an arc greater than 180° for locking said shoe to said vane against relative movement therebetween in a direction transverse to the direction of extension of said arcuate portions, said arcuate recessed portion of said vane having a slot therein extending longitudinally therewith from one end of the vane to a point inwardly of said end thereof, and said shoe having a stop movable into said slot upon inserting said arcuate surface portion of the shoe into said arcuate recessed portion of the vane through said one end thereof for limiting the oscillation of said shoe relative to said vane.

2,458,621
FURNITURE LEG SHOE
Robert Ellis Miller, Bronxville, N. Y.
Application January 20, 1948, Serial No. 3,289
6 Claims. (Cl. 16—42)

1. A cushion slide for a tubular furniture leg, comprising a plate having a central circular opening and secured peripherally to the tubular leg, a bushing having a truncated conical portion and a cylindrical portion adjacent said central opening of the plate, and a rubber plug having a cylindrical portion of a diametric dimension to be receivable in the cylindrical opening of the said plate and bushing, and a cone head recessed at its under end to form an annular shoulder, the diametric dimension at said wider end of the cone head of the rubber plug being greater than the diameter of the tip end of the tapered bushing, said cone head being compressed in forced insertion through the tapered bushing, its said recessed annular shoulder snapping into overlying abutment with the tip edge of the tapered bushing to prevent withdrawal of the rubber plug.

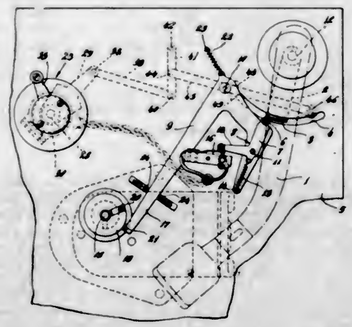
2,458,622
STUD DRIVER
Frank Alden Miller, Buffalo, N. Y., assignor to Buffalo Machinery Company, Incorporated, Buffalo, N. Y., a corporation of New York
Application March 19, 1945, Serial No. 583,569
1 Claim. (Cl. 81—53)

A stud driver core comprising a cylindrical body having square threads on the lower stud-engaging end thereof, an enlarged disc providing a head on the upper end and a centrally disposed positioning pin extended from the disc and axially aligned with the said cylindrical body and square threads thereon, said cylindrical body having a transversely disposed pin-receiving opening therethrough positioned perpendicular to the axis thereof and a countersunk threaded set screw socket extended inward from one side and in the same plane as that of the said pin receiving opening, a pin having a notch in the side thereof positioned in said pin receiving opening of the cylindrical body with the ends extended from opposite sides of said body and with the notch therein registering with said set screw socket, a countersunk head set screw threaded in said socket with the end thereof extended into the notch of the pin and with the outer surface of the head within the peripheral surface of the said cylindrical body, a sleeve positioned on and carried by said cylindrical body having internal square threads to receive the said threads of the body, inclined slots in which the extended ends



of the pin are positioned and a threaded stud receiving socket in the lower end, a driving head having a mounting shank thereon with a socket in the lower end thereof for receiving the disc on the upper end of the said cylindrical body, and a friction disc in said driving head positioned to coact with the disc forming the head of said cylindrical body.

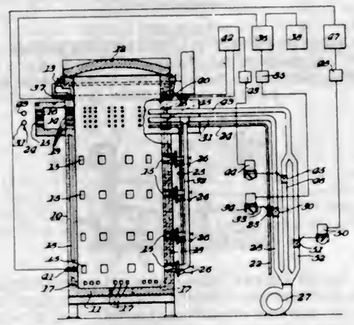
2,458,623
CONTROL MEANS FOR GRAMOPHONES
Edmund Walter Mortimer, Swindon, England, assignor to The Garrard Engineering and Manufacturing Company Limited, Swindon, England
Application May 23, 1945, Serial No. 595,371
In Great Britain November 5, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 5, 1963
8 Claims. (Cl. 192—123)



1. In a gramophone comprising a turntable, an electric motor for driving the turntable, a turntable brake, a tone arm and means including a relay for cutting off the motor and actuating the turntable brake, a switch in circuit with said relay, a quadrant movable with the tone

arm, an oscillatable support, a bell crank pivotally mounted on said support and having one arm normally maintained in engagement with said quadrant to cause the bell crank to rotate simultaneously with the movement of the tone arm, the other arm of the bell crank being adapted to actuate said switch to operate said relay upon a predetermined rotation of the bell crank greater than the rotation thereof caused by the quadrant during one revolution of the turntable while the pick up needle is in the reproduction groove of a record, means for periodically oscillating said support at each revolution of the turntable to disengage the bell crank from the quadrant, and means for returning the bell crank to a predetermined initial angular position relative to the support upon oscillation of this latter.

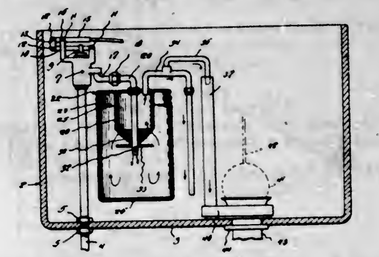
2,458,624
METHOD AND APPARATUS FOR ARTIFICIALLY COMPENSATING FOR THERMAL LOAD CHANGES IN HEAT-TREATMENT FURNACES
William A. Morton and Edwin G. Smith, Mount Lebanon Township, Allegheny County, Pa., assignors, by mesne assignments, to Amsler Morton Corporation, Pittsburgh, Pa., a corporation of Delaware
Application April 15, 1942, Serial No. 438,986
19 Claims. (Cl. 263—40)



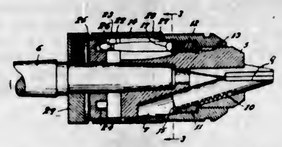
2. In a commercial heating furnace of the character described, the combination of means for introducing heat to the furnace chamber for heat treating the material therein, exhaust ports adjacent one end of the furnace chamber, artificial load ports adjacent the other end of the furnace chamber, means for supplying a non-combustible fluid to the artificial load ports, means responsive to the temperature and pressure of the furnace chamber for controlling the supply of the non-combustible fluid, and independent means responsive to the temperature of the furnace chamber for controlling the supply of heat thereto.

2,458,625
WATER FILTER BOWL
John J. Nizlolek, Chicago, Ill.
Application October 23, 1945, Serial No. 623,898
1 Claim. (Cl. 210—164)

A liquid filtering device for use with flush tanks or the like, comprising a bowl for receiving the liquid and being open at one end, a cover detachably mounted upon the open end of the bowl, a central inlet pipe connected with the cover and extending therethrough and into the bowl and open at its bottom end, the open bottom end of the inlet pipe being spaced from the bottom of the bowl, the inlet pipe being provided near its bottom end with a shoulder, washer surrounding the inlet pipe and engaging the shoulder to be supported thereby, an upwardly flaring conical foraminous filter surrounding the pipe and having its lower end seated upon the washer, a cylindrical sleeve arranged between the cover and foraminous filter and contacting the upper end of the filter to steady the filter, and an outlet pipe extending through the cover and communicating with the interior of the sleeve.



2,458,626
DRILL CHUCK
Anthony Norige, East Hartford, Conn.
Application April 3, 1946, Serial No. 659,250
9 Claims. (Cl. 279—64)

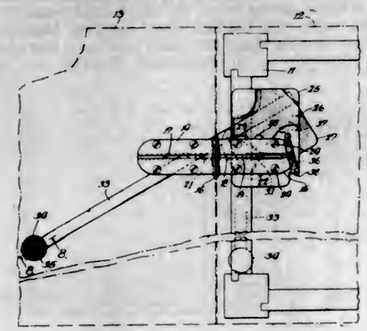


2. A drill chuck of the character described comprising a body portion having a plurality of jaws slidably mounted therein, a nut rotatable on said body portion and in threaded engagement with said jaws for moving them towards closed or opened position, cam means mounted on said body portion for moving said nut relatively to said body, leverage means extending from said cam means, and means for operating said lever for causing said cam means to move said nut relatively to the body and applying a gripping closing motion to said jaws.

2,458,627
TABLE LID SUPPORT
Edwin W. North, Rockford, Ill., assignor to National Lock Company, Rockford, Ill., a corporation of Delaware
Application July 23, 1945, Serial No. 606,508
10 Claims. (Cl. 311—62)

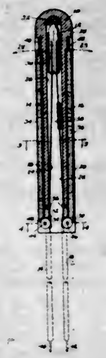
1. In a lid support or the like, the combination of a supporting arm rotatably mounted beneath the cabinet top, a lid connected to said top so as to overlie the same or be extended therefrom, a link pivotally connected to said lid and slidably connected to said top, said link having an

abutment positioned to limit the outward movement of said arm, and a spring connected to pro-



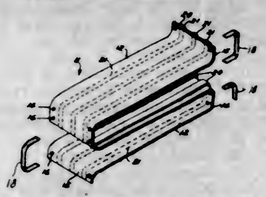
ject said arm into an extended position limited by the position of said link.

2,458,628
VEST-POCKET CIRCUIT TESTING DEVICE
Nathaniel N. Okun, Bronx, N. Y.
Application June 14, 1944, Serial No. 540,199
4 Claims. (Cl. 175—183)



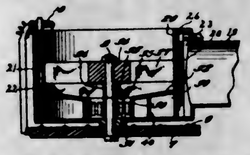
1. A vest pocket circuit testing device comprising an elongated holder of small cross-sectional area having a hollowed center and a pair of exterior housing portions extending lengthwise of said holder on opposite sides thereof, a circuit testing lamp carried by said holder in its hollowed center and visible through a wall of said holder, a pair of elongated test arms each articulately mounted on said holder at the lower end of one of said exterior housing portions so as to be movable outwardly and inwardly thereon between an extended testing position and a contracted inoperative position, the test arms in the contracted inoperative position lying parallel to said holder in said exterior housing portions so as to be substantially enclosed within the cross-sectional area of said holder, and conductive elements within said holder connecting the test arms in series with said circuit testing lamp.

2,458,629
SERPENTINE FREEZER SHELF
George Orley, Detroit, Mich.
Application June 18, 1945, Serial No. 600,081
1 Claim. (Cl. 62—126)



A unitary one piece serpentine or sinuous freezer shelf member for refrigerators comprising at least three parallel horizontal shelves connected by at least two vertical portions, all integral, and formed with hollow ribs extending from end to end, these ribs reinforcing the member and also providing conduits for refrigerant, the ends of these conduits being in sealed communication with refrigerant inlet and outlet tubes, the conduits having flat parallel top and bottom sides and being positioned midway of the rib, the ends of the member being formed as vertical extensions, these and the vertical portion being adapted to be fastened to vertical walls of the refrigerator to secure the member in place.

2,458,630
PAN TYPE OIL GASIFYING BURNER
Andrew Palko, Spring Valley, N. Y.
Application September 26, 1945, Serial No. 618,641
3 Claims. (Cl. 158—53)



1. An oil burner comprising an open substantially circular pan formed with a vaporized fuel and air mixing chamber therein, and a vapor chamber with which said mixing chamber communicates, means for feeding liquid fuel into said mixing chamber, means for feeding air under pressure into said mixing chamber to form a mixture with the vaporized fuel therein and force the mixture under pressure out of said mixing chamber and into the vapor chamber, means for preheating the vapor chamber to preheat the mixture therein, a sleeve upstanding in said pan in the center thereof and provided with inlet apertures therein, means for directing the preheated mixture from said vapor chamber into said sleeve including a spiral baffle, a circular burner block supported in the pan above the sleeve and having radial slots therein, and plates extending out of said sleeve to the block for directing mixture rising out of said sleeve to the slots in said block.

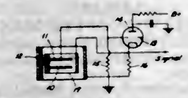
2,458,631
DRILL STEM TESTER
Asbury S. Parks, Houston, Tex.
Application March 30, 1944, Serial No. 528,757
11 Claims. (Cl. 166—1)

1. A formation tester for testing a desired formation in a bore hole, comprising a body adapted

to be lowered into the bore hole, annular packer means carried by said body and expansible by fluid pressure into contact with the formation within the bore hole to seal off from the remainder of the bore hole the formation to be tested, a compressor carried by said body for supplying fluid under pressure to the packer means to expand same, means for initially holding said com-

pressor from operation, means for releasing said holding means, means actuated by the pressure fluid in said bore hole for operating said compressor upon release of said holding means, a fluid receptacle, means for conducting fluid from the formation sealed off by said packer means to the interior of said receptacle, and means for releasing said fluid pressure within the body to permit contraction of said packer means.

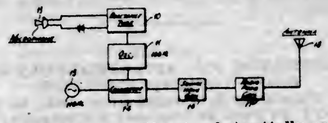
2,458,632
IONIZATION CHAMBER
J Howard Parsons, Oak Ridge, Tenn., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application December 11, 1945, Serial No. 634,315
4 Claims. (Cl. 250—83.6)



1. An ionization chamber comprising a pair of parallel plate electrodes spaced in confronting relationship, a hollow cylindrical electrically conductive member surrounding the interelectrode space of said electodes, a second hollow cylindrical electrically conductive member surrounding said first-mentioned hollow cylindrical member and being grounded, and an electronic amplifying circuit having a cathode follower circuit, the cathode being connected to said first-mentioned hollow cylindrical member.

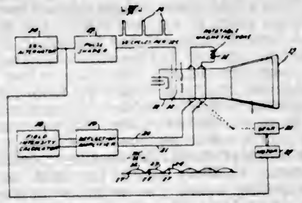
2,458,633
PULSE SYSTEM
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 5, 1944, Serial No. 517,002
3 Claims. (Cl. 250—17)

3. The method of communication which comprises producing spaced pulses whose durations are always substantially equal to the intervals between them, at a rate greater than twice the highest modulation frequency, and varying the occurrence time of said pulses in accordance with



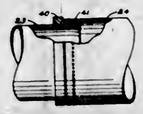
signal modulations without substantially varying the durations of said spaced pulses.

2,458,634
INDICATING DEVICE
Donald W. Peterson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 16, 1947, Serial No. 741,744
7 Claims. (Cl. 315—22)



1. The combination of a device wherein the intensity of a cathode ray is determined by a potential applied to a control grid and the angular position of said ray on a fluorescent screen is determined by rotation of a magnetic ray deflecting yoke, means for applying to said yoke at a predetermined frequency successive sets of potentials each representative of a complete scanning of an electric field, means for applying to said grid at a different frequency pulses for intensifying said ray, and means for rotating said yoke at a speed such that said ray is intensified at a different period in each of said sets of potentials.

2,458,635
EXPANSION JOINT FOR EXHAUST STRUCTURES
Paul A. Pitt and Harold A. Sprenger, San Diego, Calif., assignors to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application July 10, 1945, Serial No. 604,194
11 Claims. (Cl. 285—183)



7. An articulated exhaust structure comprising a pair of conduit sections interconnected by a telescoping joint consisting of inner and outer members rigidly connected to the respective sections, in which said inner member expands more than the outer member in response to flow of hot exhaust gas through the structure, and said inner member is dimensioned to have substantially no clearance with and be substantially locked to the outer member at normal operating temperatures when conducting hot exhaust gas, whereby said joint provides free slippage to adjust for longitudinal expansion of said sections during the transition period following initiation of exhaust

said holder connecting the test arms in series with said circuit testing lamp.

1. A formation tester for testing a desired formation in a bore hole, comprising a body adapted

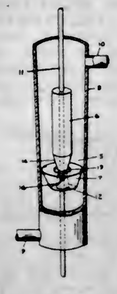
tween them, at a rate greater than twice the

gas flow, and provides a substantially rigid mechanical connection between said sections after normal operating temperatures have been reached.

2,458,636
PROCESS FOR PRECIPITATING POLYMER FROM AQUEOUS EMULSION
Louis Plambeck, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 19, 1946, Serial No. 648,815
6 Claims. (Cl. 260—29.6)

5. Process for obtaining, in form suitable for isolation by filtration, a saturated addition polymer of a monomer composition wherein each monomer has but one aliphatic carbon-to-carbon unsaturation and that is ethylenic, which polymer, in the form of a molded bar 2.5 by 0.5 by 0.05 inch when rigidly clamped at one end, loaded with a 27.5 gram weight applied two inches from the point of support and in the plane of the 0.05 inch dimension, and heated in a liquid bath at the rate of two degrees centigrade per minute does not deform 0.06 inch below 60° C. and which poylmer is precipitated from its aqueous emulsion in finely divided and difficulty filtrable form, which comprises adding to a completely polymerized aqueous emulsion of said polymer a water-insoluble, unpolymerizable, liquid organic swelling agent for said polymer, which swelling agent has a vapor pressure at 100° C. of at least 15 mm., in amount from 3 to 30% based on the weight of the polymer but less than that sufficient to cause coalescence of the polymer particles to a gummy mass, coagulating the aqueous polymer emulsion by the addition thereto of a water-soluble electrolyte and thereafter evaporatively removing the swelling agent.

2,458,637
FLUID FLOW MEASURING DEVICE
Robert H. Pratt and James Q. Underwood, Jr., Narrows, Va., assignors to Celanese Corporation of America, a corporation of Delaware
Application April 5, 1946, Serial No. 659,808
6 Claims. (Cl. 73—209)



1. In a rotameter for the measurement of instantaneous rates of fluid flow, a substantially cylindrical vertical chamber provided with fluid inlet and fluid outlet means, a sectional bob enclosed by said chamber comprising an upper section and a separate lower section in surface to surface contact, the construction and arrangement of said upper bob section and said lower bob section being such that said upper bob section acts as a pivot for said lower bob section, and vertical guide means cooperating with said bob for limiting lateral movement of said bob during fluid measuring operations.

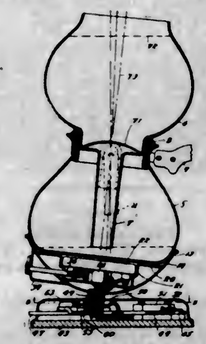
2,458,638
SHOTGUN SIGHT
Daniel A. Pretzer, Fresno, Calif.
Application May 31, 1946, Serial No. 673,253
2 Claims. (Cl. 33—51)

1. In a lead sight for shotguns, a pair of ring members, and fastening means for clamping the ring members securely onto the front end of a gun barrel, said fastening means comprising a substantially triangular frame formed of resilient metal, said frame having a top member and two side members, said side members being adapted to be bent outwardly so that the gun barrel can be inserted in the frame, and a pair of adjusting tongues formed on the top member, extending downwardly therefrom and adapted to rest on the barrel, said ring members being positioned adjacent the meeting edges of said top and side members and secured thereto.

2,458,639
VINYL COPOLYMER AND PROCESS FOR ITS PRODUCTION
Richard W. Quaries, Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application October 13, 1944, Serial No. 558,609
5 Claims. (Cl. 260—43)

2. A copolymer consisting of vinyl chloride, vinyl acetate, maleic acid, methyl maleate and vinyl alcohol containing from 85 to 95% vinyl chloride, from 1.5 to 10% vinyl acetate, from 0.2 to 6% maleic acid, from 0.68 to 4.4% methyl maleate calculated as dimethyl maleate and from 1 to 10% vinyl alcohol.

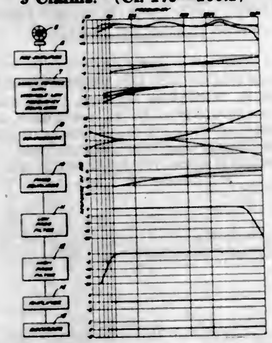
2,458,640
AUTOMATIC COFFEE MAKER
Ludwig Reichold, Winsted, Conn., assignor to The Silex Company, Hartford, Conn., a corporation of Connecticut
Application October 9, 1944, Serial No. 557,902
15 Claims. (Cl. 99—281)



1. In a device of the character described, the combination of a base, uprights on said base, a

heater swingingly supported by said uprights, an electric circuit for said heater, a main switch in said base for controlling said circuit, a manually operable member for moving said heater to operating position and closing said switch, a separate switch carried by said member, means carried by said heater for operating said separate switch to break said circuit, means for retaining said separate switch in open position, a thermally responsive switch for controlling said circuit while the separate switch is in open position, and means associated with said manually operable member for returning the separate switch to closed position and operating the main switch to break said circuit and thereby return the heater to normal condition.

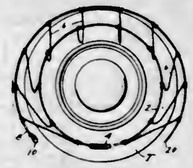
2,458,641
METHOD AND APPARATUS FOR CONTROLLING FREQUENCY CHARACTERISTICS IN SOUND RECORDING
Michael Rettinger, Encino, and Kurt Singer, North Hollywood, Calif., assignors to Radio Corporation of America, a corporation of Delaware
Application May 8, 1945, Serial No. 592,618
9 Claims. (Cl. 179—100.1)



1. The method of obtaining a predetermined frequency characteristic of a signal before impression on a sound recorder, comprising translating sound waves into electrical currents, said currents having a frequency characteristic in accordance with the frequency response characteristic of the translator, equalizing the translator frequency response characteristic, applying additional low frequency equalization to compensate for voice variations from normal, compressing said currents while applying equalization to the control signal, and then equalizing for film losses and recorder slit attenuation.

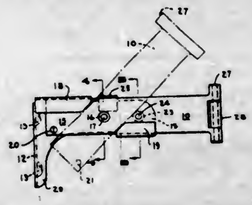
2,458,642
AUTO TIRE CHAIN RING
Charles H. Reynolds, Donora, Pa., assignor of forty-nine per cent to Peter Girman, Donora, Pa.
Application July 17, 1946, Serial No. 684,320
1 Claim. (Cl. 152—242)

In a motor vehicle non-skid tire chain, the combination, which comprises, an outer spring wire ring having a turnbuckle therein for adjusting the diameter thereof, adapted to be positioned against the outer surface of a tire, an inner spring wire ring adapted to be positioned against the inner surface of the tire and having an opening therein with a sleeve mounted on the end at one side of the opening and extended to receive the opposite end, said opposite end having a recess in the inner surface thereof, a spring latch positioned on the end of the ring carrying the sleeve and extending through an opening in the sleeve for locking engagement with the said opposite end of the ring through the recess therein, whereby upon releasing the ring after being spread, the ends are adapted to snap into locking engagement with the said opposite end secured in the sleeve, a plurality of spaced cross chains positioned around the tire connecting the rings, and open clevises for freely connecting the ends of the cross chains to the said rings, said clevises having elongated arms with eyes at the ends of



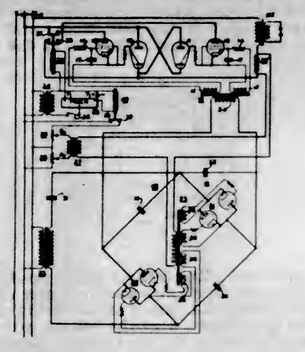
said arms and with the eyes freely positioned on the rings, and said rings having a pair of collars integral therewith and positioned on opposite sides of the clevises with the collars spaced from the outer surfaces of the clevises, wherein substantially free connections are provided between the cross chains and rings to compensate for uneven longitudinal thrust resulting from pull on the said cross chains, and whereby the said cross chains suspend the inner ring in position against the inner surface of the tire so that the ends thereof are positioned to snap into locking engagement when released, thereby eliminating the necessity of manually fastening the inner section of a tire chain on a wheel.

2,458,643
BRACKET FOR DRAPERY FIXTURES
Earl W. Riley, Pontiac, Mich.
Application January 15, 1947, Serial No. 722,110
6 Claims. (Cl. 248—265)



1. A bracket adapted to support both a curtain rod holder and a drapery crane holder and comprising means provided by said bracket to permit attachment thereof to a support, pivotal attachment means provided by said bracket for attaching a curtain rod holder pivotally to one side thereof and for attaching a drapery crane holder pivotally to the other side thereof, the pivotal attachment means for said two holders having individual spaced pivot axes, and supporting means cooperable with the pivot attachment of said curtain rod holder and drapery crane holder to support the said holders and including lateral projections from said bracket at opposite sides thereof.

2,458,644
ELECTRONIC CONTROL SYSTEM UTILIZING AUTOMATIC PHASE SHIFT
Robert L. Ringer, Jr., and Clyde E. Smith, Warren, Ohio, assignors to The Taylor-Winfield Corporation, Warren, Ohio, a corporation of Ohio
Application August 6, 1943, Serial No. 497,714
4 Claims. (Cl. 323—37)

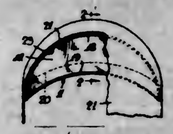


1. In an electric resistance welding system having a welding load circuit and means to control the flow of electrical energy thereto comprising a pair of reversely connected valves, the combination of a symmetrical bridge phase shifting network in control of conduction in said valves and having a reactance device and a variable conductance in series in each of the two legs of the input circuit portions of the bridge, each of said conductances comprising a pair of reversely connected grid controlled space discharge devices, a common control circuit for each of said discharge devices comprising a transformer having a single primary winding and a plurality of appropriately phased secondary windings each connected to the control grid of one of said discharge devices, and means to energize said primary winding in accordance with the strength of current flowing in said load circuit.

2,458,645
IMBEDDED METAL BAND
Samuel Rosenberg and Seymour Padwe, Newark, N. J.
Application January 7, 1947, Serial No. 720,612
3 Claims. (Cl. 63—15)

1. In the process of producing embedded metal bands in which an annular disk is pressed out at the center to produce a circular band, the improvement comprising cutting out at least a section of said disk and inserting, in the cut-out portion, a piece of another metal of the shape of the cut-out portion, prior to the pressing-out operation.

2,458,646
PAD AND POCKET THEREFOR
Lin Root, Boston, Mass., assignor, by mesne assignments, of one-half to Barens Products, Inc., New York, N. Y., a corporation of New York
Application August 11, 1945, Serial No. 610,284
11 Claims. (Cl. 2—268)



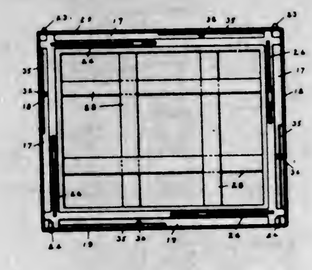
1. A pocket for attachment to apparel, and a soft flexible pad therefor, said pocket having a predetermined volumetric shape comprising a bottom section having a peripheral edge, and shaped to fit a portion of the body, a top section having a peripheral edge and a contour to which it is desired to shape the apparel, and a side wall joining and connecting the top and bottom sections, where the peripheral edges are spaced therefrom, forming a hollow structure; said pad having a predetermined shape for filling the hollow structure.

2,458,647
COCKING BOLT OF MACHINE GUNS
Frederick W. Sampson, Dayton, Ohio, and George J. Hyde, Brooklyn, N. Y., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 15, 1946, Serial No. 690,738
2 Claims. (Cl. 42—16)

1. In an arm of the character described, a cocking device comprising a slide having a longitudinal body provided at its forward end with a handle extending through and slidably fitted in a longitudinal slot formed in the side of a breech bolt housing of said arm, said forward end being formed for engagement with the forwardly facing part of a breech bolt of said arm, said longitudinal body having a longitudinal bore extension from its rear end to slidably receive an extensible member, means within said longitudinal body to limit the movement of said extensible member within said longitudinal body and yielding means positioned in said bore for resilient engagement of said extensible member with said longitudinal body, said extensible member and longitudinal body slidable together and parallel with said breech bolt housing to effect cocking of said bolt.

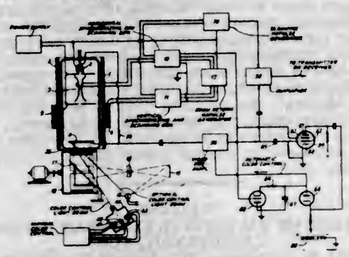
2,458,648
PHOTOGRAPHIC ENLARGING EASEL
Robert P. Saunders, Rochester, N. Y.
Application April 4, 1946, Serial No. 659,518
17 Claims. (Cl. 88—24)

1. In a photographic enlarging easel, the combination with a base plate on which a sheet is positioned, of a retaining frame pivotally mounted on the base plate and positionable thereagainst to hold the sheet, a supporting frame detachably arranged within said retaining frame and positionable therewith against the base plate, and framing members adjustable on the



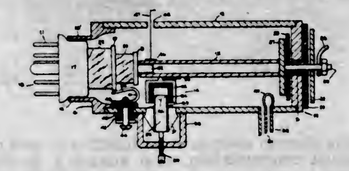
supporting frame in a plane parallel to the base plate.

2,458,649
COLOR TELEVISION
Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1941, Serial No. 376,770
17 Claims. (Cl. 178—5.2)



1. In a television transmitting system adapted to develop and transmit signals representative of a succession of differently colored optical images comprising a cathode ray tube having a photosensitive target electrode of the charge storage type and electron beam generating means, a light filter assembly associated with said tube including a succession of displaced differently colored light filters, means to move said filter assembly in the path of light from an object intercepted by said target to form a succession of differently colored optical images of said object on said target, means to maintain an area of said target unilluminated between areas subjected to light passing through adjacent filters, means to scan the electron beam of said tube in one direction over said unilluminated area of the said target to develop signals representative of the intensity of light passing through one of said filters, means to displace the electron beam and scan said beam in an opposite direction approximately parallel with said first-mentioned direction and means to intensify said electron beam during scanning in said opposite direction to discharge areas of said target intermediate the areas scanned in said first direction.

2,458,650
COAXIAL LINE GENERATOR
Louis W. Schreiner and Eugene V. Leonard, Philadelphia, Pa., assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 20, 1944, Serial No. 554,893
5 Claims. (Cl. 250—36)



1. A high frequency generator comprising in combination a lighthouse tube having anode grid and cathode contact rings, a coaxial line having inner and outer conductors connected to the anode and cathode contacts respectively of said tube at the near end, and closed at the far end with respect to radio frequency, an adjustable capacitor at the near end of the coaxial line connected between the inner conductor and the outer conductor, a feed-back loop in inductive relation to said capacitor connected to the grid contact and coupled to the outer conductor of the coaxial line with respect to high frequenc[illegible] but electrically insulated therefrom with res[illegible] to direct current, and means for supplying anode voltage to the inner conductor of the coaxial line, said coaxial line having a length less than one quarter wave for the frequency at which the generator is intended to operate.

2,458,651
PROCESSES FOR PRODUCING LOW CARBON CHROMIUM STEELS
Herman B. Schulz, Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
No Drawing. Application September 25, 1947, Serial No. 776,158
3 Claims. (Cl. 75—12)

1. In the production of electric arc furnace steels, wherein a bath is formed consisting of molten steel and a highly oxidizing slag, carbon is oxidized from the steel to a content of less than 0.03 per cent, and chromium is subsequently introduced to the steel, a method of maintaining a low carbon content in the steel while chromium is being introduced comprising replacing the original highly oxidizing slag with a mildly oxidizing slag consisting of 600 to 800 pounds burnt lime, 300 to 400 pounds silica sand, and about 100 pounds fluorspar per 25 tons of heat, and introducing chromium through said mildly oxidizing slag at a temperature of around 3100° F.

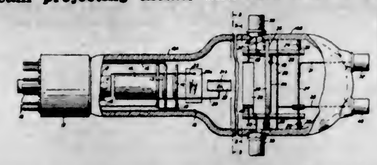
2,458,652
ELECTRON DISCHARGE APPARATUS
Raymond W. Sears, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 13, 1946, Serial No. 715,900
11 Claims. (Cl. 250—164)

1. An electron discharge device comprising a member having a plurality of rows of apertures therein, means opposite thereto for projecting an electron beam toward said member, means for deflecting said beam in the direction along one of said rows, means for deflecting said beam in a

of the cut-out portion, prior to the pressing-out operation.

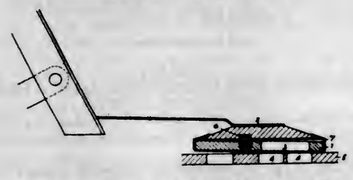
thereagainst to hold the sheet, a supporting frame detachably arranged within said retaining

direction different from said first direction, and means for guiding said beam along a path of preassigned configuration while it is deflected by said second deflecting means, said guiding means comprising an auxiliary electrode between said beam projecting means and said member and



having therein apertures conforming to said preassigned configuration, said auxiliary electrode having a coefficient of secondary electron emission greater than unity, a collector electrode opposite said auxiliary electrode and a feedback coupling between said collector electrode and said first deflecting means.

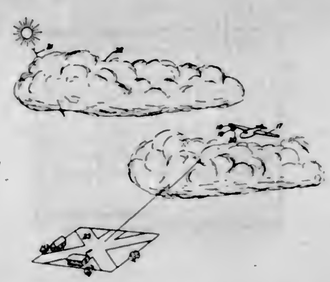
2,458,653
DOUBLE VALVE FOR ACCORDIONS AND LIKE MUSICAL INSTRUMENTS
René Seybold, Strasbourg-Meinau, France
Application May 9, 1938, Serial No. 206,851
In France May 8, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires May 8, 1957
2 Claims. (Cl. 84—376)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)



1. In a valve construction for accordions or like musical instruments, two superposed valves for every sound opening in the resonance base, the lower one being provided opposite the sound opening with an opening which is smaller than said sound opening and the upper one being plain, means for connecting both valves at their rear ends by articulation, means for limiting the mutual discarding of the valves at the front ends, a spring tending to keep both valves apart, and means for actuating the upper valve.

2,458,654
SYSTEM FOR AND METHOD OF UTILIZING MICROWAVE RADIATION FROM THE SUN
George C. Southworth, Rumson, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1943, Serial No. 515,738
6 Claims. (Cl. 178—6)

3. An apparatus for enabling artificial vision under daylight conditions of impaired visibility comprising a directive electromagnetic wave energy collector responsive exclusively to solar waves of the order of 1-centimeter wavelength, means for supporting said collector in a position in which its effective receptiveness is away from the direction of the sun whereby reflected solar energy of the order of 1-centimeter wavelength may be collected from reflecting objects, a radio receiver connected to said collector to be supplied with centimeter wavelength reflected solar energy and a facsimile-reproducing means connected



to said radio receiver to indicate visually the intensity of reflected energy which the collector receives.

2,458,655
PROCESS OF CASE-HARDENING METALS
Frank J. Sowa, Cranford, N. J.
No Drawing. Application February 4, 1944, Serial No. 521,123
5 Claims. (Cl. 148—14)

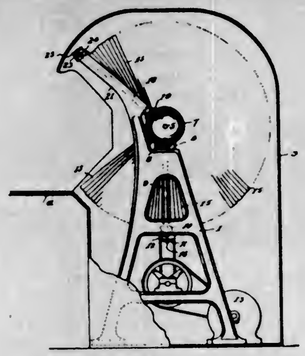
1. A process of case-hardening an article formed from a metal capable of cementation by carbon and silicon, comprising heating the metal to an elevated temperature at which carbon and silicon impregnation will occur and contacting the heated metal with the thermodecomposition products of an organo-silicon compound containing at least one organic radical selected from the group consisting of aliphatic, aromatic, alicyclic and heterocyclic radicals, at least one carbon atom of the radical being united directly to silicon.

2,458,656
ESTERS OF PIPERONYL CHRYSANTHEMUM CARBOXYLIC ACID
Martin E. Synerholm, Hastings on Hudson, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc., a corporation of New York
No Drawing. Application March 26, 1946, Serial No. 657,349
3 Claims. (Cl. 260—338)

1. The compound piperonyl ester of 2,2-dimethyl-3-isobutenyl cyclopropane-1 - carboxylic acid.

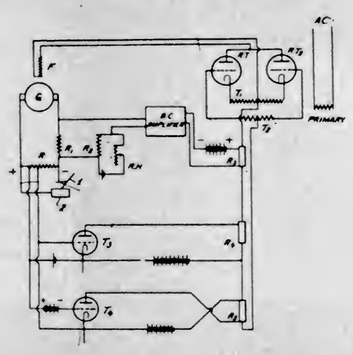
2,458,657
CARD INDEX OF THE ROTARY TYPE
George W. Torrence and Willis A. Calkins, Peoria, Ill.
Application February 5, 1944, Serial No. 521,208
7 Claims. (Cl. 40—35)

1. In a card index of the rotary type, in combination with a framing, a rotatable member supported thereon, and a series of abutting index data carrying tablets hingedly mounted each at one of its ends on the member, and each normally free to swing at its other end each having a socket therein, of a structure including mechanism adapted to rotate the member in a continuous manner and having a rotatable toothed portion whose teeth positively engage in the sockets of said tablets to advance certain of the latter with said member, and means driven by said mechanism also comprising a toothed portion whose teeth engage in said sockets of the tablets to positively control and advance the said tablets, the latter swinging individually in



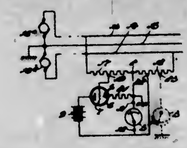
either direction on and with respect to the member, said means at a given position for inspection of the tablets adapted to release the same one by one.

2,458,658
ELECTRIC ARC WELDING
Joseph M. Tyrner, New York, N. Y., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 20, 1944, Serial No. 531,854
19 Claims. (Cl. 315—302)



1. Electric welding apparatus comprising the combination of a welding circuit, a welding generator for supplying current to said welding circuit and having a field winding for supplying excitation to control the amount of current supplied to said welding circuit, means for supplying excitation current to said field winding, and control means connected to the welding circuit and to said excitation supplying means, said control means being responsive to the current in the welding circuit for causing said excitation current to change in inverse ratio to the welding current throughout the normal operating range of welding voltage, whereby the welding current is maintained substantially constant throughout said range of welding voltage.

2,458,659
DISCHARGE DEVICE FOR VOLTAGE MEASUREMENT
Antonius Wilhelmus Vingerhoets and Hendrik Nieuwdorp, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 27, 1946, Serial No. 665,392
In the Netherlands October 3, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 3, 1962
5 Claims. (Cl. 171—95)



5. Apparatus for indicating the voltage established between the output leads of a direct current source by means of a voltage indicator one of whose input terminals is connected to an intermediate point in said source, said apparatus comprising a first potentiometer having a tap and being connected between the negative lead of the source and the intermediate point, a second potentiometer having a tap and being connected between the positive lead of the source and the intermediate point, the said first and second potentiometers being of equal value, an electron discharge device having a cathode, a control grid and an anode, said grid being connected to the tap of said second potentiometer, a resistance connected between the intermediate point and said cathode, the value of said resistance being equal to the resistance existing between the tap of said first potentiometer and the intermediate point, an anode voltage supply connected between said anode and the tap of said first potentiometer, and means connecting the other input terminal of the voltage indicator to the tap of said first potentiometer.

2,458,660
PROCESS OF MAKING COMPOSITE METAL ARTICLES
Hugh G. Webster, Detroit, Mich., assignor to J. H. Shoemaker
No Drawing. Application January 23, 1943, Serial No. 473,397
1 Claim. (Cl. 117—51)

A three step process for coating the surfaces of alkali-resistant metals with a molten lead-tin alloy, which comprises preparing the metal for coating by cleaning it with a two step non-electrolytic process wherein each step is in the nature of a chemical reaction, and wherein the second step leaves no added finish to the surface, and wherein the first step comprises immersing the metal in a bath comprising a molten mixture of 1 part by weight of alkali metal nitrate and from 1.5 to 3.0 parts by weight of alkali metal hydroxide, and from 0.1 to 0.5 parts by weight of alkali metal chloride, for a period of time sufficient to remove any organic surface impurities and convert inorganic surface impurities to an oxidized coating, more readily soluble than were the original inorganic impurities, the operating temperature of the first bath being above the melting point of the molten mixture, that is to say, being in the range of 550° to 650° F., and wherein the second step comprises immersing the metal in a bath of such nature that when the

the direction of the sun whereby reflected solar energy of the order of 1-centimeter wavelength may be collected from reflecting objects, a radio

sockets of said tablets to advance certain of the latter with said member, and means driven by said mechanism also comprising a toothed por-

is maintained substantially constant throughout said range of welding voltage.

metal in a bath of such nature that when the

metal is immersed therein for a proper period of time, the bath will react chemically with the oxidized coating to remove it, so as to leave the surface free of the original impurities and of the oxidized coating as well, the second step, however, being such as not to expose at the surface other impurities, not previously existent, or not previously exposed, thus leaving the surface free of all impurities and consisting solely of the metal, and finally coating the surface thus cleaned, with the coating, the bath of the second step being a dilute acid selected from the class consisting of hydrochloric and sulfuric acids, and the immersion being sufficiently brief so as not to permit the acid to attack the metal, but merely to remove the oxidized coating formed by the first step.

2,458,661
PROCESS OF CLEANING METAL SURFACES AND COMPOSITIONS THEREFOR
Hugh G. Webster and Clarence L. Falter, Detroit, Mich., assignors to J. H. Shoemaker, Detroit, Mich.
No Drawing. Continuation of application Serial No. 431,168, February 16, 1942. This application January 29, 1944, Serial No. 520,332
2 Claims. (Cl. 134—3)

1. A two step non-electrolytic process for cleaning the surfaces of alkali resistant metals, wherein each step is in the nature of a chemical reaction, and wherein the second step leaves no added finish to the surface, and wherein the first step comprises immersing the metal in a bath comprising a molten mixture of one part by weight of alkali metal nitrate and from 1.5–3.0 parts by weight of alkali metal hydroxide, and from 0.1–0.5 part by weight of alkali metal chloride, for a period of time sufficient to remove any organic surface impurities and convert inorganic surface impurities to an oxidized coating, more readily soluble than were the original inorganic impurities, the operating temperature of the first bath being above the melting point of the molten mixture, and wherein the second step comprises immersing the metal in a bath of a dilute acid selected from the class consisting of hydrochloric and sulphuric acids, whereby when the metal is immersed therein for a proper period of time, the bath will react chemically with the oxidized coating to remove it, so as to leave the surface free of the original impurities and of the oxidized coating as well, the second step, however, being such as not to expose at the surface other impurities, not previously existent, or not previously exposed, thus leaving the surface free of all impurities and consisting solely of the metal, the immersion in the second bath being sufficiently brief so as not to permit the acid to attack the metal, but merely to remove the oxidized coating formed by the first step.

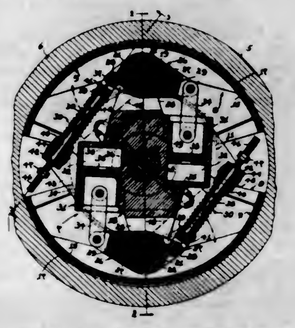
2,458,662
METHOD FOR PRESERVING THE EFFECTIVENESS OF A METAL CLEANING BATH
Hugh G. Webster, Detroit, Mich.
No Drawing. Application May 10, 1946, Serial No. 668,777
1 Claim. (Cl. 252—156)

A method for preserving the effectiveness of a metal cleaning molten alkali salt bath of the type wherein an excess of alkali salt carbonate is formed, either by atmospheric effects, or by chemical reactions arising during metal cleaning, which comprises removal of the carbonate from time to time as by precipitating it out of the bath and then removing it as a precipitate as follows: reducing the temperature of the bath to the solidification point, then increasing the temperature of the bath to the melting point, thus causing the carbonate, less soluble in the bath at the melting point than at higher temperatures, to precipitate out of the bath, and drop to the bottom, and quickly removing the carbonate precipitate.

2,458,663
MOLTEN SALT BATHS
Hugh G. Webster, Detroit, Mich., assignor to J. H. Shoemaker, Detroit, Mich.
No Drawing. Application November 22, 1946, Serial No. 711,795
1 Claim. (Cl. 252—156)

A process for removing objectionable sodium ferrite from a molten alkali-salt bath comprising molten alkali salts, molten sodium hydroxide and said objectionable sodium ferrite comprising passing steam into said bath to precipitate the ferrite, as a removable sludge, from the bath.

2,458,664
FLUID ACTUATED CLUTCH AND BRAKE MECHANISM
John N. Weiland, Cleveland, Ohio, assignor to The Cleveland Punch & Shear Works Co., Cleveland, Ohio, a corporation of Ohio
Application May 2, 1947, Serial No. 745,517
14 Claims. (Cl. 192—17)

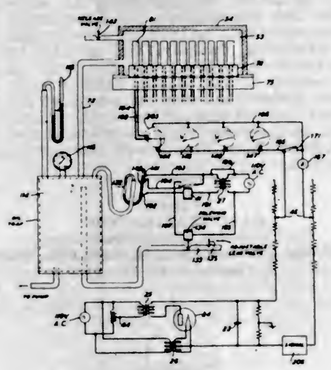


1. In clutch and brake mechanism a driving member, a driven member, means affording a stationary braking surface, unitary clutch and brake shoe means, a lever arrangement pivotally connected with said driven member and eccentrically pivoted to said clutch and brake shoe means, and actuating means for said lever arrangement, said lever arrangement adapted to shift said clutch and brake shoe means in opposite directions for selective clutching and braking engagement with said driving member and said stationary braking surface.

2,458,665
METHOD OF AND APPARATUS FOR MEASURING PRESSURE
Gerald W. Willard, Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 24, 1944, Serial No. 528,013
6 Claims. (Cl. 175—183)

1. Apparatus for selectively testing a plurality of sealed containers for gas leakage, each of which containers is provided with a pair of pin type external terminals electrically connected respectively to opposed electrodes enclosed by the

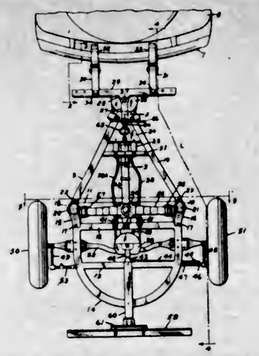
respective container, comprising a first plate for supporting a plurality of containers being tested, a second plate positioned to support said first plate, a gasket between said plates, said first plate having a plurality of apertures therein adapted to receive respective pin terminals of containers being tested, said second plate and said gasket each also having a plurality of apertures therein, respective apertures in said first and said second plates and in said gasket being in registry, an electrical contact member positioned in each set of registered apertures, each of said electrical contact members comprising a socket member positioned in a respective aperture of said first plate adapted to engage a respective pin terminal of the containers being tested and a bolt portion positioned in the respectively registered aperture in said second plate and the respectively regis-



tered aperture in said gasket, each of said electrical contact members having a shoulder portion, said shoulder portions being in contact with a surface of said gasket and acting in conjunction therewith to produce a gas-tight seal between said first and said second plates, means for lowering the ambient gas pressure at the upper surface of said first plate and within the apertures provided in said first plate to a point substantially below the pressure at which the containers being tested were sealed, a source of voltage, means for selectively applying a voltage from said source across respective pairs of said electrical contact members in any desired order, means for regulating the magnitude of the applied voltage, and means for indicating the magnitude of ionic current flow between the opposed electrodes of a respective container being tested.

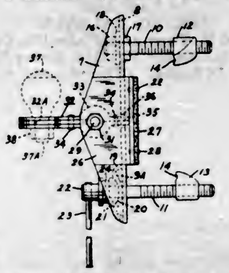
2,458,666
TRAILER DOLLY
Chester Williams, Ypsilanti, Mich.
Application November 30, 1945, Serial No. 631,899
7 Claims. (Cl. 280—33.55)

1. In a device of the character described, the combination of an axle, steerable wheels on said axle, a frame secured to said axle, said frame having forward and rearward sections pivoted together, means for connecting the forward section of the frame to an automobile bumper, means on said forward section for steering said wheels, means on said rearward section for supporting the front end of a trailer and a leaf spring secured at one end to said rearward section and



secured at the other end to an adjustable member carried by said forward section.

2,458,667
TRAILER HITCH
Chester Williams, Ypsilanti, Mich.
Application September 25, 1946, Serial No. 699,249
9 Claims. (Cl. 280—33.44)



1. In a device of the character described, the combination of a channel member having slots therein adapted to accommodate attaching bolts, attaching bolts in said slots, said bolts having lugs thereon adapted to engage opposite sides of an automobile bumper, a bearing plate pivotally secured to said channel member, and thrust plates on opposite sides of said channel member, the pivot of said bearing plate extending through the said thrust plates.

2,458,668
SKILL DEVICE
Russell A. Wood, Cambridge, Mass.
Application January 8, 1946, Serial No. 639,761
3 Claims. (Cl. 272—67)

2. An amusement device comprising a rod formed with a spiral groove extending for a substantial part of the length of the rod, smooth cylindrical sections on said rod at opposite ends of said spiral groove, a handle portion on said rod beyond one smooth cylindrical section, a trap groove in the rod at the opposite end of one smooth cylindrical section from the spiral groove, a second trap groove in the rod at the opposite end of the second smooth cylindrical section opposite the spiral groove and intermediate said

time to time as by precipitating it out of the bath and then removing it as a precipitate as follows: reducing the temperature of the bath to the

which containers is provided with a pair of pin type external terminals electrically connected respectively to opposed electrodes enclosed by the

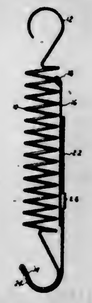
of the frame to an automobile bumper, means on said forward section for steering said wheels, means on said rearward section for supporting

end of the second smooth cylindrical section opposite the spiral groove and intermediate said

smooth cylindrical section and the handle portion, and a captive missile comprising a ball having a loop attached thereto circumposed on the rod and received in said spiral groove, whereby as the rod is gyrated at an angle to its axis in one direction or the other by means of said handle

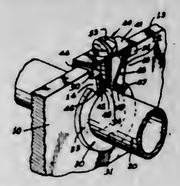
portion, the missile pulls outwardly away from the rod and in a direction along the spiral groove, and whereby the loop of the missile is caught in the trap grooves whenever the rod is unskillfully gyrated so as to cause the missile to travel too far axially outwardly along the corresponding smooth sections.

2,458,669
SPRING BALANCE
Wilfred H. Yeamans, Plainville, Conn.
Application December 10, 1946, Serial No. 715,260
5 Claims. (Cl. 265—63)



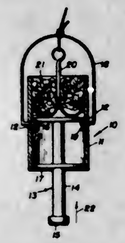
5. In a spring balance, the combination of an extensible coil spring formed of wire which is extended at its upper end to provide means for engagement with a support and which is extended at its lower end to provide a hook for engagement with an object to be weighed, the wire of the said hook being doubled back upon itself to provide an upward extending longitudinal indicating rod extending along one side of the spring, and a longitudinally graduated scale plate adjacent the last said side of the spring and having an integral loop at its upper end which engages a convolution of the spring near the upper end thereof, the said scale plate having an integral offset portion constituting a guide for longitudinal movement of the indicator rod and the graduations on the plate cooperating with the upper end of the rod to indicate the weight of the object to be weighed.

2,458,670
TUBE SUPPORT
John Young, Jr., Southgate, Calif., assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware
Application September 10, 1945, Serial No. 615,449
14 Claims. (Cl. 248—56)



2. In a device for supporting an elongated member, the combination of: a mounting element provided with an opening therethrough and a slot extending inwardly from an edge thereof to communicate with said opening, said slot and said opening having rigidly defined walls and being so dimensioned that the elongated member may pass through said slot into said opening; and locking means extending through said slot into said opening for retaining said elongated member therein.

2,458,671
BAIT APPLICATOR
Carl J. Zirbel, Montezuma, Iowa
Application November 9, 1946, Serial No. 709,059
2 Claims. (Cl. 43—4)

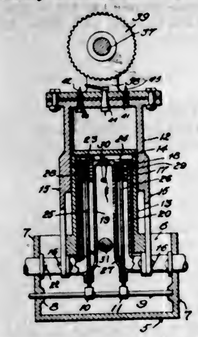


1. A bait applicator comprising in combination, a sleeve, a plunger and a pair of spaced discs provided thereon, said plunger being slidable in said sleeve, and means in said sleeve engageable selectively with said discs for restricting the extent of movement of said plunger.

2,458,672
RECIPROCATING CYLINDER INTERNAL-COMBUSTION ENGINE
Lawrence L. Zoch, Jr., Madison, Wis.
Application November 15, 1946, Serial No. 710,211
3 Claims. (Cl. 123—50)

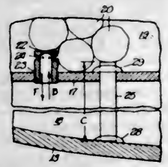
2. An engine of the character described comprising a stationary piston, a base, supporting means on the base for the stationary piston, a slide piston on the stationary piston containing a combustion chamber between itself and said stationary piston, ignition means in the chamber, fuel intake and exhaust means on the stationary piston, a cylinder in which the slidable piston operates, supporting means for the cylinder, a crank shaft mounted on the cylinder and having power take-off means and connecting

means between the crank shaft and the lower portion of the said slide piston, said intake and exhaust means consisting of conduits extending from openings in the stationary piston to the base and laterally through side portions of the



base, valve elements operative in said openings and having valve stems extending therefrom and downwardly through the conduits and through openings in the lower portions thereof, and a cam shaft having cams against which the rods bear.

2,458,673
FILTER UNDERDRAIN
Lawrence W. Bieker, Munster, Ind., and William J. Lewis, Chicago, Ill., assignors to Graver Tank & Mfg. Co., a corporation of Delaware
Application August 8, 1946, Serial No. 689,139
2 Claims. (Cl. 210—148)

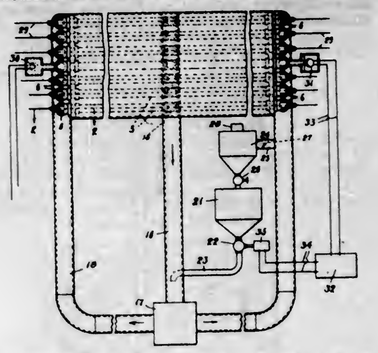


1. Apparatus of the filter type, comprising a steel tank; a steel underdrain plate in the bottom of said tank, said plate having elongated slots at positions distributed over the plate, and each of said slots having a periphery the length of which is several times the thickness of the plate; strainer nozzles distributed over said plate and spaced from said slots; flat steel bars secured to the bottom of the tank, upstanding therefrom toward said positions, and extending into said slots, each bar being welded to said plate by a continuous weld seam, on the top side of said plate, surrounding the respective bar.

2,458,674
DUSTING APPARATUS
Charles E. Blanchard, Randolph, and Albert W. Ferre, Wellesley, Mass., assignors, by mesne assignments, to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application January 18, 1944, Serial No. 518,726
6 Claims. (Cl. 91—18)

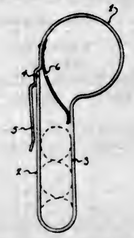
1. In dusting apparatus a tube, means for supplying dust laden air into said tube, a light source at one end of said tube, a photo-electric cell at

the other end of said tube, and means responsive to electric current variations from said cell caused



by variations in the dust density in said tube for adjusting said supplying means.

2,458,675
GAME HOLDER LINK
Ray H. Boehm, Racine, Wis.
Application October 18, 1945, Serial No. 623,097
1 Claim. (Cl. 224—7)



1. A game holder comprising a one-piece strip having an upper head receiving loop, terminating at its inner end with a tangentially disposed downwardly extended belt engaging tongue, the opposite end of said loop also having a downwardly extended clip-section folded upon itself to form an outer clip-section paralleling the inner clip-section, whereby a restricted neck receiving throat is formed, the upper end of the inner clip-section being secured to the base of the belt engaging tongue and extending tangentially from the receiving loop, and a leaf-spring secured to the loop having its free end extending across the neck receiving throat engaging the outer clip-section.

2,458,676
APPARATUS FOR ELECTROPLATING
Abner Brenner, Chevy Chase, Md., and Thelma Steinberg Meites, Princeton, N. J., assignors to the United States of America as represented by the Secretary of Commerce
Application July 22, 1947, Serial No. 762,782
2 Claims. (Cl. 204—201)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an electroplating device provided with an electroplating current supply and a suitable receptacle for a plating bath, the improvement which comprises a portable ball retaining device

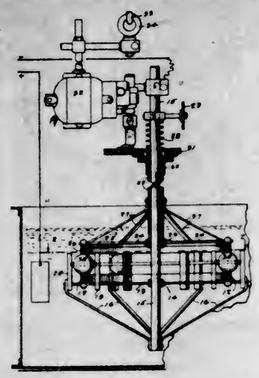
offset portion constituting a guide for longitudinal movement of the indicator rod and the graduations on the plate cooperating with the upper end of the rod to indicate the weight of the object to be weighed.

ber, fuel intake and exhaust means on the stationary piston, a cylinder in which the slidable piston operates, supporting means for the cylinder, a crank shaft mounted on the cylinder and having power take-off means and connecting

1. In dusting apparatus a tube, means for supplying dust laden air into said tube, a light source at one end of said tube, a photo-electric cell at

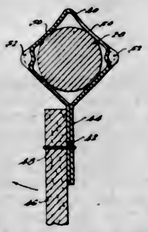
1. In an electroplating device provided with an electroplating current supply and a suitable receptacle for a plating bath, the improvement which comprises a portable ball retaining device

having a ring shaped cathode, a cathode supporting spider, two ball confining guide rings mounted on said spider, a friction ring of a diameter substantially the same as said ring cathode, a second



spider for said friction ring, means for rotating said friction ring with respect to said cathode and resilient means for axially pressing a plurality of balls to be electroplated between said cathode and said friction ring.

2,458,677
VISOR
Alan D. Brundage, Detroit, Mich., assignor to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application April 18, 1945, Serial No. 589,000
2 Claims. (Cl. 296—97)



1. In a slidable visor, a cylindrical shaped visor supporting rod, a frustro-conical shaped end portion carried by said rod, a block substantially square in external cross-section having a frustro-conical shaped bore frictionally engaging said end portion to yieldably resist turning movement of the block on the frustro-conical end portion, a visor supporting tube formed of resilient material embracing the cylindrical shaped portion of said rod and said block, said tube being substantially square in cross-section and with the sides thereof lying substantially in engagement with the surfaces of the block, said tube having opposite walls thereof spaced from each other a distance substantially equal to the diameter of the cylindrical portion of said rod, some of the side walls of said tube being bowed inwardly to frictionally and resiliently engage the periphery of the cylindrical portion of the rod to yieldably resist sliding movement of the tube relative to the rod, and a visor panel carried by said tube.

2,458,678
UNIDIRECTIONAL FLOW GEAR PUMP
George F. Bunte, Detroit, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 2, 1945, Serial No. 597,252
4 Claims. (Cl. 103—117)

2. A pump structure comprising a housing having a chamber therein, pumping means in said chamber comprising inner and outer eccentric rotor members having inter-engaging teeth forming pumping chambers between them, means for supporting and driving one of said rotors about an axis fixed with respect to said housing, said outer rotor being bodily shiftable in said first mentioned chamber in a plane perpendicular to said axis between two relatively different positions, said housing having inlet and outlet port means opening into said pumping chambers, said ports maintaining the same pumping relation regardless of which of said positions said outer rotor is in, and spring pressed means incorporated in the outer rotor adapted to be engaged by the inner rotor upon reverse rotation of the pump so as to effect shifting of the outer rotor from one position to a relatively different position.

2,458,679
PREPARATION OF VITAMIN-FORTIFIED MEALS
Loran O. Buxton, Maplewood, N. J., assignor to Nopco Chemical Company, a corporation of New Jersey
No Drawing. Application June 3, 1946, Serial No. 674,030
20 Claims. (Cl. 99—11)

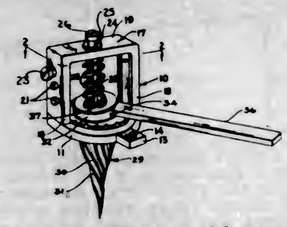
1. A process for preparing a free-flowing, oxidation-resistant, vitamin-fortified, edible vegetable meal which comprises thoroughly impregnating an edible vegetable meal by mixing therewith an oil containing fat-soluble vitamin material, ammonia and a solvent compatible with ammonia and miscible with a substantial proportion of the oleaginous matter in the mixture, said vitamin-containing oil being added in such quantity that the total quantity of oleaginous matter in the combined meal and vitamin-containing oil does not exceed 50% of the total weight of vegetable meal and vitamin-containing oil, and removing the ammonia and said solvent from the meal in such manner that substantially all of the oleaginous matter remains with the meal.

2,458,680
TREATMENT OF OIL-BEARING VEGETABLE MEALS
Loran O. Buxton, Maplewood, N. J., assignor to Nopco Chemical Company, a corporation of New Jersey
No Drawing. Application June 3, 1946, Serial No. 674,031
20 Claims. (Cl. 99—11)

1. A process for preparing a free-flowing, stabilized, oil-bearing vegetable meal which comprises thoroughly impregnating a vegetable meal

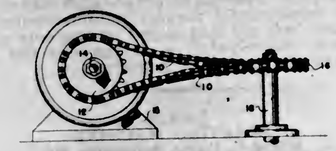
containing a substantial amount, but not over 50% by weight, of oleaginous matter and having unctuous exterior surfaces on the individual particles of the meal with a compatible mixture of ammonia and a solvent miscible with said oleaginous matter, and removing the ammonia and said solvent from the meal in such manner that substantially all of said oleaginous matter remains with the meal.

2,458,681
REAMER TOOL FOR PIPES AND THE LIKE
Thomas A. Caliendo, South Ozone Park, N. Y.
Application December 7, 1945, Serial No. 633,452
4 Claims. (Cl. 77—73)



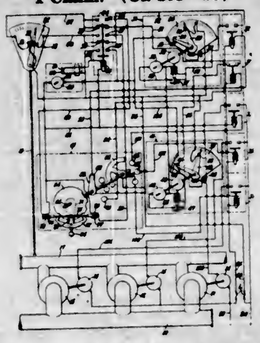
1. A manual pipe reaming tool for reaming out the burr from the cut end of a pipe comprising a ring, opposed guides, rectangular in cross section, extending from opposite sides of one face of said ring, said guides having opposed threaded orifices, a yoke having channeled legs slidably mounted on said guides and a cross bar connecting said legs, said legs each having a row of unthreaded orifices, set screws adapted to be disposed in correlated orifices of said legs and to be threaded in said guide orifices to adjustably secure said yoke to said guides, said bar having an unthreaded orifice concentric with said ring, a shouldered bolt in said bar orifice, a reamer having a conical head and a square stem, said stem having a threaded axial recess into which said bolt is screwed, a coil spring compressed between said head and yoke for normally urging said reamer away from said bar, said stem normally being spaced from said bar, and means for causing relative movement between said pipe and reamer to effect said reaming.

2,458,682
ROLLER BEARING CHAIN
Samuel Couper, Baltimore, Md.
Application August 1, 1947, Serial No. 765,327
5 Claims. (Cl. 74—245)



1. A roller bearing drive chain having a plurality of connected link members comprising individual link members having inner and outer side connecting members, the inner side members being provided adjacent their ends with apertures having at least two straight sides running parallel within the longitudinal axes of the said inner side members, the outer side members having apertures in each end thereof, a pin adapted to extend through one of the apertures in each of the inner and outer side members, a pair of sleeves, slidably receivable over the said pin, said sleeves having a shoulder formed on the outer ends thereof for engaging the straight sided apertures in the said inner side members, and a roller slidably receivable over the said sleeves and extending between the inner side members.

2,458,683
SEQUENCE CONTROL
Robert D. Cowherd, Atlanta, Ga., and William H. Stahl, Jr., Waterbury, Conn., assignors to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application January 7, 1943, Serial No. 471,620
1 Claim. (Cl. 103—25)

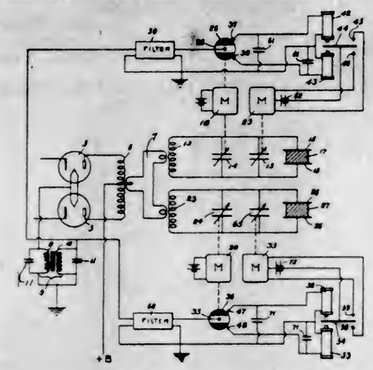


In combination, a plurality of devices operable to maintain a fluid pressure within a predetermined zone of values, gauging means responsive to said pressure and having electrical contacts operated when the pressure value passes outside said zone, a normally deenergized control relay having contacts in circuit with the first mentioned contacts when said control relay is deenergized, timing means in circuit with the contacts of said gauging means and with the said control relay contacts for energization when the contacts of said gauging means are operated and said control relay is deenergized, connections controlled by said timing means for causing said control relay to be energized at the end of a predetermined interval following energization of said timing means with resultant disestablishment of the connection between said control relay contacts and said timing means, means for deenergizing said control relay at the end of a predetermined time following energization thereof for reestablishing said connection between said control relay contacts and said timing means, means comprising a stepping relay and contacts brought into action upon successive operations thereof for bringing different ones of said devices into action to affect the value of said condition, and means comprising contacts controlled by said control relay for operating said stepping relay successively upon successive energizations of said control relay.

2,458,684
RADIO-FREQUENCY APPARATUS
Ervin L. Crandell, Boston, Mass., assignor, by mesne assignments, to Stevens-Arnold Inc., Boston, Mass., a corporation of Massachusetts
Application May 14, 1946, Serial No. 669,551
2 Claims. (Cl. 250—36)

1. Radio frequency apparatus comprising a thermionic tube, a plurality of load circuits cou-

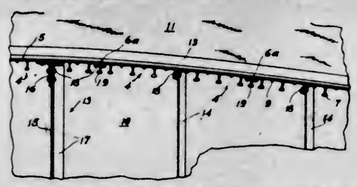
pled to said tube for receiving radio frequency energy therefrom, continuously operated means for each circuit for alternately increasing and decreasing the frequency to which the circuit is tuned, the continuously operated means for each circuit operating at a different frequency, tuning means for tuning each load circuit to resonance independently of said continuously operated means, a reversible motor for adjusting each tuning means, a transformer having a primary connected in the space current circuit of said tube, and means including means utilizing current from the secondary of said transformer and including frequency selective means for causing each motor to operate in one direction when its associated load circuit is tuned above resonance and to operate in the other direction when its associated load circuit is tuned below resonance.



2,458,685
METHOD OF MAKING TAMPONS
Joseph R. Crockford, New York, N. Y., assignor to Harry Badzinsky and Sidney W. Dean, Jr., both of New York, N. Y.
Application December 14, 1945, Serial No. 634,952
8 Claims. (Cl. 18—55)

7. In the method of making tampons, the steps of transversely severing a sheet of sponge material into a plurality of wedge-shaped sections, applying a withdrawal string to each of said sections, gripping each section and rotating the section, inserting the section into a guide and therefrom into a tubular passage while the section is being rotated to thereby compress the section and cause it to conform in shape to the interior of said passage, supporting an applicator tube and an inner push-tube in an upstanding position while said tubes are arranged telescopically and with a part of the applicator tube arising above the top of the push-tube, and forcing the compressed tampon section from the passage and into the applicator tube.

2,458,686
EXTRUDED SHAPE
Robert P. Davis, Jr., Manhattan Beach, Calif., assignor to North American Aviation, Inc., Inglewood, Calif., a corporation of Delaware
Application January 31, 1942, Serial No. 428,986
6 Claims. (Cl. 244—117)

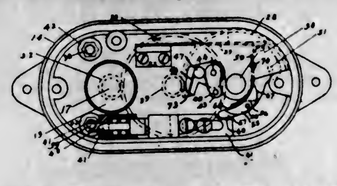


1. In aircraft stressed-skin wing construction including a spar having a web element and a flanged top chord element, an extended metallic covering element rigidly attached to the flange of said spar chord, the said covering element comprising a wall portion of uniform thickness, an outer smooth face of said wall portion forming the exterior surface of said aircraft wing, parallel integral ribs extending inwardly into said wing and longitudinally only in the direction of said wing spar, said ribs having integral terminal portions of bulbous cross-section spaced from said side wall portion adapted to form with the remainder of said covering element a stress-taking structural part of said wing construction of relatively high resistance to buckling in compression.

2. A blank for an aircraft stressed-skin panel formed from an extruded metallic section having an arcuate wall of relatively greater length and width than its uniform thickness, said wall having a plain surface on one side only adapted to be addressed to the airstream and a plurality of laterally spaced enlarged longitudinal reinforcing ribs extending radially from its opposite surface, said ribs having portions of bulbous cross-section at their free ends remotely spaced from the said wall portion to form therewith integral stiffeners of I-beam cross-section, said section adapted to be slit longitudinally intermediate a pair of said adjacent reinforcing ribs to form unbroken marginal attachment portions adapted to be bent laterally outward throughout its said width into a section of lesser curvature to cause said ribs to form substantially parallel reinforcements extending from the said second surface only of the finished stressed-skin panel opposite the said airstream-addressed plain surface.

2,458,687
BLASTING MACHINE
Alfred U. Davis, Baltimore, Md.
Application March 1, 1945, Serial No. 580,346
4 Claims. (Cl. 171—76)

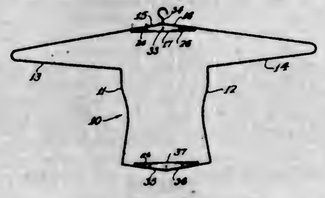
1. In a blasting machine of the class described, the combination of a train of gearing, a clutch incorporated in said gearing, an electrical source of energy actuated by said gearing through said clutch, a segmental element operable extraneously to said machine for actuating said train, a plurality of contacts in said machine, a resiliently biased hammer unit mounted on a pivot in the machine having a limited arcuate travel therein and including a hammer, and a plural faced cam thereon, to which a finger is loosely attached a trigger movable with said element arranged to engage on different faces of said cam during different phases of its travel, said trigger forcing the cam and hammer against their resilient tension to a cocked position from which they are immediately released as the trigger changes its phase of travel, whereby the hammer and finger working cooperatively are suddenly released to deliver a striking blow, and a movable pusher in guides attached to said machine and aligned with said contacts for momentarily bridging the contacts when struck by said finger.



2,458,688
WELDING CUPRO-NICKEL ALLOYS
Charles H. Davis, Cheshire, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application May 16, 1945, Serial No. 594,157
3 Claims. (Cl. 113—112)

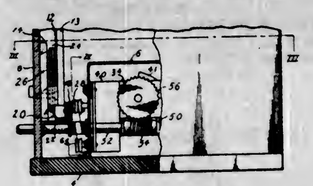
1. The improvement in welding parts made of a copper-nickel base alloy containing 10 to 35% nickel and the balance principally copper which comprises including in the copper-nickel base alloy of each of the parts to be welded from 0.02 to 0.1% magnesium, and heating said parts approximate the zone of the contemplated weld to the welding temperature in the absence of any flux and in the presence of a filler made of a copper-nickel base alloy containing 0.02 to 0.1% magnesium.

2,458,689
SWEATER BLOCKER
Meyer Davis, Chicago, Ill.
Application January 23, 1945, Serial No. 574,095
11 Claims. (Cl. 223—69)



1. A sweater blocker, comprising side members each formed of resilient wire and adapted to conform generally with the sleeves and body of the sweater, a bracket for adjustably securing the upper ends of the wires together, means connected to the bracket for supporting the blocker, tapered keepers coacting with the bracket for holding the ends of the wires in the bracket, a bracket for adjustably securing the lower ends of the wires together, and tapered keepers coacting with the last named bracket for holding the lower ends of the wires in the bracket.

2,458,690
TUNING AND INDICATING MECHANISM
Francis A. Dawson, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a corporation of Indiana
Application April 3, 1946, Serial No. 659,234
12 Claims. (Cl. 250—16)



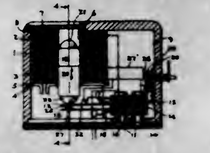
1. In a radio receiver or the like having a cabinet and a chassis supported in the cabinet, the improvements of a tuning mechanism movably mounted on the chassis, a tuning indicator movably mounted on said cabinet, a driving member movable in correlation with said tuning mechanism, said driving member being mounted on said chassis for movement parallel to the movement of said tuning indicator, a drive connection between said tuning indicator and said driving member, said drive connection including interengaging members automatically detachable upon removal of the chassis from the cabinet, one of said members including a cam surface for automatically shifting the other member to interengaging position by operation of said driving member following reinsertion of said chassis in the cabinet.

2,458,691
APPARATUS FOR CHLORINATION PROCESSES
Julian Dorsky, George W. Mattson, and Clarence M. Neher, Baton Rouge, La., assignors to Ethyl Corporation, New York, N. Y., a corporation of Delaware
Application October 15, 1946, Serial No. 703,276
2 Claims. (Cl. 250—43)

1. A photochemical apparatus for the chlorination of hydrocarbons comprising a straight glass reactor chamber transmissive of actinic light, a surrounding jacket for a heat removing liquid, a light transmissive enclosure in the liquid adjacent the outer wall of the glass reaction chamber and having lights therein, a coaxial

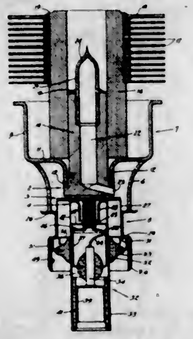
chlorine feed tube in the chamber and a multiplicity of jets projecting from the tube into the reaction chamber and pointing axially of the latter, the ends of the jets being spaced axially and circumferentially of the chamber.

2,458,692
DEVICE FOR MIXING DENTAL AMALGAMS
John Harry Downer, Toronto, Ontario, Canada
Application February 19, 1947, Serial No. 729,461
4 Claims. (Cl. 259—62)



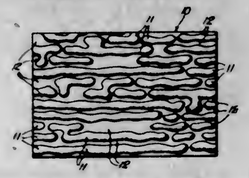
1. A device for preparing amalgams, comprising a solenoid magnet having a central opening, a core reciprocably arranged in the central opening of said magnet and having an amalgam mixing chamber therein, a loose impact member enclosed within said mixing chamber means extending across said magnet opening to check upward movement of said core, and a spring opening switch arranged below said magnet opening and closed by said reciprocable core under movement of said core to its lowermost position into engagement therewith to direct electric current intermittently through said coil to effect the reciprocation of said core.

2,458,693
ELECTRON TUBE
Donald F. Drieschman, Los Altos, and Radford Leonard, San Bruno, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application January 25, 1946, Serial No. 643,286
10 Claims. (Cl. 250—27.5)



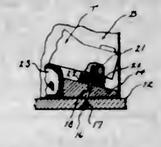
1. An electron tube having parallel plane electrodes, an envelope supporting an electrode at one end and having a tubular section at the other end, a pair of sleeves inserted in said tubular section and carrying others of said electrodes, one of said sleeves lying within the other sleeve, said tubular section and said sleeves having limit stops to establish predetermined spacing between the electrodes.

2,458,694
METHOD OF MAKING SPONGE RUBBER MATERIAL
Everett A. Eakins, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a corporation of Indiana
Application November 13, 1944, Serial No. 563,150
8 Claims. (Cl. 18—53)



1. The method of making sponge rubber sheet material having surface protuberances which comprises, sheeting out blowing rubber stock while maintaining the temperature of the same below that which will produce a smooth surfaced sheet, whereby cold checks are formed on a surface of the material, and blowing and vulcanizing the material while unconfined whereby freely expanded protuberances are formed as a result of the cold checks.

2,458,695
COMBINATION SHIPPING AND DISPLAY PACKAGE FOR TYPEWRITERS
Frederick C. Edelston, Milwaukee, Wis., assignor to Clarvan Corporation, Milwaukee, Wis.
Application June 21, 1945, Serial No. 600,710
2 Claims. (Cl. 206—45.14)

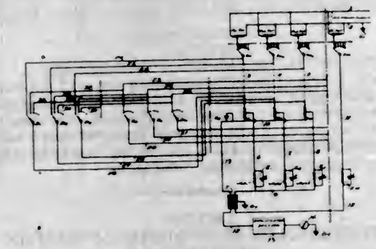


1. A combination display and moisture-proof package comprising a rigid base plate and a transparent moisture-proof bag on said base plate for receiving a machine to be protected, the machine being of the type having resilient cushion pads at its corners, internally threaded hollow screws for holding the pads on the machine, front and rear pairs of blocks arranged within the bag and under said pads, bolts extending through the base plate and blocks and threaded into said hollow screws, and spacing members on said bolts between the blocks and hollow screws of a sufficient height to hold the cushion pads above the blocks.

2,458,696
BRASSIÈRE HALTER
Solomon Elias, New York, N. Y.
Application March 9, 1946, Serial No. 653,252
2 Claims. (Cl. 2—42)

1. A strapless combination brassière and halter comprising a single piece of material adapted to encircle the body of the wearer with a wide front and a narrow rear portion and lapped ends, said piece of material being folded along one edge to form a hem, a line of stitching through said fold and the main body of the material, a strip of elastic extending through said hem, and a second line of stitching intermediate the first line of stitching and the folded edge and extending through the fold, centrally of the elastic strip, and the main body of the material, fasteners on the inner face of the hem adjacent one end, said elastic strip extending freely from the hem at the opposite end, and complementary fasteners on the extension of the elastic strip.

2,458,697
ELECTRICAL COMPUTER
Ellsworth B. Fenske, Lyons, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application November 10, 1947, Serial No. 784,963
2 Claims. (Cl. 235—61)



1. In an electrical computing apparatus suitable for solving a fixed number of unknowns and simultaneous equations, and having in combination, a suitable voltage supply, a multiplicity of voltage dividing means arranged into a plurality of circuits, calibrated means connective with said voltage dividing means for adjusting the latter to correspond with known coefficients and constants and operative to bring said circuits into balance, and indicating means to observe the balancing of said circuits, the improvement which comprises providing in combination therewith, a multiple deck switching means, a plurality of transposition circuits, wiring means connecting the decks of said switching means to said balanceable circuits of said computing apparatus, whereby but one deck connects to but one circuit, and additional wiring means in said transposition circuits connecting said decks with one another in a manner joining said voltage dividing means from one circuit to another within said computing apparatus, whereby an additional number of equations over and above the aforesaid fixed number may be solved conveniently on said apparatus.

2,458,698
COMBINED IRONING BOARD COVER AND IRON PAD OR PAD HOLDER
Fred Galbraith, New York, N. Y.
Application September 27, 1945, Serial No. 618,943
1 Claim. (Cl. 38—140)

A combination ironing board cover and iron pad, comprising a cloth casing for covering an ironing board, an iron pad disposed on said casing, a grommet engaged through one corner of said pad and said casing for pivotally supporting said pad, additional grommets mounted upon edge portions of said pad, and pins mounted on said

additional grommets and engageable with said casing.

2,458,699
FILM RACK
Abraham J. Ginsberg, New York, N. Y.
Application November 16, 1945, Serial No. 629,145
4 Claims. (Cl. 95—100)

1. A rack for holding photographic films for group developing, fixing and the like, comprising a relatively rigid frame having front and rear walls secured in relatively rigidly spaced apart relationship to define a carrier having open sides and an open top and a group of members held aligned in each of the open sides of said carrier and parallel to the front and rear walls to form side walls therefor, the totality of the widths of each aligned group being less than the distance between front and rear walls of the frame, the members of each group being free to spread apart to leave a space between adjacent members of the group, means normally operative to space apart the members of each group whereby films can be entered into said carrier through its open top with their edges received in said spaces between adjacent spread apart members and means for compacting said members so that the edges of films will be clamped therebetween.

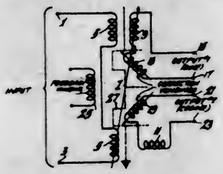
2,458,700
CORRECTION DEVICE FOR ELECTRONIC FUNCTION GENERATORS
Maurice Leighton Greenough, Groveland, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1945, Serial No. 619,239
6 Claims. (Cl. 171—777)

1. Apparatus for deriving currents having instantaneous amplitudes equal to a non-linear function of the instantaneous amplitudes of applied currents including a variocoupler having a first winding responsive to said applied currents for establishing an alternating magnetic field and having a second winding coupled to said field and selectively rotatable through a predetermined

sleeve, said tubular section and said sleeves having limit stops to establish predetermined spacing between the electrodes.

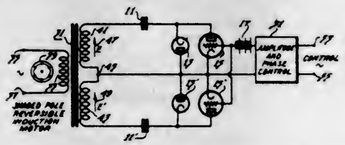
1. A strapless combination brassière and halter comprising a single piece of material adapted to

angle with respect to said first winding for deriving an output current, a compensating winding adustably oriented with respect to and coupled to said field and disposed externally of and eccentrically with said first winding for deriving com-



pensating currents, and means for combining said output current and said compensating currents to derive a combined current proportional to said applied currents and to said function of said rotation angle.

2,458,701
SHADED POLE MOTOR CONTROL
Maurice Leighton Greenough, Groveland, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application November 20, 1945, Serial No. 629,900
11 Claims. (Cl. 318—208)

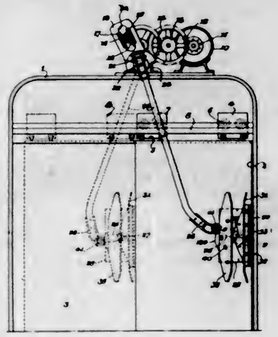


1. An electronic variable impedance network including a first source of alternating potential, a pair of thermionic tubes parallel connected in opposite polarity, a capacitor in series with said tubes, said tubes and said series capacitor being in shunt with said first source, a second source of alternating potential, unidirectional bias voltage means for said one of said tubes for establishing a loading control limit, and means connecting said second source to one of said tubes to vary simultaneously the conductance of both of said tubes to vary the loading of said first source.

3. A control circuit for a shaded-pole induction servomotor having a shading winding including a first source of alternating potential coupled to said motor and said winding, a pair of thermionic tubes parallel connected in opposite polarity, a capacitor in series with said tubes, said tubes and said series capacitor being connected in shunt with said winding, a second source of alternating potential, unidirectional bias voltage means for said one of said tubes for establishing a loading control limit, and means connecting said second source to one of said tubes to vary simultaneously the conductance of both of said tubes to vary the loading of said shading winding and the rotation of said motor.

2,458,702
ELEVATOR HATCHWAY DOOR OPERATOR
Randall Hains, Boonton, N. J., assignor to Elevator Supplies Company, Inc., Perth Amboy, N. J., a corporation of New Jersey
Application February 14, 1947, Serial No. 728,574
10 Claims. (Cl. 187—52)

1. A door clutch for an elevator system comprising a support, a pair of shoes, one of which is relatively fixed and the other of which is relatively movable on said support, means for pivotally supporting the latter for movement towards and away from the former while maintaining parallelism therewith, a cam attached to the



latter, a lever pivotally mounted on said support for movement relative to said cam and having a cam follower on the free end thereof, and means for effecting oscillation of said lever whereby said relatively movable shoe is moved towards and away from said relatively fixed shoe.

2,458,703
REDUCTION OF COMPOUNDS OF SILICON AND HALOGEN
David B. Hatcher, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application June 11, 1947, Serial No. 754,073
6 Claims. (Cl. 23—14)

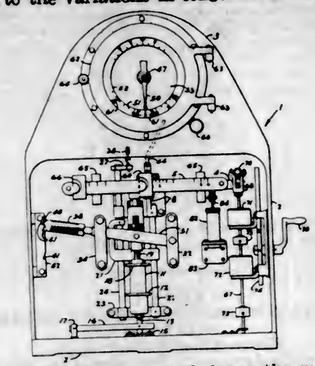
2. A method of reducing a compound having the general formula

in which X is halogen and each of the radicals R^1, R^2 and R^3 is of the class consisting of halogen and hydrogen, that comprises contacting silicon with a mixture of such compound, hydrogen and a substance of the class consisting of aluminum trichloride and aluminum tribromide at an elevated temperature.

2,458,704
SPRING TESTING SCALES
Halvor O. Hem, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey
Application October 31, 1944, Serial No. 561,201
5 Claims. (Cl. 73—161)

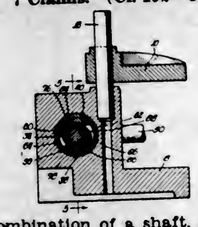
1. Mechanism for testing the rate of a spring by comparison with the known rate of a standard spring, comprising, in combination, a lever, a spring support member pivotally connected to said lever, a series of weights for applying predetermined moments to said lever, an indicator for indicating movement of said lever and means for varying the load supporting length of a spring

acting on the spring support through distances equal to the variations in length of a standard



spring required to counterbalance the moments applied to said lever by each of said weights.

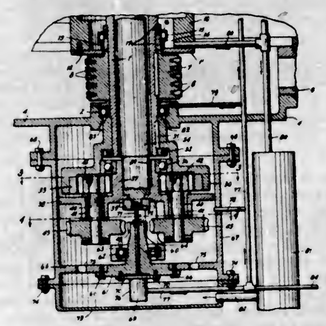
2,458,705
LOCKING MECHANISM FOR JIGS AND THE LIKE
Mathew Hitselhammer, Highland Park, Mich., assignor to Domestic Industries, Inc., Chicago, Ill., a corporation of Delaware
Application February 22, 1945, Serial No. 579,278
7 Claims. (Cl. 192—8)



1. The combination of a shaft, means providing journals for said shaft including a wall structure having a recess adjacent one end of said shaft, actuating means for controlling the operation of said shaft comprising a cam fixed to said shaft, an housing mounted within said recess in embracing relation to said cam, said housing having at least one shoe movably mounted therein, and a spring element secured to said housing and interposed between said cam and said shoe, said cam having engagement with said spring in either direction of rotation of said housing for rotating said shaft and having a cam surface engageable with said spring to move said shoe outwardly into engagement with the wall of said recess to lock said shaft against movement when said housing and cam are rotated in one direction relative to each other.

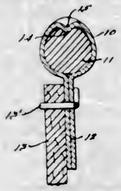
2,458,706
DIFFERENTIAL GEARING FOR CENTRIFUGAL MACHINES
Andrew F. Howe, St. Louis, Mo., assignor, by mesne assignments, to Centrifugal & Mechanical Industries, Inc., St. Louis, Mo., a corporation of Missouri
Application May 14, 1945, Serial No. 593,595
7 Claims. (Cl. 74—280)

1. Mechanism of the character described comprising a rotary outer tubular shaft, connections for positively rotating said shaft, an inner shaft within and coaxial with said outer shaft and extending beyond one end thereof, a gear attached to said outer shaft for rotation thereby, a support attached to said inner shaft, a rotary pinion mounted on said support in permanent mesh with said gear, a spiral gear attached to said pinion, a worm carried by said support engaging said



spiral gear and preventing rotation of said pinion by said first gear and leaving said pinion free for planetary movement by said first gear to rotate said inner shaft when said tubular shaft and said first gear are rotated as aforesaid, and spiral gearing for rotating said first spiral gear and thereby said pinion relative to said gear and thereby controlling rotation of said inner shaft differentially from said outer shaft.

2,458,707
VISOR
Fred L. Jacobs, Grosse Pointe, Mich., assignor to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application February 23, 1946, Serial No. 649,688
2 Claims. (Cl. 296—97)



1. In a sun visor for motor vehicles, a cylindrical support rod having a longitudinal groove throughout a substantial portion of its length, a shield member having a tube portion of resilient material adapted to engage said rod in telescoping relation, said tube portion being provided with a plurality of indentations disposed longitudinally along its length, said indentations being adapted to engage said groove in one angular position of said shield member thereby to facilitate sliding of said tube on said rod and to frictionally engage said rod in other angular positions of said shield member whereby said shield member is held in various angularly adjusted positions.

10 Claims. (Cl. 187—52)

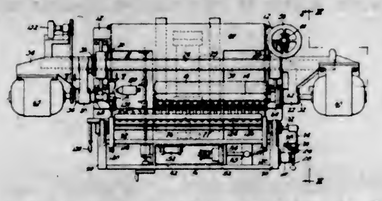
1. A door clutch for an elevator system comprising a support, a pair of shoes, one of which is

determined moments to said lever, an indicator for indicating movement of said lever and means for varying the load supporting length of a spring

1. Mechanism of the character described comprising a rotary outer tubular shaft, connections

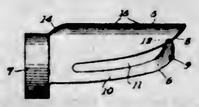
tions.

2,458,708
POLISHING AND GLAZING MACHINE
Carl O. Johnson, Springville, and William C. Burt, Olean, N. Y., assignors to Clair Manufacturing Company, Inc., Olean, N. Y.
Application November 6, 1947, Serial No. 784,410
7 Claims. (Cl. 51—85)



4. In a polishing and glazing machine for finishing curved surface work pieces, a pair of parallel rolls, means to drive the rolls, a work holder adapted to mount a plurality of work pieces with the curved surface portions thereof extended toward the gap between said rolls, said holder being carried by said machine by means of pivotal connections therewith whereby upon pivoting of said work holder the extended work pieces are displaced to reciprocate in directions transversely of the polishing gap between the rolls and at the same time oscillated so that the work piece curved surfaces float peripherally of one of said rolls.

2,458,709
FINGERNAIL GUARD
Jean H. Kayer, Hollywood, Calif.
Application August 31, 1946, Serial No. 694,181
7 Claims. (Cl. 2—21)

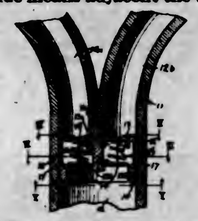


1. A fingernail protector including: a band effective to mount the nail protector on the outermost joint of the finger to thereby immobilize said joint; a nail guard supported by an integral upwardly curved forward extension of said band and spaced thereby from the fingernail; and a strap-like finger tip engaging portion formed integral with said band and effective to prevent inward displacement of the protector, but separate from the nail protector to afford access of air to the fingernail, said strap-like portion being formed to expose the under portion of the end joint of the finger upon which it is mounted.

2,458,710
MULTIPLE CHECK VALVE
Leslie A. Kempton, St. Petersburg, Fla., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application December 6, 1946, Serial No. 714,515
5 Claims. (Cl. 277—60)

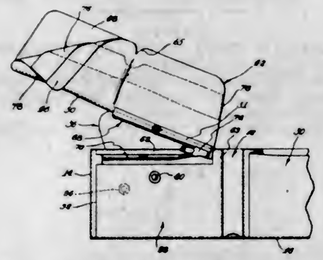
3. A double check valve comprising a hollow cylinder bisected by a partition wall, a cruciform-shaped end wall at one end of said cylinder, ports in said end wall and side walls of the cylinder on opposite sides of the partition wall, D-shaped valve seats on said cylinder on opposite sides of the partition wall at the bases of said ports, fragmental circular flat valve disks coacting with said seats, coil springs compressed between the end

wall and the disks urging the disks against the seats, and guide means adjacent the disks extend-



ing between the end wall and seats for directing the disks on and off of the seats.

2,458,711
WALLET WITH AUXILIARY OR SECRET BILLFOLD
Simon Knee, Newark, N. J.
Application January 5, 1946, Serial No. 639,168
2 Claims. (Cl. 150—36)

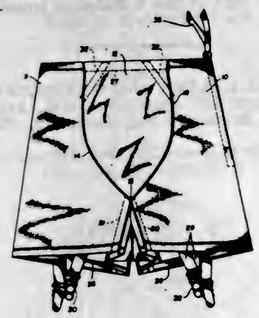


1. In a container having a pocket provided with an opening, a foldable holder for paper money or other papers movably positioned in said pocket and removable therefrom through said opening thereof, said holder being foldable along a transverse line and being in folded condition when positioned in said pocket and while being removed therefrom, said holder when removed from said pocket being unfoldable to a flat condition, said holder comprising two parts joined at a longitudinally extending edge of the holder, said pocket and its opening being shorter than said holder when the latter is unfolded so that said holder must be folded in order to be inserted in said pocket and can be unfolded only when removed from said pocket, said fold line being transverse to said pocket opening and said longitudinally extending edge of the holder, said holder when unfolded being at least as long as paper money but narrower than the latter, and means in said holder between said parts thereof for retaining paper money in the holder with such money folded longitudinally about said means as well as transversely at said fold line of said holder.

2,458,712
CONVERTIBLE FOUNDATION GARMENT
Richard S. Kops, Scarsdale, N. Y., assignor to Kops Bros., Inc., New York, N. Y., a corporation of New York
Application June 26, 1948, Serial No. 35,481
7 Claims. (Cl. 2—43)

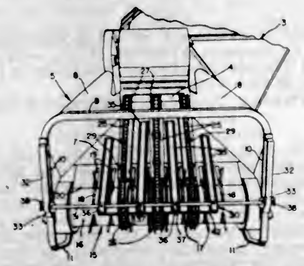
4. A foundation garment comprising a body encircling member having transversely elastic portions arranged to exert a body confining

action, said member extending from the waistline of the wearer to a point below the buttocks, said member having a slit extending upward from the lower edge thereof at the centers of the front and back portions of said member to points intermediate the top and bottom edges of said member, the free edges formed by each slit having complementary fastening means secured thereto, said fastening means comprising hooks at one



edge and eyes at the other edge of each slit, said fastening means at each slit being adapted to be interconnected to provide a continuous section across the body of the wearer to provide a firm confining action in the region of the hips, and a detachable crotch piece having similar complementary fastening means adapted to be secured to the edges of said slits, when they are not interconnected, to convert said garment into a pantie girdle.

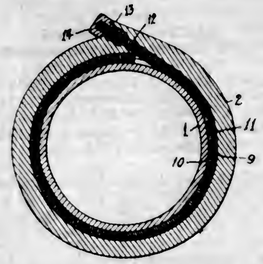
2,458,713
CROP COMPRESSOR
Francis Linderer, Boise, Idaho, assignor, by mesne assignments, to Deere Manufacturing Co., a corporation of Iowa
Application January 18, 1946, Serial No. 642,081
1 Claim. (Cl. 56—364)



In a harvester having crop-gathering means at its forward end including crop-conveying means rearwardly thereof and supporting means including a pair of laterally spaced upright supports respectively at opposite outer sides of the crop-gathering means: a crop-compressor comprising a shaft disposed transversely between the supports and having opposite end portions projecting respectively outside the supports, means mounting the shaft on the supports for rocking movement generally about its major axis and for limited vertical floating movement relative to the crop-gathering means, a presser member fixedly

connected to the shaft and extending rearwardly therefrom to have a portion remote from the shaft positioned over the crop-conveying means, a pair of arms separate from the presser member and fixed to said opposite end portions of the shaft and extending generally rearwardly therefrom respectively at opposite sides of the supporting means and respectively outside the opposite sides of the crop-conveying means, each of said arms terminating substantially midway between the shaft and the remote portion of the presser member, and a pair of tension springs connected respectively to the terminal portions of said arms and to the supporting structure and tending to turn the shaft to press both the remote portion and the shaft-connected portion of the presser member downwardly against crops moving over the crop-conveying means.

2,458,714
COUPLING
Frank D. Mahoney, San Francisco, Calif.
Application March 5, 1946, Serial No. 652,009
1 Claim. (Cl. 285—97.3)



In a coupling, two tubular conduits having adjacent ends positioned one inside the other and arranged for pivotal adjustment, the inner conduit having an annular shoulder for engagement by the end of the outer conduit, an annular bushing interposed between the joined ends of the conduits, the said bushing having an end abutting an annular shoulder on the inner conduit and its opposite end formed with an annular beveled edge, an annular seat formed at the inner surface of the outer conduit and positioned adjacent the beveled end of the bushing, a resilient sealing ring positioned inside the annular seat and arranged with one side thereof exposed to the fluid passing through the coupling and its opposite side extending between the beveled end of the bushing and the outer surface of the inner conduit, whereby the pressure of the fluid passing through the coupling will urge the sealing ring into sealing relationship with the inner conduit, the sealing ring and the outer conduit.

2,458,715
METHOD OF PREVENTING SCALING
William J. Marencik and Robert E. Ahlf, Cleveland, Ohio, assignors to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 25, 1944, Serial No. 551,194
1 Claim. (Cl. 78—81)

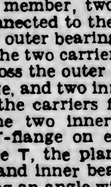
The method of preventing scaling of a hollow metal blank during a hot forging operation, which comprises applying to the internal surface of said blank, while substantially clean and at a temperature below that at which scale would form, an aqueous suspension of a finely divided

valve seats on said cylinder on opposite sides of the partition wall at the bases of said ports, fragmental circular flat valve disks coacting with said seats, coil springs compressed between the end

7 Claims. (Cl. 2—43)

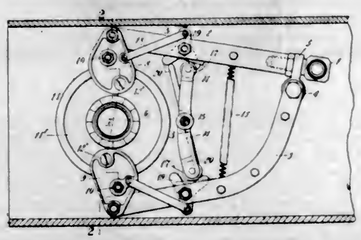
4. A foundation garment comprising a body encircling member having transversely elastic portions arranged to exert a body confining

semi-fused frit capable of forming a glassy coating on fusion that is adherent to the metal surface, preliminarily heating said blank to around 200° F. to dry said frit and form a relatively hard adherent layer, subjecting the exterior of said blank to a forging operation at a temperature



sufficiently high to cause said frit to fuse and form a protective coating over such internal surface and thus prevent the formation of scale and oxides during said forging operation and maintaining said coating over such internal surface until the completion of said forging operation.

2,458,716
CLUTCH GEARING
Donald Marcus Kelway Marendaz, Bergh Apton, England
Application April 25, 1945, Serial No. 590,171
In Great Britain December 17, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 17, 1963
3 Claims. (Cl. 74—126)



1. A drive comprising in combination a rotary driven member having an anular flange of T-shape cross-section, a reciprocable driving member, means for transmitting the driving power from the said reciprocable driving member to the said rotary driven member, the said means comprising a pair of divergent links connected at one end to the reciprocable driving member and extending to diametrically opposite sides of the rotary driven member, two carriers respectively pivotally connected to the other end of the divergent links, an outer bearing member mounted on each one of the two carriers for engagement with and right across the outer surface of the top part of the T-flange, and two inner bearing members mounted on the carriers for respective engagement with the two inner surfaces of the top part of the T-flange on either side of the vertical web of the T, the plane containing the axes of the outer and inner bearing members on each carrier making an angle with the plane containing the axis of the rotary driven member and the axis of the outer bearing member, and the one angle being in advance of and the other one lagging with respect to the said plane containing the axis of the rotary driven member, and resilient means for urging the divergent links towards each other and thereby pressing the outer bearing member against the annular flange, whereby the alternate to and fro movements of the two divergent links produced by the to and fro movements of the reciprocable driving member cause the two sets of bearing members mounted on the diametrically arranged carriers alternately to grip and release the annular flange and therewith the rotary driven member, and whereby the grip applied by the bearing members to the top part of the T-flange is equalised with respect to the vertical web of the T.

2,458,717
BULL HALTER AND CONTROLLER
Henry Masbruch, Platteville, Wis., assignor to Russell Manufacturing Company, Platteville, Wis.
Application February 25, 1944, Serial No. 523,954
2 Claims. (Cl. 119—104)

1. A bull halter and controller comprising a pair of spaced plates shaped to fit the areas of the bull's head surrounding the eyes, adjustable means to hold the plates securely against said areas irrespective of their spacing, each plate having a blinder which is open only on the under side so as to prevent sight if the bull lowers his head for an attack while permitting limited vision downwardly, and an outwardly turned lower edge on the plate located below the blinder to assist in preventing dirt and debris from lodging in the blinder.

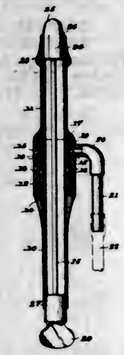
2,458,718
STABILIZATION OF SULFUR TRIOXIDE
Harold G. McCann, Flushing, N. Y., assignor to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application February 9, 1946, Serial No. 646,699
15 Claims. (Cl. 23—174)

14. The method of stabilizing material of the group consisting of sulfur trioxide and oleum of SO_3 strength not less than 99.5%, which method comprises incorporating with said material a compound of the class consisting of the oxides and halides of boron and the inorganic derivatives thereof, in amount equivalent to not more than 1.5% by weight of boron, said compound containing substantially no free water nor water of constitution, and then subjecting the resulting material to heat treatment.

2,458,719
COLONIC DEVICE
William Reed McCormick, Chicago, Ill., assignor to A. Yates Dowell, Washington, D. C.
Application June 13, 1946, Serial No. 676,531
7 Claims. (Cl. 128—229)

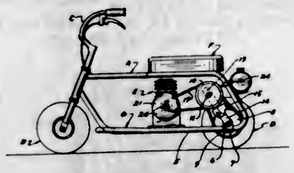
1. An implement for the treatment of the human anatomy comprising inner and outer con-

nected aligned pipe sections providing a relatively straight unobstructed passage therethrough, said inner section having a reduced portion and said outer portion having an enlarged portion providing an annular chamber therebetween, a plurality of spaced orifices through said inner section providing communication between said chamber and said passage, an inlet pipe having communication with said chamber through said outer section for



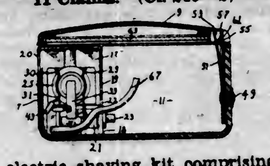
admitting fluid into said passage, a plug for each end of said passage, a rod connecting said plugs, one of said plugs closing the end of said passage and the other of said plugs being of a diameter less than that of said passage to permit flow of fluid therearound, and a gripping portion whereby said plugs and connecting rod may be withdrawn to permit rapid discharge through said passage.

2,458,720
POWER TRANSMISSION DRIVE ADJUSTMENT
Harry J. Mertz, Webster City, Iowa, assignor to Solar Corporation, Milwaukee, Wis., a corporation of Delaware
Original application August 30, 1945, Serial No. 613,640. Divided and this application November 12, 1946, Serial No. 709,379
2 Claims. (Cl. 74—242.10)



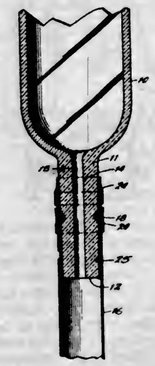
1. Mechanism for transmitting power from a rotary driving member to a rotary driven member having relatively fixed axes, comprising a speed change rotary member operationally interposed between the driving and driven members and respectively connected therewith by flexible power transmitting elements, a bracket fulcrumed coaxially with one of the first two mentioned rotary members and for supporting said speed change member, said bracket including two sections pivotally connected to each other and relatively adjustable about such pivot connection to regulate the effective length of the bracket.

2,458,721
ELECTRIC SHAVING KIT
Howard F. Nenno, Rochester, N. Y.
Application February 28, 1946, Serial No. 650,765
11 Claims. (Cl. 240—2)



1. An electric shaving kit comprising a body having a bottom and side walls and an open top, a cover member hinged to said body substantially at the rear edge thereof and adapted to be swung from a closed position closing the top of said body to an open position inclined upwardly and rearwardly from said rear edge of said body, a mirror mounted on the inner face of said cover member, a tubular incandescent electric light bulb mounted in said body close to the front edge thereof and extending approximately parallel to the front wall of the body, a light-diffusing translucent housing member extending substantially the full length of said front wall of the body and having a top wall over said bulb through which light may be transmitted upwardly and a rear wall lying to the rear of said bulb through which light may be transmitted rearwardly in a general direction toward said mirror when said cover member is open; said rear wall of said housing member being spaced substantially forwardly from the rear wall of said body to provide between them a compartment of substantial size for containing an electric razor, an electric outlet plug mounted in said body in position so that an electric razor may be plugged into it, and a flexible electric cord for supplying current to said outlet plug and to said bulb.

2,458,722
TUBING SET
Maurice M. Nesset, Glenview, and Edward J. Nawoj, Chicago, Ill., assignors to Baxter Laboratories, Inc., Glenview, Ill., a corporation of Delaware
Application November 2, 1942, Serial No. 464,300
9 Claims. (Cl. 285—84)



1. A tubing set for transmitting liquids, comprising a rigid tube having a groove extending transversely about the periphery of an interme-

the axis of the outer bearing member, and the one angle being in advance of and the other one lagging with respect to the said plane containing the axis of the rotary driven member, and resilient means for urging the divergent links towards each other and thereby pressing the outer

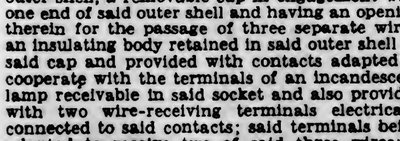
William Reed McCormick, Chicago, Ill., assignor to A. Yates Dowell, Washington, D. C.
Application June 13, 1946, Serial No. 676,531
7 Claims. (Cl. 128—229)

1. An implement for the treatment of the human anatomy comprising inner and outer con-

1. A tubing set for transmitting liquids, comprising a rigid tube having a groove extending transversely about the periphery of an interme-

diate portion of the end thereof and a thin flexible, substantially inelastic tube received snugly about said end of the rigid tube and overlying the groove therein, the end of said rigid tube having a longitudinal dimensionally constant peripheral surface extending thereabout adjacent said groove, receiving the inelastic tube in snug peripheral engagement therewith and means extending transversely about said inelastic tube and overlying said groove to secure the inelastic tube within the groove and prevent longitudinal movement of the tubes with respect to each other.

2,458,723
ELECTRODE HOLDER
Gustaf F. Nilsson, Minneapolis, Minn.
Application April 5, 1947, Serial No. 739,613
2 Claims. (Cl. 219—8)



1. In an electrode holder an elongated case, a plunger slidable along said case, said plunger having a V-shaped groove in one end of the same opening laterally of said plunger for the reception of a welding electrode, a spring secured to said plunger and extending along said groove, a jaw on said spring adapted to urge the electrode toward the vertex of said groove and means on said case for moving said jaw inwardly toward the apex of said groove upon longitudinal movement of the plunger within said case.

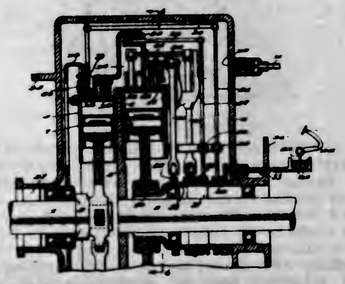
2,458,724
INCANDESCENT LAMP SOCKET
Priscilla M. Parissi and Anthony J. Parissi, Cohoes, N. Y.
Application January 4, 1946, Serial No. 638,992
7 Claims. (Cl. 315—75)

1. An incandescent lamp socket comprising an outer shell, a removable cap in engagement with one end of said outer shell and having an opening therein for the passage of three separate wires, an insulating body retained in said outer shell by said cap and provided with contacts adapted to cooperate with the terminals of an incandescent lamp receivable in said socket and also provided with two wire-receiving terminals electrically connected to said contacts; said terminals being adapted to receive two of said three wires; a thermostatic switch positioned within said socket between said cap and said insulating body and including a resistance heating coil forming a shunt around said switch for electrically heating said switch to close the same, means electrically connecting one terminal of said switch and one terminal of said coil to one of said contacts, and means electrically connecting the other terminals of said switch and coil, respectively, and adapted to be electrically connected to the third of said three wires.

2,458,725
PLIERS
Glenn W. Periman, Los Angeles, Calif.
Application September 14, 1944, Serial No. 553,970
6 Claims. (Cl. 81—51)

1. In pliers, handle and jaw members pivoted to each other, means to prevent the jaw members from coming together comprising a sliding block, the handle members having converging faces upon one of which the block is slidable and to which it is connected and the other of which the block engages in its adjusted positions, a boss on one of said converging faces and means adjustably carried by the boss and revolubly connected with the block to move the block along one of said faces and to maintain the block in its adjusted position.

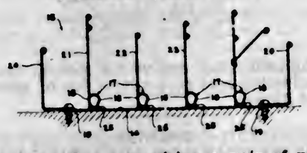
2,458,726
PNEUMATIC VARIABLE TORQUE TRANSMISSION
Emil H. Piron, New York, N. Y., assignor to Transit Research Corporation, New York, N. Y., a corporation of New York
Application March 24, 1943, Serial No. 480,409
4 Claims. (Cl. 60—62)



1. The combination of a prime mover having a rotating drive shaft, a driven shaft, a transmission connecting said shafts comprising an air compressor adapted to transmit the torque of

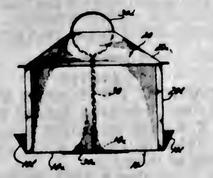
said drive shaft directly to said driven shaft, said compressor having pistons which reciprocate at a speed equal to the differential speeds of said shafts and which are adapted to pump air in an amount proportionate to their speed of reciprocation, a motor driven by the air pressure produced by said compressor to produce a torque, and means transmitting the torque of said motor to said driven shaft for addition to the torque impressed directly on said driven shaft by said compressor, said compressor having inlet valves and said motor having outlet valves, all of said valves opening into a common chamber containing air maintained at a pressure substantially above atmospheric.

2,458,727
BIRDPROOFING
Julius Stanley Peles, New York, N. Y.
Application June 27, 1944, Serial No. 542,348
9 Claims. (Cl. 20—1)



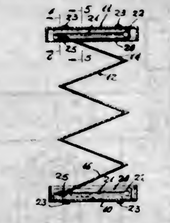
1. Bird proofing comprising a pair of parallel separate resilient track wires, each having base portions in longitudinal alinement with open-ended loops at spaced intervals between said base portions extending vertically therefrom, with restricted neck portions near said base portions, and a plurality of separable wire elements, each comprising a pair of parallel fingers and an interconnecting portion transverse to the track wires, each of said transverse portions having a pair of spaced closed loops therein normal to said fingers arranged to be seated on the base portions of the track wires, opposite inner sides of the loops in said elements being arranged to be engaged under pressure by the neck portions of the loops in the track wires to maintain the fingers in substantially vertical positions.

2,458,728
MOLDING TOY
Bernadette Pihak, La Salle, Ill.
Application June 18, 1947, Serial No. 754,525
6 Claims. (Cl. 46—46)



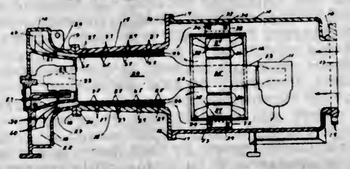
1. A molding toy set comprising a shallow tray mold defining an interior cavity corresponding to a building structure base, an open bottom, box-like, thin walled main mold defining an interior cavity corresponding to a building structure mountable on said molded base, the bottom portions of said base mold being receivable in said tray in nested relation, said tray mold and said main mold having apertures through the base and top portions thereof respectively, said apertures being aligned in the nested position of said molds, and a molding tool having a handle and an enlarged working portion, said handle being insertable through said aligned apertures to bring said enlarged working portion of said tool into engagement with said tray, whereby said tool secures said molds together in unitary assemblage.

2,458,729
BOOK BOX CONSISTING OF ACCORDION FOLDED PAGES IN A BOX
Irving Politzer, New York, N. Y.
Application June 16, 1945, Serial No. 599,779
3 Claims. (Cl. 40—102)



1. A book in a box, comprising an open top box provided with a cover, track-like strips mounted within said box and within said cover and having slots connecting with enlarged circular openings at the front ends, a strip of accordion folded pages for engagement in said box and having bar-like strips attached to the end portions of its top and bottom pages, and the ends of said bar-like strips being slidably and non-rotatively engaged in said slots and being turnable in said enlarged circular openings.

2,458,730
REFRIGERANT COMPRESSOR
Alexander I. Ponomareff, Havertown, Pa., assignor, by mesne assignments, to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application November 20, 1946, Serial No. 711,006
11 Claims. (Cl. 230—117)



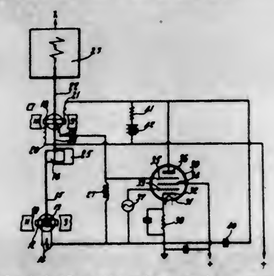
1. A refrigerant compressor comprising a casing having a suction passage for refrigerant vapor, and a diffusion passage including an annular passage curving outwardly to provide a compressed refrigerant vapor outlet directed transversely of the compressor axis; a rotary spindle within the casing having journal portions at its upstream and downstream ends, and a hub adjacent the downstream journal portion, said hub cooperating with the casing to provide a blade passage connecting the suction and diffusion passages, said blade passage being axially aligned with the suction passage and converging toward the diffusion passage; axial-flow blading in the blade passage and including a plurality of rows of rotary blades carried by the hub and guide vanes carried by the casing; bearings carried interiorly by the casing for said journal portions, and an electric motor for driving the spindle and arranged in the suction passage so that the stream

cooperate with the terminals of an incandescent lamp receivable in said socket and also provided with two wire-receiving terminals electrically connected to said contacts; said terminals being adapted to receive two of said three wires; a thermostatic switch positioned within said socket between said cap and said insulating body

1. The combination of a prime mover having a rotating drive shaft, a driven shaft, a transmission connecting said shafts comprising an air compressor adapted to transmit the torque of

of refrigerant vapor flowing in the latter passes through and about the motor, said motor including a rotor mounted on the spindle between the hub and said upstream journal portion.

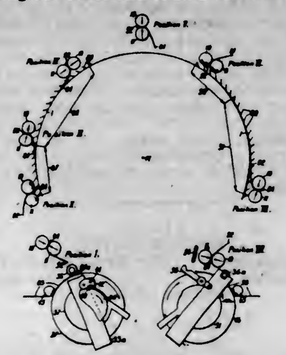
2,458,731
ELECTRICAL FOLLOW-UP APPARATUS
Karl Rath, New York, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application January 20, 1944, Serial No. 519,003
3 Claims. (Cl. 318—28)



1. An electrical measuring system comprising an input device having a movable element responsive to variations of a quantity to be measured and provided with a first electrode actuated thereby, an output device actuatable in response and proportion to an electric current applied thereto and having a movable element provided with a second electrode, actuated thereby, said electrodes being arranged in relatively spaced relationship to form a single variable condenser; a frequency converter-amplifier comprising an electronic tube having at least a cathode, an anode, a pair of control grids and a screen grid interposed between said control grids, a resonant impedance means connected between said cathode and one of said control grids, a source of auxiliary high frequency voltage having a frequency normally relatively equal to the resonant frequency of said impedance means and connected between the other of said control grids and said cathode, to produce a direct anode current having an amplitude varying in sense and magnitude in proportion to the relative frequency departure between said source and the resonant frequency of said impedance means; means for varying the relative frequency between said source and said impedance means by said variable condenser; and further means for actuating said output device by said direct anode current, to substantially instantaneously restore the frequency balance between said source and said impedance means and to maintain a continuous follow-up relation between the movable elements of said input and said output device.

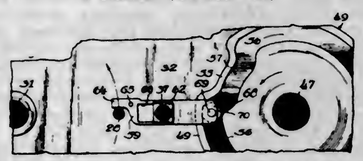
2,458,732
METHOD AND MACHINE FOR COMBING COTTON AND OTHER TEXTILE FIBERS
Frederick Raubitschek, Ealing, London, England
Application November 13, 1943, Serial No. 510,152
In Great Britain November 23, 1942
27 Claims. (Cl. 19—117)

14. A method of combing cotton and other textile fibres, comprising the steps of gripping and detaching a tuft from an advancing lap of fibrous material, moving said tuft by rolling action and presenting one free end thereof for combing, combing said free end of said tuft whilst moving said tuft, inverting said tuft whilst still gripped by rotating it about an axis intermediate its ends, moving said gripped tuft by rolling action and presenting the other end of said tuft for combing,



combing said other end whilst moving said tuft, and delivering said tuft onto a lap of previously combed fibres.

2,458,733
POSITIVE BRAKE OR ARRESTING MEANS
George Reget, New Rochelle, N. Y.
Application October 31, 1945, Serial No. 625,709
1 Claim. (Cl. 188—69)

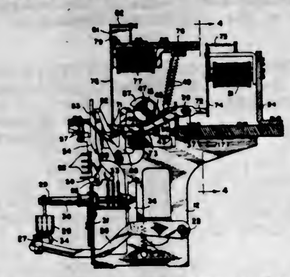


In a machine of the character described having a rotating member, arresting means comprising, cam actuated intermittent arresting means slidably mounted and provided with roller means, a cam having a raceway and being rotatably mounted engaging the said roller means in its raceway, the said intermittent arresting means provided with bifurcated arresting extensions positioned and arranged to arrest releasably the movement of the rotating member of said machine, the said arresting extensions being provided with elongated slotted portions, and rigidly fixed parallel slide means provided with reduced slide extensions fitted in the said slotted portions.

2,458,734
MECHANICAL CIPHERING SYSTEM
Albert H. Reiber, deceased, late of Evanston, Ill., by Emily Y. Reiber, executrix, Evanston, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application December 8, 1943, Serial No. 513,374
2 Claims. (Cl. 178—22)

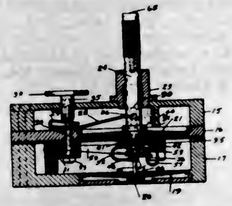
2. In combination, a selector including a plurality of cams, a follower associated with and urged into engagement with each of said cams, said cams having low portions for receiving the cam followers followed by raised portions for actuating the followers invariably, a pivot for supporting said followers, signal responsive means normally operable selectively to block the followers from engagement with the low portions of their cams, deciphering means, a corresponding plurality of elements carried on said pivot

and dually controlled by said signal responsive means and said deciphering means for exercising control over said followers, each of said elements being slidably articulated to and in juxtaposi-



tion with an associated follower, and a slidable actuator associated with each follower for actuation thereby, said actuators operated by said followers according to the control exercised by said elements.

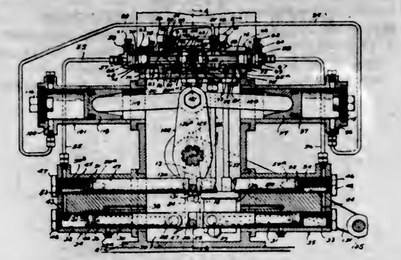
2,458,735
ELECTRIC PRESSURE AND DEFLECTION GAUGE
Harry Reifel, Waltham, Mass., assignor, by mesne assignments, to Stevens-Arnold Inc., Boston, Mass., a corporation of Massachusetts
Application November 8, 1946, Serial No. 708,684
6 Claims. (Cl. 201—48)



1. A gauge for indicating movements, comprising a plunger adapted to contact a source of movement; a resilient diaphragm extending centrally around said plunger and in contact with same so as to restrain the movement thereof; a lever fulcrumed at one end and carrying an electric contact adjacent its other end, said lever having aligned, rounded depressions in its opposite sides intermediate its ends, the inner end of said plunger being in contact with the rounded surface of one of said depressions; a second resilient diaphragm in axial alignment with said diaphragm, a pin carried at one end by said second diaphragm at the center thereof, said pin having its other end rounded at its point of contact with the surface of the other of said depressions, and a resistance wire touching said contact, said contact being adapted to be moved along said wire by movement of said plunger, said diaphragms opposing said movement.

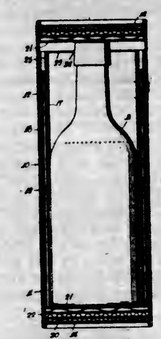
2,458,736
SELF-CONTAINED HYDRAULIC SERVO MECHANISM
Edward A. Rockwell, Cleveland, Ohio
Application June 29, 1943, Serial No. 492,745
16 Claims. (Cl. 60—52)

6. In combination, a device to be moved, manual means for controlling the position of the same, a master cylinder operated by the manual means, a modulating valve adapted to control the delivery of pressure liquid from the valve, power cylinders and opposed pistons therein operated by said pressure liquid, a casing having a chamber between said power cylinders and on which casing



the power cylinders are mounted, said power pistons being connected to said device, and a pump in said chamber having a pressure accumulator connected thereto for supplying said pressure liquid, said master cylinder and modulating valve having fluid connection with said chamber.

2,458,737
SHOCKPROOF BOTTLE CONTAINER
Mortimer B. Salkowitz, Brooklyn, N. Y.
Application February 26, 1947, Serial No. 731,002
3 Claims. (Cl. 229—90)



1. A shock-proof individual shipping container for bottled goods comprising an outer casing of conventional stiff paper tube stock, including a base having an end wall of sheet metal crimped thereto, a composite protective liner secured within said base, said liner comprising two tubes of conventional stiff paper tube stock defining an annular space therebetween, corrugated paper board in said space and encompassing the inner tube, said liner protruding substantially beyond the rim of the base, said casing including a cover of construction similar to that of the base and removably telescoped over the protruding part of the liner for rim to rim abutment against the base, and corrugated board cushions retained by and lodged against the inner faces of the respective sheet metal end walls of the base and the cover, the inner face of the base cushion being abutted by the end of the liner, each of said end cushions comprising a stack of discs of corrugated paper board and a paper stock cup with

material, moving said tuft by rolling action and presenting one free end thereof for combing, combing said free end of said tuft whilst moving said tuft, inverting said tuft whilst still gripped by

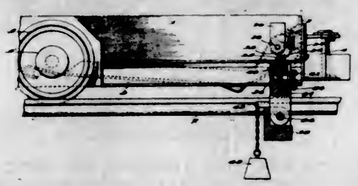
means normally operable selectively to block the followers from engagement with the low portions of their cams, deciphering means, a corresponding plurality of elements carried on said pivot

Application June 29, 1943, Serial No. 492,745
16 Claims. (Cl. 60—52)

6. In combination, a device to be moved, manual means for controlling the position of the same, a

its face exposed to the interior and its rim snugly intervening between the rims of the respective stacks of cardboard discs and the inner wall of the base and cover respectively.

2,458,738
LATCH TRIPPING MECHANISM
Hugh W. Sanford, Knoxville, Tenn., assignor to The Sanford Investment Company, Wilmington, Del., a corporation of Delaware
Application March 14, 1944, Serial No. 526,426
12 Claims. (Cl. 214—58)



1. In a drop bottom mine car adapted to be mounted on track rails and having side-sill means with transverse forward and rearward end-sill structures connected therewith and cooperating to form a load supporting frame, side wall structures extending upwardly from the side-sill means, a drop bottom door hinged to the frame structure about an axis extending transversely of the dumping conveyance, a latch for supporting the free edge portion of the door when closed, said latch having its lowest portion when in door supporting position above the portion of the lower edge of the adjacent end-sill structure lying in the same longitudinal upright plane, a shaft extending transversely of the car and supporting the latch rigidly fixed thereon for swinging movement in a direction lengthwise of the car upon rotation of the shaft to release the door for dropping, said shaft having an end portion projecting externally of the side-sill means and side wall at one end thereof and having actuating means on said projecting end portion, the end-sill structures having portions thereof projecting laterally of the car throughout the length of said projecting end portion of the shaft and disposed with the lower edge thereof below the shaft and said end-sill structure having a recess in the projecting lower edge portion thereof in the same longitudinal vertical plane as the actuating means.

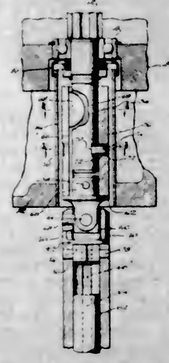
2,458,739
MECHANICAL PENCIL WITH LEAD STORAGE UNIT
Mark E. Savoie, Cleveland, Ohio
Application August 25, 1945, Serial No. 612,590
2 Claims. (Cl. 120—14.9)

1. A removable lead storage unit for a pencil barrel having an opening in the end thereof and an end surface about said opening, said lead storage unit comprising an elongated cylindrical tube adapted to be frictionally and slidably inserted in the said pencil barrel and having an inner open end and an outer open end, a support member fitted nonremovably in the outer open end to close said end of the tube, said support member having external flange stop means engageable with the end surface of the pencil barrel to limit movement of the elongated cylindrical tube into the pencil barrel, said support member also being provided with an opening therethrough and extending co-axially therewith, and a sheath having a cylindrical portion anchorably

fitted in the opening in the support member and also having a noncylindrical portion thereof extending co-axially with and disposed within the cylindrical tube, the space within the cylindrical tube and outside of the noncylindrical portion of the sheath constituting a storage

space for leads, the cylindrical portion of the sheath extending outwardly beyond the support member and the cylindrical tube for providing an engagement means for readily removing the support member and the cylindrical tube from the pencil barrel for access to the stored leads therein.

2,458,740
MULTIPLE SPINDLE MACHINE TOOL
Robert A. Schafer, Richmond, Ind., assignor to National Automatic Tool Company, Inc., Richmond, Ind., a corporation of Indiana
Application June 9, 1943, Serial No. 490,167
3 Claims. (Cl. 287—119)



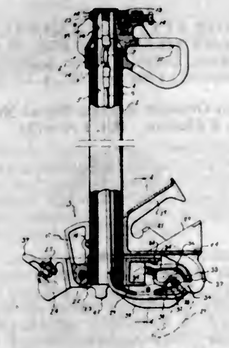
1. For use in a machine tool having a rotating driving element and a spindle driven thereby, and having means connecting the driving element to the spindle, the combination of a sleeve secured to the spindle, a shaft connected to the rotating driving element and extending into said sleeve, said shaft having a transverse segment shaped groove cut in its outer surface, said sleeve having an arcuate transverse slot cut through the wall thereof for alignment with said groove, a key and keyway rotary driving connection between said shaft and said sleeve causing them to rotate together but permitting relative longitudinal movement thereof, a readily removable

Woodruff key extending into the transverse slot of said sleeve and into the transverse groove of said shaft to prevent relative longitudinal movement of said shaft and said sleeve, and a manually releasable split resilient sleeve holding said Woodruff key in said position.

2,458,741
PREPARATION OF METHOXY ACETIC ACID
Louis Schmerling, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application September 15, 1945, Serial No. 616,651
1 Claim. (Cl. 260—535)

A process for preparing methoxyacetic acid which comprises non-catalytically reacting monochloro acetic acid with a molar excess of methanol at a temperature of from about 180° to about 250° C.

2,458,742
DROP-OUT FUSE CONSTRUCTION
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application November 13, 1945, Serial No. 628,157
6 Claims. (Cl. 200—114)

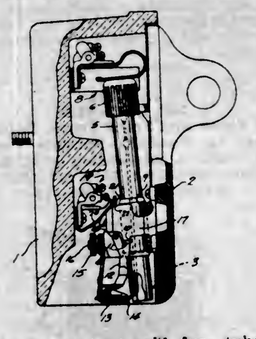


1. A drop-out fuse construction comprising upper and lower stationary terminals, a fuse tube having an upper end detachably locked to said upper stationary terminal, a main lever supporting said tube for drop-out motion and having pivotal connection with said fuse tube, a fuse link within said fuse tube electrically connecting said upper and lower stationary terminals, a catch rigid with said fuse tube, a throw-out lever pivoted to said main lever and normally having interlocking engagement with said catch and held against motion by said fuse link, said throw-out lever being biased towards throw-out motion and arranged to execute throw-out motion to withdraw any remaining portion of said fuse link from said fuse tube upon rupture of said fuse link and to detach itself from said catch, whereby said main lever will rock to allow said fuse tube to execute drop-out motion.

2,458,743
DROP-OUT FUSE CONSTRUCTION
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application December 30, 1946, Serial No. 719,205
2 Claims. (Cl. 200—114)

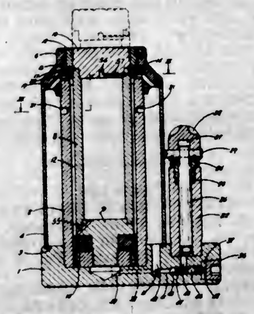
2. A housed type of drop-out fuse comprising a housing having upper and lower stationary

contacts, a door pivoted to said housing and arranged for outward rocking motion, said door having a lower contact normally engaging said lower stationary contact and urged outwardly thereby to bias said door outwardly, a fuse tube slidable downwardly in the contact carried by said door and having an upper contact normally interlocking with said upper stationary contact to restrain said door from outward rocking motion until said fuse tube slides downwardly, a fuse link within said fuse tube electrically con-



necting the contact of said fuse tube and the contact of said door and normally restraining said fuse tube against downward sliding motion and releasing said fuse tube on rupture of said fuse link, and screw means removably carried by said lower stationary contact and coacting with the contact of said door for selectively allowing or preventing said door from outward rocking motion when said fuse tube slides downwardly, said screw means being removable without removing any other portion of said lower stationary contact.

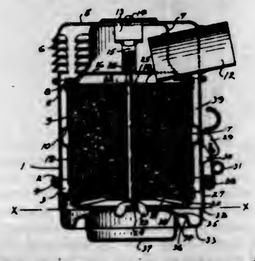
2,458,744
HYDRAULIC JACK
Frank H. Schwerin, Pittsburgh, Pa., assignor to The Duff-Norton Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 22, 1947, Serial No. 749,680
6 Claims. (Cl. 60—52)



1. A hydraulic jack comprising a base, a jack cylinder mounted thereon, a liquid reservoir mounted on the base around the cylinder and having a closed top, a hollow lifting member vertically movable in the cylinder and including a closed top and a piston on its lower end, the cylinder being spaced from said member above the

piston to form a variable volume chamber, and a pump for pumping liquid from the reservoir into the bottom of the cylinder to raise the lifting member therein, the jack being provided with an air passage connecting the upper end of the reservoir with said chamber, the lower portion of the lifting member above the piston being provided with an air passage connecting the inside of said member with said chamber, and the upper portion of the lifting member being provided with a vent passage connecting the inside of said member with the atmosphere when the lifting member is raised in the cylinder, whereby said passages and chamber will connect the reservoir with the atmosphere.

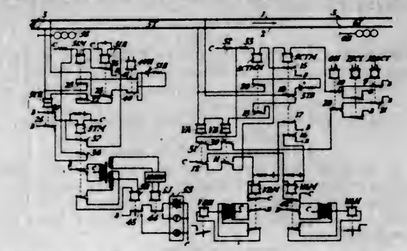
2,458,745
AIR CLEANER
Joseph B. Sebok and Frank Sebok, Detroit, Mich., assignors to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application February 1, 1945, Serial No. 575,610
4 Claims. (Cl. 183—15)



4. In a liquid bath air cleaner, a casing having an inlet and an outlet spaced therefrom, a filter medium in the path of air traveling from said inlet to said outlet, said casing having a liquid sump below said filter medium, means in said casing defining an annular passage adjacent the casing wall for incoming air leading toward said sump, and said casing being shaped in the region of said sump to provide an outer annular trough beneath said passage and a central well spaced from said trough, and an upwardly and inwardly sloping wall connecting said trough and said well and merging with the adjacent walls of said trough and well in a manner to define an arcuate junction with each such wall, said central well being substantially twice the depth below said sloping wall as said annular trough, said trough being freely open at the top and having a smoothly curvate bottom merging with the inside trough wall to define a path along which incoming air descending said passage may drive accumulated dirt out of said trough over said sloping wall into said well.

2,458,746
CODED TRACK CIRCUITS
Charles B. Shields, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application June 11, 1946, Serial No. 675,875
14 Claims. (Cl. 246—38)

2. In a coded track circuit signaling system, in combination, a section of railway track having a pair of track rails, a first and a second transmitter relay each having contacts movable between a released and a picked-up position, means for operating the contacts of the first transmitter relay between their two positions, a circuit including a back contact of said first transmitter relay for supplying energy to the winding of said second transmitter relay, a circuit including a back contact of said first transmitter relay and a front contact of said second



transmitter relay for connecting a code following relay across said track rails, and a circuit including a front contact of said first transmitter relay and a back contact of said second transmitter relay for connecting a source of energy across said track rails.

2,458,747
DEVICE FOR ATTACHING METAL BALING RIBBONS TO ANCHORAGE PLATES
Fred A. Singley, Detroit, Mich., assignor to Acme Steel Company, Chicago, Ill., a corporation of Illinois
Application October 9, 1946, Serial No. 702,316
8 Claims. (Cl. 140—73)

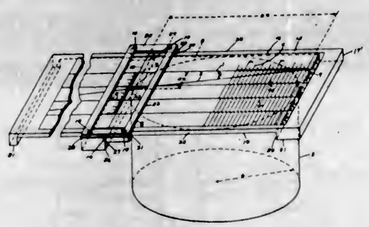
1. Mechanism for securing a metal packaging ribbon to an anchor plate, comprising, in combination with a base member, a hinge having one of its pivotally correlated plates secured to said base member, a manually actuatable handle secured to the freely-swinging one of said hinge plates, and anchor-plate-engaging clips extending inwardly from the vicinity of the outer marginal edge of said freely-swinging hinge plate, adapted to hold a centrally apertured anchorage plate, through which a metal packaging ribbon has been passed, against displacement by induced swing of said freely swinging hinge plate and its actuating handle, thereby permitting the wrapping of the metal ribbon thereabout.

2,458,748
HERMETIC SEAL FOR ELECTRIC TERMINALS AND THE LIKE
Semon H. Stupakoff, Latrobe, Pa., assignor to Stupakoff Ceramic & Manufacturing Company, Latrobe, Pa., a corporation of Pennsylvania
Application May 1, 1945, Serial No. 591,392
6 Claims. (Cl. 174—152)

1. A hermetic seal construction comprising a conductor, a body of glass fused to the conductor,

a supporting eyelet to which the glass is also fused, and a separately formed insulating collar encircling the glass and intimately bonded thereto and spaced away from the conductor.

2,458,749
APPARATUS FOR APPROXIMATELY SQUARING CIRCLES
William Balvaird Thomson, Boston, Mass.
Application July 8, 1948, Serial No. 37,594
7 Claims. (Cl. 235—61)



1. An instrument for approximately squaring a circle having, in combination, a base member having two straight lines inclined to each other at an angle ϕ determined by the equation

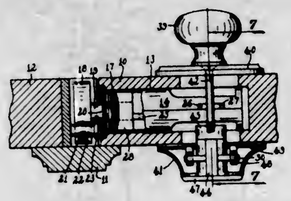
$$\tan \phi = 1 - \frac{1}{2}\sqrt{\pi}$$

where π is the ratio of the circumference to the diameter of a circle, one of the lines being linearly calibrated in predetermined units, and an indicator member movable with respect to the base member substantially parallel to one of the lines and calibrated in the same units.

2,458,750
REMOVABLE FLOOR OR WALL COVERING
Samuel G. Trepp, Dedham, Mass., assignor to Bird & Son, inc., East Walpole, Mass., a corporation of Massachusetts
No Drawing. Application April 2, 1946, Serial No. 659,159
2 Claims. (Cl. 154—49)

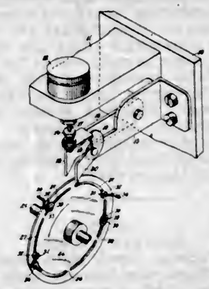
1. A hard-surfaced flexible removable covering for floors, walls, and the like, adapted to be cemented to an underlying supporting surface by linoleum paste, comprising a fibrous base saturated with bituminous material, an ornamental tread layer on one side of said fibrous base, and a flexible, dry, coherent non-tacky backing coat on the opposite side of said base consisting essentially of a composition including rubber selected from the class consisting of isobutylene-diolefin copolymer, neoprene, butadiene-styrene copolymer, vulcanized natural rubber, and vulcanized reclaim rubber, said composition including pigment and a water-soluble organic binder, the rubber content of said composition not exceeding 20% (by weight) thereof, the internal cohesive strength of said backing coating and its bonding strength to the floor covering being sufficient to firmly anchor the floor covering to an underlying layer of hardened linoleum paste on a supporting surface but at least one of said strengths being substantially less than the internal cohesive strength of said saturated base, whereby said base is strippable as a unit from said supporting surface after attachment thereto by such hardened paste.

2,458,751
ANTIJIMMY TUBULAR LOCK
Henry G. Voight, Hamden, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application October 4, 1943, Serial No. 504,817
2 Claims. (Cl. 292—198)



1. A door lock comprising a case of generally tubular shape, a bolt rotatably mounted in the case and projecting therefrom, said bolt having a body portion snugly fitting said case, a head portion lying without the case, and a neck portion connecting said head and body and passing through an opening in the front of the case, said neck portion being of reduced size with respect to said head and body and being provided with means engaging the front face of the case to prevent movement of the bolt in an axial direction.

2,458,752
TAPPET-ACTUATING MEMBER
James R. Waidelich, Naugatuck, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application April 18, 1946, Serial No. 663,083
4 Claims. (Cl. 74—568)

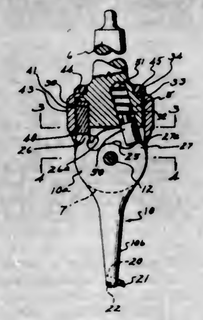


1. A cam member for actuating tappet mechanism, comprising a rotatable supporting element having an edge portion separated from the remainder of the element by a series of arcuate slots therethrough circumferentially disposed adjacently to one another and evenly spaced in the cam member, with bridge portions separating said slots; and a stud element having a squared section adapted to fit a slot and to be secured to the supporting element to prevent rotation of said stud element in its slot, the head of the stud element being provided with a groove disposed diagonally to the squared section, and an L-shaped finger element secured through its one portion in the said groove to extend outwardly from the said head beyond the edge portion of the rotatable supporting element with its other portion projecting in a sense parallel to the longitudinal axis of the stud element.

between a released and a picked-up position, means for operating the contacts of the first transmitter relay between their two positions, a

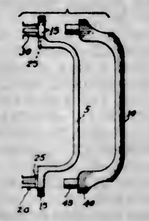
1. A hermetic seal construction comprising a conductor, a body of glass fused to the conductor,

2,458,753
BORING HEAD
Frank C. Wallace, North Hollywood, Calif.
Application June 26, 1944, Serial No. 542,189
3 Claims. (Cl. 77—56)



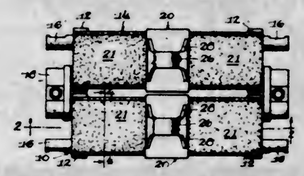
1. A boring tool comprising a body of round cross-section presenting a pair of bifurcations at its lower end and a shank portion at its top end, said body having a medial portion of reduced diameter providing an upwardly facing shoulder and a longitudinally disposed peripheral slot, a traveling block mounted in said slot for movement longitudinally thereof, said block presenting threads, an internally threaded sleeve rotatably mounted annularly of the reduced diameter portion of the body and bearing at its bottom end against said shoulder, a stop ring threadedly mounted on the body and bearing against the top end of the sleeve, said body presenting a recess opening downwardly between said bifurcations, a tool carrier, means pivotally mounting the carrier adjacent one end between said bifurcations for swinging movement about an axis at right angle to the longitudinal axis of the body, said carrier presenting at its top end a pair of cam followers one at each side of the longitudinal axis of the body, one at each side of the axis of rotation of the carrier, one of said followers having engagement with the bottom end of said block, a spring-loaded plunger reciprocably mounted in said recess and having bearing against said other follower, and tool-holding means at the bottom end of the carrier.

2,458,754
HANDLE DEVICE
Frank C. Wallace, North Hollywood, Calif., assignor to Monogram Manufacturing Company, Los Angeles, Calif., a corporation of California
Application October 29, 1945, Serial No. 625,348
2 Claims. (Cl. 16—125)



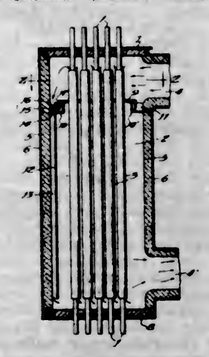
1. A pull device comprising a U-shaped base member having a laterally projecting flange at each of its ends, each of the flanges presenting an opening therethrough, a tubular radially expansible attaching element mounted in each opening and projecting from the base element, a U-shaped cover member conforming to and fitting over the base member and having its ends bearing against said respective flanges, and a lug carried by and projecting from each end of the cover member, said lugs extending into the respective attaching elements to radially expand the latter.

2,458,755
CENTER GUIDE TREAD MEMBER FOR ENDLESS TRACKS
Gustav M. Waller, Dundee, Ill., assignor to Burgess-Norton Manufacturing Company, Geneva, Ill., a corporation of Illinois
Application June 6, 1945, Serial No. 597,879
7 Claims. (Cl. 305—10)



1. In an endless track construction, a tread unit consisting of a pair of tubular pivot bearing sleeves having end members rigidly connecting them together, a metal guide block having parallel bores through which said bearing sleeves extend for connecting said bearing sleeves together intermediate their ends, said guide block including an upwardly projecting guide member, and said guide block also forming a part of the bottom load bearing surface of the tread unit.

2,458,756
MEANS FOR CONTROLLING AND EQUALIZING TUBE TEMPERATURES
Charles C. Watson, Evanston, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application January 1, 1945, Serial No. 570,990
2 Claims. (Cl. 257—228)



1. A heat exchange apparatus comprising a chamber having side walls and end walls, a bank of tubes extending through said end walls and the chamber, a partitioning member extending across the chamber and forming an inlet compartment with one of said end walls and a heating compartment with the other of said end walls,

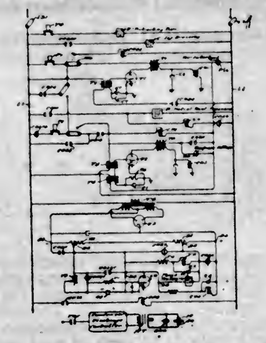
a sleeve concentric with and spaced from each of said tubes and extending through said partitioning member, said sleeves terminating short of said end walls and being open at their opposite ends, a plate parallel with said tubes and sleeves extending from said partitioning member adjacent but spaced from one of said side walls within the heating compartment and disposed outside said tube bank and forming with the side wall a jacket communicating with the interior of the heating compartment adjacent the end thereof opposite the partitioning member, said partitioning member being apertured between said plate and the last-mentioned side wall to provide communication between said inlet compartment and said jacket, means for introducing a fluid heating medium to the inlet compartment and means for removing said medium from the heating compartment.

2,458,757
STERILIZER FOR BARBER SHOPS AND BEAUTY PARLORS
Marie Wechrel, New York, N. Y.
Application June 23, 1947, Serial No. 756,357
8 Claims. (Cl. 21—81)

1. A steam sterilizer for towels comprising a plurality of parts stacked one upon the other and including a pedestal, a heater part, a water part and a steam vessel, an opening in the steam vessel through which the towels man be introduced or extracted, a cover adapted to be extended over the opening to retain the steam therewithin, a water inlet pipe extending into the pedestal, then upwardly through the heater part and into the water part to deliver a supply of water thereto, said heater part having a heater element with a supporting base therefor, projections extending from the base and adapted to rest against the interior of the heater part to support the heater and its base therebetween.

2,458,758
APPARATUS FOR RESISTANCE WELDING
Edward J. Zulinski and Robert Barley, Detroit, Mich., assignors to Progressive Welder Company, Detroit, Mich., a corporation of Michigan
Application November 6, 1944, Serial No. 562,106
4 Claims. (Cl. 219—4)

1. In a resistance-welding system embodying an electrode engageable with work to be welded and electrode control mechanism operative to apply pressure between the electrode and the work, the combination of a first control means actuable to actuate said control mechanism and apply a substantially constant initial said pressure, a first and second independently operable time delay means, said first time delay means being operative upon actuation thereof to initiate at the expiration of a predetermined time interval an increase in said pressure, said second time delay means being operative upon actuation thereof to initiate at the expiration of a predetermined time



interval an impulse of welding current to flow through the work and the electrode, said first and second time delay means being operably independent of each other for independently controlling said initiation of pressure and of said current respectively.

2,458,759
GAUGE FOR MEASURING SUBATMOSPHERIC PRESSURES
Gurdon R. Abell, Jr., Poughkeepsie, N. Y.
Application November 3, 1944, Serial No. 561,757
13 Claims. (Cl. 73—400)

11. A pressure gauge for measuring low gas pressures comprising a closed and sealed transparent container, partly filled with a liquid, means for connecting the section of the container above the liquid with the gas whose pressure is to be measured, a bulbous entrapment cup floating in said liquid, and magnetically operated means for moving said entrapment cup within the closed container from its floating position to a position above the liquid level, for holding it in this position and returning it into its floating position, said magnetically operated means comprising a magnetically permeable body within the container adapted to entrain the entrapment cup, and a magnetically active means outside the container adapted to produce a magnetic field which is movable along the container for entraining the magnetically permeable body within the container.

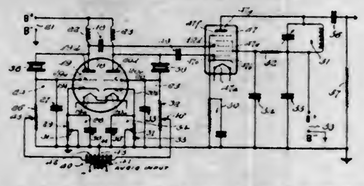
1. A pull device comprising a U-shaped base member having a laterally projecting flange at each of its ends, each of the flanges presenting

across the chamber and forming an inlet compartment with one of said end walls and a heating compartment with the other of said end walls,

ply a substantially constant initial said pressure, a first and second independently operable time delay means, said first time delay means being op-

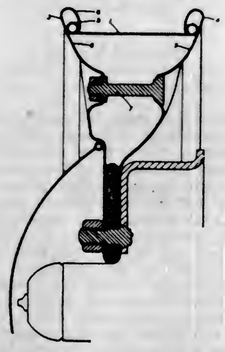
magnetically permeable body within the container.

2,458,760
CRYSTAL CONTROLLED FREQUENCY MODULATION SYSTEM
Walther M. A. Andersen, Hartford, Conn., assignor to Crystal Research Laboratories, Incorporated, Hartford, Conn., a corporation of Connecticut
Application August 17, 1945, Serial No. 611,186
4 Claims. (Cl. 179—171.5)



1. A frequency modulation system comprising a twin three electrode tube, including sets of cathode grid and plate elements, means for activating said cathodes, means for energizing said plates, a high impedance path connected between the grid and cathode of each of said sets of elements, a piezo-electric crystal connected between the grid and plate of each of said sets of elements, said piezo electric crystals being displaced in frequency for producing a beat frequency therebetween, a tap in each of the high impedance paths associated with said grid and cathode elements, an audio frequency control circuit connected between said taps and to a point intermediate said cathode elements and a mixer circuit comprising a pentagrid tube including a cathode, a pair of control grids, an output grid, an anode and a space charge grid, a tank circuit tuned to the difference frequency between the aforesaid piezo-electric crystals and connected between said output grid and said anode and connections between said plate elements of said twin three electrode tube and the respective control grids.

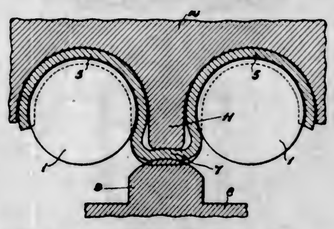
2,458,761
VEHICLE ROAD WHEEL
Frederick William Baker, Oldswinford, Stourbridge, England
Application March 25, 1944, Serial No. 528,104
In Great Britain March 25, 1943
7 Claims. (Cl. 152—5)



7. A vehicle wheel comprising a pair of side members having spaced peripheral portions, tire bead receiving channel portions with the channel openings toward the axis of the wheel and

supported on the peripheries of said members for relative lateral movement under the inflation pressure of the tire, an expansible annulus between said side members and expandible for engagement by its edge portions with said channel portions to form a seat for the tire beads, and outwardly extending flanges on the edges of said annulus for seating within the channels of said tire bead receiving portions to limit the relative lateral movement of said portions and laterally tension said annulus.

2,458,762
METHOD OF MAKING CAGES FOR BALL BEARINGS
Thomas George Barnbrook, Wolverhampton, England, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application June 10, 1946, Serial No. 675,784
In Great Britain May 15, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires May 15, 1965
1 Claim. (Cl. 113—117)

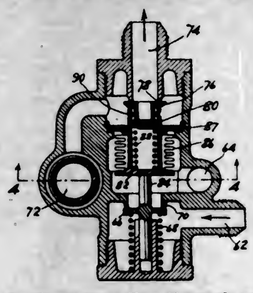


A method of producing a ball-bearing cage and assembling it upon the balls of the bearing consisting in fashioning a sheet-metal ring of undulatory form with spherically-contoured loop-like pockets on one face spaced by U-shaped connecting parts the side branches of which have concave inner faces; and, after the balls have been engaged within the pockets, simultaneously upsetting said U-shaped connecting parts by spreading dies so as to spread the same laterally in order to restrict the mouths of the pockets and cause the side branches thereof to conform to the contour of the balls, the said spreading dies consisting of a multiple tool having a plurality of spaced projections adapted to engage and space the ends of the connecting parts of the cage ring, and an opposed member shaped to fit and support the back of the cage and having projections which enter the interiors of the U-shaped connecting parts, said projections having end surfaces which are opposed to the projections on the first-named member and said first-named member being moved in a direction towards the back of the cage to act upon the pockets while the said back of the cage is supported by the second-named member.

2,458,763
LUBRICATING SYSTEM FOR MECHANISMS OPERATING AT HIGH ALTITUDES
Rudolph Birmann, Newtown, Pa., assignor, by mesne assignments, to Turbo Engineering Corporation, a corporation of Delaware
Application May 13, 1944, Serial No. 535,412
4 Claims. (Cl. 184—6)

1. In a lubricating system for aircraft mechanisms operating at high altitudes, a pressure pump, a scavenging pump, a lubricant supply line

to the pressure pump, a lubricant return line from the scavenging pump, a valve in said supply line, a valve in said return line, connections between the valve in the supply line and a part of the return line between the scavenging pump and

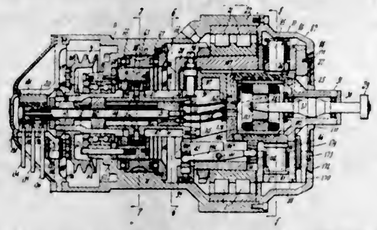


the valve in the return line through which pressure in said part of the return line may effect opening of the valve in the supply line, and means for maintaining the valve in the return line seated until the valve in the supply line is opened.

2,458,764
METHOD FOR PREPARING SOLUTIONS OF COLLOIDAL SULFUR AND THE PRODUCTS THEREOF
Henri Brunel, Paris, France
No Drawing. Application December 26, 1945, Serial No. 637,285. In France May 3, 1945
5 Claims. (Cl. 252—313)

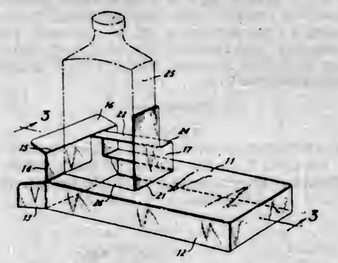
2. A concentrated solution of sulphur in ethylene–diamine.

2,458,765
PLANETARY GRINDING MACHINE
William J. Bryant, Springfield, Vt., and Thor H. Ljunggren, Charlestown, N. H., assignors to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont
Application January 10, 1945, Serial No. 572,140
12 Claims. (Cl. 51—43)



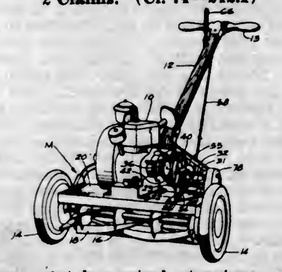
1. In combination, a casing, a hollow rotary master shaft journaled in said casing, a motor supported within said master shaft and having a rotor with its axis parallel to the axis of said master shaft, means for adjusting said motor transverse to said axis to adjust said rotor axis toward and from coaxial relation to said master shaft axis, a tool carried by said rotor beyond one end of said master shaft, means for rotating said master shaft, electrical connections through said master shaft to said motor, a counterbalance for said motor and related parts movably carried by said master shaft, connections between said motor and counterbalance causing the adjustment of said motor transverse to said axis to adjust said counterbalance in the opposite direction, and means for taking up backlash in said connections.

2,458,766
COMBINED BOTTLE CONTAINER AND SUPPORT
Raymond Cheminski, Schenectady, N. Y.
Application January 16, 1947, Serial No. 722,312
1 Claim. (Cl. 206—45.14)



In a rectangular carton adapted to receive a bottle, a flat bottom, a flat top, and an end flap at each end of the carton, each flap serving as a closure, a rectangular portion in the top adjoining one end flap, said rectangular portion being defined by a perforated line along the juncture of said top with the flap, by a creased line spaced from said juncture, and by two perforated sides, to permit said portion on severance along perforated lines to be raised vertically from the creased line, a strip severed partly from the side of said rectangular portion and partly from the flap, and extending across the line of said juncture of the flap, said strip being hinged at one end in the flap at the other end in said portion spaced from said creased line, the strip being adapted to pull up the flap into a vertical position when said rectangular portion has been manually raised to a vertical position above the level of said top.

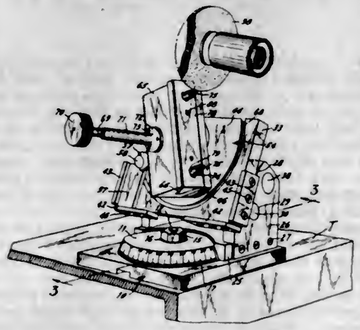
2,458,767
CLUTCH CONTROL
Allyn R. Cooper, Marshalltown, Iowa
Application May 2, 1944, Serial No. 533,815
2 Claims. (Cl. 74—242.1)



1. In a clutch control structure, a driving pulley, a driven pulley, a belt connection between said pulleys, said belt including a normally outwardly bowed outer surface, a shaft for said driven pulley, a frame in which said shaft is journalled, a base for said frame, the frame being pivotally mounted relative to the base for swinging said shaft toward and away from said driving pulley, a spring connection with said frame to

swing it in the direction of approach of said driven pulley toward said driving pulley, a stop for said frame in said direction, said belt being loose with respect to said pulleys when said frame engages said stop, a guard around said driven pulley said guard being secured to said frame to keep said belt closely adjacent said driven pulley and for moving the belt from contact with said driving pulley by engaging the outwardly bowed outer surface of the belt when said frame engages said stop, and a pair of toggle links providing a connection between said base and said frame and adapted to be moved to an over-center position for spacing said frame from said stop and tightening said belt around both of said pulleys in such spaced position.

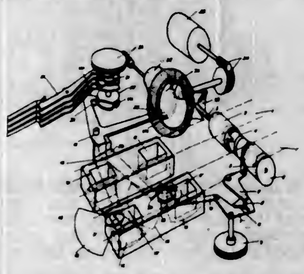
2,458,768
GRINDING WHEEL DRESSING DEVICE
Edward J. Daily, Highland Park, Mich.
Application December 13, 1947, Serial No. 791,619
5 Claims. (Cl. 125—11)



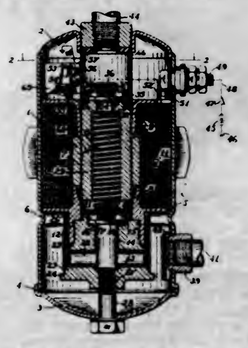
1. A dressing device of the kind described, including in combination a flat base, a semi-circular index plate axially mounted for rotation thereon and calibrated in degrees along its outer periphery, the index plate having an integral extension defined by three sides of a rectangle, the fourth side of the rectangle being the line of junction to said index plate, a pair of parallel brackets rising vertically from the sides of said extension, a rectangular master plate mounted upon a horizontal shaft journalled in said brackets to permit the master plate to be rotated upon said shaft from a normally vertical position to a position at an angle thereto, a disc-like turntable axially mounted for rotation on the face of the master plate and having calibrations in degrees along its periphery, a straight-line slide disposed on the top face of the turntable, rack and pinion means to move the slide in a straight line upon said turntable, means on the slide having diamond-cutting members to dress the grinding wheel, and separate screw-nut means to lock in place the index plate, the master plate and the turntable thereon, respectively.

2,458,769
APPARATUS FOR THE PHOTOGRAPHIC REPRODUCTION OF DOCUMENTS
André Victor Léon Clément Debrie, Paris, France
Application August 31, 1945, Serial No. 613,938
In France January 26, 1945
4 Claims. (Cl. 88—24)

1. Machine for the simultaneous photographic reproduction of documents on two cinematographic films comprising a table on which is disposed the document to be photographed, a carriage movable vertically above said table, a camera mounted on said carriage, means for moving two films parallel in relation to one another in said camera, a disconnecting device enabling either one of said films to be made use of if desired, two objectives on said camera for photographing on the two films the documents disposed on said table, two other objectives on said camera for photographing on said films an index-card carrying the title and disposed on the carriage, a rotating shutter for said two first objectives, a rotating shutter for said two second objectives, masking shutters operated by said disconnecting device, said masking shutters covering and uncovering the objectives of the film which is not being used, cams controlled by the means for moving the films producing at the required moments the opening and the closing of the shutters of said two first and said two second objectives, and auxiliary cams also controlled by the means for moving the film and rendering said first cams temporarily inoperative on at least one of said rotating shutters.



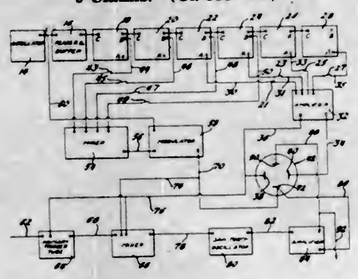
2,458,770
ELECTRICALLY ACTUATED PUMP
John W. Dickey, Millard M. Henry, and Theodore K. Riggen, Elmira, N. Y., assignors to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application February 11, 1946, Serial No. 646,950
4 Claims. (Cl. 172—126)



1. In an electrically actuated pump, a cylinder of non-magnetic material, a hollow piston of magnetic material slidable therein, a spring arranged to move the piston toward the discharge end of the cylinder, electromagnetic means

adapted when energized to move the piston toward the inlet end of the cylinder, and contacts for controlling the energization of the electromagnetic means, one of said contacts being movable; means for moving said contact including a permanent magnet and mounting means therefor permitting movement thereof toward and away from the cylinder, the permanent magnet being so located near the discharge end of the cylinder that the piston on its discharge stroke enters the field of the magnet and thereby causes the magnet to move in a direction to bring the movable contact into engagement with the cooperating contact; and magnetic means in the field of the permanent magnet so located that the attraction of the permanent magnet therefor causes the magnet to move in a direction to separate the movable contact from its cooperating contact when the piston is withdrawn from the influence of the magnet.

2,458,771
SUPERSONIC REFLECTOSCOPE
Floyd A. Firestone, Ann Arbor, Mich., assignor to The Regents of the University of Michigan, Ann Arbor, Mich., a constitutional corporation
Application March 15, 1943, Serial No. 479,228
9 Claims. (Cl. 315—26)

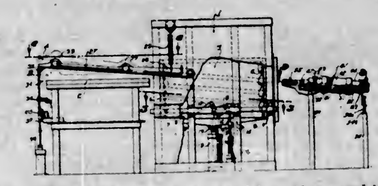


1. In indicating means, a cathode ray tube having vertical and horizontal beam deflecting plates, a master oscillator, a plurality of frequency divider circuits connected in series and to the oscillator to provide frequencies which are sub-multiples of the master oscillator frequency, means for selectively connecting one of said frequency divider circuits to the horizontal deflecting plates, means for connecting one or more of the frequency divider circuits to the vertical deflection plates, and voltage regulating means in each connector line of the last mentioned connecting means whereby the relative value of the voltage applied by that frequency divider circuit may be varied.

2,458,772
POLYMERIZING THE GLYCERYL ESTER OF LEVO-PIMARIC ACID-MALEIC ANHYDRIDE ADDUCT
Elmer E. Fleck, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application December 27, 1944, Serial No. 570,040
1 Claim. (Cl. 260—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

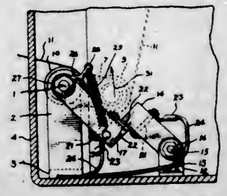
A process of forming a resin comprising heating a mixture of substantially pure levo-pimaric acid-maleic anhydride adduct and glycerin to form the glyceryl ester of the adduct, and polymerizing the ester by heating it at a temperature about from 250° to 300° C. to form an oil-insoluble, thermoset resin.

2,458,773
SCREEN PRINTING MACHINE
Robert F. Foard, Los Angeles, Calif.
Application February 18, 1946, Serial No. 648,426
18 Claims. (Cl. 101—115)



2. In a screen printing machine, the combination with a work area adapted to receive material to be printed, of: a master frame extending over said work area and having rails upon which to guide frame units; remote controlled means for raising and lowering said master frame, said master frame, when lowered adapted to occupy a predetermined relation with material on said work area; a plurality of screen printing frame units, each including an outer frame and an inner frame, the inner frame being covered with design bearing screen printing material, and means for adjusting the position of said inner frame relative to said outer frame; means adapted to carry said screen printing frame units; means for feeding said frame units in sequence to the rails of said master frame; and means for positioning each frame unit in a predetermined relation with said master frame, whereby upon adjustment of the inner frames of said frame units the designs on the screen material may be brought in registry with each other and with work material on said work area.

2,458,774
FILM CONTROLLED SAFETY STOP FOR MOTION-PICTURE PROJECTORS
Wilbur H. Gabel, Kulm, N. Dak.
Application February 20, 1946, Serial No. 649,055
3 Claims. (Cl. 200—52)



2. Film controlled safety stop for motion picture projectors, comprising, in combination, a rotatable shaft journalled in the framework of said projector, an arm secured at one end thereof to said shaft, a jockey roller at the remaining end of said arm, an idle roller rotatable on said shaft and parallel to said jockey roller, said film being threaded between and engaging said rollers, a stationary contact on said framework, a coacting contact pivoted on said shaft, said contacts being in circuit with the driving motor of said projector, a crank secured to said shaft, and a tension spring connecting said crank to said pivoted contact, said spring normally urging said contacts together.

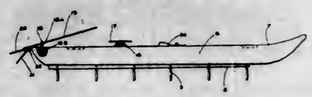
2,458,775

first zone with respect to the flow of complex an

ing from one end of said bottom plate to and

2,458,781
UNIVERSAL HITCH

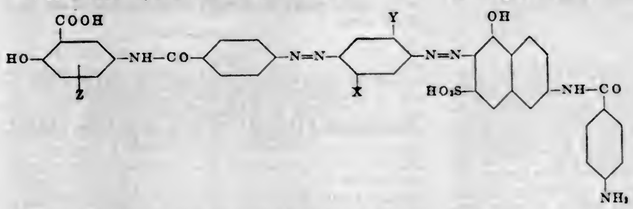
2,458,775
WATER SKI
Carlo Giacomelli, New York, N. Y.
Application February 14, 1945, Serial No. 577,784
1 Claim. (Cl. 115—32)



In a water craft, a float having a stern, a yoke comprising a stem upstanding from said stern and rotatable therein, and an elongated handle having a rear end overhanging said stern, said handle being laterally swingable about the axis of rotation of the stem and endwise slidable forwardly and rearwardly and rotatable about its longitudinal axis, a paddle extending from the rear end of the handle parallel therewith for rotation by said handle into vertical position and use as a rudder by swinging of the handle, and a blade pivoted to the rear end of said paddle to incline downwardly and rearwardly therefrom for use as a pusher in the water by endwise sliding of the handle rearwardly, said blade being swingable on its pivot upwardly by pressure of the water when the handle is slid forwardly and to obviate resistance to sliding of said handle forwardly.

2,458,776
DISAZO DYESTUFFS AND A PROCESS FOR THEIR MANUFACTURE
Philippe Grandjean, Basel, Switzerland, assignor to Sandoz Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application May 26, 1947, Serial No. 750,647. In Switzerland May 29, 1946
8 Claims. (Cl. 260—187)

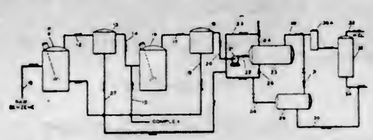
5. A disazo dyestuff of the formula



wherein X stands for a member selected from the group consisting of alkyl, alkoxy and acylamino, Y stands for a member selected from the group consisting of hydrogen, alkyl and alkoxy and Z stands for a member of the group consisting of hydrogen and alkyl.

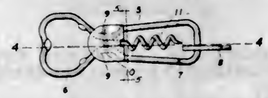
2,458,777
PURIFICATION OF HYDROCARBONS
Harold J. Hepp and Howard B. Sailors, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application December 17, 1945, Serial No. 635,590
5 Claims. (Cl. 260—674)

1. A continuous countercurrent process for the purification of a hydrocarbon stock containing an aromatic hydrocarbon selected from the group consisting of benzene, toluene and the xylenes, and containing olenfinic impurities, for the removal of this olefinic impurity and wherein the hydrocarbon stock remains otherwise substantially unaltered, comprising contacting in a first zone with respect to the flow of complex an aluminum chloride hydrocarbon complex and partially treated hydrocarbon stock containing said aromatic hydrocarbon and olefinic impurities in the ratio of a maximum of about 20 parts by weight of complex to 100 parts by weight of hydrocarbon stock, separating the so treated stock as a product of the process from the contacted aluminum chloride hydrocarbon complex, further contacting this latter complex in a second zone with the first mentioned hydrocarbon stock and with dry hydrogen chloride as an activator wherein the complex is substantially fully degraded and the hydrocarbon stock is partially purified, separating said partially purified hy-



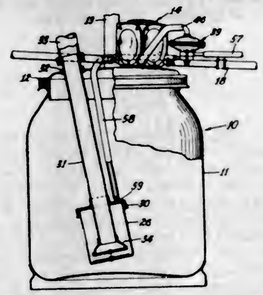
drocarbon stock from the substantially fully degraded complex and passing said partially purified hydrocarbon stock to the first contacting zone as the partially purified stock; adding water to the substantially fully degraded complex to liberate hydrogen chloride, said liberated hydrogen chloride containing some moisture, and treating said liberated hydrogen chloride containing some moisture with a fresh aluminum chloride hydrocarbon complex to remove said moisture from said hydrogen chloride and passing this dried hydrogen chloride into said second zone as the first mentioned dry hydrogen chloride, and passing said aluminum chloride hydrocarbon complex from the moisture removal step to said first contacting zone.

2,458,778
CORK REMOVER
William J. Hines, San Francisco, Calif.
Application November 9, 1945, Serial No. 627,761
1 Claim. (Cl. 81—3.45)



An appliance comprising an elongated open frame, a pin connected to and extending across said frame, a corkscrew pivoted to said pin, a top plate secured to said frame above said pin covering said pin and a portion of the shank of the corkscrew and having a pair of spring fingers depending therefrom to engage and to detachably retain said corkscrew within and in the plane of said frame, and a bottom plate coextensive with said top plate and secured to said frame below said pin, said latter plate having a recess extending from one end of said bottom plate to and slightly beyond the pin and in registration with the pivoted end of the corkscrew, the closed end of said recess providing a shoulder capable of limiting the swinging movement of said corkscrew in one direction when the same is moved at right angles to said frame to its operative position.

2,458,779
PRESSURE RELEASER MILKER
Floyd G. Hodsdon, Milwaukee, Wis., assignor to International Harvester Company, a corporation of New Jersey
Application November 14, 1945, Serial No. 628,483
7 Claims. (Cl. 31—82)

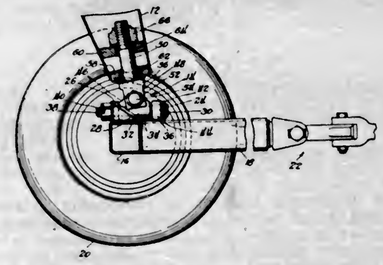


1. In a releaser milker system, a milk receiver pail, a pulsator associated with said pail for supplying intermittent vacuum and atmosphere pulsations to a plurality of teat cups, said pail having a vacuum therein; the combination with said pail, of a container mounted within said pail, said container being provided with a milk intake opening and a milk discharge opening, a regulating means actuated by the pulsator for alternately creating air pressure and vacuum within said container, said regulating means having a vacuum and a compressed air connection, means for sealing the intake opening of the container upon the compressed air application of said regulating means, thereby permitting the air pressure to expel milk through said discharge opening, and means for sealing said discharge openings upon the vacuum application of said regulating means thereby permitting the milk to flow from said pail into said container.

2,458,780
ANTIOXIDANTS
Louis H. Howland, Watertown, Conn., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 6, 1945, Serial No. 633,267
1 Claim. (Cl. 260—800)

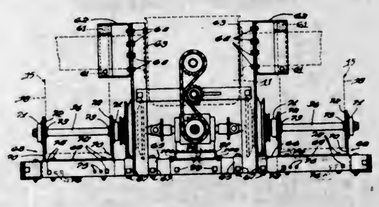
A rubber composition containing from 0.1 to 5% by weight of a 5-pyrazolone from the class consisting of 5-pyrazolone, 1-phenyl 5-pyrazolone, 2-methyl 1-phenyl 5-pyrazolone, 3-methyl 5-pyrazolone, 4-methyl 5-pyrazolone, 3,4-dimethyl 5-pyrazolone, 1,3,4-trimethyl 5-pyrazolone, 4-allyl 3,4-dimethyl 1-phenyl 5-pyrazolone, 3-benzyl 5-pyrazolone, 3-methyl 4-butyl 5-pyrazolone, 1-phenyl 3-methyl 5-pyrazolone, 3-methyl 4-lauryl 5-pyrazolone, 4-cyclopentyl 3-methyl 1-phenyl 5-pyrazolone.

2,458,781
UNIVERSAL HITCH
Loiell L. Hyler, Cedar Rapids, Iowa, assignor to La Plant-Choate Manufacturing Co., Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application February 6, 1946, Serial No. 645,755
2 Claims. (Cl. 287—100)



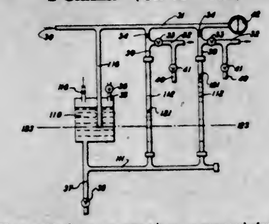
1. In a connection of the class described, a supporting member, a pair of bearing blocks formed on the supporting member, the bearing blocks having aligned openings therein, one of the openings being larger than the other, a pin having an enlarged end formed thereon mounted in the openings, the enlarged end of the pin being positioned in the larger opening, forwardly extending ears on the bearing block containing the smaller opening, a swivel block rotatably mounted on the pin between the enlarged end thereof and the opposite bearing block, and means for securing the pin in the bearing blocks.

2,458,782
TRACTOR-MOUNTED CORN PICKER
Benjamin M. Hyman and Elof K. Karlsson, Moline, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application April 11, 1942, Serial No. 438,582
3 Claims. (Cl. 56—18)



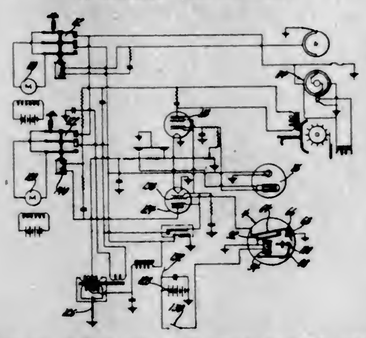
1. In combination, a tractor having a rear axle, a picker unit extending along one side of the tractor and entirely beneath the rear axle, and means mounting the picker unit on the tractor for pivotal movement of adjustment with respect thereto, comprising a member positioned parallel to and generally below the rear axle and below the portion of the picking unit extending thereunder, means attaching the member to the axle against movement of the member with respect thereto, brackets positioned on the transverse member, means pivotally mounting the picker unit on the brackets, and means for securing each bracket in a plurality of positions spaced along the length of the transverse member for lateral adjustment of the picker unit with respect to the tractor.

2,458,783
CONSTANT REFERENCE POINT MANOMETER
Joseph W. Jensen, Los Angeles, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application February 18, 1946, Serial No. 648,324
1 Claim. (Cl. 73—401)



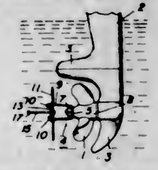
A differential manometer comprising: a tube having lower and upper ends, said tube being open at its upper end to a zone of pressure to be measured; a vessel provided in its upper portion with an outlet and provided below its upper portion with a downwardly facing inlet and with a connection with the lower end of said tube, said vessel being otherwise closed; means for conducting to said inlet fluid from another zone of pressure to be measured; a body of liquid in said tube, in said vessel, and in the connection therebetween, completely filling said connection and filling said vessel to a level above said inlet; and a restriction in said outlet having an orifice of such capacity as to cause a substantially fixed interface between said liquid and said fluid to be maintained at said inlet.

2,458,784
AUTOMATIC CONTROL
Charles F. Kettering and Albert W. Fischer, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original application April 7, 1944, Serial No. 529,990. Divided and this application September 28, 1945, Serial No. 619,118
10 Claims. (Cl. 318—489)



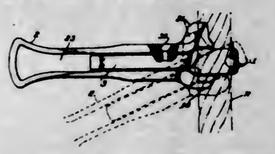
10. In means for controlling aircraft having elevators, means for driving said elevators in either direction, switching means for controlling said driving means including a first contact, chronometric means for driving said contact at a given fixed rate, a second movable contact traversing substantially the same path as the first and the first acting as a blocking member for the second so that the speed of the second cannot exceed that of the first, pressure sensitive means for actuating said second contact, supporting means for the pressure sensitive means and second contact and means to adjust the position of the supporting means so that corrections for ambient pressure at point of initiation may be made, a third contact, means for adjusting the same to a position representing a final altitude for level flight, said third contact lying in the path of movement of the second contact but not the first, and control means actuated by initial movement of the aircraft to start the chronometric means.

2,458,785
TROLLING PLATE ATTACHMENT
Edward B. Kottke, St. Paul, Minn.
Application June 26, 1946, Serial No. 679,318
9 Claims. (Cl. 170—135)



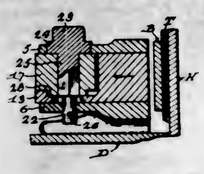
1. An attachment for connecting a trolling plate to a propeller shaft comprising a plurality of arms adapted to project rearwardly from the shaft and each having a transversely extending shoulder formed on its free end for passing a perforation in the plate to mount the plate on the arms, and a locking disc adapted to be interposed between each shoulder and the plate for obstructing passage of the shoulders through the perforations and thereby holding the plate on the arms.

2,458,786
SKI TOWROPE GRIPPER
Earl E. Lagergren, King County, Wash.
Application January 22, 1947, Serial No. 723,489
9 Claims. (Cl. 104—202)



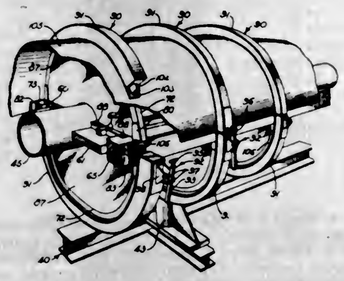
8. A ski tow rope gripping device comprising a handle which in operation is disposed generally horizontally and projecting laterally and somewhat rearwardly from the tow rope, an offset extension at and rigid with the rope-engaging end of the handle for positioning ahead of or behind the handle and alongside the tow rope, to deflect the rope upon application of a force to the handle, by reason of its offset location, a shackle pivotally mounted upon and in line with the handle, and of substantially arcuate shape, to encircle the tow rope, and to complete, with said extension, encirclement thereof in excess of a half-circle, and under the influence of the same force to deflect the encircled rope oppositely to the extension, the shackle and the extension being shaped and spaced to provide an entrance gap of such size that, when the handle projects laterally and forwardly of the rope, the rope may enter such semicircular notch of the shackle, and latch means including a hand-grasped portion lying alongside the handle, engageable with the shackle to hold the latter in closed operative position, and biased by the rope's force acting upon the shackle for movement into shackle-released position, to free the shackle for pivotal movement into open position, away from said extension.

2,458,787
BATTEN CLAMP
Onésime Lamothe, Champlain, Quebec, and Joseph Albert Lamothe, Lachine, Quebec, Canada
Application May 23, 1945, Serial No. 595,286
1 Claim. (Cl. 292—140)



In batten-clamping means, a body, a batten-engaging bolt slidable in said body, spaced parallel tongues extending from one end of said body, a corrugated cam rotatably mounted between said tongues having a periphery engageable with the bolt to positively slide the latter, notch means on the cam-engaging surface of the bolt for disengageably securing the corrugated cam in locked position, an auxiliary bolt-retracting cam formed on said first cam, an extension on the bolt for engagement by the auxiliary cam, and a rotatable pin for actuating both cams for extending the bolt and retracting same.

2,458,788
JIG FOR ASSEMBLING HOLLOW STRUCTURES
William L. Lewis, Glendale, and Frederic C. Pahl, Culver City, Calif.; said Pahl assignor to Hughes Tool Company, Houston, Tex., a corporation of Delaware
Application January 18, 1943, Serial No. 472,804
2 Claims. (Cl. 144—281)

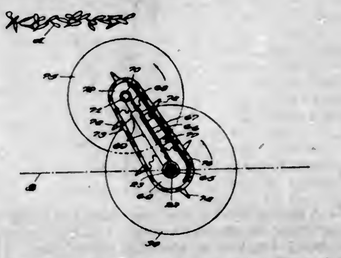


1. In an apparatus for assembling relatively long hollow structures having wall material in sheet form reinforced by internal frame members, the combination of: a jig assembly of a length greater than the hollow structure for positioning said frame members to receive said sheet material with intervening adhesive; at least three supporting means for said jig assembly, some of said supporting means being movable out of contact with the jig assembly to permit circumferential frame members to be moved onto and along the jig assembly from one end thereof for distribution of said frame members therealong; means for expanding said jig assembly outward to reinforce said frame members against inward pressure and for subsequently collapsing said jig assembly to permit subsequent withdrawal; and means for embracing the assembly of frame members with surrounding sheet material to press the sheet material inwardly against the frame members while said adhesive sets.

2,458,789
WIRE COILING MACHINE PARTICULARLY FOR PRODUCING COILED FILAMENTS FOR ELECTRIC LAMPS AND ELECTRONIC TUBES
Hans Marter, Milan, Italy, assignor to Societa Tecnica Applicazioni Metalli Duri Ed Affini—S. T. A. M. A., Milan, Italy, a corporation of Italy
Application April 18, 1947, Serial No. 742,276
In Italy May 18, 1946
7 Claims. (Cl. 140—71.5)

1. A wire coiling machine, comprising a hollow mandrel-guide spindle revolvable about its axis, a winding head disposed on said spindle near its discharge end for accommodating the wire to be coiled, a mandrel feeding member disposed near said spindle end and revolvable about an axis extending at an angle to an axial plane of said spindle, said spindle being angularly displaceable about a stationary pivot axis extending parallel to said axis of said feeding member.

2,458,790
BEET TOPPER
Robert P. Messenger, Kenilworth, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application July 10, 1944, Serial No. 544,215
8 Claims. (Cl. 55—107)



1. In a topping mechanism for beets and the like, in combination, a support, linkage pivoted on the support for vertical swinging movement, a cutting disk rotatable on an upwardly extending axis carried by the linkage for severing the beet tops, a second disk rotatable on an axis generally parallel to the first-mentioned axis for receiving the beet tops discharged from the first-mentioned disk, means for driving the second disk from the first disk, including means for driving said second disk at a higher rate than said first disk, and means associated with said drive means for guiding the tops from said first disk to said second disk.

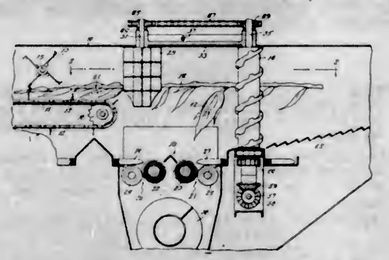
versing substantially the same path as the first and the first acting as a blocking member for the second so that the speed of the second cannot

ter such semicircular notch of the shackle, and latch means including a hand-grasped portion lying alongside the handle, engageable with the

supporting means being movable out of contact with the jig assembly to permit circumferential frame members to be moved onto and along the

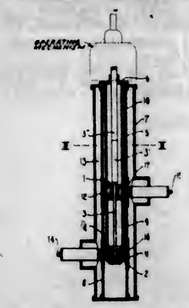
drive means for guiding the tops from said first disk to said second disk.

2,458,791
STALK FORWARDER FOR CORN PICKERS AND HUSKERS
Robert P. Messenger, Kenilworth, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application October 15, 1945, Serial No. 622,392
7 Claims. (Cl. 130—33)



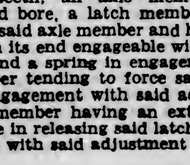
1. A corn machine having a housing, snapping and husking rolls mounted in said housing, said husking rolls mounted in said housing, said husking rolls positioned horizontally and transversely of said housing at a location forwardly of and beneath said snapping rolls, and a pair of cooperative stalk forwarding rolls vertically positioned and journaled in the housing at their upper ends, the lower ends of the forwarding rolls being unjournaled and depending over the husking rolls forwardly of the snapping rolls.

2,458,792
ELECTRIC CIRCUIT BREAKER
Hendrik A. H. Nijland, Laren, Netherlands
Application December 19, 1946, Serial No. 717,226
In the Netherlands January 16, 1946
2 Claims. (Cl. 200—48)



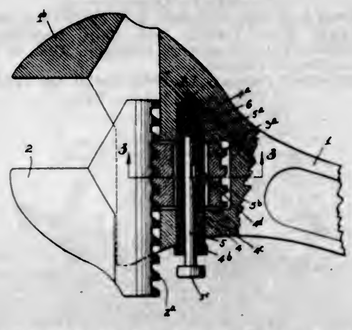
1. A metal-clad circuit-breaker for high voltage comprising in combination a stationary supporting body having a metallic outer wall and an inner wall of insulating material defining a space for an insulating fluid of constant and high quality, insulated leading-in conductors extending through said outer wall, contact means connected to said conductors and projecting into the central space of said body, metal screens conductively connected to said contact means and mounted to force the electric field of greatest intensity from said central space into said space between said outer and inner wall and a contact make and break element comprising a tube of insulating material, cooperating switching contacts mounted on said tube, certain of said switching contacts being movable and the remaining switching contacts being stationary with regard to said tube, and contact members supported by said tube and projecting into the central space of said supporting body, said contact members being connected to said relatively stationary switching contacts and so engaging the contact means secured to the leading-in conductors to permit said contact make and break element to be entirely withdrawn from and inserted into the supporting body, while the leading-in conductors are alive.

2,458,793
WRIST WATCH HOLDER
Vincent T. O'Donnell, Aberdeen, S. Dak.
Application May 7, 1946, Serial No. 667,925
3 Claims. (Cl. 224—4)



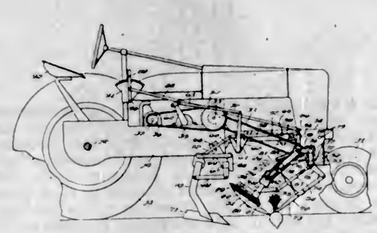
1. A wrist watch holder comprising in combination, a wrist band, a plate positioned medially the length of said band, said plate being notched to provide a pair of transversely aligned, elongated guide loops, a strip slidably positioned in said loops, a stop at one end and a pair of spaced detents at the remaining end of said strip, said watch being removably receivable between said detents.

2,458,794
LOCK FOR ADJUSTABLE END WRENCH
James H. Ogden, San Diego, Calif.
Application May 22, 1944, Serial No. 536,657
1 Claim. (Cl. 81—165)



In a wrench of the class described, the combination of a frame and handle member provided with a fixed jaw, a movable jaw reciprocably mounted thereon and provided with racked teeth, a revoluble adjustment worm nut having a bore therethrough and engageable with said movable jaw rack teeth, an axle member extending through said bore, a latch member reciprocally mounted in said axle member and having a spring portion with its end engageable with said adjustment nut, and a spring in engagement with said latch member tending to force said spring portion into engagement with said adjustment nut, said latch member having an extending thumb piece for use in releasing said latch member from engagement with said adjustment nut.

2,458,795
BEET TOPPER
John W. Orendorff, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application July 10, 1944, Serial No. 544,200
13 Claims. (Cl. 55—107)



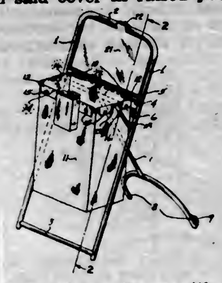
3. In a beet topper, in combination, a support, linkage mounted on the support for swinging movement in a vertical plane, a cutting element carried by the linkage, gauge means for the cutting element, means connecting the gauge means to the support for vertical swinging movement with respect thereto including means serving as a bell-crank pivoted on the support, means pivoting the gauge means on one arm of the bell-crank, means pivotally connecting the other arm of the bell-crank to the linkage, and means connecting the gauge means to the linkage for movement therewith.

2,458,796
PHENOL OXIDE RESIN LACQUERS AND THEIR MANUFACTURE
Gustav H. Ott, Riehen, and Wilhelm Kraus, Basel, Switzerland, assignors to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application July 29, 1947, Serial No. 764,558. In Switzerland August 8, 1946
21 Claims. (Cl. 260—43)

1. A process for the preparation of a lacquer raw material, especially for fired lacquers, from a resinous ethylene oxide derivative of a phenol, wherein an ethylene oxide derivative of a phenol, which derivative contains at least two ethylene oxide groups, is heated in the presence of a suitable solvent with dicyandiamide and an ether of a formaldehyde condensation product of a substance of the group consisting of melamine, urea, dicyandiamide and phenol.

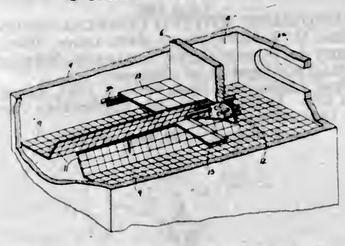
2,458,797
DISPENSING-DISPLAY STAND
Severin A. Prag, St. Louis, Mo.
Application December 5, 1945, Serial No. 632,875
2 Claims. (Cl. 248—97)

1. A dispensing-display stand comprising in its unfolded position a pair of diagonal side members and a swingable supporting member, a member rigidly connecting said diagonal members, a sack and means on said connecting member for swingably supporting said sack, slotted elements adapted for sliding movement upon said diagonal members for collapsing said sack, and means for preventing such movement, said diagonal members extending upwardly beyond said sack and being provided at their upper ends with a connecting member, and a swingable cover for said sack adapted to be engaged with said connecting member to retain said cover in raised position, said



stand being adapted to collapse with its parts in substantially parallel positions.

2,458,798
BAFFLE FOR WATERTUBE BOILERS
George P. Reintjes, Kansas City, Mo.
Application November 16, 1944, Serial No. 563,709
3 Claims. (Cl. 110—98)

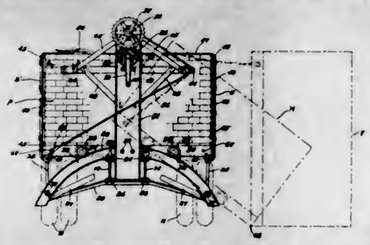


1. The combination in a water tube boiler having front and rear headers connected by a bank of water tubes in vertically and horizontally spaced rows, a roof spaced above said tubes, a fire box below the tubes, a bridge wall dividing the space above the tubes into a gas turn chamber and a gas outlet chamber, and side and end walls enclosing the tube bank and fire box, an outlet connection for the gas outlet chamber, of a plurality of spaced longitudinal baffles extending longitudinally of and upwardly through the tube bank from a point below the bridge wall to one end wall of the furnace, a cross baffle extending upwardly through the tube bank from a point below the bridge wall to the lower edge of the bridge wall to close communication between the space between adjacent longitudinal baffles and the outlet chamber, horizontal baffles extending from the side walls of the furnace to the lower edges of adjacent longitudinal baffles to confine upward gas flow to the space between said longitudinal baffles, and a horizontal baffle extending from the lower edge of the cross baffle to the back wall of the outlet chamber and from side wall to side wall of said chamber to close direct communication between the outlet chamber and the fire box.

2,458,799
VEHICLE UNLOADING CONSTRUCTION
Edward J. Sattler, Mineral City, Ohio
Application May 29, 1946, Serial No. 673,128
10 Claims. (Cl. 214—65.2)

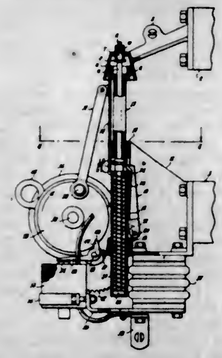
1. Vehicle unloading construction including a central beam extending longitudinally of the ve-

hicle, longitudinally spaced downwardly curved tracks mounted on said beam and extending laterally thereof in both directions, a tray rollably mounted on said tracks for supporting a stack of material, an upright post supported on the



beam, cable means supported on said post for moving said tray along the tracks to tilt the tray, and detachable means for securing said tray to said tracks when the tray is in substantially horizontal position.

2,458,800
AUTOMATIC SWITCH CONSTRUCTION
William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Original application September 4, 1943, Serial No. 501,227. Divided and this application August 16, 1944, Serial No. 549,659
4 Claims. (Cl. 200—146)

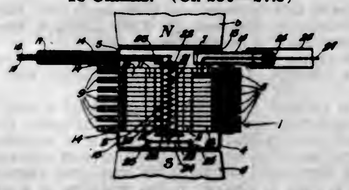


1. A switch construction comprising switch means including stationary contact means and movable contact means, said movable contact means having a main portion and an auxiliary portion, means for moving the main portion of said movable contact means out of engagement with said stationary contact means, a stationary insulating tube into which the auxiliary portion of said movable contact means is reciprocable, locking means for locking the auxiliary portion of said movable contact means in closed position, means actuated directly by said main portion of said movable contact means for tripping said locking means, and means for quickly reciprocating the auxiliary portion of said movable contact means into said tube after the main portion of said movable contact means has moved away from said stationary contact means.

2,458,801
ELECTRICALLY ENERGIZABLE FABRIC
Louis K. Schwartz, East Orange, N. J., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo., a corporation of Delaware
Application August 22, 1944, Serial No. 550,529
5 Claims. (Cl. 219—46)

1. A method of forming electrically energizable units comprising the steps of knitting an imperforate fabric including the knitting thereinto of a portion of an electrical conductor as a weft traverse in one direction, knitting cloth weft traverses in closely packed relation to each other and to said conductor traverses while carrying another portion of said conductor parallel to the warp of said fabric, knitting a third portion of said conductor as a weft traverse in an opposite direction, knitting further cloth weft traverses also in closely spaced relation while carrying a fourth portion of said conductor parallel to the warp of said fabric and repeating the foregoing steps to produce imperforate fabric in endless lengths, cutting the length of fabric at predetermined points into short lengths, and severing the electrical conductor at points commensurate with the electric current with which the lengths of the electrical conductor are to be energized.

2,458,802
MAGNETRON ASSEMBLY AND METHOD
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 30, 1942, Serial No. 436,891
18 Claims. (Cl. 250—27.5)

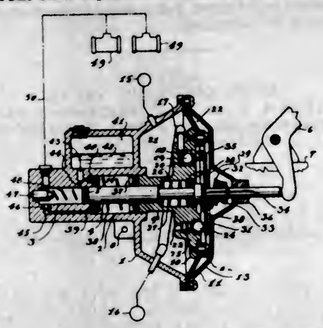


3. A discharge tube comprising a cathode surrounded by a laminated anode block, said anode block consisting of a series of stacked laminas, each lamina having a central cathode space, and a plurality of spaces interconnected with said cathode space and forming coupled cavity resonators.

2,458,803
COMBINED POWER AND MANUALLY OPERATED BRAKE BOOSTER
William Stelzer, East Orange, N. J.
Application June 24, 1943, Serial No. 492,106
7 Claims. (Cl. 60—54.5)

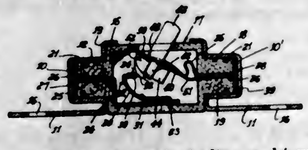
1. In a hydraulic braking system having actuating cylinders to expand the brake shoes, in combination, a pressure producing device comprising a chamber and a manually operated piston therein to force fluid to said actuating cylinders, an auxiliary piston in a separate chamber to produce a hydraulic pressure, a power motor to operate said auxiliary piston, fluid pressure transmitting means leading from said separate

chamber to said actuating cylinders, check valve means interposed in said fluid pressure transmitting means arranged to permit the flow of fluid from said separate chamber to said actuat-



ing cylinders but not in the opposite direction, and resilient means interposed between said manually operated piston and said auxiliary piston to tend to operate the latter upon operation of said manually operated piston.

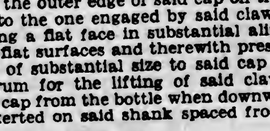
2,458,804
CIRCUIT PROTECTOR
Edward Victor Sundt, Arcadia, Calif.
Application February 25, 1944, Serial No. 523,958
4 Claims. (Cl. 200—116)



2. A circuit protector including a bi-metallic member having an arcuate portion, one end of said portion being fixed and a contact end portion disposed approximately at right angles to said arcuate portion and extending toward the concave side thereof, a leaf spring having one end fixed and a contact portion on the other end, said last named contact portion engaging under said first named contact portion, said spring being under tension for movement away from said bi-metallic member, and an arc reducing non-conducting baffle member mounted on the side of said leaf spring opposite the contacting area of said spring, said baffle member being constructed and positioned to pass in close proximity to the extremity of said contact portion of said bi-metallic member upon the separation of said contact portions by excessive heat.

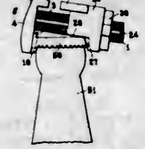
2,458,805
APPARATUS FOR MEASURING ELECTRICAL RESISTANCE
Henry George Taylor, London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., as trustee
Application October 19, 1945, Serial No. 623,269
In Great Britain September 1, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires September 1, 1964
7 Claims. (Cl. 175—183)

1. Apparatus for measuring the electrical resistance of a circuit having a power source, said apparatus comprising a current indicator having a first current range and a second and more sensitive current range whereby for a given deflection of said current indicator in said first and second range currents applied to said indicator bear a fixed ratio, a first impedance element, a second impedance element of relatively large value with respect to said first element, the values of said first and second impedance elements having an inverse ratio to said fixed ratio,



an adjustable impedance element connected in series with said second impedance element, and means including a switch for selectively connecting in a first position said current indicator in said first range across the circuit to be measured in series with the said first impedance element, and in a second position connecting said current indicator in said second range across the circuit to be measured in series with said second impedance element and said adjustable impedance element.

2,458,806
RECEPTACLE COVER PRY-OFF TOOL
James C. Tippett, Brockton, Mass.
Application July 2, 1947, Serial No. 758,512
1 Claim. (Cl. 81—3.46)



A receptacle cover pry-off tool comprising a grooved and threaded shank having a head at one end, said head having a rearwardly directed claw engageable beneath the margin of the cap of a capped bottle, a tubular jaw member having inner splines to engage the grooves in said shank, and a lock nut threaded on said shank back of said jaw to determine the maximum spacing of said jaw from said head, said jaw being cut away on the side facing said head to provide a pair of laterally flat surfaces for engagement with the top of said cap spaced back from said claw and a shoulder back of said flat surfaces for engagement with the outer edge of said cap on the side opposite to the one engaged by said claw, said shank having a flat face in substantial alinement with said flat surfaces and therewith presenting a flat area of substantial size to said cap serving as a fulcrum for the lifting of said claw to remove said cap from the bottle when downward pressure is exerted on said shank spaced from said head.

2,458,807
THERMOSTATIC SWITCH
John W. Tucker, Peotone, Ill., assignor to Hopax Industries, Inc., Chicago, Ill., a corporation of Illinois
Application July 16, 1945, Serial No. 605,219
6 Claims. (Cl. 200—116)

6. A thermostatic switch comprising, in combination, support means, a pair of relatively mov-

sulating material, cooperating switching contacts mounted on said tube, certain of said switching contacts being movable and the remaining

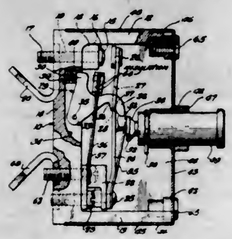
said latch member having an extending thumb piece for use in releasing said latch member from engagement with said adjustment nut.

provided at their upper ends with a connecting member, and a swingable cover for said sack

central beam extending longitudinally of the ve-

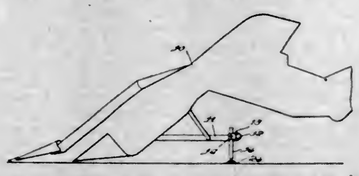
said movable contact means has moved away from said stationary contact means.

able contacts having open and closed positions, means biasing the contacts to the open position, latch means movably supported and having a latching position for holding the contacts in the closed position, means for biasing the latch means toward the latching position, thermostatic means for moving the latch means away from the latching position, cam means on the latch means coacting with one of said contacts normally to hold the latch means away from the latching position, and a manually operable actuating means having switch opening and closing positions and adapted



to coact with one of said contacts and the latch means, means biasing the actuating means to the switch opening position, said actuating means including a portion for moving the contacts to the closed position and an angularly disposed cam surface, and said latch means including a portion adapted to engage the cam surface when the latch means is in the latching position to retain the actuating means in the switch closing position, and said angularly disposed cam surface effecting movement of the latch means from the latching position when the actuating means is manually moved to the switch opening position.

2,458,808
SUPPORTING STRUT
Glen O. Turnbull, Rock Island, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 2, 1944, Serial No. 538,461
4 Claims. (Cl. 248—351)

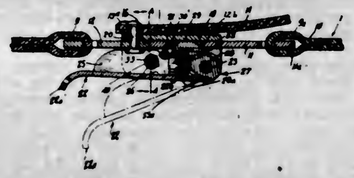


1. A holding means for a cylindrical shaft comprising in combination with a shaft, a U-shaped sheet metal member having respective axially spaced notches which are slightly larger in diameter than the shaft, each of said notches having side portions for engaging the shaft at circumferentially spaced points, said shaft extending through said notches and in engagement with said side portions, a second U-shaped member fitted within the first and being of an over-all width slightly less than the inside width of the first member, said second member having alined circular openings through which said shaft projects, said openings being slightly larger in diameter than the diameter of the shaft, the spaced portions around the notches of the first mentioned U-shaped member being positioned to form three point grips on the shaft with the openings in the second U-shaped member, and means for holding the two members together consisting of a headed element and a nut threaded thereon whereby the relative positions of the two members may be adjusted.

2,458,809
HOSE COUPLING VALVE
Zygfred A. Twardowski, East Detroit, Mich.
Application January 2, 1948, Serial No. 233
4 Claims. (Cl. 251—8)

1. A hose coupling of the kind described including two tubular members, each of them being open at one end and threaded for connection to a length of a hose, the other end forming a head including a plurality of apertures therein, the two tubular members being axially aligned but having the heads in opposed relation and held apart by a connecting rod, a sleeve mounted upon the heads of said tubular members, the sleeve including in its mid-length an annular portion extending inwardly into the space between the two heads, and threaded means upon the sleeve in engagement with threads on the outer surface of one tubular member to move said sleeve axially to bring said annular portion into abutment with the head of the respective tubular member to close the apertures therein.

2,458,810
AVIATOR'S BELT
Kenneth W. Varney and Harold D. Allen, East Hampton, Conn.
Application December 18, 1943, Serial No. 514,748
7 Claims. (Cl. 24—179)

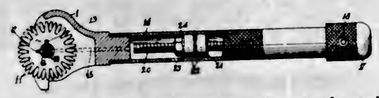


2. A buckle which comprises a body which has an opening through which a member can be inserted into said body, a locking bar turnably connected to said body, a catch located at the inner face of said locking bar, said catch being turnably associated with said locking bar, biasing means which abut said locking bar and said catch and which bias said catch to turn away from said locking bar and towards said body when said locking bar is in operative position, and holding means connected to said body and adapted releasably to hold said locking bar in operative position, said catch and said locking bar having cooperating stop means to limit the turning movement of said catch relative to said locking bar under the force of said biasing means, said catch being turnable towards said locking bar, when said locking bar is held by said holding means in operative position, said catch being shaped to engage said inserted member.

2,458,811
FISH MEASURING TAPE
George Von Koscielski, San Diego, Calif., assignor to Langley Corporation, a corporation
Application October 9, 1944, Serial No. 557,863
2 Claims. (Cl. 33—138)

1. In a device for measuring fish, a casing, a coiled linear measuring tape in said casing and protruding therefrom, a fish supporting hook suspended from and below said casing adjacent said tape at the same end of said casing substantially parallel to the extension of said tape from said casing whereby said casing supports said fish and one end of said tape while said fish is being measured.

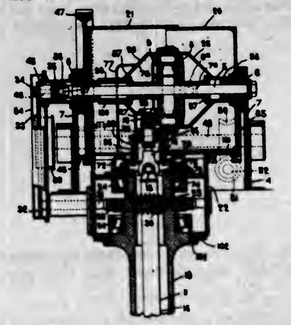
2,458,812
DRESSING TOOL FOR GRINDING WHEELS
Gerald J. Wallen, San Francisco, Calif.
Application May 18, 1946, Serial No. 670,736
2 Claims. (Cl. 125—37)



1. In a tool for dressing grinding tools, a bifurcated head having aligned threaded openings arranged in opposed relation, a normally stationary boss secured in one of the openings and having an axial socket, an annular groove and a radial channel connecting the socket and the groove, an adjustable boss secured in the other threaded opening of the head and having an elongated axial shaft extending into the socket of the other boss the said shaft having a longitudinal channel and a radial passage extending from the said longitudinal channel to the bearing surface of the shaft, a plurality of cutters journaled on the shaft, and means for supplying lubricant under pressure, to the annular groove of the stationary boss, whereby the bearing surfaces of the cutters may be lubricated.

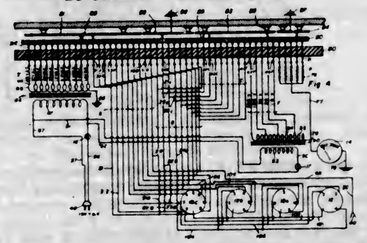
2,458,813
OUTBOARD PROPELLER MECHANISM FOR BARGES, SCOWS, AND THE LIKE
Arthur W. Wanzer, Quincy, Mass., assignor to Murray & Tregurtha, Inc., Quincy, Mass., a corporation of Massachusetts
Application February 13, 1943, Serial No. 475,744
10 Claims. (Cl. 115—35)

3. An outboard propeller mechanism for boats comprising a base adapted to be mounted on the deck of a boat, a supporting shaft carried by said base in outboard relation, a housing member mounted on said shaft to turn thereabout, a propeller housing carried by said housing member, a propeller carried by said propeller housing, means to operate the propeller, means operative from the front end of the base to turn the housing member about the supporting shaft and thus swing the propeller upwardly, said propeller housing being turnable about an axis at right angles to the supporting shaft for steering the boat, a steering wheel carried by said base at the front end thereof and connections between said steering wheel and said propeller housing by which turning movement of the steering wheel turns



the housing about its axis, said connections being operative in any position which the propeller housing assumes as it turns about the supporting shaft.

2,458,814
TUBE TESTING APPARATUS
Pat Warren, Fort Worth, Tex.
Application August 8, 1947, Serial No. 767,373
16 Claims. (Cl. 315—368)



1. In an apparatus for testing electronic tubes, a panel provided with a number of sockets having socket contacts, a source of currents, a meter, groups of contact plungers connected with the socket contacts, a group of contact plungers connected with the source of current, a further group of contact plungers connected with the meter, a number of contact plates facing said contact plungers, means for pressing said plungers towards said plates, a movable insulating type selector sheet provided with perforations interposed between said contact plungers and contact plates, providing for contact between the aforesaid plungers and plates through the perforations, thus establishing the test connections between electrodes and between electrodes, the source of current and the meter respectively.

2,458,815
TOOL HANDLE CONNECTION
Julius Winkler, Detroit, Mich.
Application January 21, 1946, Serial No. 642,586
8 Claims. (Cl. 306—32)

1. A hammer comprising an elongated head having a transverse internally-enlarged cavity therein with a plurality of spaced handle inlet and outlet openings of smaller cross-sectional dimension than the internal cross-sectional dimen-

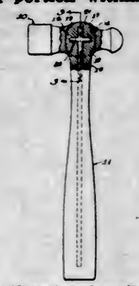
sion of said cavity, and a moldable plastic handle

inwardly into a flat abutment face at right an-

2,458,820

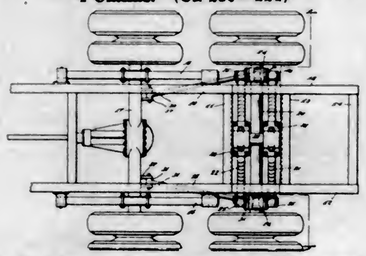
both directions through said opening in the stack and bearing an armature at the end in proximity

sion of said cavity, and a moldable plastic handle having its end portion within said cavity and



filling the space therein whereby to prevent withdrawal of said handle from said tool portion.

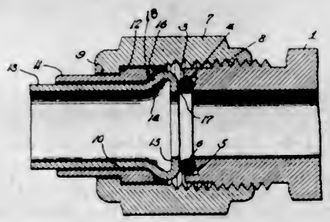
2,458,816
TANDEM AXLE CONSTRUCTION FOR TRUCKS
Ralph A. Woods, Morgantown, Ind.
Application March 24, 1947, Serial No. 736,837
4 Claims. (Cl. 280—124)



1. In a truck having a frame and a power axle with suspension means and driving means therebetween, a tandem axle construction comprising a tandem axle behind said power axle, upstanding shackle posts adjacent the ends of said tandem axle, a central spring support on said frame, a pair of transverse springs secured to said support on opposite sides of said axle, shackles between the ends of said springs and said shackle posts, a pair of tie rods respectively connected to said tandem axle adjacent its ends and below said axle, said tie rods extending forwardly and upwardly and being pivotally connected at their forward ends to said power axle at points spaced longitudinally thereof, said tie-rod connections providing limited universal movement and said spring shackles being relatively long whereby said tandem axle has substantial freedom of movement laterally of said frame and with respect to said power axle, said tie rods having their forward ends spaced apart a shorter distance than their rearward ends whereby during lateral movement said tandem axle is angularly displaced and steered to follow said power axle.

2,458,817
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application December 2, 1944, Serial No. 566,316
1 Claim. (Cl. 285—120)

A coupling for tubes having the end thereof bent outwardly to provide a shoulder and thence inwardly into a flat abutment face at right angles to the axis of the tube, comprising a body member, a nut having a thread engagement therewith, a sleeve associated with said nut and adapted at its inner end to engage the preformed shoulder on the tube for clamping the abutment face of the tube against the outer end of the body member, said body member having at its outer end and the inner side thereof a recess, a



ring gasket located in said recess and dimensioned so as to protrude beyond the end of the body member when initially seated in the recess, said gasket being engaged by the flat end portion of the tube when the coupling is closed so that the gasket will be deformed and caused to fill the recess solely by the pressure of the tube end thereagainst, thus providing a liquid-tight joint between the tube and the body member.

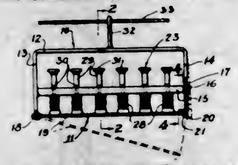
2,458,818
SOLID CATALYST TREATMENT OF GASEOUS HYDROCARBONS
David W. Young, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 9, 1945, Serial No. 627,789
6 Claims. (Cl. 260—683.15)

5. The process of producing normally liquid hydrocarbons from a normally gaseous olefin at a polymerization temperature in the range of 100° C. to 300° C. with a catalyst composed of an inorganic hydrogel selected from the group consisting of silica, alumina, and magnesia, containing titanium oxide dispersed within its gel structure, by hydrolyzing titanium sulphate in an alkaline metal acid carbonate solution mixed with the said hydrogel, followed by washing and drying the hydrogel thus treated and calcining the resulting gel containing precipitated titanium oxide at a temperature in the range of 1470° F. to 1670° F.

2,458,819
PURIFYING ALKYL HALIDES
Howard L. Yowell, Elizabeth, and Charles E. Morrell, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 23, 1944, Serial No. 555,589
4 Claims. (Cl. 210—42.5)

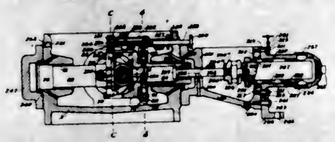
1. The process for removing small contaminating amounts of alkyl ethers from alkyl halides which comprises contacting in the fluid state the alkyl halides containing about 0.1% of alkyl ether with silica gel and withdrawing from said silica gel an alkyl halide containing less than 0.01% of alkyl ethers.

2,458,820
MULTIPLE HANGER
Maximilian E. Zimmermann, Los Angeles, Calif., assignor to Fred O. Martin, Los Angeles, Calif.
Application September 12, 1945, Serial No. 615,800
7 Claims. (Cl. 211—113)



4. In a multiple clamp a frame comprising a rod or wire shaped as a broad inverted U having downwardly directed end arms, a bar spanning the space between said arms, one end of said bar being secured to one of said arms and the opposite end thereof extending loosely through an aperture in the other end arm, a swingable arm for supporting garments, one end of said swingable arm being hinged to said frame in an outwardly spaced relation to said bar, a catch carried by the outer end portion of said apertured arm and normally engaging the free end of said swingable arm to keep it upswung, and spring-presser clamps carried by said bar in an abutting relation to said swingable arm when the latter is unswung, said apertured arm having sufficient resiliency to allow the catch which it carries to be manually moved to and from releasing position.

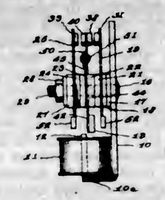
2,458,821
PUMP AND STROKE ADJUSTING MECHANISM
Harry J. Anderson and Milton V. Hartman, Chicago, Ill., assignors to Hills-McCanna Company, Chicago, Ill., a corporation of Illinois
Application February 5, 1945, Serial No. 576,180
18 Claims. (Cl. 103—38)



1. A variable stroke device comprising a reciprocable cylinder closed at one end, a plunger adapted to reciprocate in said cylinder and extending beyond the other end of said cylinder, an inlet and an outlet valve on said cylinder for admitting and discharging liquid, means for maintaining said outlet valve in open or closed position during any portion of the stroke of said cylinder, and means for reciprocating said cylinder and plunger.

2,458,822
VIBRATOR
Robert J. Aust, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application February 3, 1944, Serial No. 520,873
6 Claims. (Cl. 200—90)

4. An electromagnetic vibratory interrupter which comprises in combination a hook-shaped ferromagnetic frame, a magnetizing coil on the hook end of said frame, a stack having an opening through its mid-portion mounted in an intermediate region of said frame on one side thereof, a substantially rigid lever structure extending in both directions through said opening in the stack and bearing an armature at the end in proximity to said coil and vibratory contacts at its other end, resilient hinges clamped in said stack for supporting said lever structure from a top portion of each hinge, relatively fixed contacts supported

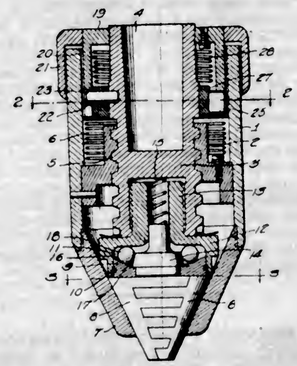


by side springs clamped in said stack adapted to cooperate with said vibratory contacts to control a plurality of electrical circuits, and an opening in said frame in the region of said armature to make the armature portion of said lever structure accessible for supervision and adjustment.

2,458,823
BENZOIC ACID DERIVATIVES
Souren Avakian, Oreland, Pa., assignor to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application June 19, 1946, Serial No. 677,898
2 Claims. (Cl. 260—472)

1. A beta-(beta-dialkylaminoethyl-mercapto)-ethyl alkoxyl-benzoate.

2,458,824
CHUCK
Johan Arvid Axelsson, Eskilstuna, Sweden, assignor to Aktiebolaget Fr. Ramström, Stockholm, Sweden, a corporation of Sweden
Application March 14, 1945, Serial No. 582,652
In Sweden June 1, 1942
3 Claims. (Cl. 279—64)



1. In a chuck, a central body member provided with a right hand thread, a chuck sleeve rotatably mounted on said threaded body member and having a tapering end portion, a number of chuck jaws arranged in said tapering end portion and adapted to be closed when the chuck sleeve is moved in one direction on said central body member and to be opened when the chuck

sleeve is moved in the opposite direction which

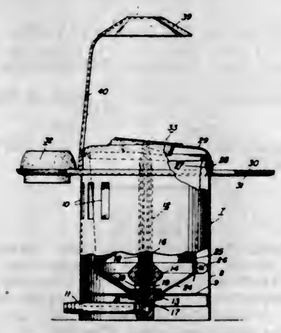
tending upwardly through the top closing means

2,458,828
TOY GUN

ing the electrical potential supplied to said analyzer which comprises a solid member having one

sleeve is moved in the opposite direction which last-mentioned movement is adapted to occur automatically, a spring-actuated locking means for automatically locking the chuck sleeve in an adjusted position on said central body member, said locking means comprising a number of bodies of rotation mounted in tapering pockets between said chuck sleeve and said central body member, a carrier member rotatably mounted with respect to the central body member and adapted to embrace said bodies of rotation, a manually operable ring member connected to said carrier member, and a torsion spring adapted to actuate said ring member and said carrier member and to turn the same in a direction for moving the bodies of rotation to the shallowest portion of their pockets for automatically locking said chuck sleeve to said central body member.

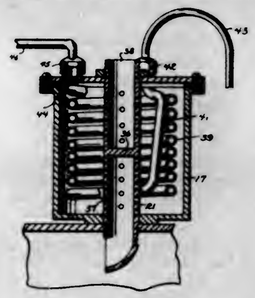
2,458,825
SPARK PLUG CLEANER
Alexander J. Battey, Skaneateles, N. Y.
Application August 26, 1946, Serial No. 692,947
4 Claims. (Cl. 51—8)



4. A spark plug cleaner, comprising a casing having a tubular wall and an elevated bottom, a substantially funnel-shaped element arranged in the casing and resting on the bottom, a blast nozzle comprising an outer abrasive compound tube and an inner air tube spaced coaxially therein with its lower extremity extending below that of said abrasive compound tube, a base member for said nozzle having coaxial openings arranged to receive the lower ends of said respective tubes, said base extending through said funnel-shaped element and bottom, means for clamping the base to the bottom and for securing said element in stationary position, and a porous bag suspended at its upper end from the top portion of said casing with its lower end secured to the top portion of said element.

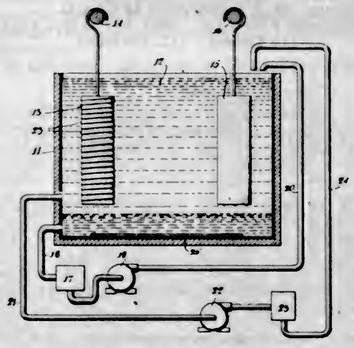
2,458,826
WATER HEATING TYPE FUEL CONDITIONER
Hamilton G. Blumberg and Elbert M. Stevens, San Antonio, Tex.
Application July 21, 1947, Serial No. 762,308
1 Claim. (Cl. 123—122)

A fuel conditioner comprising a casing having a bottom, a central pipe extending through the bottom and having a thread portion adapted to be extended through and connected to a cylinder head of an internal combustion engine, means for closing the top of the casing, said pipe extending upwardly through the top closing means and adapted to have outlet pipe means connected thereto, said central pipe having a partition to divide the top and bottom portions, each of said portions having perforations whereby water entering the pipe will leave the perforations of the



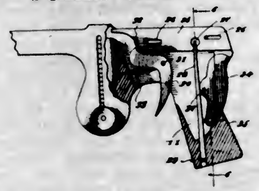
bottom portion to fill the casing and will enter the perforations of the top portion to leave the pipe, and pipe coils within the casing about the pipe and connected with fittings in the top closing means, inlet and outlet pipes connected with the fittings.

2,458,827
ELECTRODEPOSITION OF LEAD-TIN-ANTIMONY ALLOYS
James M. Booe, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 10, 1946, Serial No. 668,653
5 Claims. (Cl. 204—43)



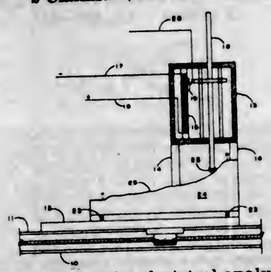
1. The method of electrodepositing lead-tin-antimony alloys which comprise passing current between a cathode and an anode consisting of a minor portion of tin and a major portion of lead through an electrolyte consisting essentially of lead fluorborate, tin fluoborate, and a compound selected from the group consisting of antimony trioxide and antimony fluoborate, maintaining a tin concentration of 0.5 to 10 grams per liter and a lead concentration of 5 to 200 grams per liter by corrosion of the anode, and maintaining an antimony concentration of 0.1 gram per liter to saturation by periodic addition of a soluble compound to the bath, said compound being selected from the group consisting of antimony trioxide and antimony fluoborate.

2,458,828
TOY GUN
Arthur H. Boese, Clinton, Okla.
Application August 16, 1943, Serial No. 498,850
2 Claims. (Cl. 124—27)



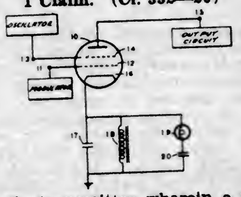
2. A toy gun comprising a gun form simulating body including a barrel formed to provide a projectile guide and a hand grip, the upper part of the hand grip having a chamber therein into which the rear end of the guide opens, a relatively long firing bolt slidably supported in the upper part of the chamber for movement on a line paralleling the guide and having a forward end portion adapted to enter the rear end of the guide for contact with a projectile in firing position in such rear end, a trigger having a hook portion pivotally supported in the forward part of the chamber and adapted for detachable connection with the firing bolt when the bolt is in retracted position, a leaf spring secured at one end in the lower part of the chamber and extending upwardly and having its other end loosely connected with the bolt, a member pivotally supported in the chamber adjacent to and upon the side of the leaf spring opposite from the trigger, said pivoted member having a portion extending outside the chamber beyond the rear side of the hand grip and having an opposite side portion engaging the leaf spring when the leaf spring is untensioned, the said pivoted member being adapted to be forced into the chamber against and to place the spring under tension by a hand grasping the hand grip, the said hook portion of the trigger maintaining the bolt against movement under the action of the tensioned spring prior to the actuation of the trigger.

2,458,829
APPARATUS FOR ADJUSTING THE ELECTRICAL CONDITION OF ELECTRICAL ANALYZERS
William A. Bruce, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware
Application August 11, 1945, Serial No. 610,352
2 Claims. (Cl. 201—48)



1. In a system for the electrical analysis of the behavior of a petroleum reservoir, including an electrical analyzer, an improved device for varying the electrical potential supplied to said analyzer which comprises a solid member having one portion of its periphery shaped to conform with the production time curve of a selected well tapping said reservoir, means for moving said solid member uniformly in a direction parallel with the time axis of said periphery, a follower adapted to ride on the aforesaid portion of said periphery, an electrical element of variable value adapted to effect electrical changes in said analyzer in accordance with projected changes in production of said selected well and means carried by said follower for varying the value of said electrical element in accordance with changes in said projected production.

2,458,830
MODULATION INDICATOR
John F. Byrne, Wellesley Hills, Mass., assignor to the United States of America as represented by the Secretary of War
Application May 23, 1945, Serial No. 595,356
1 Claim. (Cl. 332—20)



In a radio transmitter wherein a modulation voltage and a carrier frequency voltage are mixed in an electronic tube having at least cathode, grid and plate electrodes, and a cathode circuit therefor, a modulation voltage indicating circuit comprising an incandescent light and a condenser connected in series with respect to each other and in parallel to an inductance and a second condenser, said inductance and said second condenser being connected in parallel to said cathode circuit, said inductance having a low impedance to modulation frequencies, said second condenser having a high impedance to modulation frequencies and a negligible impedance to all the higher frequencies, said inductance and said condensers acting to prevent the passage of any current through said incandescent light except a current varying in accordance with the modulation voltage, whereby the intensity of illumination of said incandescent light is an indication of the modulation voltage.

2,458,831
OPTICAL GUN SIGHT WITH HORIZONTAL AND VERTICAL DEFLECTION ADJUSTMENTS
Willoughby M. Cady, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application July 9, 1945, Serial No. 604,054
1 Claim. (Cl. 88—2.4)

In an optical gun sight for viewing a target, a reference reticle, a pivotable ray dividing means, means for projecting an image of said reticle upon said ray dividing means, a ray deflecting means optically interposed between said reference reticle and said ray dividing means, said ray deflecting means being adapted to change, in a horizontal direction, the position at which said image will strike said ray dividing means, said ray deflecting means including a pair of spaced coaxially disposed cylindrical optical prisms, said prisms hav-

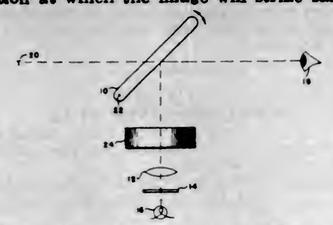
ing their bases, which are adjacent each other,

ends normally overlying and forming a cap for

of stitching securing said last-mentioned strips

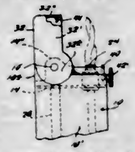
arated from one another by an air space whose axial length lies between zero and .01 times the

ing their bases, which are adjacent each other, disposed obliquely to their mutual axis and having their remaining bases disposed normally to their mutual axis, a circular rack secured to each of said prisms, said racks being coaxial with said prisms and of like diameter and facing each other, an idler gear in mesh with both of said racks and having the position of its axis of rotation fixed, means to revolve one of said prisms about its axis, means for pivoting the ray dividing means for changing, in a vertical direction, the position at which the image will strike said ray



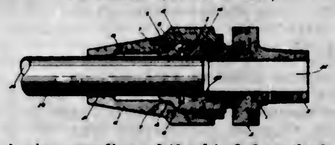
dividing means, whereby, upon revolving one of said prisms about its axis in one direction, the other prism is caused to revolve an equal amount in the opposite direction and thereby vary horizontally the position at which the image will strike the ray dividing means, and, upon pivoting of the ray dividing means, the position at which said image will strike said ray dividing means is varied vertically, the horizontal variations aforesaid being usable for windage correction and the vertical variation aforesaid being usable for range correction.

2,458,832
POCKET LIGHTER
Adolph Campos, Clifton, N. J.
Application September 14, 1945, Serial No. 616,202
3 Claims. (Cl. 67—7.1)



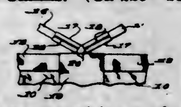
3. In a lighter, a rectangular hollow body constituting a fuel reservoir, said body having side walls, end walls connecting the side walls together, and a top wall inset with respect to said side and end walls, the side walls and one end wall being of uniform height and the other end wall being of a height higher than said side walls and said one end wall, the side walls adjacent said other end wall being each provided with a substantially semi-circular cut-out, said top wall being a plate having up-turned portions projecting above the side walls of said body, said upturned portions being arranged between the extremities of the plate, the ends of the upturned portions terminating in substantially semi-circular enlargements, each of said enlargements having a centrally-disposed aperture extending therethrough, a pin extending through the apertures in said enlargements and supported by the latter, a combined ratchet-and-spark-wheel unit rotatably mounted on said pin, a wick projecting from the top wall of said hollow body, a protective hood for said ratchet-and-spark-wheel unit mounted for rocking movement on said pin and having one of its ends normally overlying and forming a cap for said wick, the other end of said hood having side walls each substantially circular in form to conform to the curvature of the cut-outs of the side walls of said hollow body and in engagement with said cut-outs, said hood being provided with an inset adjacent its circular side walls so as to provide a rest for said hood upon completion of its rocking movement, and operative connection between said hood and said combined ratchet-and-spark-wheel unit to rotate the latter in response to the rocking movement of said hood, spring means interposed between the top wall of said body and said hood and operatively connected to said pin for effecting rocking movement of said hood about said pin, and latch means on the end wall of said body contiguous to the end of said hood having said cap and operatively connected to said hood for releasably holding said hood in its normal position.

2,458,833
SPRING COMPRESSION TUBING AND PIPE CONNECTION
Raymond Carignan, Bradford, Vt., assignor, by mesne assignments, to Mer-Wall Enterprises, Incorporated, Wallingford, Conn., a corporation of Connecticut
Application November 7, 1947, Serial No. 784,638
2 Claims. (Cl. 285—123)



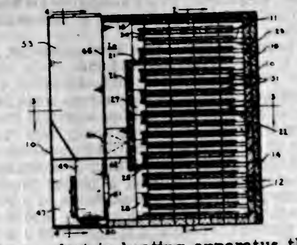
2. A pipe coupling of the kind described, comprising a member adapted to receive the end portions of abutting pipes fitted within said member, an exterior threaded portion on each end of said coupling, together with tapered end portions at each end of said coupling, an internal circular recess adjacent each tapered end portion where the same adjoins the threaded portion, in combination with threaded nuts tapered to cooperate with each bevelled end portion of said connecting member to clamp the end portions about the pipes fitted therein, whereby said end portions are compressed into pressure-tight clamping action on said respective pipe ends.

2,458,834
CONTAINER
Archie J. Chateauneuf, Lockport, N. Y.
Application April 9, 1946, Serial No. 660,763
2 Claims. (Cl. 229—23)



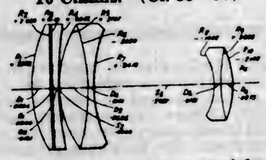
1. A container comprising a plurality of walls and a bottom, longitudinal strips of flexible folded material, lines of stitching securing said strips to the marginal edges of said walls and said bottom, stitches attaching said strips together at adjacent ends thereof to connect the corners of said walls and bottom, a reinforcing strip intermediate of opposite walls and provided on the top edges thereof, cover means hingedly mounted on said reinforcing strip at the top edges of the opposite walls, said cover means including top members, longitudinal folded material strips, lines of stitching securing said last-mentioned strips to the marginal edges of said top members, stitches hingedly connecting each of said members to said reinforcing strip at the top of the said opposite walls.

2,458,835
HEATING APPARATUS
Yngve R. Cornelius, Seattle, Wash., assignor to Acmheat Electric, Portland, Oreg., a corporation of Oregon
Application May 29, 1945, Serial No. 596,532
8 Claims. (Cl. 219—39)



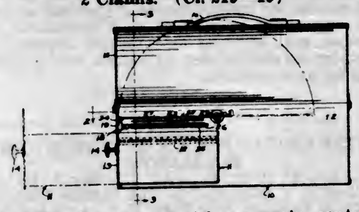
1. In an electric heating apparatus the combination comprising a heat accumulator means including a plurality of horizontal layers of bricks supported in a vertically spaced relation, a resistance element consisting of a plurality of lengths of bare iron rod connected together at opposite ends in series relation resting upon each of said layers, the resistance elements on said different layers being connected together in series relation, means for connecting said resistance elements to a source of electric energy, the resistance of said element being such that the maximum temperature thereof is limited to substantially 600° F., an insulated enclosure housing for said heat accumulator means, means for circulating air between said layers for heating the same.

2,458,836
OPTICAL OBJECTIVE OF THE TELEPHOTO TYPE HAVING AXIALLY SEPARATED CONVERGENT FRONT AND DIVERGENT REAR MEMBERS
Arthur Cox, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain
Application May 31, 1946, Serial No. 673,303
In Great Britain April 3, 1946
10 Claims. (Cl. 88—57)



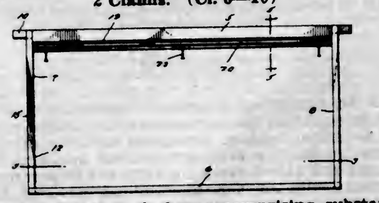
1. A telephoto objective, corrected for spherical and chromatic aberrations, coma, astigmatism and field curvature, and comprising a convergent front member and a divergent rear member axially separated from one another by an air space between .20 and .35 times the equivalent focal length of the objective, the divergent rear member being in the form of a meniscus doublet with its outer surfaces concave to the front and with its internal contact surface collective and convex to the front, whilst the convergent front member consists of two meniscus doublets separated from one another by an air space whose axial length lies between zero and .01 times the equivalent focal length of the objective and having their outer surfaces convex to the front, the front doublet having a convergent element in front of a divergent element, the internal contact surface between these elements being dispersive and having a radius of curvature greater than the equivalent focal length of the objective, whilst the internal contact surface in the rear doublet of the front member is collective and concave to the front with radius of curvature between .25 and 1.0 times such equivalent focal length.

2,458,837
LUNCH CAN
James Dougherty, Silver Creek, Pa.
Application March 11, 1947, Serial No. 733,949
2 Claims. (Cl. 219—19)



1. A lunch can comprising a main container part and a cover adapted to be extended over the same, said container part having an opening in one end, a drawer adapted to contain liquids or soup or the like slidable into the opening to consume part of the space within the main container part, an electrical socket connected to the end of the main container part above the drawer opening, a heating element having wires leading from the electrical socket and brackets for supporting the same above the drawer, a grill pivotally connected to the main container part between the side walls thereof and adapted to be extended over the heating element or pivoted to a position rearwardly of the same and serving when over the heating element to support the drawer which may have been removed from the main container part opening so that the contents of the same may be heated, said grill when not being used to support the drawer being adapted to be extended over the space within the main container part not consumed by the drawer to serve as a support or cover for any sandwiches or the like within the main container part to keep the same from shaking while the lunch can is being carried.

2,458,838
BEE COMB FRAME CONSTRUCTION
Guy Dunham, Bono, Ark.
Application April 27, 1945, Serial No. 590,531
2 Claims. (Cl. 6—10)



1. In a bee comb frame comprising substantially horizontal top and bottom frame members

and upright end frame members secured to the

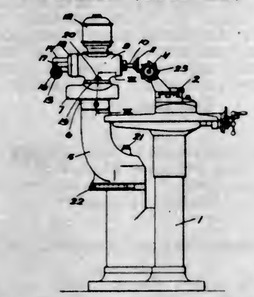
lifting power of the wings thereof, said spoilers

and upright end frame members secured to the ends of the latter, and the horizontal top member having a downwardly-directed, open longitudinal slot in the intermediate portion of the bottom surface thereof for receiving the upper edge of a bee comb, the features which include outwardly and upwardly-beveled edges on either side of the downwardly-directed slot upon said bottom surface of said top member, and having a second, horizontally inwardly-extending, longitudinal open slot in one side of said horizontal top member disposed substantially at a right angle to said downwardly-directed open slot and with the latter defining a yielding strip connected to the remaining portion of said horizontal top member by a thin web limited to the inner adjacent ends of both slots, the yielding strip being manually flexed to open and close said downwardly-directed open slot to facilitate insertion of the upper edge of said bee comb therein, and means for connecting said yielding strip to said remaining portion of said horizontal top member and bridging said second horizontally inwardly-extending slot to secure said yielding strip in fixed position.

2,458,839
ELECTRODEPOSITION OF INDIUM AND ITS ALLOYS
John Robert Dyer, Jr., and Timothy J. Rowan, Utica, N. Y., assignors to The Indium Corporation of America, New York, N. Y., a corporation of New York
No Drawing. Application April 19, 1944, Serial No. 531,818
9 Claims. (Cl. 204—45)

1. An electroplating bath containing as essential electroplating ingredients the anion SO_3NH_2 and the cation In in an ionizing solvent, the pH of said bath being below about 3.5, and the concentration of indium being at least 20 grams per liter and the concentration of sulfamate radical being at least 167 grams per liter.

2,458,840
GRINDING MACHINE
Elias Napoleon Eklund, Stockholm, Sweden
Application January 4, 1945, Serial No. 571,295
In Sweden May 16, 1942
4 Claims. (Cl. 51—122)

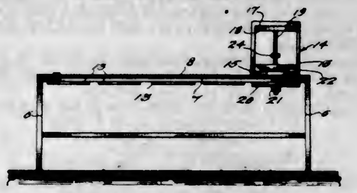


1. In a grinding machine for grinding cutting tools, especially formed cutters, the combination of a working table on which the tool to be ground may be fixed, a separate column mounted for rotary movement around a vertical axis arranged excentrically to the longitudinal axis of the column, a carriage on said column slidable in a horizontal plane, a head stock mounted for rotary movement on said carriage and carrying two driven spindles with an abrader secured to the free end of each, the axis of one of said spindles being perpendicular to the axis of the other spindle and being mounted for adjustment to various inclines in a vertical plane.

2,458,841
RUBBER SOFTENED WITH SULFUR DIOXIDE AND CHLORINE TREATED POLYISOBUTYLENE REACTED WITH AMMONIA
Norman M. Elmore, Elizabeth, and Albert M. Gessler, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 20, 1944, Serial No. 555,036
2 Claims. (Cl. 260—45.5)

1. A composition of matter comprising in combination a vulcanizable rubber selected from the group consisting of caoutchouc, the rubbery polymers of butadiene prepared in aqueous emulsion and the rubbery copolymer of a major proportion of isobutylene with a minor proportion of isoprene prepared by the addition of a Friedel-Crafts catalyst at low temperature; and between 5 and 40 percent per weight of rubber of a softener containing combined chlorine, sulfur and nitrogen prepared by the steps of dissolving in a chlorine resistant solvent a polymer of isobutylene having a molecular weight between 2,000 and 20,000, treating the polymer solution under the assistance of ultra violet light and heat with a mixture consisting of 2 to 5 parts of sulfur dioxide and 1 part of chlorine until substantial amounts of sulfur dioxide and chlorine are combined into the polymer, treating the resulting polymer derivative with ammonia and recovering the resulting polymeric softener.

2,458,842
FLANGE FORMING TOOL FOR OPENINGS IN SHEET METAL
Christian Evensen, Melrose Park, Ill.
Application January 5, 1946, Serial No. 639,227
2 Claims. (Cl. 153—25)

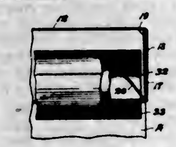


1. A device for flanging an aperture in a metallic sheet, comprising in combination, a pair of clamping plates adapted to receive said sheet therebetween, means for clamping said plates against said sheet, said plates being formed with aligned openings, the openings in one of said plates being surrounded by an annular flange constituting a female die, a screw-threaded shaft extending through said openings, a clamping disc and a male die positioned on said shaft, said disc engaging said flange, and a pair of clamping nuts on said shaft for urging said male die and said disc together, wherein said means include a substantially U-shaped frame including a pair of spaced legs and a cross-bar connecting the same together, one end of said shaft being secured to said cross-bar, and said legs engaging one of said plates.

2,458,843
METHOD OF IMPROVING CURED BUTYL RUBBER FOR PRESSURE WORKING
Wilbur F. Fischer, Roselle Park, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 1, 1943, Serial No. 471,010
2 Claims. (Cl. 260—93)

1. In the treatment of a material prepared by reacting together a major proportion of isobutylene with a minor proportion of a conjugated diolefin having four to twelve inclusive carbon atoms per molecule, at a temperature between —40° C. and —160° C. in the presence of a polymerization catalyst comprising a Friedel-Crafts halide in solution in an alkyl halide having a freezing point below about —20° C. and non-reactivity with the Friedel-Crafts halide, comprising the steps in combination of chemically combining into the polymer a curing agent, milling the cured polymer to plasticity and intermixing therewith a further portion of uncured polymer, thereafter milling into the mixture a further portion of curing agent and then heating the mixed materials to a curing temperature for a curing time interval.

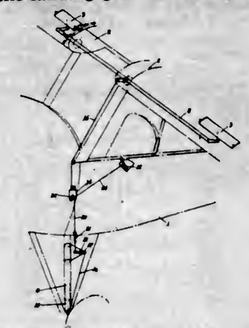
2,458,844
PACKAGING
James Foote, Plattsburg, N. Y., assignor to B. F. D. Company, New York, N. Y., a corporation of Maine
Application January 5, 1946, Serial No. 639,253
18 Claims. (Cl. 206—58)



17. An integral blank for a dispensing carton for holding a roll of sheet material having a core and dispensing lengths of said sheet material, comprising a rectangular front section having extensions on each side thereof separated from the front section by a score line and adapted to form side elements having end margins and side margins, a rectangular bottom section separated from said front section by a score line and having two side extensions separated from said bottom section by score lines which side extensions are adapted to form side elements having end margins and side margins, a rectangular back section separated from said bottom section by a score line and having two side extensions separated from said bottom section by score lines and adapted to form side elements having end margins and side margins, a rectangular top section separated from said back section by a score line, one of said side elements extending from each side of one of said sections having a further bearing extension at its side margin adapted to be formed into bearing relation with the core of a roll of sheet material to be dispensed.

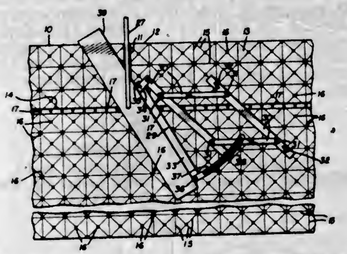
2,458,845
LANDING MECHANISM FOR AIRPLANES
Emil M. Gardner, Barberton, Ohio
Application August 28, 1947, Serial No. 771,018
13 Claims. (Cl. 244—81)

1. Mechanism for improving the landing of an airplane comprising spoilers for reducing the lifting power of the wings thereof, said spoilers being normally in inactive position, landing gear including a movable landing wheel support, a throttle, and mechanism for coordinating the operation of the spoilers, landing gear and throttle comprising an element movable by the impact of the landing gear with the ground and



a second element connected to the spoilers, and means to transmit the movement of the first element to the second element when said elements are coupled to shift the spoilers to active position, and a control device connected to the throttle and movable by the movement of the throttle to idling position to couple said elements.

2,458,846
ADJUSTABLE WORK GUIDE FOR SAW TABLES
Robert H. Gilmore, Los Angeles, Calif.
Application December 17, 1946, Serial No. 716,801
1 Claim. (Cl. 143—175)



In a work support for saws, the combination of a table provided with an opening to receive a saw blade and formed with a set of locating apertures, and a work guide positioned on said table and adjustable with respect to said opening, said guide comprising a primary bar and a secondary bar disposed in spaced parallel relation, spaced parallel links pivotally connecting said bars together and coacting therewith to define a parallelogrammatic frame, fastening elements provided on said primary bar and receivable selectively in said apertures whereby said frame is adjustably secured to said table, a work engaging and guiding beam pivotally connected at one end thereof to one end of said secondary bar and adapted to swing toward and away from the latter, an arcuate arm pivoted at one end thereof to said beam and formed with an arcuate slot, and an adjustable fastening means provided on said secondary bar and engaging said slot.

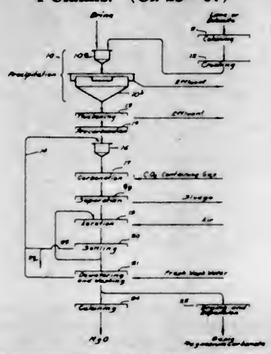
2,458,847
PROCESS FOR MANUFACTURE OF

the rearwardly extending parts of the jaws, when the jaws are closed, being spaced and adapted to

hinge mounting at one of the edges above and in

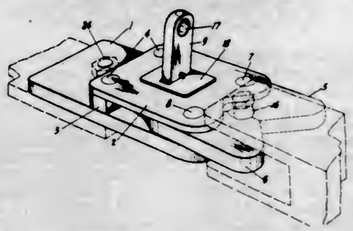
2,458,852
ROLL TENSION DEVICE

2,458,847
PROCESS FOR MANUFACTURE OF MAGNESIUM PRODUCTS
Gunter H. Glenn, Redwood City, Calif., assignor to Marine Magnesium Products Corporation, South San Francisco, Calif., a corporation of Delaware
Application May 10, 1943, Serial No. 486,391
4 Claims. (Cl. 23—67)



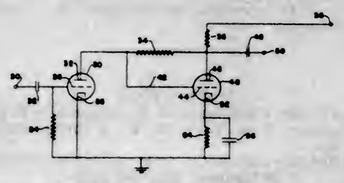
4. In a process for the manufacture of magnesium compounds from a brine containing convertible magnesium salts together with solid phase and dissolved impurities, the steps of reacting the impure brine with a lime containing material to convert the magesium salts to a magnesium hydroxide precipitate, said reaction being accompanied by formation of dissolved calcium salts, obtaining from the reaction step a slurry containing a precipitate together with a portion of the mother liquor and solid phase impurities from the brine, carbonating the slurry to a degree sufficient to convert the dissolved calcium salts present to solid phase calcium carbonate, subjecting the material to further carbonation to convert the magnesium hydroxide to magnesium bicarbonate, and then removing the magnesium bicarbonate solution from the remaining sludge solids.

2,458,848
HITCH MECHANISM
Clarence W. Goff, Washington, Iowa
Application November 26, 1945, Serial No. 630,824
1 Claim. (Cl. 280—33.15)



In a hitch mechanism, a supporting body having spaced upper and lower body members and a pair of laterally separated pivots connecting the body members, a pair of jaws mounted on said pivots and extending forwardly and rearwardly therefrom, said jaws being adapted to be opened and closed and, when closed, engaging each other with a hole between them opening upwardly and downwardly, only, for the reception of a hitch pin, the rearwardly extending parts of the jaws, when the jaws are closed, being spaced and adapted to receive between them a latching member, and a pivoted latching member carried by the lower body member and adapted to swing into and out of the space between the rearwardly extending parts of the jaws when they are closed and, when swung into position between the jaws, serving to hold the jaws closed, the latching member being a lever pivotally suspended from the lower face of the lower body member and spring-urged into latching position between the rearwardly extending parts of the jaws, said body members being slotted to allow the latching member to extend transversely through both body members and to swing about its pivot into and out of latching position.

2,458,849
DIRECT-COUPLED AMPLIFIER WITH DIRECT-CURRENT FEEDBACK
Russell J. Grambsch, Marshfield, Wis.
Application August 20, 1945, Serial No. 611,659
1 Claim. (Cl. 179—171)

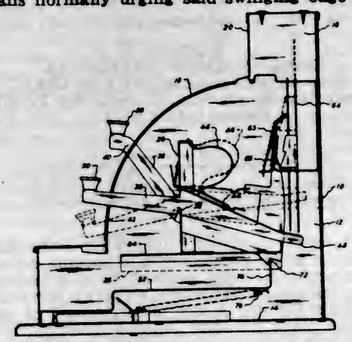


A multi-stage video amplifier having at least a first vacuum tube and a second vacuum tube, each of said vacuum tubes having at least a cathode, an anode, and a control grid, a resistance connected between the anodes of said vacuum tubes as a load resistance for said first tube and feedback resistance for said second tube, a further load resistance for both tubes from the anode of said second tube to a source of anode current, a direct electrical connection between the anode of said first vacuum tube and the control grid of said second vacuum tube, means for raising the potential of the cathode of said second vacuum tube above the potential of the cathode of said first vacuum tube, means for applying a signal to be amplified to the control grid of said first vacuum tube to provide a signal at said anode of said first vacuum tube whereby said signal is applied to the control grid of said second vacuum tube by said direct-current connection and whereby an amplified output is obtained at said anode of said second vacuum tube.

2,458,850
TARGET RELEASE ACTUATOR FOR TOY CASH REGISTERS
Floyd W. Hardick, Jackson, Mich., assignor to Ruth P. Berry, Jackson, Mich.
Application January 4, 1947, Serial No. 720,170
2 Claims. (Cl. 235—12)

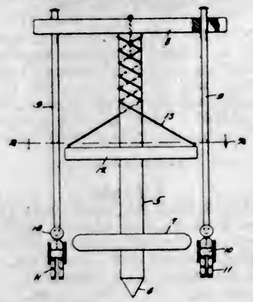
1. In a toy cash register, supporting case structure, a plurality of key levers, each of said levers having a key at one end and a target operating portion at the other end and being provided with a fulcrum point intermediate its ends, a fulcrum on the supporting structure on which said key levers are loosely disposed in a transversely spaced assembly for rocking movement around their fulcrum points, a drawer slidable within the supporting case structure, a target for each key lever, an elongated flap plate swingably mounted across the key lever assembly, said flap plate having its

hinge mounting at one of the edges above and in proximity to the fulcrum mounting of the several key levers for retaining said levers on the fulcrums and having its swinging edge engageable with the target operating portions of the key levers to retain them in normal position, spring means normally urging said swinging edge into



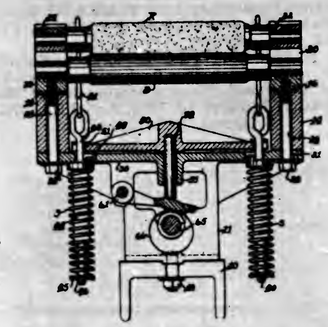
engagement with said key lever, and a pivotally mounted drawer latch member having a detent engageable with the drawer when in closed position and provided with an extension engaged by the swinging edge of the flap plate upon operation of a key whereby the drawer latch member is swung to drawer releasing position.

2,458,851
FIGURED SPINNING TOY
Frank Harris, Orlando, Fla.
Application September 18, 1946, Serial No. 697,610
1 Claim. (Cl. 46—50)



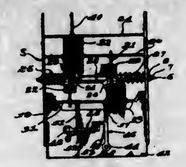
A spinning toy comprising a main stem having a supporting-surface-engaging point at its lower end, a cross-arm pivotally connected at its center point to the upper end of the stem, there being openings formed in the ends of the cross-arm, rods depending from the cross-arm and having their upper ends slidable and rotatable in the openings, jointed objects mounted at the lower ends of the rods and adapted to contact the surface on which the toy rotates, a balance wheel mounted on the lower portion of the main stem and rotatable with the main stem, said cross-arm being of greater length than the diameter of the balance wheel whereby to space the rods and objects from the periphery of the wheel, the lower ends of said objects being in a plane lower than the plane of the wheel, and means for imparting spinning motion to the main stem.

2,458,852
ROLL TENSION DEVICE
Sigurd H. Helland, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application May 31, 1946, Serial No. 673,558
3 Claims. (Cl. 19—135)



1. In a drawing mechanism having pairs of drawing rolls, bearing boxes for said rolls and side rails along which said boxes are adjustable, in combination, a cross bar for each pair of drawing rolls, a bolt extending through each end of each cross bar and through the adjacent side rail and into the adjacent bearing box and clamping said three parts together, with said cross bar and said bearing box in permanent assembled alignment, and spring tensioning means for each pair of rolls positioned and guided by the associated cross bar and shiftable therewith along said rails.

2,458,853
TIME CONTROLLED SWITCH MECHANISM
Ralph Lewton Hughes, Los Angeles, Calif.
Application April 22, 1946, Serial No. 663,901
6 Claims. (Cl. 200—38)



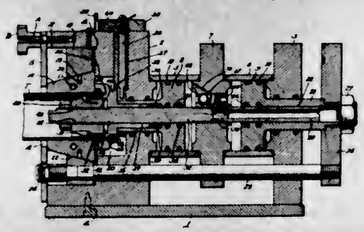
1. A time-controlled switch mechanism of the kind described comprising, in combination with a clock having an hour hand shaft provided with a forward coaxial extension, spaced gears slidable longitudinally on said shaft extension and having the latter freely rotatable thereon, said gears having inner spiral cam surfaces, springs acting to slide said gears toward one another, a spreader bar secured on said shaft extension to rotate therewith and arranged between said gears, the spreader bar engaging said cam surfaces so as to relatively move the gears apart and to allow them to be relatively moved toward one another by said springs upon rotation of the spreader bar relative to said gears, coacting circuit-controlling contacts operatively associated with and relatively movable in certain directions by the gears when the latter are relatively moved toward one another by said springs, further springs for relatively moving said contacts in directions opposite to said certain directions when the gears are rela-

which includes means for supporting a group of

in substantially right angular relationship to the

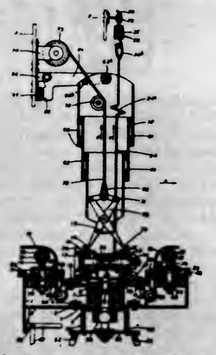
tively moved apart by said spreader bar, and manually operable means to independently rotatably adjust each gear to set the times of circuit closing and circuit opening by said contacts.

2,458,854
MACHINE FOR BEADING TUBES BY RADIAL EXPANSION FOLLOWED BY AXIAL PRESSURE
Henry E. Hull and Paul L. Takacs, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application January 10, 1945, Serial No. 572,147
8 Claims. (Cl. 153—73)



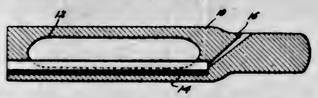
6. A machine for forming an external bead in the end portion of a tube comprising means for clamping the tube against endwise movement, an expansible head disposed within the tube, a beading head disposed in axial alignment with the tube, means for reciprocating the beading head, said beading head having means adapted to engage the expansible head for expanding the same to initiate the formation of a bead in the wall of the tube, said beading head having means adapted to subsequently engage the end of the tube for completing the bead by an axial force applied to the end of the tube.

2,458,855
PARACHUTE AND THE LIKE WITH ROTATING SUSTAINING BLADES
Vittorio Isacco, London, England
Application June 7, 1945, Serial No. 598,112
In Great Britain December 1, 1944
21 Claims. (Cl. 244—138)



1. A parachute to support the free descent of a body from an aircraft comprising a support, interfitting telescopic blade sections of aerofoil form rotatable on said support, means to rotate said blades shortly after the start of the fall and thereby to effect development and extension of the telescopic sections by virtue of the centrifugal force generated during said rotation, elements to limit the extension of said blade sections and mechanical means responsive to the initial part of the fall of the body from the aircraft to actuate said means to rotate the blades.

2,458,856
KITCHEN KNIFE SHARPENER
Jesse Bryan Jacobson, San Jose, Calif.
Application March 20, 1947, Serial No. 735,928
4 Claims. (Cl. 51—214)

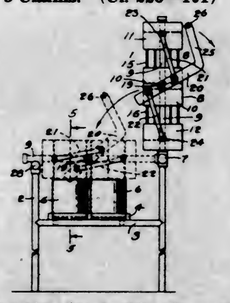


1. A knife sharpener comprising a housing, means for guiding knives in said housing, abrading means removably received in said housing, said guide means comprising an upper, lower and end walls defining a slot longitudinally of said housing, said abrading means comprising a sharpening stone extending partially within the slot and forming a portion of the said lower wall, and means for guiding a tool within said housing and against a terminal portion of said stone thereby facilitating removal of the stone.

2,458,857
METHOD OF PRODUCING METHYLFURAN
Iral B. Johns, Ames, Iowa, and Llewellyn W. Burnette, Easton, Pa., assignors to Iowa State College Research Foundation, Ames, Iowa, a corporation of Iowa
No Drawing. Application September 21, 1945, Serial No. 617,926
5 Claims. (Cl. 260—345)

1. A process for the production of methylfuran from furfural, which comprises vaporizing furfural by bubbling hydrogen through said furfural at a temperature of 110° C.–135° C., passing said hydrogen admixed with furfural at a temperature of 140° C.–280° C. over a catalyst prepared by reducing an acid-leached copper calcium chromate.

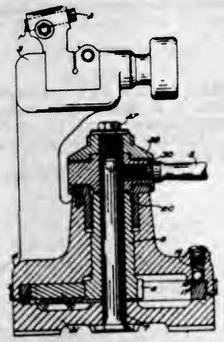
2,458,858
APPARATUS FOR PACKING ASPARAGUS
Howard E. Kelly, Los Angeles, Calif., and Harry A. Howard, Seattle, Wash.
Application May 28, 1945, Serial No. 596,140
5 Claims. (Cl. 226—101)



5. An apparatus for packing in containers asparagus stalks or articles of like elongated form,

which includes means for supporting a group of packing containers in fixed predetermined horizontal position, an article receiving member pivoted to swing from a vertical to a horizontal position above the packing containers, said article receiving member being provided with a group of circular recesses, each of which is adapted to register with a packing container of the said group of horizontal supported packing containers when the receiving member is in horizontal position above said group of packing containers, means for expanding the said group of recesses when the article receiving member is in vertical position to receive articles therein to be packed and to contact the group of recesses around the articles received, and to retain the same therein so that when the article receiving member is swung from its vertical position into its horizontal position above said group of horizontally positioned containers, the articles in said group of recesses are in position to be discharged into said group of packing containers.

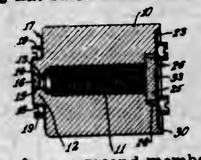
2,458,859
LOCATING AND LOCKING MEANS
Thomas Aubrey Kestell, Thurmaston, England, assignor to Power Jets (Research & Development) Limited, London, England
Application November 15, 1945, Serial No. 628,757
In Great Britain September 14, 1945
10 Claims. (Cl. 74—527)



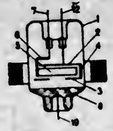
1. Apparatus for locating an element to a predetermined position and locking said element in said position comprising means for moving said element towards said position, means for preventing movement of said element beyond said position, and locking means for locking said element in said position, the said moving means comprising a rotatably mounted member adapted to be operable when rotated in one sense to move the element to the said position, and the said locking means being adapted to be operable only upon the continued rotation in the same sense of the said member beyond said position.

2,458,860
SCANNING LENS WITH MOUNTING MEANS FOR SOUND PROJECTORS
John Kogel, Malverne Park, Long Island, N. Y., assignor to Kollmorgen Optical Corporation, Brooklyn, N. Y., a corporation of New York
Application April 19, 1946, Serial No. 663,283
5 Claims. (Cl. 88—24)

1. A scanning lens comprising a tube having recesses in its opposite ends, said recesses being in substantially right angular relationship to the axis of said tube, a first semi-cylindrical lens in one of said recesses having an outwardly facing flat surface, a first member detachably mounted on one end of said tube for engagement with said flat surface to retain said first lens in said recess in a predetermined position, a second semi-cylindrical lens in the other recess having an inwardly facing flat surface and an outwardly facing convex surface, a second member detachably connected to the other end of said tube, means on said tube and said second member for positioning said second member in a predetermined relationship to the axis of said first lens, and projections on said second member engaging the convex surface of said second lens to position said second lens relative to said second member so that the axes of said lenses are perpendicular to each other and to the axis of said tube.



2,458,861
MERCURY VAPOR DISCHARGE VESSEL AND CONNECTION ARRANGEMENTS FOR THE SAME
Alfred Kohler, Neuchatel, Switzerland, assignor to Sirco A.-G., Zurich, Switzerland
Application March 26, 1947, Serial No. 737,238
In Switzerland April 4, 1946
8 Claims. (Cl. 250—27.5)



1. A mercury vapour discharge device, comprising in a vessel a mercury cathode, an annular anode in a plane parallel to the mercury surface, cathode plates on both sides of said anode and parallel thereto, the cathode plate nearer to the mercury level being at a distance less than 10 mm. therefrom and a magnet so positioned with respect to said elements that the field of it passes through said cathode plates at right angles with their surface.

2,458,862
PREVENTING SECONDARY REACTIONS IN CATALYTIC PROCESSES
Robert W. Krebs, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 24, 1943, Serial No. 496,014
3 Claims. (Cl. 260—683.3)

1. In a process for carrying out gas phase reactions at elevated temperatures in the presence of finely divided catalytic material wherein the gas to be reacted is passed upwardly through a reaction zone containing a layer of finely divided catalytic material in dense, turbulent condition, overlain by a space above said layer containing a relatively small amount of catalyst; the method of preventing undesirable secondary reactions during passage of the reaction products through said space which com-

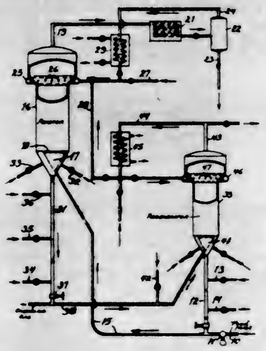
prises injecting an inert quenching gas into said space in an amount sufficient to reduce the tem-

2,458,864
METHOD OF MAKING INTEGRAL MOLDED

beam of visible light rays hereinafter described,

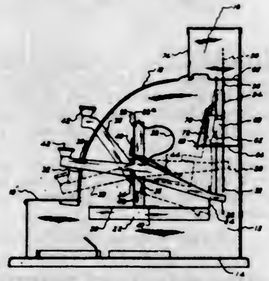
2,458,867
METHOD OF AND APPARATUS FOR PRE-

prises injecting an inert quenching gas into said space in an amount sufficient to reduce the temperature of the reaction gases passing therethrough below a temperature which will cause such secondary reactions, separating a portion



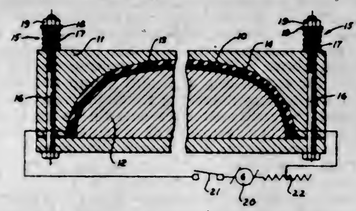
of the mixture of quenching gas and reaction gases, cooling the separated gas and returning this cooled gas to the space above the dense turbulent layer of finely divided catalytic material as the inert quenching gas.

2,458,863
COMBINATION KEY HOLDER AND TENSION MEMBER FOR TOY CASH REGISTERS
Henry A. Kroenlein, Los Angeles, Calif., assignor to Ruth P. Berry, Jackson, Mich.
Application January 10, 1947, Serial No. 721,192
3 Claims. (Cl. 235—12)



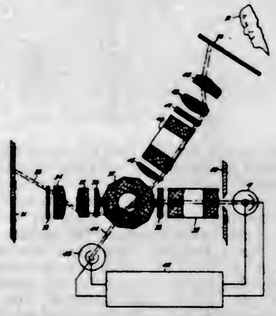
1. In a toy cash register, supporting structure, a plurality of key levers, each of said levers having a fulcrum point intermediate its ends, a fulcrum on the supporting structure on which said key levers are loosely disposed in a transversely spaced assembly for rocking movement upon their fulcrum points to and from depressed positions, and an elongated flap plate swingably mounted across the key lever assembly, said flap plate having its hinge mounting above and in proximity to the fulcrum mounting of the several key levers to retain said levers on said fulcrum mounting and having its swinging edge engageable with the inner swingable portions of the key levers for maintaining said levers in nondepressed position.

2,458,864
METHOD OF MAKING INTEGRAL MOLDED STRUCTURES
John D. Lindsay, Grosse Pointe Woods, Mich.
Application January 1, 1945, Serial No. 570,991
13 Claims. (Cl. 154—110)



2. The method of forming a laminated structure which includes the steps of placing a plurality of sheets of relatively thin material upon a contoured mold, applying an adhesive between adjacent sheets, positioning a layer of soft pliable electrically conducting elastomer adjacent the superposed sheets, passing an electric current through the elastomer to produce heat therein and to thereby heat the adjacent sheets and the interposed adhesive, applying pressure to mold the sheets to the contour of the mold, maintaining said heat and pressure until the sheets have become bonded together, and thereafter separating the molded structure from the mold.

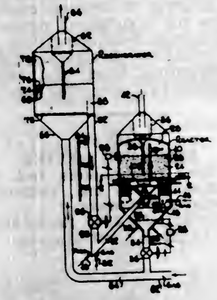
2,458,865
INVISIBLE LIGHT TELEVISION SYSTEM
William A. R. Maim, New Orleans, La.
Original application April 15, 1944, Serial No. 531,205. Divided and this application October 27, 1945, Serial No. 625,035
2 Claims. (Cl. 178—6)



1. In the art of television and the like, a device which combines the scanning of an object with the scanning of an image of said object for the purpose of viewing said object when enveloped in fog, haze, or darkness, comprising a lens assembly for intercepting a succession of parallel beams of infra-red or ultra-violet rays radiated from the surface of said object, means for filtering said successive parallel beams, a dual purpose rotating polyhedronal prismatic lens having a concentric circular hole and related cylindrical lenses providing means for simultaneously and vertically deflecting said successive parallel beams of infra-red or ultra-violet rays and a parallel

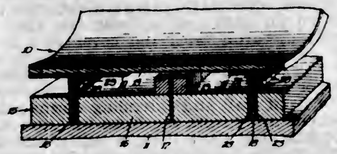
beam of visible light rays hereinafter described, a second rotating polyhedronal prismatic lens having a concentric circular hole and related cylindrical lens for horizontally deflecting said parallel beam of infra-red or ultra-violet rays, and an aperture plate which by virtue of the successive related positions of the said rotating prismatic lenses allows only the rays within said infra-red or ultra-violet scanning beam to convey modulating impulses to a photo-electric cell; a photo-electric cell or similar device, an amplifier and related means for producing a parallel image scanning visible light beam modulated by the output impulses of said amplifier, a third rotating polyhedronal prismatic lens having a concentric circular hole and related cylindrical lens for deflecting said parallel beam of modulated visible light rays in a plane perpendicular to the plane in which said modulated beam of visible light rays are deflected by the aforementioned dual purpose rotating polyhedronal prismatic lens, and a lens assembly providing means for determining the total viewing screen area scanned by said modulated parallel visible light beam thereby determining the size of the television image projected upon said screen.

2,458,866
REMOVING ENTRAINED GASEOUS FLUIDS FROM SOLIDS
Homer Z. Martin, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 21, 1944, Serial No. 564,515
8 Claims. (Cl. 23—288)



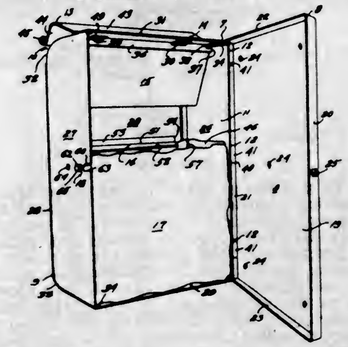
1. An apparatus of the character described including a cylindrical vessel having a top outlet for reaction products, a conical feed member therein having a horizontally arranged perforated plate arranged in the lower portion of said vessel providing a reaction chamber above said plate, a skirt depending from said feed member and forming with the internal wall of said vessel an annular stripping section, rows of baffles in said stripping section, means for introducing stripping gas below said baffles, said vessel having a conical bottom for collecting stripped solid material leaving said stripping section and a bottom outlet for solid materials, partition means arranged between the top of said skirt and the internal wall of said vessel, valved openings in said partition means for controlling the flow of solid particles from said reaction zone to said stripping section and means for withdrawing gaseous fluid from the upper portion of said stripping section and from beneath said partition means.

2,458,867
METHOD OF AND APPARATUS FOR PREPARING CREASING COUNTERS
George G. Messersmith, Chicago, Ill., assignor to J. F. Helmold & Bro., Inc., Chicago, Ill., a corporation of Illinois
Application June 7, 1947, Serial No. 753,341
13 Claims. (Cl. 76—107)



11. A method of preparing a creasing counter for operation in conjunction with a creasing rule, comprising rigidly supporting said creasing rule in a die together with elongated cutting rules on each side thereof which project beyond the working face of said creasing rule, simultaneously applying said cutting rules under pressure to an opposed counter to remove material therefrom between the cutting edges of the rules, and thereafter fracturing said cutting rules along the length thereof and behind said working face of the creasing rule, whereby to remove said cutting edges and expose said working face without altering the relation of said creasing rule to the die.

2,458,868
DISPOSAL RECEPTACLE
Charles E. Miller, Seattle, Wash., assignor to Time Oil Co., Seattle, Wash., a corporation of Washington
Application December 9, 1944, Serial No. 567,391
2 Claims. (Cl. 220—18)



2. A disposal receptacle comprising a housing open at its back and having a front wall, side walls, a bottom, and a top, the top being formed with an insert opening having its front portion extending downwardly into the front wall, a rear closure wall for the housing hinged at one side edge to one of said side walls of the housing and constructed and arranged to be secured against a support and mount the housing for swinging movement away from the rear wall from a closed position to an open position, means for releasably holding the housing in its closed position, a cover for the insert opening resting upon the top when closed and having its forward portion extending downwardly and formed with a handhold pro-

jecting outwardly from the front wall along the front edge of the said insert opening, a slide

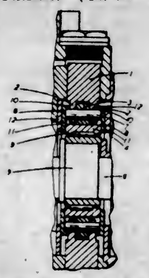
ing carbon monoxide and hydrogen in the presence of a powdered iron catalyst, which catalyst

2,458,872
PANORAMIC TILTING TRIPOD HEAD

2,458,874
COUPLING FOR TUBES
Arthur L. Parker, Cleveland, Ohio, assignor to

jecting outwardly from the front wall along the front edge of the said insert opening, a slide plate extending downwardly across the rear edge of said cover into the housing, hinges having leaves secured to the top wall and other leaves secured to the rear end of the cover, a bracing plate extending between side walls of the housing and limiting rearward movement of the side plate, said cover having upward swinging movement to an open position and the slide plate moving upwardly with the cover and limiting such upward movement by engagement of its free end with the front wall of the housing, a deflector plate mounted across the inner surface of the front wall and extending downwardly at an incline away from the front wall and having its ends spaced from the side walls, and a bag placed in the housing through the open rear thereof and resting upon the bottom of the housing, said bag being open at its top and terminating below the lower end of the slide plate and having the forward position of its upper edge overlapped by the inclined portion of the deflecting plate.

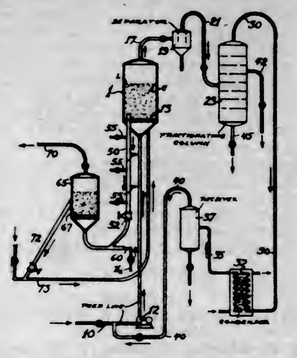
2,458,869
RECIPROCATING PUMP OR MOTOR
Joshua Challiner Naylor, Monkseaton, England, assignor to Vickers-Armstrongs Limited, London, England, a company of Great Britain
Application January 4, 1945, Serial No. 571,249
In Great Britain October 27, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 27, 1963
10 Claims. (Cl. 74—51)



1. In a pump or motor of the radial type an eccentric, cylinders substantially radiating from the eccentric, pistons reciprocating in the cylinders, rollers carried by the pistons and engaging the periphery of the eccentric and means restraining the pistons from turning about their axes, said means comprising diametrically opposed flats on the pistons and a pair of axially spaced annular retaining rings engaging the flats on the pistons, headless cylindrical piston pins passed diametrically through the pistons and forming axles for the rollers, and integral abutment surfaces on the piston pins engaging the retaining rings at annular surfaces opposed to the piston for holding the piston pins against axial displacement.

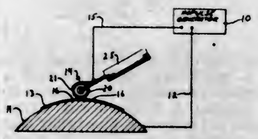
2,458,870
HYDROGENATION OF AN OXIDE OF CARBON
Henry J. Ogorzaly, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application May 29, 1946, Serial No. 673,189
2 Claims. (Cl. 260—449.6)

1. The method of forming hydrocarbons and oxygenated hydrocarbons which comprises reacting carbon monoxide and hydrogen in the presence of a powdered iron catalyst, which catalyst is maintained in the reactants, in the form of a dense fluidized mass in a reaction zone, maintaining said reaction zone at elevated temperatures and under superatmospheric pressure, withdrawing catalyst contaminated by carbon-containing deposits during said reaction, conveying said contaminated catalyst into a separate hydrogenation zone, forming a dense fluidized mass



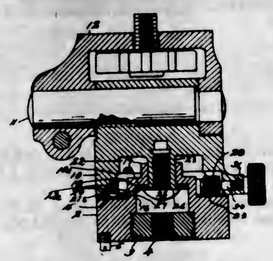
of said contaminated catalyst in a hydrogen-containing gas in said hydrogenation zone, maintaining a temperature of at least about 900° F. in said hydrogenation zone, permitting the contaminated catalyst to remain resident in said reaction zone for a sufficient period of time to effect removal of at least about 80% of said contaminants, withdrawing cleansed catalyst from said hydrogenation zone and returning the cleansed catalyst to the reaction zone.

2,458,871
MARKING DEVICE
Herbert E. Oles, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application July 12, 1945, Serial No. 604,611
3 Claims. (Cl. 219—15)



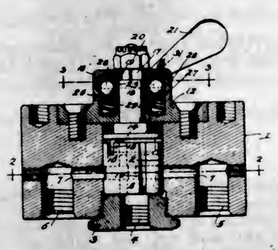
1. In an electric marking device, a metal object, a stencil mounted upon a surface of said object having openings therein defining a pattern to be marked on said surface, a metal marking member having projections extending therefrom constituting a continuous regular array of spark electrodes, and an impulse generator connected to said member and said object whereby, when the member is moved into contact with the stencil, sparks pass between said object and said electrodes through the openings in said stencil thereby marking a pattern on portions of said surface, the body of the stencil preventing the passage of sparks between the said electrodes and the other portions of said surface.

2,458,872
PANORAMIC TILTING TRIPOD HEAD
Robert J. Pagliuso, Glendale, Calif.
Application April 22, 1946, Serial No. 663,980
4 Claims. (Cl. 248—183)



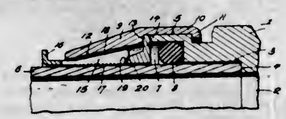
1. A panoramic tripod head including a base attachable to a tripod and supporting a flat, upwardly facing friction washer, a central boss upstanding in the washer from the base, a head body swivelled in said boss to turn on the plane of the said washer, a skirt extending downwardly from the head body and surrounding said boss and having a conical bore face, a radial screw projecting outwardly through the skirt, a split brake ring setting on said washer and fitting said bore face, and a nut on the inner end of the screw and having cam faces engaging and for expanding the ring against the bore face of the said body skirt.

2,458,873
INDEXING MECHANISM FOR VALVES
Arthur L. Parker and Emmett C. Hartley, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application May 29, 1944, Serial No. 537,935
3 Claims. (Cl. 251—163)



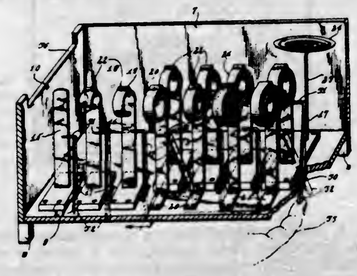
1. An indexing mechanism for a valve comprising a casing, a valve chamber provided with ports in the wall thereof, a valve rotor disposed in said chamber and having a port adapted to be selectively connected to the ports in the valve chamber, a stem connected to said valve rotor and projecting from said casing, a disk secured to said stem, spaced parallel stop shoulders carried by said disk, yieldable members carried by said valve casing and adapted to be selectively engaged by the respective stop shoulders, and means carried by said disk and cooperating with said yieldable members for holding said stop shoulders in contact with said yieldable members.

2,458,874
COUPLING FOR TUBES
Arthur L. Parker, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application December 28, 1944, Serial No. 570,158
6 Claims. (Cl. 285—168)



1. A coupling for tubes comprising a body member having a bore to receive the tube end, a nut directly connected to said body member, said body member having a counter-bore forming with the tube an annular chamber for a gasket, a deformable ring gasket in said chamber, said nut at its outer end being spaced from the tube and having the inner face thereof tapered, a sleeve disposed within the nut and free to move therein and projecting outwardly beyond the end thereof, said sleeve having the inner end thereof slotted longitudinally and having serrations on the inner face of the members between the slots, said members being disposed so that when a tube is inserted in the coupling said serrations will frictionally grip the tube, said sleeve having means on the outer face thereof adapted to engage the tapered face of the nut so that an outward pull on the tube will cause the serrations on the sleeve to grip the tube and prevent the removal of the tube from the coupling, and means within the nut for expanding the sleeve and releasing the tube when said sleeve is forced inwardly so as to release the coupling from the tube.

2,458,875
MUSIC BOX
Adolph Pfeiffer, Chicago, Ill.
Application January 12, 1948, Serial No. 1,699
4 Claims. (Cl. 84—408)



1. A music box of the character described comprising, a box structure open at the top, a top grill element removably secured to the said box structure and provided with a multiplicity of sound emission openings, a plural number of reed-like elements fixedly mounted at their lower termini to the base of the said box structure, their upper termini extending upwardly to be accessible to vibration producing means, slotted means on the bottom of the said box structure, and pick means articulately confined in the said slotted means and provided with prong means releasably engaging the free termini of the said reed-like elements.

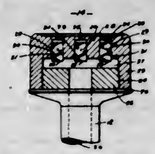
2,458,876
EYE SPRAY

prising an electrolytically reducible oxygen-yield-

said legs opposite the U-bend extending upwardly in horizontally spaced relationship for position-

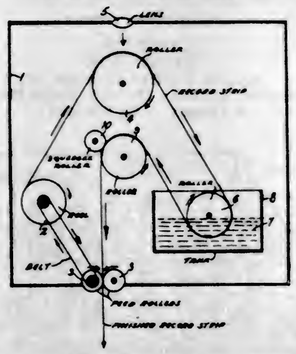
bracket, a gaseous electric discharge light source in said cylinder responsive to high frequency in-

2,458,876
EYE SPRAY
Anna Rehn, New York, N. Y.
Application January 16, 1946, Serial No. 641,503
2 Claims. (Cl. 128—249)



1. In a device of the character described, a support forming a casing, a pair of nozzles mounted on said support, each of said nozzles having a chamber therein, each of said nozzles having a plurality of jet members, each of said jet members having a helical passage therein in communication with the chamber within its associated nozzle, said nozzles being spaced a pupillary distance apart, a duct member supported in said casing and in liquid communication with the chambers in said nozzles, a handle attached to said support, and means for supplying liquid to said nozzles via said duct member producing a mist-like spray emanating from said jet members.

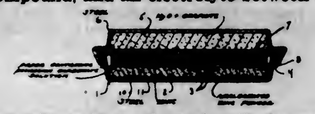
2,458,877
PHOTOGRAPHIC DEVELOPING METHOD AND APPARATUS
Walter Dean Rose, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 7, 1946, Serial No. 695,527
3 Claims. (Cl. 95—88)



1. A method for producing a permanent image on a sensitized strip containing a silver halide emulsion which comprises continuously exposing the emulsion side of the strip to a beam of light, continuously contacting the exposed emulsion side of the strip with an aqueous solution of ammonia and contacting the electrolyte-wet surface with copper while simultaneously removing excess solution from said strip.

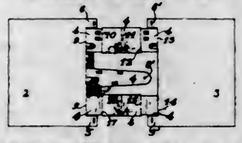
2,458,878
ALKALINE PRIMARY CELL
Samuel Ruben, New Rochelle, N. Y.
Application June 26, 1945, Serial No. 601,626
7 Claims. (Cl. 136—107)

2. A primary cell comprising an amalgamated zinc anode, a coherent conductive cathode comprising an electrolytically reducible oxygen-yielding compound, and an electrolyte between and in



contact with said anode and cathode predominantly comprising an aqueous solution of an alkali metal carbonate.

2,458,879
MANUFACTURE OF INTEGRAL, THREE-DIMENSIONAL, SELF-ERECTING ILLUSTRATIONS
Abraham Schenk, Brooklyn, N. Y.
Application November 13, 1944, Serial No. 563,300
1 Claim. (Cl. 46—36)



A method for making a folder having a three dimensional self-erecting illustration at its binding, consisting in cutting out portions of the central area of a flat sheet to form a central illustration at the center of said flat sheet which illustration is integral with the flat sheet and connects with and continues into uncut end portions of said flat sheet, scoring fold lines on said illustration in order that said illustration will be self-erecting when said uncut end portions of said flat sheet are moved towards each other to bring their adjacent ends together, moving said uncut end portions towards each other to bring their adjacent ends together, and binding the adjacent ends of said uncut end portions in order that they may open and close like a folder.

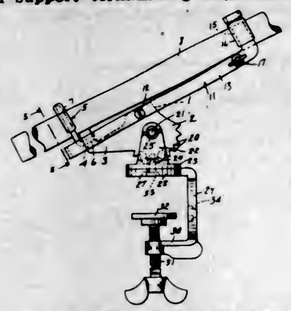
2,458,880
TOOL
John William Slayton, Jr., Pittsburgh, Pa.
Application December 16, 1946, Serial No. 716,463
7 Claims. (Cl. 306—33)

1. A tool of the class described comprising a head having an eye, a handle one end of which can be inserted into said eye, a wedge between said end and said eye, the wedge increasing in thickness from the outer to the inner face of the head, one side of said handle end having a sloping face cooperating with said wedge, and resilient means for applying pressure between the wedge and the handle end.

2,458,881
FISHING ROD HOLDER
Milton Steuer, San Francisco, Calif.
Application October 28, 1944, Serial No. 560,771
1 Claim. (Cl. 248—42)

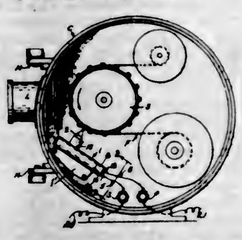
A fishing rod holder for an inclined or horizontal rod comprising a generally horizontally extending U-shaped member positioned with its legs horizontally spaced apart, the outer ends of

said legs opposite the U-bend extending upwardly in horizontally spaced relationship for positioning a portion of the handle of a fishing rod therebetween with the butt end of such rod extending over said U-bend, a cross piece connecting said legs adjacent the lower ends of the aforesaid upward extensions of said legs for supporting said rod, a support for said member, a horizontal pivot extending through said legs at a point between the U-bend and the free ends of said legs pivotally supporting said member for swinging in a vertical plane about said pivot, an extension on said support terminating adjacent said U-



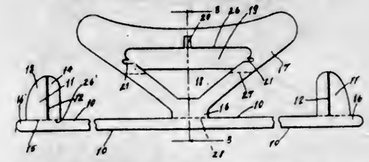
bend, a pair of upwardly extending jaws between said legs and pivotally secured at their lower ends to the outer end of said extension for swinging thereof to and from clamping engagement with said butt end of said rod when the latter extends across said U-bend, the portions of said jaws adjacent and above their pivoted lower ends extending divergently outwardly relative to each other in an upward direction for engagement with the said legs of said member adjacent said U-bend when the latter is swung upwardly about said pivot for automatically closing said jaws about said butt end.

2,458,882
TIMING DEVICE FOR HIGH-SPEED MOTION-PICTURE CAMERAS
Richard G. Stoner and Curtis W. Lampson, Princeton, N. J., assignors to the United States of America as represented by the Secretary of War
Application October 4, 1945, Serial No. 620,344
1 Claim. (Cl. 346—107)



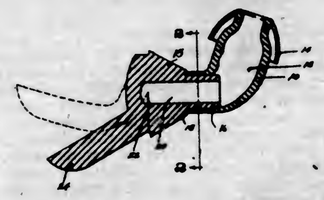
In a high speed photo film strip moving picture camera, a timing device to produce a time calibration record on the film strip while passing through the camera comprising an opaque closed hollow cylinder having a mounting bracket attachable to the wall of a camera adjacent the film path, said cylinder having a light port therein on a radius of the cylinder distant from said bracket, a gaseous electric discharge light source in said cylinder responsive to high frequency intermittent electrical discharges to propagate correspondingly intermittent light rays through said port, said cylinder having a lateral tubular extension concentric with the said radius of the cylinder, and a converging lens mounted in said tubular extension.

2,458,883
BOX AND PACKAGE HANDLE
William Trogman, Chicago, Ill.
Application November 13, 1944, Serial No. 563,167
1 Claim. (Cl. 16—125)



A handle for a box or like article comprising a body having an intermediate portion, a finger guard of elongated formation, a hinge connection between the guard and the intermediate portion and adapted to be flexed in a direction relative to the intermediate portion to permit the guard to be moved to a position beneath the intermediate portion with the intermediate portion disposed centrally with respect to the opposite long edges of the guard, said guard having at opposite ends thereof laterally extending fingers, said body having oppositely disposed notches formed therein for the reception of said fingers when said guard is disposed flush with respect to the intermediate portion, and said fingers adapted to move from engagement in said notches when said guard is moved into a horizontal position beneath the intermediate portion and to engage adjacent portions of said body to limit movement of the guard into said horizontal position beneath said intermediate portion.

2,458,884
EAR PROTECTOR VALVE
John Volkmann, Cambridge, Mass., assignor to the United States of America as represented by the Executive Secretary of the Office of Scientific Research and Development, and The President and Fellows of Harvard College
Application January 3, 1946, Serial No. 638,881
5 Claims. (Cl. 128—152)



1. An acoustic valve for an earplug comprising a slitted elastic manually deformable body portion connected to the plug, said body having a blind sound-communication passage therein intersecting the slit and open through one end of the body, and means for moving the portions beside the slit apart from one another.

2,458,885
DIRECTIVE ANTENNA SYSTEM

reactive positions in the phenol nucleus, centrifuging and drying the cellulose product, combin-

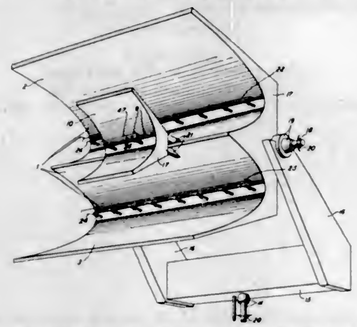
2,458,885
DIRECTIVE ANTENNA SYSTEM
Clifford A. Warren, Watchung, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 15, 1944, Serial No. 568,248
16 Claims. (Cl. 250—33.65)



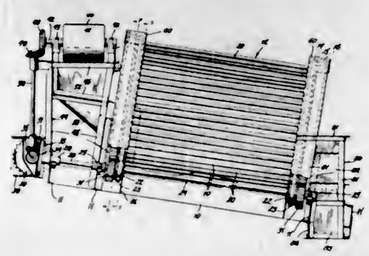
5. In combination, a pair of antenna systems connected through separate lines to the same translation device, one of said antenna systems having a minor directive lobe and the other antenna system having a maximum directive lobe, a direction of action in said maximum lobe being aligned with the axis or direction of greatest action in said minor lobe, a phase shifter included in one of said lines for rendering said lobes antiphasal and an attenuator included in one of said lines for substantially equalizing the intensities of said lobes in the direction of said axis.

2,458,886
METHOD OF BONDING CELLULOSIC MATERIALS TO RUBBER AND COMPOSITE PRODUCTS FORMED THEREFROM
Johannes G. Weeldenburg, Velp, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
Application April 12, 1946, Serial No. 661,516
In the Netherlands September 15, 1945
8 Claims. (Cl. 154—139)

1. Vulcanized rubber articles reinforced with cellulosic products, said rubber articles and cellulosic products being bonded together by chemical reaction at their boundary surfaces respectively with a compound of the class consisting of dimethylol derivatives of mono-substituted phenol, mono-methylol derivatives of double substituted phenol and their salts, wherein the aforesaid substituents occupy the so-called reactive positions in the phenol nucleus.

3. A method of bonding cellulose products to rubber which comprises surface treating the cellulose product with a compound of the class consisting of di-methylol derivatives of mono-substituted phenol, mono-methylol derivatives of double substituted phenol and their salts, wherein the aforesaid substituents occupy the so-called reactive positions in the phenol nucleus, centrifuging and drying the cellulose product, combining the treated cellulose product with rubber and vulcanizing the composite product.

2,458,887
BAR SCREEN GRADER FOR CARROTS AND VEGETABLES HAVING LIKE TAPERING FORMS
Russell H. Winters, Green Bay, Wis., assignor to The Larsen Company, Green Bay, Wis.
Application February 11, 1947, Serial No. 727,794
1 Claim. (Cl. 209—393)

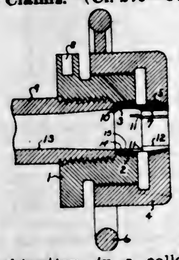


In a size grader for carrots and similar tapered vegetables, a cylindrical bar screen mounted for rotation about a generally horizontal axis and comprising a pair of end rings each having a series of radial slots near its periphery, a plurality of screen bars each having its opposite ends arranged in a corresponding pair of said slots on said end rings and thereby being supported generally in the form of a cylinder and generally parallel with said axis and capable of limited movement toward and from said axis, the opposite extremities of each of said screen bars projecting beyond said end rings, a pair of track bars of L-shaped cross section and of generally semicircular form each having a radially extending flange and an axially extending flange projecting from the outer edge of said radially extending flange, a stationary support holding each of said track bars alongside the lower part of each of said end rings with said axially extending flanges in opposed relation and engaging the sides of the passing screen bars to hold them in closely spaced relation as they traverse the lower part of said screen to provide minimum size grading apertures in the bottom of the screen, the said radial flanges preventing endwise displacement of said screen bars, a second pair of track bars of L-shaped cross section and of generally arching form and each having a radially extending flange and an axially extending flange projecting from the inner edge of said radially extending flange, a second stationary support holding each of said second track bars with its ends abutting the ends of one of said first track bars and with the radial flanges of both track bars forming a continuation of each other, said axially extending flanges of said second pair of track bars being in opposed relation to each other and spaced radially inwardly with reference to the axially extending flanges of said first pair of track bars and also engaging the sides of the ends of said screen bars, said second pair of track bars being arched to move the projecting extremities of said screen bars radially outwardly relative to said axis as they traverse the upper part of said screen to increase the size of said grading apertures and to release any carrots caught therein.

2,458,888
ACRYLIC ESTERS OF ETHER-ALCOHOLS
Chessie E. Rehberg, Glenside, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 5, 1946, Serial No. 652,214
5 Claims. (Cl. 260—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

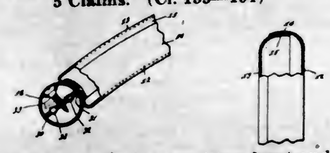
1. A monomeric ester having the formula $CH_2{:}CRCOO[CH_2CH_2O]_nR'$, wherein R is selected from the group consisting of hydrogen and methyl, R' is a branched chain alkyl, and n is an integer from 1 to 2.

2,458,889
COLLET CHUCK
Donald Wilbur Bloomquist, Chicago, Ill.
Application June 24, 1946, Serial No. 678,731
3 Claims. (Cl. 279—56)



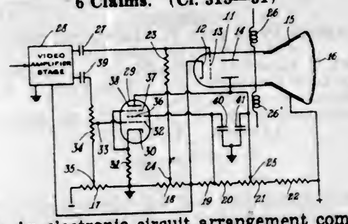
1. The combination, in a collet chuck, of a threaded backplate adapted to be threadably secured to the nose of a lathe spindle and having a tapered alignment sleeve and an alignment pin fitted thereinto, a threaded force-cap threadably secured to the said backplate and having a frustoconical alignment sleeve fitted thereinto, the said force-cap being further provided with an integral handwheel portion, and a tapered collet having a body defining a shoulder portion resting against the nose of the said spindle and provided with a keyway removably and interchangeably engaging the said alignment pin to prevent rotation of the said collet when the said force-cap is rotated, the said body of the said collet being removably confined between the free end of the nose of the said spindle and the said alignment sleeves.

2,458,890
METAL CHAIR
Earl C. Booth, Columbus, Ind., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application April 3, 1944, Serial No. 529,349
5 Claims. (Cl. 155—194)



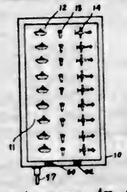
1. In a chair, a back comprising front and rear sheet-metal stampings provided with telescoping peripheral flanges formed to provide at each side of the back an outwardly presented groove, back-supporting members of metal tubing seated respectively in said grooves, the wall of each of said back-supporting members adjacent the associated groove being provided with one or more longitudinally extending slots, ears on said back extending into said slots, and screws passing through the walls of the back-supporting members and into said ears.

2,458,891
CATHODE-RAY TUBE FOCUSING CIRCUIT
Homer G. Boyle, Dobbs Ferry, N. Y., assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 721,553
6 Claims. (Cl. 315—31)



1. An electronic circuit arrangement comprising a cathode ray tube having an electron beam generating cathode electrode, a grid electrode, an anode electrode and a focusing element, a direct current potential source connected between said cathode electrode and said anode electrode, means to apply a first voltage of variable amplitude to the grid electrode of said cathode ray tube to intensity modulate the electron beam thereof, said potential source being responsive to the modulation of said beam to produce in the output thereof voltage fluctuations inversely proportional to changes in the intensity of said beam and thereby normally produce a defocusing of said beam, an electron discharge tube having a cathode electrode, a control electrode and an anode electrode, means to apply operating potentials to the electrodes of said discharge tube, means to apply a second voltage proportional to said first variable amplitude voltage to the control electrode of said discharge tube, and means to couple the anode-cathode circuit of said discharge tube to said focusing element to thereby maintain said electron beam in focus independently of said voltage fluctuations of said potential source.

2,458,892
AMUSEMENT GAME APPARATUS HAVING ILLUMINATING MEANS SIMULATING DROPPING OF A BOMB FROM AN AIRPLANE UPON A BOAT
William H. Burdick, Chicago, Ill., assignor, by mesne assignments, of one-half to Vincent T. Connor and one-half to Theodore A. Kruse
Application October 26, 1945, Serial No. 624,759
3 Claims. (Cl. 273—1)



1. An amusement game in which there is a play board having parallel rows of illuminating

elements associated therewith, comprising means for illuminating said elements, said means including an electric circuit having therein a mo-

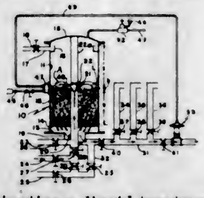
changer, an expansion engine for the expansion of compressed gas with performance of external work, a second heat exchanger, a second expan-

reducible sugar and an electrolyte in water as the catholyte solution in the cathode compartment of said cell, said solution containing from 200 to

tures, comprising a body portion having a laterally extending attaching hook adjacent one end thereof and a keyhole slot adjacent the opposite

elements associated therewith, comprising means for illuminating said elements, said means including an electric circuit having therein a motor-operated step-up switch controlling the successive illumination of the elements of one of said rows of elements, a push-button-controlled step-up switch for controlling successive illumination of the elements of another row of said elements, a step-up switch including a slow and fast operated step-up relay for controlling successive illumination of the elements of still another row of said elements, and a push-button-operated switch controlling alternate operation of said step-up relay.

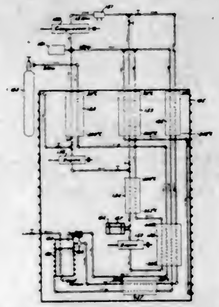
2,458,893
APPARATUS FOR CONDUCTING ION EXCHANGE OPERATIONS
Robert C. Campbell, Milburn, N. J., assignor to The Dorr Company (Inc.), New York, N. Y., a corporation of Delaware
Application October 6, 1945, Serial No. 620,723
2 Claims. (Cl. 210—24)



1. In combination a liquid treatment cell comprising a closed receptacle adapted to hold a bed of granular ion exchange material, said receptacle having means for feeding liquid to the top portion of said bed for passage downwardly therethrough, and having means for discharging liquid from the bottom portion of said bed whereby the bed is adapted to be kept in submergence, and a system for controlling the level of the liquid passing downwardly through the bed so as to maintain said level substantially constant comprising a supply conduit for an auxiliary gaseous pressure medium connected with said cell in a manner to exert pressure upon the liquid level, constant pressure control means for maintaining said pressure substantially constant, a throttling device for controlling the rate of discharge of said liquid, and actuating means for said throttling device operable to increase the flow resistance thereof when the liquid level has unduly dropped and to decrease the flow resistance when the level has unduly risen, a float controlled device actuated by said liquid level, and impulse transmitting means for transmitting impulses from said float controlled device to said actuating means whereby a rising of the float in the float controlled device effects a substantially corresponding increase of said flow resistance and a falling of the float effects a substantially corresponding decrease of said flow resistance.

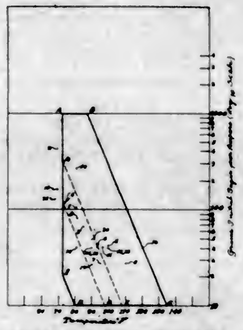
2,458,894
LOW-TEMPERATURE REFRIGERATION SYSTEM
Samuel C. Collins, Cambridge, Mass., assignor, by mesne assignments, to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
Application October 14, 1940, Serial No. 361,137
14 Claims. (Cl. 62—178)

3. A low temperature gas cycle refrigeration system comprising a compressor, a heat exchanger, an expansion engine for the expansion of compressed gas with performance of external work, a second heat exchanger, a second expansion engine for the expansion of compressed gas with performance of external work, conduit means for conveying a portion of the compressed gas from the compressor through said first heat exchanger to said first expansion engine, conduit means for conveying expanded gas from said first expansion engine through said first heat ex-



changer counter-current to the flow of compressed gas therethrough, conduit means for conveying a further portion of the compressed gas successively through said first and second heat exchangers to said second expansion engine, conduit means for conveying expanded gas from said second expansion engine through a space to be cooled and thereafter successively through said second and said first heat exchangers counter-current to the flow of compressed gas therethrough.

2,458,895
ELECTROLYTIC PROCESS FOR REDUCING SUGARS
Henry Jermain Creighton, Swarthmore, and Ralph A. Hales, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application May 21, 1943, Serial No. 487,870
4 Claims. (Cl. 204—77)



4. In the process of electrolytically reducing a reducible sugar selected from the class consisting of monosaccharides and disaccharides in a cell provided with a metal plate cathode and an anode in cathode and anode compartments respectively separated by a diaphragm, and having an electrolyte solution in the anode compartment, the steps comprising employing a solution of the

reducible sugar and an electrolyte in water as the catholyte solution in the cathode compartment of said cell, said solution containing from 200 to 700 grams of the sugar per liter, the ratio of the area of the cathode of the cell to the volume of said catholyte solution being from 0.25 to 10 square decimeters per liter, passing an electric current between said anode and said cathode and through said catholyte solution to reduce the sugar therein to polyhydric alcohol, maintaining a current density of from 2 to 10 amperes per square decimeter of surface of said cathode during at least a substantial part of the reduction, and simultaneously maintaining said catholyte solution at a temperature of 80° to 110° F.; said current density and catholyte temperature being correlated, taking into account the initial concentration of sugar in the catholyte and the ratio of area of said cathode to the volume of catholyte, so that the point defined by plotting the arithmetic value of the temperature in degrees Fahrenheit as abscissa against an ordinate which is the logarithmic value of the expression,

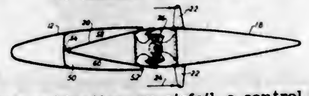
$$\frac{C_0}{R \times CD}$$

wherein,

C_0 is the initial concentration of sugar in the catholyte solution in grams per liter
R is the ratio of cathode area to the volume of catholyte solution in square decimeters per liter
CD is the current density at the cathode in amperes per square decimeter of cathode surface,

falls within the area ABCDEA in the accompanying graph Figure 3.

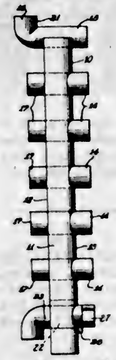
2,458,896
DIFFERENTIAL BALANCE FOR AIRFOILS
Robert A. Darby, Eggertsville, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application August 10, 1942, Serial No. 454,348
10 Claims. (Cl. 244—87)



1. In combination, an airfoil, a control surface pivotally secured to the trailing edge thereof, said airfoil having a rearwardly opening recess within its trailing edge, a balance member for said control surface pivotally mounted to the trailing edge of said airfoil for deflection about said axis relative to both said control surface and airfoil, said balance member extending forwardly from its pivot axis into said recess to divide said recess into opposed chambers, each of said chambers being subjected to outside pressure conditions on its respective side of the airfoil, and differential gearing operatively interconnecting said control surface and balance member such that said balance member deflects about its axis simultaneously with deflection of said control surface about its axis but to a lesser extent.

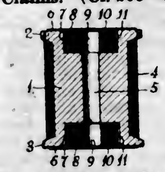
2,458,897
ARTICLE SUPPORT
Jan de Swart, Los Angeles, Calif., assignor to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application July 13, 1946, Serial No. 683,373
5 Claims. (Cl. 248—243)

1. A shelf support adapted to be attached to a supporting wall having vertically spaced apertures, comprising a body portion having a laterally extending attaching hook adjacent one end thereof and a keyhole slot adjacent the opposite end, and a hook-shaped key, said attaching hook being adapted to be positioned in one of the aper-



tures in said supporting wall, and said key being adapted to be positioned in another of the apertures in said supporting wall and in said keyhole slot to attach said shelf support to said supporting wall.

2,458,898
COMBINATION SPOOL AND BOBBIN ASSEMBLY
Thomas D. Di Addario, Buffalo, N. Y.
Application March 2, 1948, Serial No. 12,512
6 Claims. (Cl. 206—47)



1. As a new article of manufacture and sale, a combination spool and bobbin assembly comprising a spool having a cylindrical body formed at its ends with upper and lower annular flanges which provide a channel in which thread is wound upon the cylindrical surface of the spool body and having an axial bore to take over the post of a sewing machine, the body being counterbored at each end concentrically to the axial bore in order to provide recesses open to the flat face of the body, bobbins fitted in the recesses and upon which thread is wound, the bobbins each having a central opening in alinement with the the bore and which may be set over the post of the sewing machine, and labels attached to the flat end faces of the spool and overlying the bobbins, normally to confine them in the recesses and to prevent their displacement.

2,458,899
COUPLING
Eugene N. Doubrava, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 7, 1946, Serial No. 652,608
3 Claims. (Cl. 284—4)

2. In a quick disconnect coupling of the type having a split valve for connecting coupling

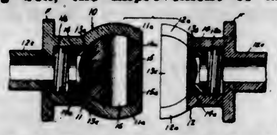
boxes in fluid flow communication and for sealing the coupling boxes in uncoupled relation together with a spring-pressed port seal in each coupling box, the improvement of an axially

emitting lamp communicating with the cabinet above the rack to direct rays on the head of the patient, and a thermostat control device for the

bottom surfaces adapted for direct seating on wheel-contacting surfaces of an associated derailer, whereby to remove car wheels from guidance by said derailer during passage thereof over

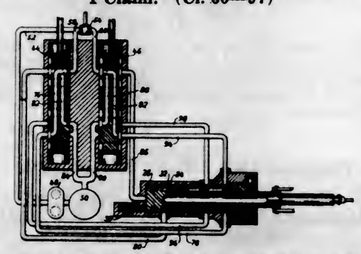
graphing a monochrome image onto a photographic light-sensitive silver-halide emulsion, developing the exposed emulsion to a negative, coloring certain portions of the negative which

boxes in fluid flow communication and for sealing the coupling boxes in uncoupled relation together with a spring-pressed port seal in each coupling box, the improvement of an axially



movable flow tube in the split valve acted on by the opposed port seals when the valve is rotated to place the boxes in fluid flow communication and defining a conduit passage connecting the ports of the boxes.

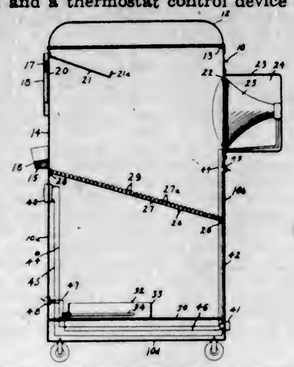
2,458,900
FLAP OPERATING MEANS
Frank Erny, Kenmore, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application August 10, 1942, Serial No. 454,345
1 Claim. (Cl. 60—97)



In combination, fluid motor means for operating a pair of members said means including a cylinder, a pair of pistons in said cylinder each connected to one of said members, fluid passages communicating with the end and intermediate portions of said cylinder, and valve means controlling the admission of fluid under pressure to and the flow of fluid from said cylinder through said passages, said valve means being operable to admit fluid under pressure through one of said passages into said cylinder between said pistons when said pistons are adjacent one end of said cylinder and to permit the flow of fluid from said cylinder through either of two passages communicating respectively with the other end of said cylinder and with an intermediate portion of said cylinder such that full or partial stroke movement of only one of said pistons is effected, said valve means also being operable to admit fluid under pressure through one of said passages to one end of said cylinder and to permit the flow of fluid from said cylinder through either of two passages communicating respectively with the other end of said cylinder such that full or partial stroke movement of both said pistons is effected.

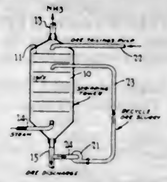
2,458,901
SCALP CONDITIONING CABINET
Clifford Fields, Mount Vernon, Ill.
Application December 18, 1946, Serial No. 717,039
5 Claims. (Cl. 128—375)

1. A treating device comprising a cabinet having a head-receiving aperture, a rack spanning the cabinet interior below said aperture and adapted to support hair thereon, a steam generator in the cabinet beneath the rack to supply steam to the rack for flooding the cabinet, a ray-emitting lamp communicating with the cabinet above the rack to direct rays on the head of the patient, and a thermostat control device for the



lamp and the steam generator to de-energize the same when the cabinet temperature reaches a preset degree.

2,458,902
RECOVERY OF AMMONIA FROM ORE TAILINGS PULP
Robert R. Fitzhugh, Nicaro, Cuba, and Benjamin F. Frederick and Bernard A. Axelrad, Freeport, Tex., assignors to Nicaro Nickel Company, New York, N. Y., a corporation of Delaware
Application October 7, 1943, Serial No. 505,402
10 Claims. (Cl. 23—193)

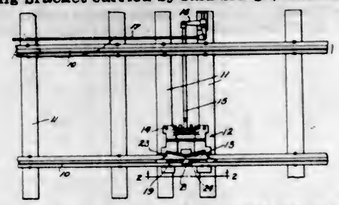


1. A method for recovering ammonia by distillation from nickeliferous ore tailings pulp containing residual ammoniacal leach solution and unstable magnesium compounds as impurities, which pulp and impurities have a tendency to form deposits on hot heating surfaces at the ammonia distillation temperatures employed comprising, heating said pulp by adding hot ore tailings slurry substantially free of magnesium impurities having such tendency and by direct heat transfer from a hot fluid medium from a temperature below 150° F. to a temperature at which precipitation of said magnesium impurities occurs, until this precipitation has been completed to an extent substantially overcoming the deposition tendency, and evaporating ammonia from the pulp while the same is flowing through a plate distillation column.

2,458,903
DERAILER BRIDGE FOR RAILWAY TRACK SYSTEMS
Willard A. Francis, Sr., Bowerston, Ohio
Application July 17, 1947, Serial No. 761,513
9 Claims. (Cl. 104—275)

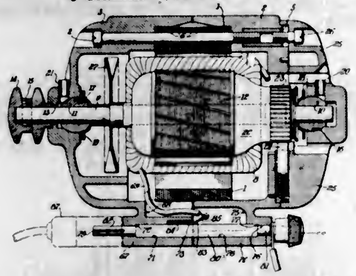
7. A bridge for railway derailers comprising a wheel-guiding body having wheel-engaging inclined top surfaces and reversely inclined planar

bottom surfaces adapted for direct seating on wheel-contacting surfaces of an associated derailer, whereby to remove car wheels from guidance by said derailer during passage thereof over said bridge, and a substantially U-shaped positioning bracket carried by said bridge, said brack-



et including a horizontally disposed leg adapted to be positioned between the under part of the derailer and the upper surface of an associated track rail, the said horizontal leg terminating in a downwardly directed flange having bearing engagement with the side of the head of said track rail.

2,458,904
DYNAMOELECTRIC MACHINE WITH INTEGRAL CONNECTOR BOXES
Reynold Happe, Pittstown, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application April 23, 1945, Serial No. 589,847
6 Claims. (Cl. 171—252)



1. In a dynamoelectric machine, a stator core, a split casing providing two opposed end-covers for said core and formed with apertures having internal shoulders, a current-conducting winding carried by said core, conducting leads connected to said winding, spring lugs connected to said leads, and terminal studs received in said apertures and secured therein in contact with said spring lugs by means of said shoulders when said end-covers are assembled to form said casing.

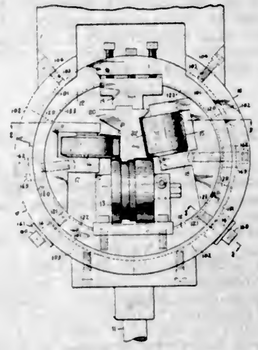
2,458,905
PHOTOGRAPHIC PROCESS FOR CONVERTING BLACK AND WHITE OR MONOCHROME PICTURES INTO MULTICOLOR PICTURES
Harold C. Harsh, Richard M. Haff, and Frank J. Kassuba, Binghamton, N. Y., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Original application August 31, 1944, Serial No. 552,210. Divided and this application May 18, 1946, Serial No. 670,850
8 Claims. (Cl. 95—2)

1. The process of producing subtractively colored photographic prints which comprises photographing a monochrome image onto a photographic light-sensitive silver-halide emulsion, developing the exposed emulsion to a negative, coloring certain portions of the negative which are to appear in color in said subtractively colored print with a dispersion consisting of:

Water soluble organic dye ------ grams --	1–10
5–25% Aqueous solution of hydrophilic polymer ------ cc --	50–100
Water soluble aliphatic polyhydric alcohol containing at least two carbon atoms ------ gram --	0.5–1
Wetting agent ------ do ----	0.5–1

said water soluble organic dye in said dispersion being of a color, complementary to that which is to represent the corresponding colored portion in said print and coloring other portions of said negative with a dispersion as aforesaid in which the water soluble organic dye is of a color different from that of said first dispersion and complementary to that which is to represent the corresponding colored portion of said print, printing the resulting colored negative onto a photographic, multi-layer, light-sensitive emulsion, the layers of which are selectively sensitized to the red, green, and blue regions of the spectrum, each layer containing a color former capable of yielding a dye image complementary in color to that for which it is sensitized and developing the exposed layers by color forming development into a subtractively colored print.

2,458,906
SUPPLEMENTARY FORMING MEANS FOR STRIP-METAL FORMING MACHINES
Fred Himmel and Isidore Himmel, New Haven, Conn., assignors to The Himmel Brothers Company, Hamden, Conn., a corporation of Connecticut
Application May 25, 1946, Serial No. 672,284
7 Claims. (Cl. 153—32)



2. In a device for straightening a preformed metal strip: a fixed ring-frame; a carrier-ring; means arranged to support said carrier-ring for adjustment circumferentially within said fixed ring-frame; adjustable means cooperatively associated with said ring-frame and said carrier-ring to secure said carrier-ring in a predetermined adjusted position circumferentially within said fixed ring-frame; forming rolls; means arranged to support said forming-rolls within said carrier-ring for adjustment circumferentially therein; and adjustable-means cooperatively associated with said forming-rolls support-

ing-means and said carrier-ring to secure said forming-rolls supporting-means in predeter-

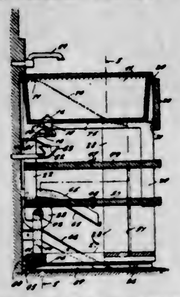
horizontally disposed foraminous liquid catching and liquid film retaining members, means for

2,458,911
DEVICE FOR DEPILATORY PURPOSES
Ellen Kerr, Coventry, England

a plurality of unfinished stones on radial lines so that the sides of adjacent stones are substantially parallel, cutting all of said stones by engagement

ing-means and said carrier-ring to secure said forming-rolls supporting-means in predetermined adjusted positions circumferentially within said carrier-ring.

2,458,907
SERVING COMBINATION
Boris Hoppe, Kew Gardens, N. Y.
Application August 2, 1944, Serial No. 547,735
8 Claims. (Cl. 280—44)



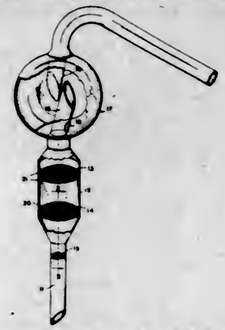
1. In a device of the character described, the combination of a movable server having a section thereof adapted to be moved vertically with respect to said server, said section comprising a top portion and legs supporting said top portion; vertically disposed support members swingably attached to said top portion and adapted to be swung from a first position at one side of said top portion to a second position underneath said top portion; means pivotally connecting said support members with a pair of said legs, said pivotal connecting means being operative in response to a force acting thereon to exert pressure on said section while coincidently permitting movement of said support members from said first position to said second position, and means cooperative with said pivotal connecting means for directing the pressure on said section upwardly in order to raise said section.

2,458,908
METHOD OF STRIPPING ELECTRODEPOSITED MANGANESE
James H. Jacobs, Boulder City, Nev., assignor, by mesne assignments, to Crimora Research and Development Corporation, Crimora, Va., a corporation of Virginia
No Drawing. Application November 13, 1944, Serial No. 563,325
2 Claims. (Cl. 204—105)

1. That method of stripping electrodeposited manganese in large pieces from a stainless steel cathode plate which is characterized by heating the plate with the deposited metal to a temperature of about 350° C. for a period of fifteen minutes to two hours; and then breaking the deposited metal from the cathode plate.

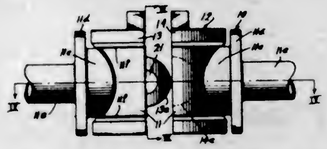
2,458,909
SPRAY TRAP
Harry J. John, Philadelphia, Pa.
Application April 22, 1947, Serial No. 743,213
3 Claims. (Cl. 183—94)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a vapor column, a liquid-film vapor contact scrubber comprising a vertical tube having horizontally disposed foraminous liquid catching and liquid film retaining members, means for holding said members in position, an enclosure above said tube forming a chamber, the upper end of said tube being disposed through the bottom of said chamber, said tube having an aperture through the side thereof at a point within and near the bottom of said chamber, and an



outlet tube through the top of said chamber, the ends of each tube within the chamber being open and facing in a direction away from the open end of the other tube, the foraminous members comprising two adjacent bowed screens, the center of the upper screen being bowed upwardly, the center of the lower screen being bowed downwardly.

2,458,910
QUICK DISCONNECT COUPLING
Paul P. Johnson, Willoughby, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application May 16, 1945, Serial No. 594,071
2 Claims. (Cl. 284—4)

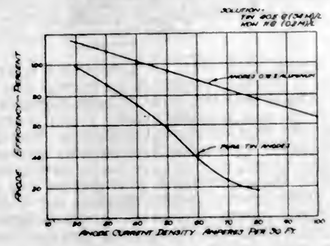


1. A self-sealing detachable coupling comprising a pair of identical ported coupling boxes having chamber-defining walls with flat mating end faces and defining when said faces are mated together a valve-operating chamber, a split plug valve rotatable in said chamber to couple the boxes together and connect the ports of the boxes in fluid flow communication, means retaining a valve segment in each box to close the ports thereof when the boxes are disconnected, a valve segment retained by one box having a mating face with a recess therethrough closed at the ends by the box when the segment is in uncoupled position, a valve segment retained by the other box having a cooperating mating face with a passaged protuberance readily seatable in the closed-ended recess to laterally align the boxes for coupling, said protuberance passage having both ends exposed in the uncoupled position of said other box to drain fluid therefrom and said passage forming a conduit connecting the ports of the boxes when the valve is rotated to couple the boxes.

2,458,911
DEVICE FOR DEPILATORY PURPOSES
Ellen Kerr, Coventry, England
Application July 29, 1947, Serial No. 764,532
In Great Britain August 29, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires August 29, 1964
3 Claims. (Cl. 128—354)

1. Improvements in devices for depilatory purposes comprising in combination a fixed member forming part of the holder for said device, a rod slidably mounted coaxially in said fixed member, a spring member coaxially mounted on said slidable rod and positioned between the top of the fixed member forming part of the holder and the top of the rod and a member connected to said rod which is adapted to be moved in relation to the fixed member forming the holder to operate the spring to grip the hair for removal.

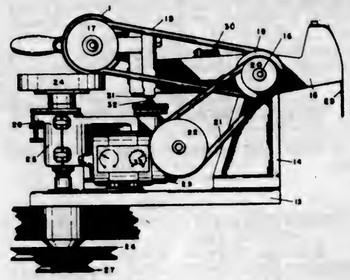
2,458,912
ELECTROPLATING OF TIN
Frederick A. Lowenheim, Plainfield, N. J., assignor to Metal & Thermit Corporation, New York, N. Y., a corporation of New Jersey
Application April 27, 1944, Serial No. 532,932
8 Claims. (Cl. 204—54)



1. In the process of electroplating tin by passing an electric current from an anode to cathode through an aqueous alkaline stannate bath the step of improving the anode efficiency of the bath which comprises employing an anode consisting essentially of tin alloyed with about 0.1 to 2% of a metal of the class consisting of aluminum, gallium and manganese.

2,458,913
METHOD OF PALLET STONE CUTTING AND POLISHING
Ralph B. Mentzer, Lancaster, Pa., assignor to Hamilton Watch Company, Lancaster, Pa.
Application June 19, 1946, Serial No. 677,642
1 Claim. (Cl. 51—283)

A method of finishing pallet stones of substantially parallelepiped form consisting in mounting a plurality of unfinished stones on radial lines so that the sides of adjacent stones are substantially parallel, cutting all of said stones by engagement with a diamond lap to a predetermined length in a single operation, surface polishing the top and exposed surface of said stones in another single operation, angle cutting the free end of



said stones to a surface conforming to a section of a conical surface, polishing all of said angled cut ends in a single operation, buffing the uppermost outer edge of all of said stones with a resilient diamond lap and polishing the inward end of the top surface of all of said stones to form a lead angle in still another operation.

2,458,914
SLIDER AND METHOD OF CONSTRUCTING THE SAME
Louis H. Morin, Bronx, N. Y., assignor of one-half to Davis Marinsky, Bronx, N. Y.
Application July 30, 1943, Serial No. 496,706
15 Claims. (Cl. 24—205.16)

1. A slider for fastener devices of the kind defined, said slider comprising a die cast body having spaced walls, an insert of denser, tougher material than said cast body, said insert comprising a frog portion centrally located with respect to the longitudinal axis of said walls with keying portions at each end thereof consisting of raised and depressed parts closely embraced by said cast body walls to form said slider.

2,458,915
MATERIAL HANDLING APPARATUS
George Bruce Palmer, Grosse Isle, Mich.
Application August 31, 1945, Serial No. 613,829
22 Claims. (Cl. 214—93)

1. In a material handling apparatus, an upright supporting frame, a plurality of arms adapted to extend outwardly from the frame, means shiftable on the frame for hingedly mounting said arms to swing about horizontal and vertical axes, a scraper for each arm, means for raising and lowering the inner ends of the arms to move the outer ends thereof toward and

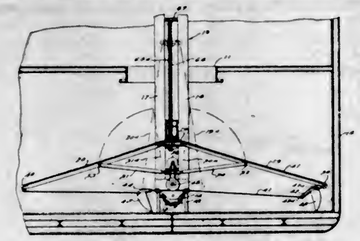
from the frame, means for swinging the arms

section, closure plates for the adjacent open ends

keystone shaped in cross-section in contact with the core and an outer portion of reduced width

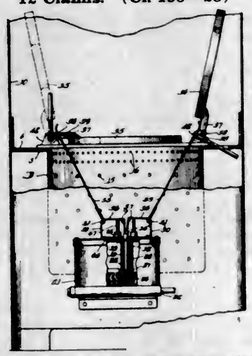
effecting relative rotation of the axes of the magnetic fields produced by said stator and rotor windings, and mechanical driving means inter-

from the frame, means for swinging the arms horizontally, and means associated with the arms



for shifting the scrapers toward and from the frame.

2,458,916
COMBINED BAFFLE AND OIL SUPPLY MEANS FOR OIL BURNERS
Gustave C. Peter, Wauwatosa, Wis.
Application November 29, 1946, Serial No. 712,814
12 Claims. (Cl. 158—28)



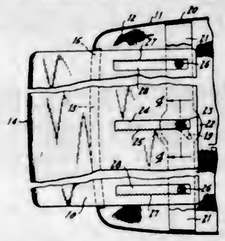
1. For an oil burner having a vaporizing chamber open at its upper end, a combined baffle and oil supply means, said means comprising a baffle plate mounted adjacent said opening and adapted to swing down from a relatively vertical position at one side of said opening to a position partially closing the same to regulate the flow of vapor from said burner, an operating rod in connection with said baffle plate, a valve for regulating the supply of fuel to the burner, reciprocable operating means for said valve, a bell crank lever pivoted intermediate its ends adjacent said valve and having one arm proximate to the operating rod for the baffle plate and the other arm engageable with the valve operating means, and a cam device on the operating rod engageable with one arm of the lever when the former is rotated to swing its associated baffle plate to down position, whereby it engages said arm to rock the bell crank and actuate the valve operating means toward its closed position.

2,458,917
MANNIKIN ADJUSTMENT DEVICE
Julius Prisco, Yonkers, N. Y.
Application October 19, 1946, Serial No. 704,516
3 Claims. (Cl. 223—68)

1. In a display form conforming to the general contours of the human figure and comprising a hollow upper section and a separate hollow lower section, closure plates for the adjacent open ends of the sections, a ball and socket joint carried by the closure plate of the lower section, a level adjusting post projecting toward the upper section from the ball of said joint, a collar affixed to the closure plate of the upper section in axial

alignment with the post and slidable therealong, said post being provided with a plurality of spaced lateral grooves and a common vertical groove feeding into said lateral grooves, and said collar being provided with a locking pin adapted to slide along the common groove into a desired one of said lateral grooves.

2,458,918
SUN VISOR
Thomas Rea, Detroit, Mich.
Application June 5, 1947, Serial No. 752,789
1 Claim. (Cl. 296—95)



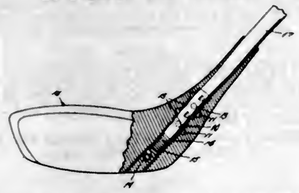
In combination with an automobile body, including a windshield and a horizontal slot in a recess above said windshield, both the slot and the recess being substantially co-extensive in length with that of the windshield, a visor slideably mounted under the roof of said automobile body and having its front portion disposed within said slot, the visor being provided in the mid-section thereof with a slot extending in the direction of the longitudinal axis of the automobile body and a similar slot parallel to the first named slot, in each side of the visor, a side of each slot being cut to form a rack, a pinion meshed into each rack, and crank means to rotate the pinion in the slot in the mid-portion of the visor to propel the visor outwardly or to retract it rearwardly, and a bead along the outer edge of the visor to fit into said recess when the visor is in its retracted position.

2,458,919
BASEBALL BAT
John E. Marsden, Philadelphia, Pa.
Application May 21, 1946, Serial No. 671,131
4 Claims. (Cl. 273—72)

1. As a new article of manufacture, a baseball bat having an axially extending core, a circular series of longitudinal wooden segments with the grain of the wood being generally radial throughout, each of said segments having an inner portion

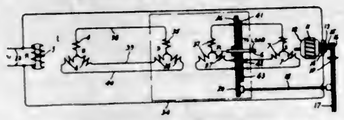
keystone shaped in cross-section in contact with the core and an outer portion of reduced width extending radially of said keystone portion to form shoulders, a plurality of wedge shaped segments each interposed between consecutive said outer portions and seated upon said shoulders, said core and all of said segments being adhesively united together.

2,458,920
GOLF CLUB
Ralph F. Wheeler, Springfield, and Emil J. Marciniak, Easthampton, Mass., assignors to A. G. Spalding & Bros. Inc., Chicopee, Mass., a corporation of Delaware
Application June 27, 1946, Serial No. 679,772
13 Claims. (Cl. 273—80)



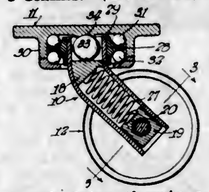
1. In a molded plastic article to be secured to a shaft to withstand high torque, means for connecting said shaft to said article comprising a metal sleeve secured to said shaft; a plurality of opposed laterally projecting fins lanced outward from the wall of the sleeve with an aperture in the wall at the base of each fin, said fins lying in longitudinal rows on the sleeve and extending in substantially radial direction therefrom, said fins being embedded in the plastic material of said article, and said plastic material extending into said apertures at least to the interior surface of the sleeve.

2,458,921
ANGULAR MOTION TRANSMITTING APPARATUS
Arthur P. Adamson, Ballston Spa, N. Y., assignor to General Electric Company, a corporation of New York
Original application August 1, 1946, Serial No. 687,550. Divided and this application March 27, 1948, Serial No. 17,453
4 Claims. (Cl. 318—24)



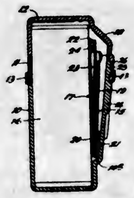
3. An electromotive device comprising a stator member having a winding thereon, a cooperating rotor member having a winding thereon connected to a commutator, a first pair of diametrically opposite brushes engaging said commutator for conducting current to said rotor winding, a second pair of diametrically opposite short-circuited brushes engaging said commutator, said second pair of brushes being spaced from said first pair of brushes around the periphery of said commutator, means comprising a rotatable member for effecting relative rotation of the axes of the magnetic fields produced by said stator and rotor windings, and mechanical driving means interconnecting said rotor and rotatable members.

2,458,922
CASTER
Herman P. Andresen, Chicago, Ill.; Ella Veil Andresen, executrix of said Herman P. Andresen, deceased, assignor of one-fourth to Ella Veil Andresen, one-fourth to Amanda M. C. Andresen, one-fourth to Edward W. H. Andresen, and one-fourth to Elsa C. M. Dettmer, as tenants in common
Application September 27, 1944, Serial No. 555,906
5 Claims. (Cl. 16—44)



1. A caster embodying therein a top plate, a post having a vertical upper end and an angularly disposed tubular lower end, means providing a swivel connection for the upper end of said post with said plate, a member arranged in the lower end of the post for a limited guided movement longitudinally thereof, laterally extending axle portions movable with said member, a wheel journalled on each axle portion, and means in said lower end of the post for cushioning the limited movement of said member under the action of shock imposed upon the caster.

2,458,923
CIGARETTE AND MATCH CASE
Howard L. Auten, Glen Ellyn, Ill.
Application October 3, 1945, Serial No. 619,941
5 Claims. (Cl. 206—38)



1. A cigarette case comprising a container generally oblong in cross section, and a closure therefor, said container and closure having their walls extended on one side to form a blister compartment adapted to receive a folded packet of matches, and a bar carried by said closure and extending across said blister compartment and adapted to extend under the fold of said match packet.

2,458,924
GOLF CLUB CARRIER
Ridgway Baker, Minneapolis, Minn.
Application June 26, 1946, Serial No. 679,403
9 Claims. (Cl. 280—36)

1. A golf club carrier comprising an upper ring member, a cup-like base member, a pair of rigid supporting bars extending between the ring mem-

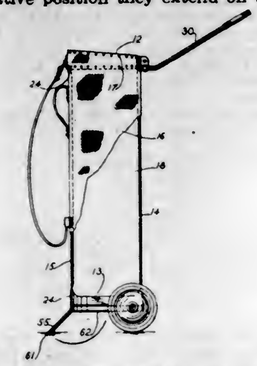
ber and the base member to form said members

tem, said optical system projecting a light image

justably mounted on the first electrode to rigidly support the element at an adjusted position with

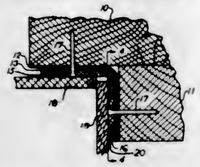
at one end an integral horizontal flat stub portion below the top face of said block center, said

ber and the base member to form said members into a rigid frame, a pair of axle sections pivotally secured to the lower surface of the base member wholly within the confines of the base member and adapted for rotation in a plane parallel with the base member in such a manner that when in a folded position they rest flat against the lower surface of the base member and when in an operative position they extend on either side



of the base member, and an open topped pan hingedly connected to the base member for enclosing said axle sections when the same are in a folded position, said pan having notches in its side walls to receive the axle sections when the same are in an operative position whereby the pan is operative to lock the axle sections against rotative movement when the same are in an operative position.

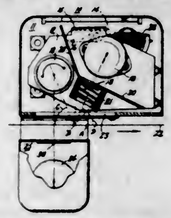
2,458,925
CORNER JOINT FOR WALLBOARDS
Cecil K. Barger, Statesville, N. C.
Application October 10, 1944, Serial No. 557,979
2 Claims. (Cl. 20—92)



1. Corner construction for interior wall coverings of a room in a building comprising an angular member secured to the framing members of the building and in the corner of a room, strips of material secured to the legs of the angular member and wall boards secured to the exposed surfaces of the strips, the adjoining edges of the wall board members being overlapped.

2,458,926
WEB SCANNING DEVICE
Merton O. Bassett, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 12, 1948, Serial No. 14,433
5 Claims. (Cl. 250—41.5)

1. In a photoelectric device for scanning a moving web, a pivotal support having mounted thereon a photoelectric tube and an optical system, said optical system projecting a light image on said web and comprising a light source and focusing means between said light source and said web, and means for moving said pivotal support between two predetermined positions to shift



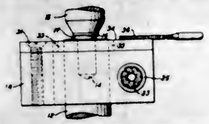
said light image on said web, said positions being such that said photoelectric tube receives diffusely reflected light in one said position and specularly reflected light in the other said position.

2,458,927
ELECTRICAL SWITCH DEVICE
Robert F. Beck, Paterson, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application November 6, 1944, Serial No. 562,243
4 Claims. (Cl. 200—164)

1. In a switch construction, a base having opposed walls with their confronting faces formed with elongated slots open at one end and closed at the other end, a movable contact operating arm having a portion provided with angularly related pairs of flat faces disposed in said base, said portion being provided with laterally extending trunnions seated in said slots at said other end to permit rotation of said arm from one position to another, a face plate secured to said base and closing the open ends of said slots, said face plate being provided with a slot receiving said arm for operation therethrough and integrally formed with resilient fingers engaging one pair of said flat faces to restrain said arm in one of said positions and for engaging another pair of said flat faces to restrain said arm in the other position when said arm is so operated, said fingers cooperating with said portion to maintain said trunnions seated in said elongated slots and thus permit rotation of said arm.

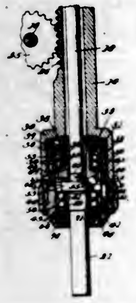
2,458,928
WELDING FIXTURE
Percy E. Brooks, Woodridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 6, 1946, Serial No. 660,026
3 Claims. (Cl. 219—4)

1. A fixture for a welding machine having relatively movable first and second electrodes with work engaging surfaces initially lying in parallel planes, the fixture comprising a wear-resisting element surrounding the first electrode and having a guide surface, an insulating member adjustably mounted on the first electrode to rigidly support the element at an adjusted position with its guide surface short of the work engaging surface of the first electrode a distance equal to the portion of the first electrode to be removed whereby the element may guide an abrasive tool



in a plane parallel with the initial work engaging surface, and an abrasive tool movable over the guide surface to remove the said portion of the electrode and produce a new work engaging surface for the electrode lying in the plane of the guide surface of the element.

2,458,929
CHIP BREAKING MECHANISM FOR METAL DRILLING AND LIKE MACHINES
Carleton B. Clark, Keene, N. H., assignor to Kingsbury Machine Tool Corporation, Keene, N. H., a corporation of New Hampshire
Application December 28, 1943, Serial No. 515,942
10 Claims. (Cl. 77—5)

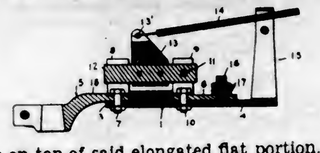


1. In metal drilling and like machines, a frame, a support movable on said frame and means so to move the same, a drill spindle rotatable in said support about an axis substantially parallel to such movement, a sleeve embracing the spindle axis and rockable to angular positions relative to said spindle axis, bearing means on said movable support for supporting the sleeve for rotation about its own prevailing axis, and an axial-thrust-transmitting driving element eccentrically mounted on said spindle and engaged with said sleeve, said element being effective to cause the spindle to drive said sleeve in rotation and also being effective to transmit thrusts between the spindle and sleeve, whereby to produce axial motion of the spindle compounded of the support and a cyclic movement caused by the angular position of the sleeve axis relative to the spindle axis.

2,458,930
MASTER SAFETY SWITCH
Fred Franklin Crooke, Jefferson City, Tenn.
Application April 17, 1947, Serial No. 742,023
1 Claim. (Cl. 200—52)

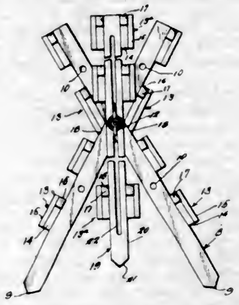
In a master safety switch, the combination of a horizontal plate-like switch base formed of insulating material and comprising a broad upstanding block center, said block center having

at one end an integral horizontal flat stub portion below the top face of said block center, said block center having at another end an integral horizontal elongated flat portion below the top face of said block center, a horizontal elongated terminal member curved vertically throughout part of its length and having its inner end resting flat on said stub portion, said terminal member having its inner end bearing against a side portion of said block center, detachable means fastening said terminal member and said stub portion together, a horizontal supplemental plate



resting on top of said elongated flat portion, fastening means detachably connecting said supplemental plate and elongated portion together, a terminal bolt extending through said supplemental plate, said terminal bolt having its inner end resting against the top face of said elongated portion, nuts on said terminal bolt above said supplemental plate, a contact jaw mounted on said terminal plate, a contact jaw mounted on said terminal member, and a switch blade pivotally mounted on one of said jaws and being adapted to engage the other jaw, substantially as shown and described.

2,458,931
CONVERTIBLE KNOCKDOWN GARDEN TRELLIS
Clarence A. Conklin, Northport, N. Y.
Application February 20, 1945, Serial No. 578,804
1 Claim. (Cl. 47—44)



A plant supporting trestle comprising in combination, a pair of upright end frames disposed in spaced parallel relation and each comprising a pair of crossed legs pivotally connected together at the intersection thereof, a plurality of blocks secured to the outer edge surfaces of said legs, said blocks being formed in the upper edge portions thereof with notches, said notches coacting with the adjacent surfaces of said legs to form keeper seats, and a plurality of stringers positioned in said seats and connecting said end frames together, a pair of said blocks on each frame being disposed adjacent the intersection of said legs and being provided at the lower edges thereof with undercut, bevel surfaces, one of said undercut blocks being provided on each of

said legs and the bevel surface thereof being en-

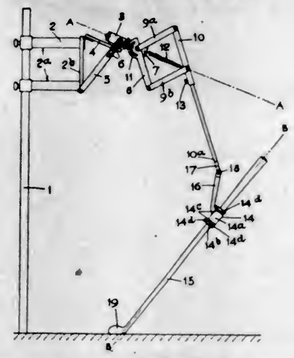
viding communication between said discharge and

ously seatable in the resulting registrable four

ent of the signal magnitude, the set of output

said legs and the bevel surface thereof being engageable with the outer edge surface of the adjacent leg, whereby said legs may be prevented from excessive spreading.

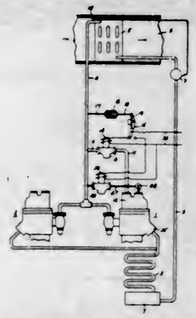
2,458,932
GOLF PRACTICING AND TEACHING APPARATUS
Rufus Frank Cottingham, Scunthorpe, England
Application January 18, 1946, Serial No. 641,885
In Great Britain August 22, 1945
1 Claim. (Cl. 273—35)



A device of the class specified comprising a supporting post adapted to be erected on the ground, a height-adjustable bracket on said post, a platform mounted on said bracket for adjustment of the angle of inclination of the platform toward the ground, a journal bearing on said platform, a stub shaft freely rotatably mounted in said journal bearing, an articulated parallel linkage of frame form attached to said shaft so as to rotate therewith and incorporating one limb constituting a control rod which extends beyond the linkage frame and one other limb which is directly swingable on said shaft, clamp means for setting said swingably adjustable limb of the frame in a fixed position relatively to said shaft, spring means associated with said linkage frame and tending always to pull said control rod toward the swingably adjustable limb of the frame, a control arm swivelly and pivotally jointed to said control rod, and club carrier means mounted on said control arm and including a freely revoluble sleeve adapted to receive and grip the shaft of a golf club, adjustment of the articulated parallel linkage in relation to said shaft setting the control rod in such a position as to dispose the club shaft for arcuate swinging in a desired plane of inclination in relation to the vertical.

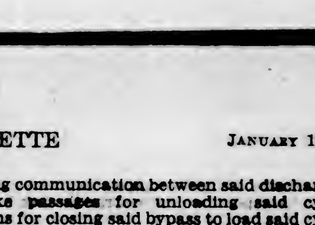
2,458,933
UNLOADER FOR RECIPROCATING GAS COMPRESSORS
Wayne E. Dodson, Caldwell, N. J., assignor to General Electric Company, a corporation of New York
Application December 18, 1946, Serial No. 717,002
5 Claims. (Cl. 230—22)

1. A reciprocating gas compressor comprising a cylinder having intake and discharge valves, means providing intake and discharge passages adjacent said intake and discharge valves respectively, an outlet connection communicating with said discharge passage, bypass means providing communication between said discharge and intake passages for unloading said cylinder, means for closing said bypass to load said cylinder, a check valve for preventing return of gas through



said outlet connection to said discharge passage upon opening of said bypass, and means rendered effective upon the loading of said cylinder for retaining said check valve in its open position to prevent vibration of said check valve.

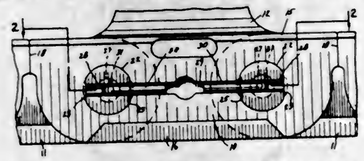
2,458,934
METHOD OF FORMING PRECISION BORE GLASS TUBING
Samuel James Everett, Thornton Heath, England, assignor to James A. Jobling & Co. Ltd., Sunderland, England, a British company
Original application November 22, 1941, Serial No. 420,121. Divided and this application December 28, 1945, Serial No. 637,572. In Great Britain February 8, 1941
6 Claims. (Cl. 49—84)



1. A method for providing a pre-formed thermoplastic tube with a fine quality internal surface comprising the steps of moving the tube over and in engagement with a surface having the dimensions of the desired internal dimensions of said tube, heating the tube in the vicinity of its engagement with said surface, and controlling the speed of movement of the tube so that the movement in the direction away from said surface is greater than that toward said surface.

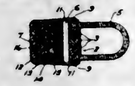
2,458,935
STRADDLE LINK CONNECTOR
Charles J. Forbes, Terre Haute, Ind.
Application August 22, 1947, Serial No. 770,079
11 Claims. (Cl. 74—254)

1. In a cutting chain structure of the cutter supporting straddle link type the combination of a pair of channel sectioned links having adjacent ends lapping, the straddle link nesting the connecting link of said pair of links, the lapping ends having registrable holes, a barrel simultaneously seatable in the resulting registrable four holes, a plate portion of the straddle link having a flat face provided in its barrel accommodating hole, the barrel being substantially cylindrical with a central bore therethrough and enlarged at one end, a rivet in the bore and having a head portion seated in the bore enlargement, the opposite end of the barrel having a transverse slot



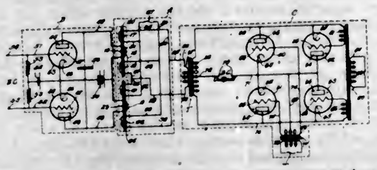
and shouldered to an appropriate depth and conform substantially to the flat face of the straddle link hole, the plate portion having an exterior longitudinally disposed groove, the rivet having an elongated end portion projecting initially beyond the barrel and finally disposed laterally thereof for simultaneous seating in the barrel slot and straddle link groove for retaining the assemblage together against axial separation.

2,458,936
LOOP PICKER
Clarence M. Fuller, Warwick, R. I., assignor to Holbrook Raw Hide Co., Providence, R. I., a corporation of Rhode Island
Application October 9, 1947, Serial No. 778,875
9 Claims. (Cl. 139—159)



1. A loop-picker comprising a multi-part core consisting in a hard block of animal hide shaped to contact the face of a picker-stick, a loop fastened to said block and extending rearwardly therefrom to attach it to the picker-stick, a plurality of inserts consisting in strips of alternate hard and soft material extending transversely of the core forwardly of the block, and a box-like cap of animal hide enclosing the front and four sides of the core with the inserts contained therein in full floating arrangement.

2,458,937
ELECTRICAL CONTROL CIRCUIT
Paul Glass, Chicago, Ill., assignor to Askania Regulator Company, Chicago, Ill., a corporation of Illinois
Application May 14, 1945, Serial No. 593,738
27 Claims. (Cl. 175—363)

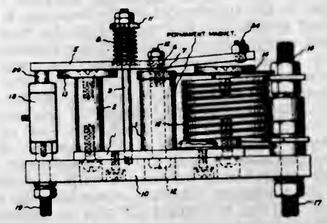


1. An electrical control circuit comprising a signal input circuit having two sets of output terminals and operable with a signal of any magnitude present to produce at one or the other only of the sets of terminals a direct current of constant magnitude larger than zero and independent of the signal magnitude, the set of output terminals at which current is produced being determined by the sign of the input signal, a saturable reactor circuit comprising a pair of saturable reactors each having an A. C. coil and a control coil, said control coils being connected one to each set of output terminals of said input circuit, and an A. C. supply circuit for an A. C. load, the A. C. coils of said reactors being connected in the supply circuit, and a rectifier circuit, connected to form the load for said supply circuit, including a pair of parallelly connected, alternately operating rectifiers and output terminals for the connection of a D. C. load thereto.

2,458,938
AUTOMATIC KEY CASE
Sydney Greenhow, Windsor, Ontario, Canada
Application May 10, 1946, Serial No. 668,938
3 Claims. (Cl. 70—456)

1. A holder of the kind described, comprising a double loop like frame having entrance and release gaps to and from the loops thereof, a web dividing the loops of the frame and having closure terminals for the gaps, and outwardly bowed flexible panels connected to the frame for encasing the latter and giving access thereto when external pressure is applied thereto.

2,458,939
CONTROL DEVICE
Chester I. Hall, Vischers Ferry, N. Y., assignor to General Electric Company, a corporation of New York
Application June 13, 1944, Serial No. 540,049
2 Claims. (Cl. 200—93)



1. Reverse current responsive control means comprising a three-legged magnet core, the middle one of said legs being provided with means for producing a predetermined polarizing magnetic flux in said magnet core, an armature mounted in magnetic flux conducting relation with said middle leg and for pivotal movement to an attracted position with one or the other of the two outside legs, spring means having a low force gradient biasing said armature to a first attracted position with a first of said outer legs, a coil on only the second of said outer legs, electric connections for normally energizing said

coil with a direct current in a direction to produce a magnetic flux in the same direction as said polarizing flux in said first outer leg and

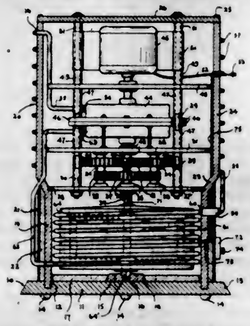
outer ends and semi-circular springs which are in inclined interleaved relation to each other con-

2,458,943
SAFETY ATTACHMENT
Isaac D. Houseman, Cleveland, Ohio

R''' and R'''' are mono-valent hydrocarbon radicals which are attached to silicon through carbon-silicon linkages and where the remaining

coil with a direct current in a direction to produce a magnetic flux in the same direction as said polarizing flux in said first outer leg and opposite to said polarizing flux in said second outer leg thereby normally to hold said armature in said first attracted position with the aid of said spring means, said coil when energized in the opposite direction reversal of current producing a magnetic flux in opposition to said polarizing flux in said first outer leg and in the same direction as said polarizing flux in said second outer leg thereby in response to a predetermined reverse current in said coil to move said armature with a snap action against its bias to its attracted position with said second outer leg, and electric circuit control means operated by said armature.

2,458,940
REFRIGERATING DEVICE FOR THE MANUFACTURE OF FROZEN COMESTIBLES
Reginald F. Harless, Ossining, N. Y.
Application June 16, 1945, Serial No. 600,153
5 Claims. (Cl. 62—114)



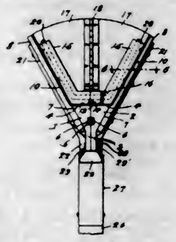
1. A freezing unit comprising a housing of substantially cylindrical form, a base having a groove to receive the lower end of the housing, a motor, a compressor, and a speed reduction gearing driven by the shaft of the compressor, said motor, compressor and speed reduction gearing being mounted in the upper end of the housing, a food container adapted to be centered on the base and enclosed within the lower end of the housing, an agitator rotatably mounted within the container and adapted to be loosely connected with the speed reduction gearing to be driven thereby, cooling coils surrounding the exterior of the housing and connected with the discharge end of the compressor, freezing coils on the interior of the housing and surrounding the food container, said freezing coils being connected with the intake side of the compressor, a pipe connecting the cooling coils and the freezing coils and an expansion valve in said pipe.

2,458,941
SPRING WHEEL
Henry Levene Harris, Richland, Wash.
Application July 22, 1946, Serial No. 685,507
5 Claims. (Cl. 152—84)

1. A device of the character described, comprising a rim adapted to support a vehicle tire, blocks secured to the outer side of said rim, blocks secured to the inner side of said rim intermediate the blocks secured to the outer side thereof, a hub having conical shaped inner and outer ends and semi-circular springs which are in inclined interlaced relation to each other con-

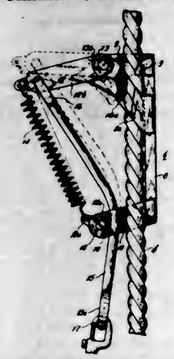
necting said blocks and said hub to form a spring wheel.

2,458,942
COLLAPSIBLE HOD
Tyris M. Hevener, Los Angeles, Calif.
Application September 4, 1945, Serial No. 614,241
1 Claim. (Cl. 72—134)



A hod including hingedly connected bottom strips, wedge-shaped in cross section, normally contacting along their inner faces along a line drawn longitudinally through the center of the hod, and normally diverging upwardly along their outer sides, the upper faces thereof normally meeting along said center line whereby to form a flat bottom, there being opposed grooves formed in the inner faces and spaced from the upper faces, a sealing means mounted in one of the grooves and proportioned to be received in the opposite groove, depending flanges on the strips extending the length thereof and proportioned to normally engage each other along said center line, a shoulder rest hinged to one of the flanges, a catch means hinged to the shoulder rest, for locking engagement with the hinge, whereby to provide a preliminary lock for the bottom strips, side boards secured to the outer sides of the strips, reinforcing frames respectively connected to the inner sides of the respective side boards, and to the upper faces of the bottom strips, stop flanges at one end of the reinforcing frames, hingedly connected segmental end sections, constituting an end board, sealably engageable by the stop flanges, hinge connections between the respective end sections and side boards, jaws fixedly connected to the respective side boards and proportioned to lockingly embrace the depending flanges, stem sections rigid with the jaws and engageable with each other to form a sectional stem, a handle, and means carried by the handle adapted to removably connect the handle to the stem.

2,458,943
SAFETY ATTACHMENT
Isaac D. Houseman, Cleveland, Ohio
Application September 10, 1947, Serial No. 773,141
3 Claims. (Cl. 188—65.2)

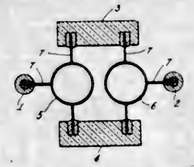


2. In safety means for a workman while working on a scaffold, the combination with a safety line, of a mechanism arranged to be adjustably clamped to the safety line, said mechanism consisting of a vertically disposed bar provided with upper and lower alined pairs of laterally extending arms through which the safety line extends, a lever fulcrumed on and between said upper pair of arms, clamping elements carried by said bar and the inner arm of said lever in opposed relation and arranged to engage and disengage said safety line, a spring connected to the outer arm of said lever and arranged to swing said lever in a direction to effect engagement of said clamping elements with said safety line under pressure, whereby said mechanism is adjustably fixed to and supported by said line, an operating rod pivotally connected to the outer arm of said lever and extending therefrom through said lower pair of arms and adapted to be connected to the workman, said rod when moved in a direction in opposition to the tension of said spring serving to disengage the clamping elements from said safety line and when moved in the opposite direction due to the weight of the workman in falling serving to effect a rigid clamping engagement of said clamping elements with said safety line, whereby the workman is held in a suspended position on said safety line, and a device supported at its opposite ends in the outer ends of said lower pair of arms and cooperating with the latter to guide said rod when it is moved in either direction.

2,458,944
ORGANO-SILOXANES AND METHOD OF MAKING THEM
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application March 20, 1944, Serial No. 527,349
6 Claims. (Cl. 260—46.5)

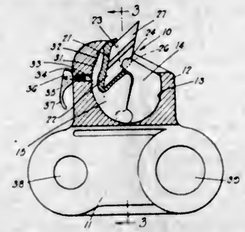
1. An organo-siloxane consisting essentially of oxygen atoms and units which correspond substantially to the general formulae $=Si=$, $RR'Si=$ and $R''R'''R''''Si-$, respectively, said units being the only silicon units present in said siloxane and being joined to each other by said oxygen atoms through silicon-oxygen linkages, where R, R', R'', R''' and R'''' are mono-valent hydrocarbon radicals which are attached to silicon through carbon-silicon linkages and where the remaining valences of the silicon atoms are satisfied by said silicon-oxygen linkages.

2,458,945
ELECTRIC DISCHARGE TUBE COMPRISING ELECTRODES SECURED TO RODS
Johannes Cornelis Janssen, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application January 15, 1946, Serial No. 641,302
In the Netherlands March 18, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 18, 1962
7 Claims. (Cl. 250—27.5)



1. An electric discharge tube comprising an envelope, a member substantially fixed in space relation thereto and having a tubular portion within said envelope, said portion being provided with a longitudinal cavity extending substantially along the entire length of said member and having an opening communicating with the space within said cavity, a hard filling material in said cavity, a supporting member having a portion thereof extending transversely into said cavity through said opening and affixed in said material, and a tube element supported by said supporting member.

2,458,946
BIT HOLDER FOR COAL-CUTTING CHAINS
Edwin F. Johnston, Earlington, Ky.
Application August 28, 1945, Serial No. 613,110
4 Claims. (Cl. 262—33)



1. A chain link having an outwardly projecting block provided with a substantially cylindrical recess, a pair of lugs which combined have their surfaces conforming to the walls of the said recess and adapted to hold a bit, one of the lugs provided with a pocket shaped to conform to the contour of a substantial portion of the bit, said lugs having slip hinge connections at their lower ends, the other lug having a protruding upper edge provided with a socket into which an edge of the bit is adapted to project and whereby the said bit is locked within its seat, means whereby the lugs may be held against

movement, a ratchet formed on the outer wall of one of the lugs and a spring controlled dog adapted to engage the ratchet teeth and forming

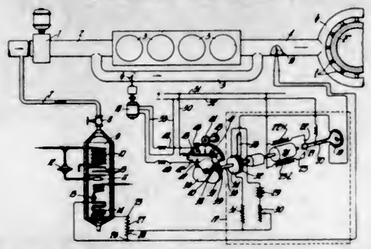
ternal end of said bushing may be sealed, said locking member being resilient and positioned relative to said bushing fuse, passageway and

2,458,951
DRILL BIT LOOSENER
Samuel H. Malinak, Butte, Mont.

in shape, one of said second mentioned sections joining the front of the first mentioned section and forming the outside of the boot, the other of said second mentioned sections joining the rear

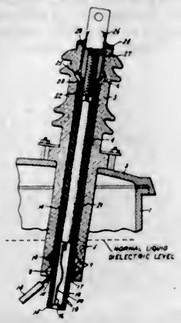
movement, a ratchet formed on the outer wall of one of the lugs, and a spring controlled dog adapted to engage the ratchet teeth and forming said locking means, and means for holding the dog from engagement with the ratchet teeth.

2,458,947
METHOD AND MEANS FOR IMPROVING BLAST FURNACE OPERATIONS
Clarence D. King, Pittsburgh, Pa., and Peer D. Nielsen, Lorain, Ohio, assignors to United States Steel Corporation of Delaware, a corporation of Delaware
Application June 22, 1943, Serial No. 491,822
11 Claims. (Cl. 236—44)



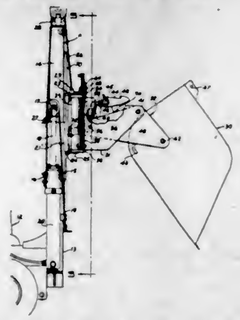
1. In the operation of a blast furnace, the method which comprises automatically and continuously varying the temperature of the hot air blast supplied to the furnace in accordance with variations in the humidity of the cold air supply.

2,458,948
PROTECTIVE DEVICE
George F. Lincks, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application March 21, 1945, Serial No. 583,960
8 Claims. (Cl. 200—133)



1. In combination, an electrical device including a high voltage bushing, a passageway in said bushing, an annular recess in said bushing adjoining said passageway, a renewable bushing fuse having a terminal adapted to be inserted in said passageway, a locking member insertable in said passageway having an opening therein through which said terminal extends, and means adapted to threadedly engage said terminal for forcing said locking member into said recess to hold said fuse immovable in said passageway whereby the end of said passageway at the external end of said bushing may be sealed, said locking member being resilient and positioned relative to said bushing fuse, passageway and recess for release therefrom upon disengagement of said means from said terminal.

2,458,949
LOAD CARRIER MOUNTING
Le Grand H. Lull, Minneapolis, Minn.
Application November 9, 1945, Serial No. 627,694
25 Claims. (Cl. 214—113)



1. In a loader having an upright guide surface and a carrier frame movable upwardly and downwardly with respect thereto, a first frame rigidly supported by said carrier frame, a second frame tiltably supported on said first frame for downward swinging movements at one end, a tubular cross member on said second frame, means carried by said cross member for engagement by said guide surface as the frames move upwardly and operative thereby to tilt said second frame, and a load carrier operatively connected to and tiltable with said second frame.

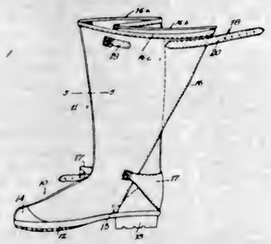
2,458,950
CHILD'S NURSING STAND
Rodolfo Luzardo, Chacao, Venezuela
Application September 11, 1945, Serial No. 615,589
9 Claims. (Cl. 128—1)

9. A child's nursing stand comprising a pedestal, a rigid arm attached to the pedestal and extending outwardly therefrom, a platform supported by said arm, the latter comprising two sections, substantially horizontal means for pivotally connecting the sections so that the platform can be raised and lowered about said means as an axis, and means for securing the sections of said arm in adjusted position.

2,458,951
DRILL BIT LOOSENER
Samuel H. Malinak, Butte, Mont.
Application December 12, 1945, Serial No. 634,610
4 Claims. (Cl. 29—243)

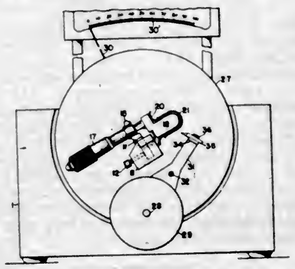
1. A device for removing a drill bit comprising a foundation, a body mounted upon said foundation and having a base and a web extending upwardly from the base and a head extending along the top of the web and projecting transversely therefrom, said head being formed intermediate its length with a transversely extending slot and at one side of the web being formed with recesses leading from the slot longitudinally of the head, jaws disposed vertically against the web with upper portions in the recesses, a strip extending between said jaws and across outer side faces thereof, bolts passing through end portions of said strip and through openings in the jaws and through the web, the bolt receiving opening of the movable jaw being elongated transversely thereof to permit movement of the movable jaw toward and away from the stationary jaw, a rocker bar pivotally mounted upon the bolt passing through the movable jaw at the opposite side of the web from the movable jaw, said rocker bar extending longitudinally of said body and having a front end portion bent to form a stem projecting laterally from the body, a block pivotally mounted upon said stem and extending upwardly therefrom and formed with a recess extending transversely thereof and with a tongue extending laterally from the block flush with the bottom of the recess, a spring engaging the rear end of the rocker bar for tilting the rocker bar about its pivot and urging the forward end of the rocker bar and the block upwardly, and means for moving the movable jaw toward the stationary jaw to grip a drill disposed between the jaw and through the slot of the body and hold the drill firmly in place with a bit of the drill extending through the recess of said block.

2,458,952
LEGGING BOOT
Assad M. Maliuk, New York, N. Y.
Application April 6, 1945, Serial No. 586,923
1 Claim. (Cl. 36—4)



An article of footwear in the form of a boot comprising a sole member and a legging member attached thereto, said legging being made of substantially three sections, each of said sections extending from the sole of the boot to the top thereof, one of said sections forming the inner side of a foot and leg portion of said boot and being substantially rectangular in shape, the other two sections being substantially triangular in shape, one of said second mentioned sections joining the front of the first mentioned section and forming the outside of the boot, the other of said second mentioned sections joining the rear of the first mentioned section and forming the counter of the boot, the other edges of said second mentioned sections being joined together at approximately the beginning of the heel adjacent the sole at the outside thereof, said second mentioned sections forming a portion with the upper ends thereof when partially wrapped projecting outwardly to the rear of the heel portion of the sole member and being adapted to be wrapped about the leg in the closed position to form a legging.

2,458,953
APPARATUS AND METHOD FOR DETERMINING THE SCUFF RESISTANCE OF LEATHER
Charles W. Mann, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of Agriculture
Application February 24, 1947, Serial No. 730,578
10 Claims. (Cl. 73—7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An apparatus for determining the scuff resistance of material such as leather, comprising a scuffing-tool support means including a pendulum, means for fastening the scuffing tool to the pendulum; specimen-holder means for the material being tested, which holder is mounted for independent rotation about an axis parallel to that of the pendulum, the specimen-holder means including a work arm carrying a specimen support, means for fastening the material on the specimen support, and means for moving the specimen support transversely to the axis of rotation of the specimen holder to adjust the radial distance between the surface of the material and the axis of rotation of the scuffing-tool support and to pre-set the radial overlap between the surface of the material and the cutting edge of the scuffing tool; means for turning the specimen holder through an arc; and means for indicating the displacement of the pendulum as the cutting tool scuffs through the material.

2,458,954
AUTOMATIC CONTROL SYSTEM FOR ELECTRIC CIRCUITS
Nemesio Márquez, Buenos Aires, Argentina, assignor to Francisco Ardila Cárdenas, Rio de Janeiro, Brazil
Application November 6, 1945, Serial No. 627,029
In Argentina February 23, 1945
12 Claims. (Cl. 175—294)

6. Automatic control device for electric circuits for the operation, security and protection of elec-

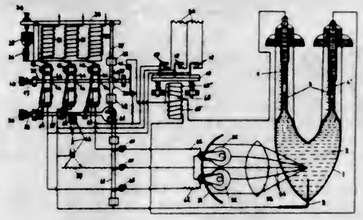
tric motors and all kinds of electrically-operated apparatus and appliances, comprising a load circuit, a spring-loaded interruptor in said circuit,

of the sections of the said second sheet matching and underlying two of the sections of the said first sheet, the portions of the cover underlying

2,458,957
TEMPERATURE COMPENSATOR FOR ELECTRICAL REGULATORS
William G. Neild, Warren Point, N. J., assignor

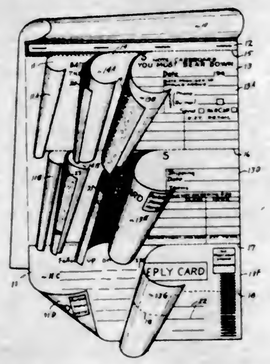
prising a ring gear formed with a series of oblique ports extending inwardly from the periphery thereof to the spaces between adjacent teeth, each such port having a wall which constitutes a

tric motors and all kinds of electrically-operated apparatus and appliances, comprising a load circuit, a spring-loaded interruptor in said circuit, an electro-magnet having two coils with opposite windings for normally maintaining said interruptor in its circuit-closing position, a mechanically operated interruptor in said circuit, a slidable bar for operating this last-mentioned interruptor and means provided on this bar for imparting a sliding movement thereto, electro-magnetic means included in said circuit and adapted to act upon a spring-loaded lever and operatively connected to said slidable bar for operating said mechanically



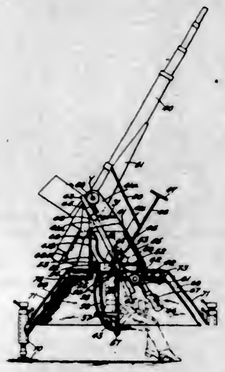
operated interruptor in case of phase failure in said circuit, bimetallic members included in said circuit and adapted to act upon said slidable bar for operating said mechanically operated interruptor in case of excess current in said circuit, a temperature-responsive switch device having two adjustable contact elements each connected with one of the two coils of said electro-magnet for causing said spring-loaded interruptor to become operative under the action of its spring in both cases of excess voltage and of under voltage in said circuit, and electric heat-generating means included in this circuit for operating said temperature-responsive switch device.

2,458,955
SPECIAL ORDER FORM
Jack Moss, Youngstown, Ohio
Application December 20, 1944, Serial No. 569,045
2 Claims. (Cl. 282—23)



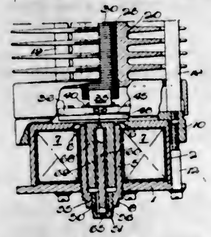
2. A special order form comprising a cover having at least two printed sheets positioned therein, the first of the said printed sheets divided into several sections, and the second of the said sheets divided into several sections, at least two of the sections of the said second sheet matching and underlying two of the sections of the said first sheet, the portions of the cover underlying the said printed sheets being divided into several sections at least two of which match and underlie the said printed sheets, carbons interposed between the said printed sheets, the said first sheet having one of the said sections including a form for entering the customer's order, another section including a form for the department manager's order, and another section including a combined business reply card and address stub, the said second sheet including a form for duplicates of the customer's order and the department manager's order, the said cover underlying the said printed sheets having forms of which correspond with the sections of the said second sheet and an additional section which comprises a follow-up post card.

2,458,956
GUN MOUNTING
Lewis Motley, London, England
Application July 16, 1943, Serial No. 494,992
In Great Britain June 26, 1942
3 Claims. (Cl. 89—37)



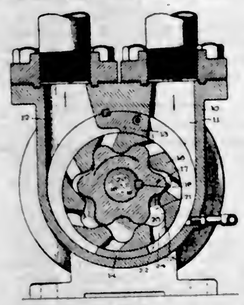
1. In a gun mounting of the class described, including a main armored chamber provided with a roof having an opening therein of a size at least sufficiently large to accommodate the passage of the head of a gunner therethrough, an auxiliary head-protecting armored chamber mounted on the roof of the main armored chamber over the opening aforesaid and freely rotatable bodily relative thereto, said auxiliary chamber having provision for pivotally mounting a gun thereon for movement in elevation relative thereto about a horizontal axis, with the gun disposed wholly outside of both armored chambers, and said gun being also freely movable in traverse about a vertical axis responsive to rotation of the auxiliary chamber, the combination of transmission means extending from the gun to a point outside of the auxiliary chamber and accessible to the gunner from within the main armored chamber for adjusting the gun in elevation, said transmission means comprising a longitudinally shiftable rack member geared at the outside of the auxiliary chamber to the gun, at one end, and a hand-control member disposed within the main armored chamber and geared to the rack member at its other end, said hand-control member being mounted on the auxiliary chamber for bodily movement therewith.

2,458,957
TEMPERATURE COMPENSATOR FOR ELECTRICAL REGULATORS
William G. Neild, Warren Point, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application March 20, 1945, Serial No. 583,811
4 Claims. (Cl. 201—51)



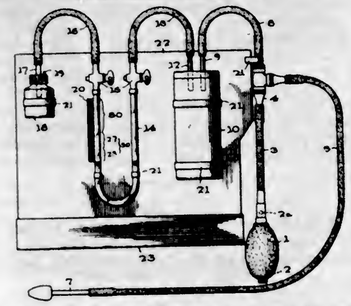
1. An electrical regulator comprising a variable resistance element, an electromagnetic winding, a spring biased armature operated by said electromagnetic winding for regulating said variable resistance element, a cylindrical core, means for adjustably mounting the cylindrical core relative to said electromagnetic winding, said cylindrical core formed of an iron bearing material, a second core formed of an iron bearing material slidably mounted in said cylindrical core and positioned in spaced relation to said armature, a member adjustably mounted at the outer end of said cylindrical core, a rod positioned between said member and said second core and formed of a material having such a greater temperature coefficient of expansion than that of the material of the cylindrical core that the elongation of said rod causes the position of said second core to vary with temperature, and said cylindrical core adjustable for changing the magnetic leakage of said second core to vary the control characteristic of the regulator independently of the air gap between said second core and the armature.

2,458,958
INTERNAL GEAR PUMP AND COMPRESSOR
Reginald J. S. Pigott and Ernest A. Mori, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application April 30, 1947, Serial No. 744,992
8 Claims. (Cl. 103—126)



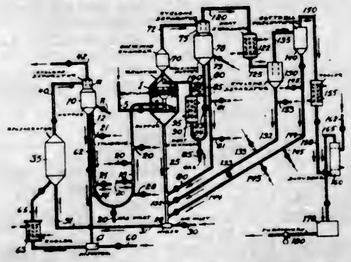
1. In a pump having an encased internally toothed ring gear and a pinion of one tooth difference in mesh therewith, the improvement comprising a ring gear formed with a series of oblique ports extending inwardly from the periphery thereof to the spaces between adjacent teeth, each such port having a wall which constitutes a tapered pickup lip, the profile of which merges with the contour of the advancing tooth.

2,458,959
PORTABLE DEVICE FOR CONTINUOUS PRESSURE POLITZERIZATION
Orr E. Reynolds, Washington, D. C., and Loyal G. Goff, Midway Island, Va.
Application December 27, 1945, Serial No. 637,408
12 Claims. (Cl. 128—1)



1. A portable politzerizer apparatus for relieving total or partial evacuation of the middle ear and which comprises a manually activated device for producing pressure, a surge tank receiving the pressure developed by said device, a mercury manometer for indicating and relieving above a predetermined degree the pressure within said surge tank, and a nozzle in communication with said surge tank for continuously releasing pressure therefrom.

2,458,960
APPARATUS FOR REACTIONS REQUIRING SHORT CONTACT TIME
Bruno E. Roetheli, Cranford, and Walter G. Scharmann, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application November 28, 1942, Serial No. 467,162
4 Claims. (Cl. 23—288)



1. Chemical reaction apparatus comprising in combination a hopper in elevated position and adapted to contain powdered solids, an elongated downflow standpipe extending from said hopper, a standpipe in communication with the downflow standpipe and arranged for upflow, at least one branch pipe adapted to discharge gas into

each of said standpipes for fluidizing powdered solids therein, a reaction-chamber-containing

ture, each such hole being countersunk on one side of the disk to receive the head of a faster-

diate wall to permit the different materials to be unwound therefrom, inclined cutting edges on said

posed, a second type of said playing spaces bearing indicia designating opportunities for investment, and indicia in said chance spaces designat-

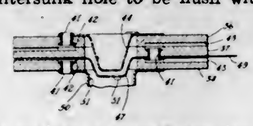
each of said standpipes for fluidizing powdered solids therein, a reaction-chamber-containing vessel in elevated position, walls defining said reaction chamber in the upper portion only of said vessel, said upflow standpipe having an extension projecting into said vessel, an inlet conduit adapted to introduce gaseous material into said vessel, mixing means within said vessel, said mixing means receiving the end of the extension of said upflow standpipe carrying solids and the end of the conduit for introducing gaseous material into said vessel, whereby said solids and gaseous material are thoroughly mixed to form a suspension, means for passing the resulting suspension into the reaction chamber, a plurality of solid-gas separators disposed in the upper portion of said vessel adjacent said reaction chamber, said reaction chamber having an outlet in the upper portion thereof communicating with the inlets of the separators, conduit means extending from the upper portion of said vessel whereby gaseous material may be withdrawn after discharge from the separators, and conduit means extending from the bottom of said vessel whereby solids may be withdrawn.

2,458,961
TELESCOPING TUBE SCREW JACK
Charles A. Snyder, Philadelphia, Pa.
Application August 11, 1944, Serial No. 549,028
7 Claims. (Cl. 254—100)

1. A jack comprising an outer barrel, an inner barrel therein, a base for the inner barrel, means operable to extend said barrels, jaw means on the outer barrel for clamping engagement with a part to be lifted, said jaw means including an element adjustably mounted by the outer barrel and engageable with the inner barrel to prevent relative turning of the barrels during extension.

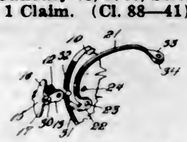
2,458,962
CATHODE-RAY TUBE
Edward Eric Shelton, London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 12, 1946, Serial No. 647,010
In Great Britain October 18, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 18, 1964
8 Claims. (Cl. 250—27.5)

1. An electrode assembly for an electron gun unit of a cathode ray tube comprising a first parallel-faced electrically insulating annular block disk member to support an electrode having a central aperture and a plurality of spaced holes symmetrically arranged around the central aperture, each such hole being countersunk on one side of the disk to receive the head of a fastening rivet, an electrode embodying an active portion extending into the central aperture and an encircling anchoring portion with the latter portion shaped to extend over the symmetrically disposed holes of the disk and to lie flat against the face of the disk on the side opposite the countersunk ends of the holes, a rivet through each hole to fixedly secure the anchoring portion of the electrode to the disk with the rivet head on the end away from the anchoring portion fitting down in the countersunk hole to be flush with or below



the disk surface, a second annular block disk identical in construction with the first disk and serving to support a second electrode in predetermined position and extending into its central aperture and spaced relation relative to the electrode on the first disk, each disk having countersunk recesses symmetrically disposed around the central aperture to be opposite the rivet holes and to accommodate any rivet heads not flush with or below the associated disk surface, so the disks may be assembled in close surface-to-surface relation without interference from the rivets that anchor the electrodes to the disk.

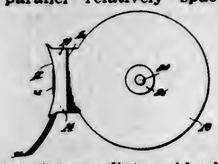
2,458,963
DETACHABLE BRIDGE-BRACE-BAR SPECTACLE CONSTRUCTION
Frederick A. Stevens, Providence, R. I.
Application January 23, 1946, Serial No. 642,890
1 Claim. (Cl. 88—41)



In an ophthalmic mounting a bridge having a lens strap with an ear to extend along a face of a lens, said ear having a hole therein and in addition an opening extending therethrough, a lens having a hole to register with said hole in said ear and a recess in its edge to register with said opening, a high arm designed to extend along the top edge of the lens and having a support at one end with a projection to extend into said opening and recess and also having a hole to register with said holes and a securing member to extend into said holes to hold the lens strap and high arm assembled with the lens.

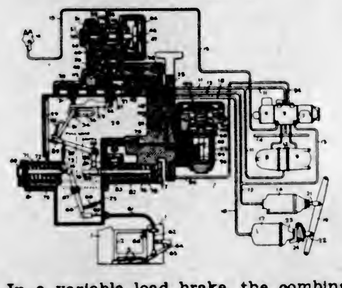
2,458,964
CAMBRIC AND LINEN TAPE DISPENSER
Harold E. Stevenson, Long Beach, Calif.
Application June 25, 1946, Serial No. 679,239
1 Claim. (Cl. 57—10)

A device of the character described, comprising a concavo-convex shaped base which is adapted to engage and conform to the curvature of an electrical cable, inner, outer and intermediate extensions on said base extending outwardly of the convex face thereof, inner, outer and intermediate, circular walls secured to the extensions on said base means mounted transversely of said walls to mount different insulating materials thereon between and separated by said intermediate wall to permit the different materials to be unwound therefrom, inclined cutting edges on said base and parallel relatively spaced straight



elongated slots intermediate said edges through which the material is trained for application to the electrical cable.

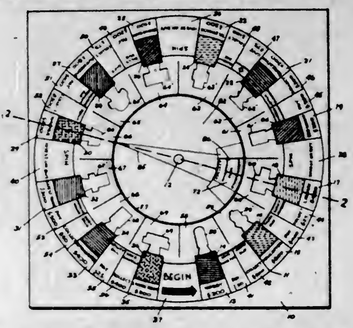
2,458,965
VARIABLE LOAD BRAKE
Henry Norton Sudduth, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application November 25, 1944, Serial No. 565,130
8 Claims. (Cl. 303—22)



1. In a variable load brake, the combination with a vehicle having a truck including suspension springs, of a relay for modifying the intensity of brake applications; ratio controlling means adjustable to vary the setting of said relay progressively between a no load and a full load setting; a motor for shifting said ratio controlling means in one direction; stop means for limiting the shift of the ratio controlling means by said motor; sensing means on the truck responsive to load deflection of the suspension springs; and a Bowden wire operatively connecting said sensing means with said stop.

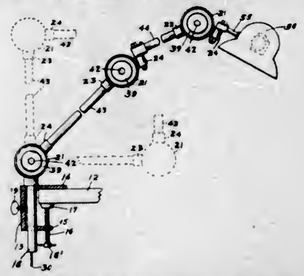
2,458,966
GAME BOARD AND PLAYING PIECES FOR A CHANCE CONTROLLED GAME
Jefferson P. Waldrop, Arlington, Va.
Application March 13, 1945, Serial No. 582,567
6 Claims. (Cl. 273—134)

6. In game apparatus of the type with which playing men are advanced along playing spaces of a plurality of types on a game board in accordance with chance means and with which a spinner is provided to designate certain chance spaces, the novel features comprising the provision of indicia in a first type of said playing spaces designating the purchase value of various different household articles which may be purchased by a player whose playing man is moved to playing spaces of said first type, a plurality of playing pieces bearing representations of said different household articles, said game board adjacent the playing spaces of said first type having recess means for receiving said playing pieces and in which said playing pieces may be disposed, a second type of said playing spaces bearing indicia designating opportunities for investment, and indicia in said chance spaces designating the outcome of said investments, whereby players whose playing men alight on one of said



first type of playing spaces may purchase and remove the household article disposed in the adjacent recess while players whose playing men alight on one of said second type of playing spaces may invest and determine the outcome of the investment by spinning said spinner.

2,458,967
SUPPORT FOR ADJUSTABLE LIGHTING FIXTURES
Arthur E. Wiedenhoeft, Chicago, Ill., assignor, by mesne assignments, to Mitchell Manufacturing Company, a corporation of Delaware
Application October 24, 1944, Serial No. 560,114
3 Claims. (Cl. 248—276)



1. In an adjustable fixture of the enclosed wire frictional holding type a plurality of hollow arms, a pair of rotatable plates each having a hollow sleeve at one side thereof the axis of said sleeves lying in the same plane as axes of said hollow arms and a recess from the hollow sleeve through to one side of the plate, the plates having central wire openings and being rotatable upon a common axis when placed together, clamping means for frictionally fastening the plates together, friction discs disposed between the plates, and between said plates and said clamping means, for varying frictional engagement of the plates, depending upon the load which they are to carry, and the plates being rotatable without twisting the wires enclosed in the joint cover plates receivable into recesses in the rotatable plates, and suitable clamping means for holding cover plates in place.

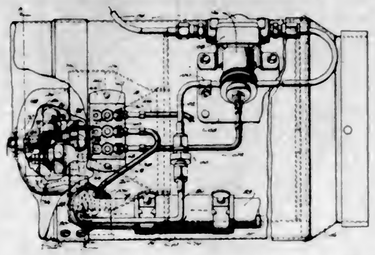
2,458,968
INTERNAL-COMBUSTION HEATER HAVING MEANS TO PREVENT FUEL CONTAMINA-

human figure or the like having a second permanent magnet fixed therein in a predetermined longitudinal portion thereof, said body conforma-

2,458,972
METHOD OF MAKING A BAG HAVING A FILLER MOUTHPIECE IN ONE END

means, means for causing each of the so split beams to strike separate radiant energy detectors and photometering means for determining the relative outputs of the detectors.

2,458,968
INTERNAL-COMBUSTION HEATER HAVING MEANS TO PREVENT FUEL CONTAMINATION OF THE VENTILATING AIR
Lyan A. Williams, Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application November 6, 1943, Serial No. 509,161
2 Claims. (Cl. 126—116)



1. An internal combustion heater of the class described, comprising a ventilating air casing, a heat exchanger located within said casing, a liquid fuel burner for supplying hot gases to said heat exchanger including a fuel spray nozzle removably attached to one end of said burner, said burner being located within said casing at one end of said heat exchanger so as to provide space for ventilating air to flow through said casing around said burner, a fuel line leading to said nozzle, a fitting exterior to said burner and within said casing for connecting said fuel line to said nozzle, a jacket forming a combustion air space surrounding said burner and open at the rear end thereof to permit ready access to said burner for insertion or removal of said nozzle, fitting, or fuel line, a detachable cap for closing the open end of said jacket and enclosing said fuel line and fitting, a conduit for conducting combustion air to the interior of said jacket and cap, said air conduit having its inlet end located remotely from said heater, and said fuel line being located inside said conduit between said cap and a point outside of said casing whereby said nozzle is easily removable for cleaning and whereby fuel leakage at said nozzle or fitting cannot contaminate the ventilating air flowing through said casing and heat exchanger and around said burner.

2,458,969
MYSTERY TOY OR PUZZLE
Jack C. Wilson, Garden City, N. Y.
Application February 5, 1948, Serial No. 6,374
2 Claims. (Cl. 46—45)

1. In a magnetic toy, the combination of a non-magnetic casing having two adjacent chambers, one open and the other closed, separated from one another by a non-magnetic partition, a permanent magnet mounted in said closed chamber and adapted to move longitudinally therein, means for releasably anchoring said permanent magnet in two positions in said closed chamber, and a body of non-magnetic material simulating a human figure or the like having a second permanent magnet fixed therein in a predetermined longitudinal portion thereof, said body conforming in shape and size to fit into the open chamber only in properly oriented end to end position, like poles of the permanent magnets cooperating with one another to expel said body from said position in the open chamber when the movable magnet is in one of said two positions and said like poles being out of coactive range to enable said body to remain in said open chamber when the movable magnet is in the other of said two positions.

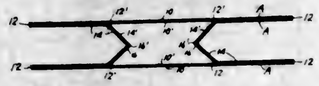
2,458,970
MYSTERY TOY OR PUZZLE
Jack C. Wilson, Garden City, N. Y.
Application May 25, 1948, Serial No. 29,168
4 Claims. (Cl. 46—45)

1. In a magnetic toy, the combination of a non-magnetic casing having two adjacent chambers, one open and the other closed, separated from one another by a non-magnetic partition, a permanent magnet mounted in said closed chamber and adapted to move longitudinally therein, releasable anchoring means fixed in said closed chamber and adapted to retain said movable magnet in two positions in said closed chamber by the attraction of said movable magnet on said means, and a body of non-magnetic material simulating a human figure or the like having a second permanent magnet fixed therein in a predetermined longitudinal portion thereof, said body conforming in shape and size to fit into the open chamber only in properly oriented end to end position, like poles of the permanent magnets cooperating with one another to expel said body from said position in the open chamber when the movable magnet is in one of said two positions and said like poles being out of coactive range to enable said body to remain in said open chamber when the movable magnet is in the other of said two positions.

2,458,971
METHOD AND APPARATUS FOR WRAPPING SAW BLADES OR THE LIKE
Henry E. Wilson and Gerald W. Wilson, Grand Junction, Colo., assignors to Pittsburgh-Erie Saw Corporation, Pittsburgh, Pa., a corporation of Delaware
Application February 27, 1946, Serial No. 650,598
19 Claims. (Cl. 93—3)

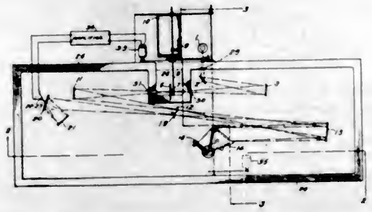
1. Apparatus for wrapping saw blades or the like comprising a table, traction rolls thereon adapted to engage a blade placed on edge on the table, means for delivering a wrapping strip longitudinally of the blade, and guide blocks spaced along the table effective progressively to fold the edges of the strip around the blade as it is pulled through the blocks by said rolls.

2,458,972
METHOD OF MAKING A BAG HAVING A FILLER MOUTHPIECE IN ONE END
Howard A. Wolf, Philadelphia, Pa., assignor to Elias Wolf, Howard A. Wolf, and Walter L. Wolf, copartners trading as Wolf Brothers, Philadelphia, Pa.
Application December 1, 1945, Serial No. 632,176
1 Claim. (Cl. 93—35)



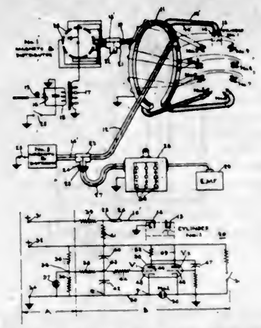
The method of making a filter bag having an impervious tubular filler mouthpiece from a bag and a mouthpiece each having infolds at its opposite sides and panels extending from side to side of the infolds, comprising nesting within the open end of the bag an open ended tubular mouthpiece having infolds of less depth than the infolds of the bag in contact with portions of the inner faces of the panels and portions of the faces of the infolds of the bag, then placing a strip of impervious material having a cement on one face thereof over the entire outer portion of the bag including the infolds at the space desired to be cemented, and then causing the cement to flow through the bag, to cement the mouthpiece to portions of the panels and portions of the infolds of the bag, and also the inner faces of the portions of the panels of the bag extending beyond the junctions of the panels and infolds of the mouthpiece and the bag to the adjacent portions of the infolds of the bag.

2,458,973
INFRARED SPECTROPHOTOMETRY
Robert B. Barnes, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application September 25, 1943, Serial No. 503,769
7 Claims. (Cl. 250—43)



1. In a photometer which includes in optical alignment, a radiator of energy of frequencies sufficiently high to obey optical laws, a monochromating means and a plurality of radiation detecting systems, the detectors of which are of limited area too small to receive the whole energy of uncollimated beams, the improvement which comprises means for causing radiant energy from the radiator to converge in a beam and focus in a narrow line at the point of convergence thereof, said means being interposed in the optical system at a point between the radiator and the detectors, means for mechanically splitting said converged, narrow line beam into two separate beams, each of finite area, said splitting means being located at substantially the point of convergence of said beam, sample holding means positioned in one of the so split beams adjacent to said splitting means, means for causing each of the so split beams to strike separate radiant energy detectors and photometering means for determining the relative outputs of the detectors.

2,458,974
METHOD OF AND APPARATUS FOR TESTING IGNITION
William Malcolm Bauer, Glen Ridge, N. J., assignor to Curtiss-Wright Corporation, Bloomfield, N. J., a corporation of Delaware
Application June 2, 1945, Serial No. 597,224
16 Claims. (Cl. 175—183)



10. Testing apparatus for a dual-ignition multiple cylinder internal combustion engine adapted to run on either ignition system while the other ignition system is dead comprising a portable unit that can be selectively connected to a dead ignition system of said engine, said unit having a source of D. C. potential and comprising a testing circuit for each cylinder of said engine, each circuit having a condenser arranged to be charged by said potential so as to be impressed on a spark plug of the corresponding cylinder in the dead ignition system so as to cause discharge through said plug during normal firing of the engine charge by the twin plug of said other ignition system, valve biasing means responsive to said discharge, an electronic valve normally biased to cut-off and controlled by said biasing means so as to be conducting during said discharge, and a lamp operatively connected to said valve for indicating said discharge and normal firing.

2,458,975
RIB REINFORCING MEANS FOR PROPELLER BLADES
George W. Brady, Upper Montclair, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application December 9, 1943, Serial No. 513,573
3 Claims. (Cl. 170—159)

1. A hollow metallic propeller blade comprising a pair of plates comprising flattened thrust and camber members disposed in facing relation and defining an interior chamber, and a reinforcing rib integral with one of said plates and extending into said chamber from the inner side only of said plate, said reinforcing rib being un-

interrupted and disposed crosswise with respect to the longitudinal axis of said propeller blade

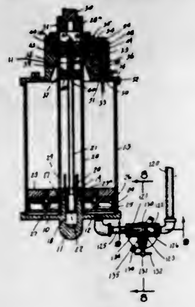
tion containing said high viscosity polymer product under such reaction conditions as to produce

2,458,979
MILK BOTTLE INDICATOR
Joseph L. Churchill, Seattle, Wash.

2,458,982
AIRCRAFT TRAINING INSTRUMENT FOR SIMULATING ATTITUDE GYROS
Richard Carl Dehmel, Summit, N. J.

interrupted and disposed crosswise with respect to the longitudinal axis of said propeller blade and extending from a point adjacent the blade trailing edge to a point adjacent the blade leading edge, the surface of said reinforcing rib which faces the other plate being spaced from the interior surface thereof.

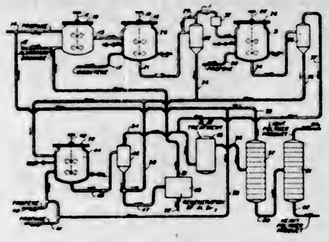
2,458,976
MULTIPLE POWER APPLICATION DEVICE
Rollin E. Campbell, Anderson, Ind.
Application April 4, 1944, Serial No. 529,531
6 Claims. (Cl. 60—97)



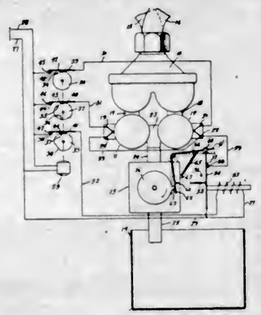
1. A pressure operated device comprising a main cylinder, an annular main piston therein having a hollow piston rod projecting out of one end of the main cylinder, the projecting end of the hollow rod being closed to form a small cylinder, a relatively stationary small piston in the small cylinder, means for selectively controlling the application of fluid under pressure to the small cylinder between its projecting closed end and the small piston, means for continuously applying fluid under pressure to the main piston at the side thereof opposite the piston rod, a normally open bypass passage for fluid flow between opposite sides of the main piston, a normally closed vent passage for the rod end of the main cylinder, and means responsive to a predetermined movement of the main piston following the admission of fluid under pressure to the small cylinder for opening the vent passage and closing the bypass passage, whereby the pressure at the rod side of the main piston is vented and the pressure at its other side is effective to cause continued movement of the main piston and its connected small cylinder.

2,458,977
HYDROCARBON CONVERSION PROCESS
Don R. Carmody, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, New York, N. Y., a corporation of New York
Application September 19, 1946, Serial No. 697,961
17 Claims. (Cl. 260—683.15)

1. A process for the polymerization of olefins comprising admixing an olefin with a solution of metallic halide catalyst in a solvent under such reaction conditions as to produce high viscosity polymer product as a first step, discontinuing admixture of further of said olefin with said catalyst solution, maintaining said metallic halide catalyst in solution in said solvent and in admixture with said high viscosity polymer product, admixing a different type olefin from that employed in said first step with said catalyst solution containing said high viscosity polymer product under such reaction conditions as to produce a low viscosity polymer product as a second step, removing catalyst complex from the reaction mixture from said second step, admixing an olefin with said catalyst complex under such reaction conditions as to produce a polymer product having a viscosity similar to the viscosity of the polymer product produced in said second step as a third step, combining the reaction mixture from said second and said third steps, and recovering high viscosity and low viscosity polymer products as separate fractions therefrom.

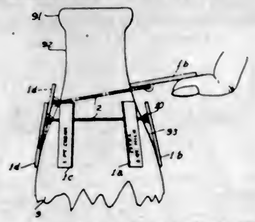


2,458,978
FLUID CONTROL SYSTEM AND MECHANISM
Thomas B. Chace, Winnetka, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application April 24, 1944, Serial No. 532,467
5 Claims. (Cl. 222—76)



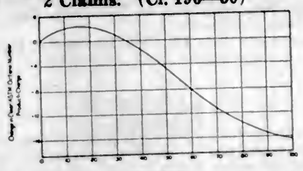
1. A fluid control system comprising a fluid supply duct, an electrically operated shutoff valve in said supply duct, an energizing circuit for opening said valve including a cam operated switch and a relay operated switch connected in series with said valve, an energizing circuit for said relay including a second cam operated switch for closing the energization circuit for said relay, a fluid metering device in said duct for measuring the quantity of water flowing therethrough, a continuously running substantially constant speed timer, cam means operated by said timer for closing both of said cam operated switches, and means operated solely by said metering device independently of said timer for opening said relay operated switch after a predetermined quantity of fluid has passed through said metering device.

2,458,979
MILK BOTTLE INDICATOR
Joseph L. Churchill, Seattle, Wash.
Application July 14, 1947, Serial No. 760,874
5 Claims. (Cl. 116—134)



1. For use upon a standard milk bottle, means to indicate wanted dairy products, comprising a ring of a size large enough to slip over the top of the bottle but too small to slip down over its sloping shoulders, a plurality of tags independently pivoted upon said ring, and each having its mass located principally below the ring to hang normally pendant therefrom, but including a portion extending above the ring, the ring tilting upwardly as a tag is tilted from its normal pendant position to a reversed, uptilted position, and settling back to hold such uptilted tag in the latter position by pressure of the ring's weight against the bottle, each tag bearing indicia identifying wanted products.

2,458,980
PRODUCTION OF GASOLINE
Robert M. Cole, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application December 8, 1945, Serial No. 633,814
2 Claims. (Cl. 196—50)



1. In a process for the production of a leaded gasoline having an improved ASTM octane number from a thermal gasoline stock having an ASTM octane number N by hydrogenation of said thermal gasoline stock and addition of tetraethyl-lead, the improvement which comprises carrying out the hydrogenation of the thermal gasoline stock under conditions to effect such a percentage saturation of the stock S that

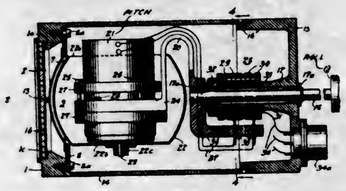
$$S=11+4.7(N'-N)\pm5$$

wherein N' is the desired ASTM octane number of the hydrogenated and leaded product.

2,458,981
METHOD OF ELIMINATING OFFSET
Charles B. Cotherman, Goshen, Ind.
No Drawing. Application October 1, 1945, Serial No. 619,701
4 Claims. (Cl. 101—422)

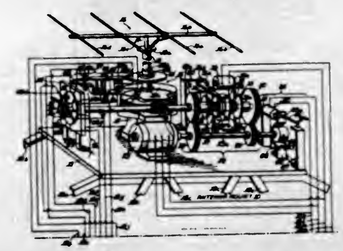
1. The method of facilitating printing press work positioning and removal which consists in applying to the draw sheet of a printing press platen, a mixture of oil and finely powdered soapstone.

2,458,982
AIRCRAFT TRAINING INSTRUMENT FOR SIMULATING ATTITUDE GYROS
Richard Carl Dehmel, Summit, N. J.
Application September 17, 1946, Serial No. 697,473
6 Claims. (Cl. 177—337)



1. Aircraft training apparatus for simulating an artificial horizon comprising means adapted for continuous and reversible rotation according to the operation of a bank attitude motor, a pitch attitude motor bodily carried by said rotatable means and a generally spherical member for representing an artificial horizon movable with and arranged for continuous and reversible rotation by said pitch attitude motor so that said spherical member is adapted to assume all attitudes of aircraft in simulated complex maneuvers.

2,458,983
ELECTRIC MOTOR FOLLOW-UP CONTROL SYSTEM
William L. Dunn, Chicago, Ill., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application April 29, 1943, Serial No. 485,061
14 Claims. (Cl. 318—31)



1. In a control system which includes a setting element and a settable element, an asynchronous connection between said setting element and said settable element including driving means for said settable element and means responsive to movement of said setting element from one position to a new position for initiating operation of said driving means, electro-mechanical means including an element synchronously operated with said settable element through a plurality of revolutions during movement of said settable element over its normal range, and operative to arrest the operation of said driving means when said settable element is operated to a position corresponding to the new position of said setting element, and means for automatically establishing a predetermined positional relationship between said settable element and said synchronously operated element before operating said last-named element synchronously with said settable element.

2,458,984
FOOTBALL INSTRUCTING DEVICE
Charles A. Engle, Pawtucket, R. I.

2,458,986
CHASSIS ENGAGING DEVICE FOR VEHICLE LIFTS

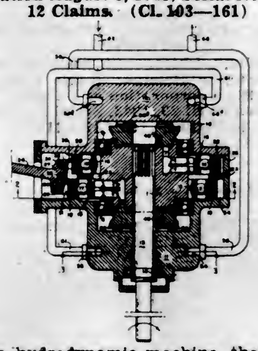
of a carrying member, said packing comprising a plurality of circumferential assemblies fastened in holding member grooves and each assembly including segments disposed circumferentially in

in combination, pumping means operative in response to pressure variations in said induction passage on the downstream side of said throttle means, fuel delivery means leading from said

2,458,984
FOOTBALL INSTRUCTING DEVICE
Charles A. Engle, Pawtucket, R. I.
Application February 5, 1945, Serial No. 576,305
4 Claims. (Cl. 35—29)

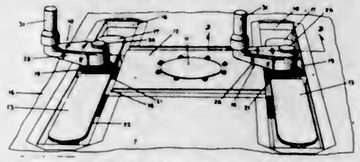
1. A device for instructing the playing of football comprising a panel shaped to indicate the general extent of the line of players of a football team and means on said panel dividing it into sectors corresponding with the position of the different players comprising said line whereby the position of the players in the line may be determined without the presence of the player in the line, said panel being provided with spikes curved toward the middle of the panel to draw the panel taut as they are positioned in the ground.

2,458,985
HYDRODYNAMIC MACHINE
Walter Ferris, Milwaukee, and James K. Douglas, Shorewood, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application August 8, 1945, Serial No. 609,584
12 Claims. (Cl. 103—161)



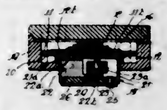
1. In a hydrodynamic machine, the combination of a rotatable cylinder barrel having a first and a second set of cylinders extending inward from its circumferential periphery and a first and a second set of channels extending inward from its opposite ends into communication with the cylinders of said first and second sets respectively, a piston arranged in each cylinder, a thrust member extending around said cylinder barrel and engaging the outer ends of the pistons of one set, a second thrust member extending around said cylinder barrel and engaging the outer ends of the pistons of the other set, the axes of said thrust members being offset in opposite directions from the cylinder barrel axis, two valves arranged upon opposite ends of said cylinder barrel to control the flow of liquid to and from said cylinders, each valve having a high pressure port and a low pressure port with which each channel in the adjacent end of said cylinder barrel registers alternately as said cylinder barrel rotates, and means for urging each of said valves against said cylinder barrel with a force which varies in accordance with variations in the pressure in its high pressure port.

2,458,986
CHASSIS ENGAGING DEVICE FOR VEHICLE LIFTS
George Frey, Philadelphia, Pa., assignor to Globe Hoist Company, Des Moines, Iowa, a corporation of Iowa
Application March 19, 1947, Serial No. 735,582
3 Claims. (Cl. 254—89)



1. In a vehicle lift having a vehicle supporting structure including a pair of transversely spaced longitudinally extended frame members, vehicle-engaging devices for said frame members including base members movably carried on said frame members for movement longitudinally thereof, coacting means on said frame members and said base members for locking said base members against tilting movement relative to said frame members at any moved position of said base members, horizontal arm members rotatably supported at one end on said base members, with the lower sides of the arm members at the one end thereof, being adapted for bearing engagement with the upper sides of said base members in all moved positions of said arm members, and upright members at the free ends of said arm members adapted to engage portions of the chassis of a vehicle to be lifted.

2,458,987
PIEZOELECTRIC CRYSTAL UNIT
Hal F. Fruth, Chicago, and Roger J. Pierce, Park Ridge, Ill., assignors to Motorola, Inc., a corporation of Illinois
Application July 18, 1945, Serial No. 605,762
13 Claims. (Cl. 171—327)

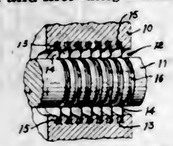


1. A variable frequency piezoelectric crystal unit, comprising a pair of electrodes adapted to have a piezoelectric crystal supported therebetween, one of said electrodes being spaced from one face of said crystal by an air gap and being at least in part movable relative to said crystal in response to ambient temperature variations to control variations in the output frequency of said unit with said ambient temperature variations, the other of said electrodes being spaced from the other face of said crystal by a second air gap and being at least in part movable relative to said crystal to vary the output frequency of said unit, and electro-responsive means for moving said other electrode relative to said crystal.

2,458,988
LABYRINTH PACKING
George F. Gayer, Palo Alto, Calif., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa.
Application April 2, 1945, Serial No. 586,109
1 Claim. (Cl. 286—10)

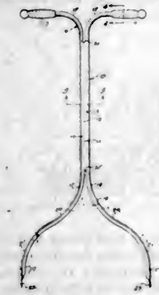
In labyrinth packing wherein sealing strips are fastened in circumferentially-extending grooves

of a carrying member, said packing comprising a plurality of circumferential assemblies fastened in holding member grooves and each assembly including segments disposed circumferentially in end-to-end relation, each segment having its outer radius suitable to bottom in its holding member groove and including a sealing strip com-



ponent formed from suitable alloy steel sheet material and a soft iron caulking component fastened to one side of the strip component, said strip and caulking components being pre-shaped arcuately so that the peripheries thereof aline when they are fastened together to form a segment.

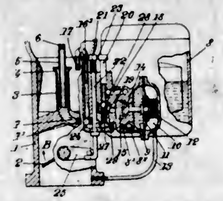
2,458,989
PROCESS OF MAKING MACHINE HANDLES
Edwin S. George, Bloomfield Hills, Mich., assignor to The Moto-Mower Company, Detroit, Mich., a corporation of Michigan
Application August 8, 1946, Serial No. 689,213
1 Claim. (Cl. 113—116)



A process of making a machine or equipment handle from sheet stock comprising forming flanges along the longitudinal edges of an elongated strip of sheet stock, forming apertures through said strip at locations spaced inwardly at predetermined distances from the opposite ends of said strip, longitudinally slotting the end portions of the flanged strip as far as said apertures, bending the slotted portions at one end of the strip outwardly in opposite directions to form a cross bar, and spreading apart the slotted portions at the opposite end of the strip to form a yoke portion for attachment to a machine.

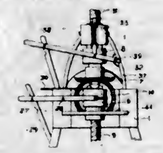
2,458,990
PNEUMATIC CONTROL ACCELERATING PUMP
Gaston Griffon, Neuilly-sur-Seine, France, assignor to Societe Anonyme Solex, Neuilly-sur-Seine, Seine, France, a society of France
Application July 21, 1945, Serial No. 606,335
In France October 4, 1944
4 Claims. (Cl. 261—34)

1. For use in connection with an internal combustion engine, a fuel reservoir chamber, means forming an induction passage leading to said engine and throttle means for controlling said passage, an accelerating pump which comprises, in combination, pumping means operative in response to pressure variations in said induction passage on the downstream side of said throttle means, fuel delivery means leading from said pumping means to said passage, fuel discharge means leading from said pumping means to said fuel reserve chamber, and means operatively



connected with said throttle means for instantaneously opening said discharge means and simultaneously closing said fuel delivery means when said throttle means is closed beyond a position close to the idling position and closing said discharge means while simultaneously opening said fuel delivery means when said throttle means is opened beyond said first mentioned position.

2,458,991
POSTHOLE DIGGER
Lloyd L. Grosshart, Boicourt, Kans.
Application April 26, 1946, Serial No. 665,097
2 Claims. (Cl. 74—22)



1. In a power transmitting system for a digging apparatus, a source of power, a threaded shaft, mechanism operable to connect said source of power with said shaft, said mechanism comprising a driving gear rotatable on said shaft and having depending spaced clutch teeth, a first clutch operable to connect said gear with said shaft and having upstanding spaced clutch teeth adapted to fit between the clutch teeth of said gear to provide connection therebetween, a brake lever mounted for movement toward and away from said clutch, a lug carried by said brake lever and adapted to be moved into a fitting engagement between the teeth of said clutch for holding said clutch against rotation, a stop-and-go nut threaded on said shaft, a second clutch operable to connect said gear with said stop-and-go nut, brake means operable to prevent rotation of said stop-and-go nut, and means for bringing said last mentioned brake means into operating position with said stop-and-go nut upon release of said second clutch.

2,458,992
PULVERIZED FUEL BURNER
Floyd T. Hague, Drexel Hill, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 6, 1946, Serial No. 674,734
3 Claims. (Cl. 110—28)

1. In a pulverized fuel burner, inner and outer concentrically-disposed annular casings defining

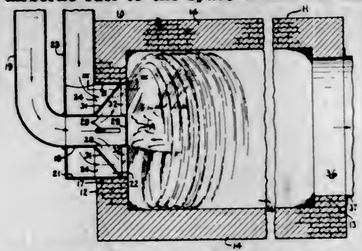
therebetween an annular nozzle chamber, radial partitions separating said annular nozzle chamber into a plurality of nozzles, means for supply-

the planes of the side, top, and bottom walls, respectively, and extending beyond one end of the latter, to inactive positions inwardly of the ends

rolysis zone, (5) cooling said mixture by directly contacting it with the molten salt withdrawn

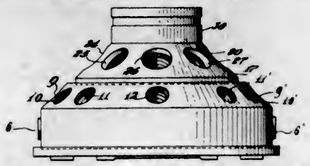
parallelism with the backing panel, said protecting panel having an opening therein and tabs hingedly connected to the margin of the opening to fold downwardly in said opening relative to said

therebetween an annular nozzle chamber, radial partitions separating said annular nozzle chamber into a plurality of nozzles, means for supplying airborne fuel to the space within the inner



casing, means for supplying secondary air to certain of the nozzles, means for admitting airborne fuel from the interior of the inner casing to the other of the nozzles, and means preventing entry of secondary air to said other nozzles.

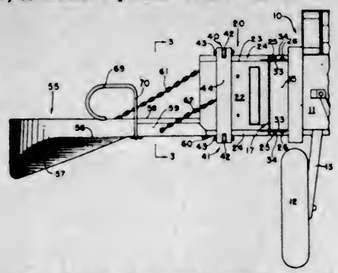
2,458,993
TESTING SOCKET
Louis Hanopol, Jamaica Plain, Mass., assignor to A. L. Deutschmann, Arnold Deutschmann, L. Deutschmann, and Herbert W. Gordon, doing business as Technical Apparatus Company, Roxbury, Mass.
Application January 27, 1945, Serial No. 574,952
9 Claims. (Cl. 174—35)



1. A shielded test socket device comprising a metal base junction block section, an intermediate metal socket section and a metal top adapter section, said base section providing a plurality of parallel shielded receptacle connections, said intermediate section having a top surface with a plurality of shielded sockets internally connected respectively to a plurality of receptacles positioned in an inclined peripheral surface of said intermediate section, said top adapter section having on its bottom surface plugs aligned to fit into the sockets in the top surface of the intermediate section and a socke having pin receptacles in the top surface of the top section adapted to receive the tube to be tested, the socket in the top section having its pin receptacles connected internally one to each of the plugs in the bottom of the top section.

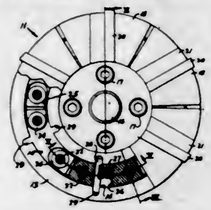
2,458,994
BALING PRESS
George B. Hill, Ottumwa, Iowa, assignor to Deere Manufacturing Co., a corporation of Iowa
Application September 4, 1945, Serial No. 614,395
8 Claims. (Cl. 100—23)

1. In a baling press case comprising a pair of oppositely disposed side walls and a pair of opposed top and bottom walls, and a collapsible extension for said case comprising a plurality of extension plates pivotally mounted on said bale case by means providing for swinging movement from normal operating positions substantially in the planes of the side, top, and bottom walls, respectively, and extending beyond one end of the latter, to inactive positions inwardly of the ends



thereof to shorten the overall length of said case, and means for detachably securing said extension plates in said normal position.

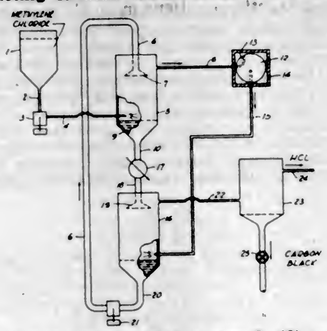
2,458,995
CUTTER TOOL VIBRATION CONTROL
Ralph G. Hummer, Defiance, Ohio, assignor to Defiance Machine Works, Inc., Defiance, Ohio, a corporation of Ohio
Application July 7, 1945, Serial No. 603,629
5 Claims. (Cl. 29—105)



1. In a device of the class described, in combination, a disk suitable for mounting on a rotatable spindle, a plurality of toolholders carrying tools that are successively applied to the work, said toolholders being movably mounted on the disk for movement independently of each other circumferentially with respect to the disk, and resilient means acting between the disk and the toolholders for urging the toolholders in the direction of rotation of the disk when mounted on the spindle.

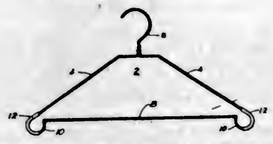
2,458,996
MANUFACTURE OF CARBON BLACK
Robert E. Kinney and Everett Gorin, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of Texas
Application February 11, 1946, Serial No. 646,842
4 Claims. (Cl. 23—209.4)

1. A process for the preparation of carbon black from methylene chloride which comprises the steps of (1) passing said methylene chloride in direct contact with a molten salt in a preheating zone, whereby it is vaporized and heated to a temperature of from about 300° to about 600° C., (2) separately withdrawing the hot vaporized reactant and the molten salt from the preheating zone, (3) passing the reactant vapors to a pyrolysis zone wherein they are subjected to a temperature of from about 900° to about 1200° C. to form carbon black and hydrogen chloride, (4) withdrawing the product mixture from the pyrolysis zone, (5) cooling said mixture by directly contacting it with the molten salt withdrawn



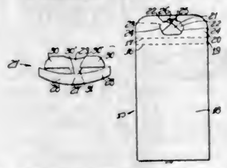
from the preheating zone in step 2, (6) recovering carbon black product from said mixture, and recycling the molten salt to said preheating zone.

2,458,997
SKIRT HANGER
Arnold J. Levine, Cincinnati, Ohio, now by change of name John Arnold Lindon
Application January 2, 1946, Serial No. 638,620
2 Claims. (Cl. 223—88)



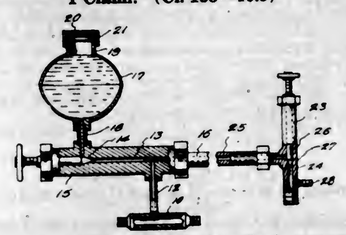
1. In a garment hanger of stiff wire bent to form downwardly and outwardly extending shoulders adapted to be inserted in the waist of a garment, a coating of adhesive material on said shoulders adjacent the outer extremities of said shoulders, said adhesive material having a tacky surface whereby to adhere to the garment to prevent the same from slipping off said shoulders.

2,458,998
SHIRT PACKAGING DEVICE
William W. McFall, River Forest, Ill.
Application November 9, 1945, Serial No. 627,698
9 Claims. (Cl. 223—71)



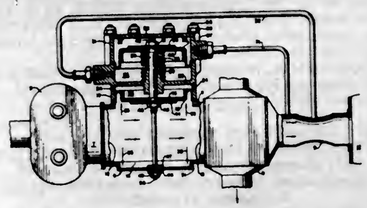
1. In a shirt packaging device, a generally rectangular sheet member of flexible fibrous material adapted to be subdivided along parallel lines of fold into a backing panel adapted to be positioned adjacent the back of a shirt, a rear wall and a collar protecting panel, and a collar supporting and locking member insertable between the collar and neckband of the shirt having a pair of bracing wings, said rear wall and panel being foldable along said lines to bring the protecting panel into position over the collar in parallelism with the backing panel, said protecting panel having an opening therein and tabs hingedly connected to the margin of the opening to fold downwardly in said opening relative to said protecting panel, said supporting and locking member being positioned adjacent said protecting panel and forwardly of said opening therein when inserted between said collar and neckband, said bracing wings being swingable rearwardly relative to said protecting panel and downwardly through said opening and being flexible outwardly beneath said protecting panel to lock the members into retaining engagement therewith.

2,458,999
PRIMER AND IDLER
Will R. S. Mills, Crystal, Okla.
Application November 9, 1945, Serial No. 627,753
1 Claim. (Cl. 158—46.5)



A device of the class described comprising a reservoir adapted to contain liquid fuel, a hollow carburetor and fuel pump coupling, a joint coupling forming a communication between the reservoir and the first mentioned coupling, an intake manifold connection, a pipe forming a communication between the intake manifold connection and the joint coupling, a valve for closing the intake manifold connection, a valve for closing the communication between reservoir and the joint coupling, and a normally sealed rotatable vent cap carried by the reservoir and having a vent opening which is adapted to be opened when the cap is rotated in one direction and closed when the cap is rotated in an opposite direction to control the flow of liquid fuel from the reservoir and to hold the fuel within the reservoir when desired.

2,459,000
SPILL VALVE
Charles W. Morris, Los Angeles, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California
Application April 23, 1945, Serial No. 589,871
15 Claims. (Cl. 98—1.5)

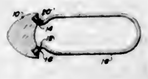


1. In an aircraft cabin pressurizing system, in combination with a cabin to be pressurized and from which controlled escape of the air is per-

sleeve section, having an exposed threaded por- for creating suction through said nozzle; a brush

mitted, means for directing a stream of air under pressure into said cabin, said last means including a spill valve having a duct portion and a venturi, said duct portion and venturi being arranged in series in the order named between said source of pressure and said cabin, said spill valve further including a fluid release port and a valve element for closing said port, said valve element opening outwardly, a servomotor including a diaphragm and means forming on the respective sides of said diaphragm a pair of fluid pressure chambers, a second diaphragm forming one side of said duct, the pressure within said duct being balanced against the inner sides of said second mentioned diaphragm and said valve element respectively and the outer sides of said second mentioned diaphragm and valve element being exposed to ambient pressure; a stem connecting said valve element and said two diaphragms; a spring yieldingly urging said valve stem in the direction to close said valve, and connections between said venturi and said servomotor adapted to establish in said chambers as a result of pressure drop in said venturi differential pressure adapted to overcome said spring and cause said valve to open when the rate of mass flow through said venturi exceeds a predetermined maximum.

2,459,001
CURTAIN ROD GUIDE
William A. Murray, Ajo, and Gordon T. Alley, Tucson, Ariz.
Application February 24, 1947, Serial No. 730,320
1 Claim. (Cl. 223—105)



A guide for threading a curtain rod comprising, a guide head, a plurality of angularly disposed sockets opening at the rear of said guide head, a spring wire clip for attaching said guide head to a curtain rod and angularly disposed fingers carried by said clip and loosely fitting in said sockets whereby to support said guide for lateral movement with respect to the curtain rod.

2,459,002
PREPARATION OF ACYL-NITROARYLIDES
Robert Prescott Parker and Richard Franklin Reeves, Somerville, and Robert Carland Conn, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 26, 1944, Serial No. 555,894
10 Claims. (Cl. 260—556)

1. A method of producing a nitro acylarylide of the benzene series which comprises reacting a solution of the corresponding amine in a water immiscible inert organic solvent with an acylating agent and nitrating with nitric acid without isolating the acylarylide.

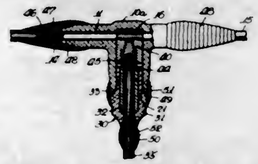
7. A method according to claim 1 in which the acylating agent is p-toluene sulfonyl chloride.

2,459,003
STANDING VALVE RELEASE MECHANISM
Elmer M. Roark, Shreveport, La.
Application May 12, 1947, Serial No. 747,523
7 Claims. (Cl. 103—221)

1. A standing valve release mechanism comprising a main hollow body portion adapted to be attached to a standing valve cage assembly or the like; a sleeve slidably mounted on said hollow body portion; a cap member slidably mounted in the upper end of said sleeve; tripping means mounted on said sleeve adapted for lifting a standing valve upon a downward movement thereof by a pressure exerted on said sleeve by said cap member; means for locking said sleeve in its lowered position including a ratchet rotatably mounted in said hollow body portion and a cored spring support slidably mounted in said hollow body portion and resting on said ratchet; said locking means adapted for maintaining said valve in an open position after pressure is removed from said cap member; actuating means

carried by said cap member including a head portion adapted to contact the inner top surface of said cap member and including a depending prong positioned to move through said cored spring support; a coiled compression spring surrounding said prong and interposed between the head of said prong and said cored spring support; said spring being adapted to maintain said cap in a normally upwardly extended position with respect to said encircling sleeve and to maintain said sleeve in a normally upwardly extended position with respect to said hollow body portion; said prong being adapted for engagement with said ratchet to actuate said locking means.

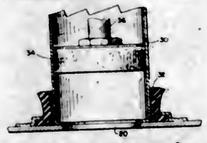
2,459,004
PREINSULATED AERIAL CABLE TAP CONNECTOR
Julian Rogoff, New Rochelle, N. Y., assignor to Buendy Engineering Company, Inc., a corporation of New York
Application July 8, 1946, Serial No. 681,867
9 Claims. (Cl. 174—71)



1. A connector for tapping into an energized electrical circuit which comprises a body portion having means for electrical connection to the electrical circuit, said body portion having a threaded section, and covered with insulation extending sufficiently beyond the threaded section to provide ample creepage distance therefrom; a tap connection for said body portion comprising an insulating cover provided with an extending

sleeve section, having an exposed threaded portion for engagement with the threaded section of said body portion; and a connector, having means for securing the tap conductor thereto prior to establishing contact with the body portion and having a contacting surface for engaging the body portion and provided with an engaging portion rotatably mounted with respect to said tap connection and positioned between the tap connection and the body portion whereby the tap connection may be rotated into threaded engagement with the body portion, driving the connector linearly into firm contact with the body portion.

2,459,005
PIPE JOINT
Spicer Douglass Shearman, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a corporation of Ohio
Application March 5, 1946, Serial No. 652,123
3 Claims. (Cl. 285—90)



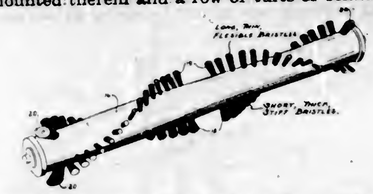
1. A follower plate structure for a grease gun including a barrel comprising a follower plate element, and means for connecting the grease gun barrel thereto comprising a sleeve connected with the follower plate and adapted to receive the grease gun barrel, said sleeve being of resilient material for gripping and sealing against the barrel, and having an internal bead adapted to be expanded over the barrel without substantial distortion.

2,459,006
TIE RACK
Clarence Sova, Windsor, Ontario, Canada
Application December 27, 1946, Serial No. 718,759
In Canada October 15, 1946
5 Claims. (Cl. 211—89)

3. A necktie rack comprising a supporting structure, a substantially horizontal abutment extending across and connected to the forward portion of said structure, a plunger reciprocably mounted in bores in said structure for motion substantially perpendicular to and forwardly toward said abutment, a necktie clamp mounted on said plunger and movable forwardly therewith into engagement with said abutment, and a resilient member connected to said plunger and urging said plunger in a forward direction toward said abutment and effecting engagement of said clamp with said abutment.

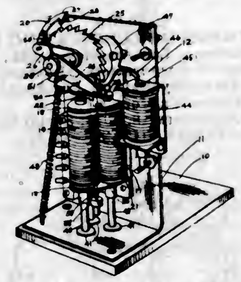
2,459,007
BRUSH ROLL FOR SUCTION CLEANERS
Charles H. Taylor, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 9, 1945, Serial No. 587,261
3 Claims. (Cl. 15—383)

1. In a suction cleaner for cleaning a nonuniform surface and including a nozzle and means for creating suction through said nozzle; a brush roll disposed in and coacting with said nozzle, said brush roll comprising a core, a row of tufts of relatively long, thin and flexible bristles mounted therein and a row of tufts of relatively



short, thick and stiff bristles also mounted in said core in circumferentially-spaced relationship to said first-mentioned row, the tufts of the second mentioned row being of greater thickness than the tufts of the first mentioned row.

2,459,008
RATCHET-OPERATING MEANS
Walter A. Tratsch, Chicago, Ill.
Application January 5, 1946, Serial No. 639,221
3 Claims. (Cl. 74—126)

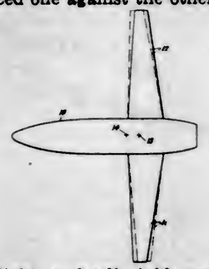


1. Mechanism of the class described including a shaft, a ratchet wheel on the shaft for rotation therewith, a pawl movable into engagement with the ratchet wheel for rotating the latter step by step, means for moving the pawl into engagement with the rachet wheel, means operable by the pawl-moving means and operatively related to the ratchet wheel to latch the ratchet wheel against rotation in a direction opposite to the rotation thereof by the pawl, said pawl-moving means including a sleeve mounted on the shaft for independent rotation thereof, means pivotally connecting the pawl to the sleeve, an arm carried by the sleeve and having lateral extensions formed therein, and independently operated solenoids having push rods adapted to engage said extensions.

2,459,009
AIRCRAFT BODY AND WING ARRANGEMENT
Barnes Neville Wallis, Weybridge, England, assignor to Vickers-Armstrongs Limited, London, England
Application May 25, 1946, Serial No. 672,249
In Great Britain March 1, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 1, 1965
10 Claims. (Cl. 244—13)

1. In a flying body, the combination of wings and an elongated fuselage extending substantially forwardly of the wings, said fuselage having a positive pitching moment in uniform horizontal

flight, the wings being mounted on said fuselage, with their centre of pressure located aft of the centre of gravity of the flying body, said wings having a negative pitching moment due to the forces acting thereon, said pitching moments being balanced one against the other in uniform



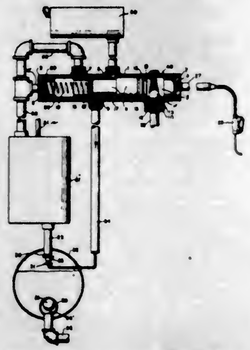
horizontal flight, and adjustable means mounting the wings on the fuselage for changing the position of the wings thus varying the position of the centre of pressure thereof and hence the value of the wing-pitching moment for effecting control of the flying body in flight.

2,459,010

HIGH-PRESSURE LUBRICATING UNIT

Louis B. Williams, Los Angeles, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California

Application December 18, 1944, Serial No. 568,752
2 Claims. (Cl. 222—373)



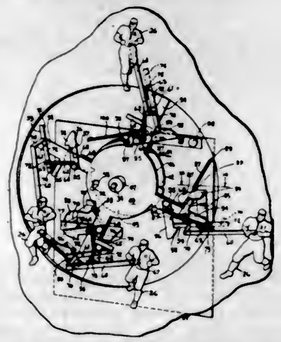
1. In a compressed air type lubricant dispensing apparatus of the character described: a valve unit including a substantially hollow cylinder, substantially closed at each end; a piston movable therein into two operative positions; a spring interposed between one end of the piston and the adjacent end of the cylinder to hold said piston in one of said positions; said cylinder having an aperture for the inlet of compressed air and having compressed air outlet apertures on opposite sides of the cylinder for transmitting compressed air successively in two directions; an inlet in the cylinder for the admission of lubricant to be dispensed under pressure and to hold said piston in the other of said positions, the piston having an annular groove for connecting the compressed air inlet aperture with the compressed air outlet aperture in the spring biased position of the piston, and adapted to connect the compressed air outlet aperture on the one side of the cylinder with the compressed air outlet on the opposite side of the cylinder in the lubricant biased position of the piston; and an outlet in one end of the cylinder for the discharge of lubricant under pressure when said piston is in the spring biased position in said cylinder.

2,459,011

AMUSEMENT GAME APPARATUS

Harry E. Williams, Chicago, Ill.

Application June 3, 1947, Serial No. 752,135
4 Claims. (Cl. 273—88)



1. A mechanism for releasably supporting a rotatable figure simulating a baseball player for movement along the path of a member simulating a baseball diamond having an opaque area, comprising a rotatable disc member, means for rotating said disc member, an arm having one end portion pivotally connected to said disc member, a figure pivotally supported at the opposite end portion of the arm, a latch member pivotally carried by the disc member and having a latch head adapted to engage the pivoted end portion of said arm, spring means for releasably holding said arm in latched engagement with said latch head with said figure projected in the path of said diamond, and means for releasably moving said arm to dispose the latch head from latched engagement with said arm to permit said arm to pivot under the action of said spring means from a position within said path to a position to the rear of said opaque area.

2,459,012

ADJUSTABLE SHAFT STOP

Jay E. Barth, Pitman, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 30, 1947, Serial No. 777,075
7 Claims. (Cl. 74—52.6)

1. An adjustable stop for a shaft having an axis of rotation, said adjustable stop comprising a stationary arm mounted adjacent to said shaft and off-set from the axis of rotation thereof, a helical spring mounted about said axis and normally biased to engage said shaft for rotation therewith, an extending projection effectively connected to said spring in register with said stationary arm, and a second projection on an end of said spring and to which a force may be applied for temporarily relieving its biasing force upon said shaft whereby to permit of relative rotary movement of said shaft with respect to said

spring and thereby to alter the extent of the normal movement of said shaft about its axis by

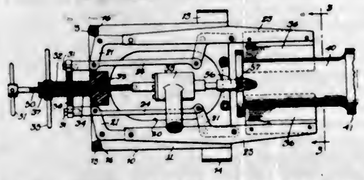
limiting the arc of movement of said extending projection with respect to said stationary arm.

2,459,013

REAMER CLAMP FOR RAILROAD CAR AXLES

Edward L. Bowen, McComb City, Miss.

Application April 14, 1947, Serial No. 741,402
3 Claims. (Cl. 77—13)



1. In a device of the class described, a clamping jaw, a rod supporting said jaw, means for supporting said rod for movement parallel to itself, and means for applying force to said rod which is always substantially at right angles to the length of the rod.

2,459,014

PROCESS FOR MAKING DIMETHYL TEREPHTHALATE

Robert M. Cavanaugh and James E. Lufkin, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 27, 1946, Serial No. 699,634
2 Claims. (Cl. 260—475)

1. The process for manufacturing dimethyl terephthalate, which comprises reacting terephthalic acid and methanol in the presence of sulfuric acid as a catalyst in a net amount greater than 1 and less than 10 times the amount of terephthalic acid by weight, introducing said sulfuric acid initially in relatively dilute form and carrying out the reaction at a temperature above the normal boiling point of methanol and at a gage pressure between 15 and 100 lb. per square inch.

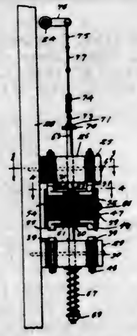
2,459,015

AUTOMATIC SWITCH

Clyde H. Clement, Phoenix, Ariz., assignor of one-half to Cleo R. Cox, Phoenix, Ariz.

Application August 14, 1945, Serial No. 610,771
1 Claim. (Cl. 200—142)

An automatic switch for use in connection with the shutter holding rod of a motion picture projection room comprising a pair of fixed insulated stationary bodies disposed in spaced relation one to the other, pairs of contacts carried by the confronting sides of said bodies, a movable circuit closing member disposed between said bodies, bridging contacts carried by one side of said member for engagement with the contacts of one of said bodies, oppositely disposed bridging contacts carried by the opposite side of said member for engagement with the contacts of said other body, a pair of slide bars fixed to said member and loosely engaging through said bodies, a connecting bar connecting the end of one bar



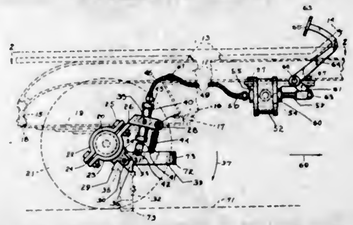
to the other bar, springs about said pair of bars outwardly of one of said bodies for constantly urging said member to move in the direction of the other of said bodies, elongated yieldable means connected between said connecting bar and said shutter holding rod for normally maintaining said member in a position with the bridging contacts on the first-named side thereof in engagement with the pairs of contacts of said other body and a fusible element interposed in said latter named means.

2,459,016

VEHICLE ANTISKID MECHANISM AND WHEEL JACK

Abe Cohen, Omaha, Nebr.

Application January 4, 1946, Serial No. 639,093
7 Claims. (Cl. 188—5)



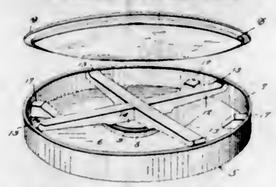
1. In a motor vehicle, a shackle disposed about the rear axle and adjacent a rear wheel of said vehicle, a crow having an end pivotally attached to said shackle to permit vertical swinging movements thereof, the free end of said crow being disposed beyond the extended outline of the tread of said wheel, a cylinder pivotally attached to said shackle for vertical swinging movements, a piston in said cylinder having a rod slidably disposed through an end of said cylinder, said end of said rod being pivotally attached to said crow between the ends of the latter, a spring for causing the free end of said crow to normally be above a roadway during use, a second cylinder attached

2,459,021

and the related portions of the perforated end

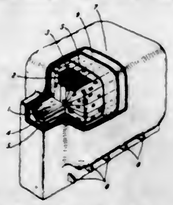
to the frame of said vehicle and having a second piston therein, a rod for said second piston slidably disposed through an end of said second cylinder, a flexible conduit between said cylinders, a liquid in said conduit between said pistons, and a lever having an articulated connection with said second piston for causing liquid under pressure to swing the free end of said crow into engagement with said roadway against the urge of said spring at times when said lever is actuated.

2,459,017
REVOLVING SERVING TABLE
Beatrice La Vonne Crew, Compton, Calif.
Application July 17, 1945, Serial No. 605,586
1 Claim. (Cl. 311—32)



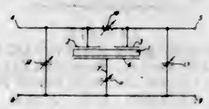
A rotary serving device for table use, embodying a stationary base, a wide annular flange rising from the base and providing a housing, a rotary support embodying cross arms, a bearing disc to which the cross arms are connected, pivotally mounted within the base, the arms being of lengths to extend to a point adjacent to the annular flange, upwardly curved ends formed on the arms and a tray having a body portion shaped to fit within the upwardly curved ends of the arms securing the tray against horizontal movement with respect to the arms.

2,459,018
METHOD OF COATING ELECTRICAL DEVICES
Robert W. De Monte, Glen Ridge, and Atwell B. Haines, Millburn, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 22, 1945, Serial No. 584,064
4 Claims. (Cl. 117—75)



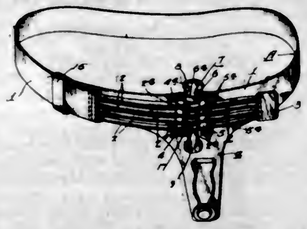
1. The method of forming a smooth adherent moisture-resistant coating on the external surface of an electrical device comprising a formed coil, which method comprises applying to the external surface of said device a coating of a polymerizable varnish comprising a solution of the reaction product of cashew nut shell oil and formaldehyde, drying and baking said coating at a temperature of about 270° F. for a time of about eight to ten hours, applying to said device a coating of a coating compound comprising said varnish and finely divided talc combined in such relative amounts that the weight of the finely divided talc is about 80 per cent to 90 per cent of the weight of the solid content of the varnish, drying the coating compound on said device at room temperature for a few hours, baking the coating compound on said device for a period of about five hours at a temperature of about 190° F. to 210° F., subsequently applying a final coating of said coating compound to said device, drying said final coating at about room temperature for a few hours, and then baking the final coating for a period of about ten to twelve hours at a temperature of about 190° F. to 210° F.

2,459,019
PIEZOELECTRIC CRYSTAL FILTER
Albert R. D'heedene, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1946, Serial No. 718,687
5 Claims. (Cl. 178—44)



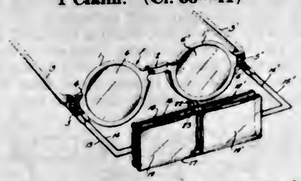
1. A band-elimination wave filter comprising a pair of input terminals, a pair of output terminals, a piezoelectric crystal which is resonant at a frequency within the attenuation band, and a resistor, said crystal having two electrodes associated with one face and a third electrode associated with the opposite face, said two electrodes being connected, respectively, to one of said input terminals and one of said output terminals, said third electrode being connected through a common shunt path to the remaining terminals, and said resistor being connected between said two electrodes associated with said one face and having a value to balance the resistance of said crystal in the neighboring of said resonant frequency.

2,459,020
FASTENER
William J. Dillenz, Philadelphia, Pa.
Application February 13, 1946, Serial No. 647,313
7 Claims. (Cl. 24—194)



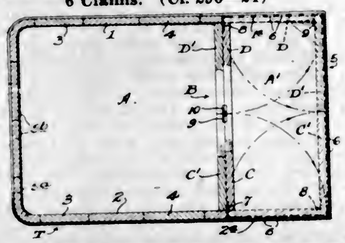
1. A fastening device comprising a body element, a plurality of flexible extension elements secured to one end of said body element and adjustable longitudinally relative to one portion of said body element, a plurality of laterally spaced strap elements secured to said body element and forming therewith spaced series of loops extending transversely across said extension elements, and a tapered element axially operable transversely of said extension elements intermediate said laterally spaced strap elements and between said body element and said extension elements.

2,459,021
BINOCULAR LOUPE
Moses Frommer, New York, N. Y.
Application November 10, 1944, Serial No. 562,816
1 Claim. (Cl. 88—41)



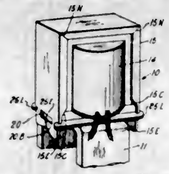
A binocular loupe comprising a spectacle frame formed of a pair of eye frames containing ophthalmic lenses, a nasal bridge extending therebetween and a temple pivotally mounted on each end piece of the eye frame remote from said bridge, the forward part of each end piece having a pair of horizontally and laterally disposed hinges thereon disposed coaxially on a horizontal axis, a set of bars pivotally mounted about said horizontal axis on the inwardly disposed hinges and supporting a frame between the free ends thereof for a pair of magnifying lenses, a set of bars of slightly greater length than said first-mentioned bars pivotally mounted about said horizontal axis on the outwardly disposed hinges and supporting a second frame between the free ends thereof for a second pair of magnifying lenses of different characteristics from said first set, said last-mentioned frames each being capable of positioning separately and together forwardly of the eye frames to obtain three different magnifying effects or above the eye frames into selectively inoperative positions.

2,459,022
CONVERTIBLE TRUCK BODY
William W. Gentry, Chickasha, Okla.
Application August 13, 1947, Serial No. 768,312
6 Claims. (Cl. 296—24)



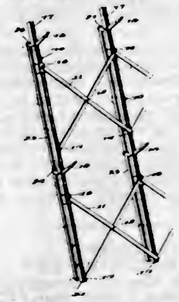
1. A convertible truck body, comprising a floor, side, top and end walls, said floor, top and one of the end walls being relatively imperforate, and said side walls including perforate and imperforate sections, the latter adjoining a perforate end wall, and a partition located at the junction of the imperforate and perforate sections of said side walls, said partition comprising pairs of hingedly connected door leaves, one leaf of each pair respectively connected to opposite inner portions of the side walls between said perforate and imperforate sections, and movable from a folded position transversely across the interior of the truck body, which position divides said body into closed and ventilated compartments, to a relatively extended position whereby the leaves of each pair respectively lie behind the perforate sections of the side walls and the related portions of the perforated end wall to close all perforate portions of the body and provide a single enclosed compartment.

2,459,023
TRANSFORMER MOUNTING
Wayne H. Gilman, Oak Park, Ill., assignor to Permoflux Corporation, Chicago, Ill., a corporation of Illinois
Application September 27, 1946, Serial No. 699,921
5 Claims. (Cl. 175—356)



1. In a transformer mounting, a transformer having rectangular laminations with exposed edges, a three sided mounting frame of channel-shaped cross section embracing three sides of the exposed laminations and embodying securing ears at the ends of the frame extending beyond the fourth side edge of said laminations, said securing ears having transverse slots formed therein so as to define transverse securing bars at the ends of said ears, a mounting plate having a pair of spaced lugs formed at each end thereof, said transformer being disposed on said plate with said fourth side edge of said laminations abutting one face of said plate and with the ears of said frame extending respectively between the pairs of lugs at opposite ends of said plate, said lugs being bent inwardly toward each other and over the related ears to hold the same against the ends of said plate and said securing bars being bent arcuately beneath the opposite face of said plate to hold said ears in position between said lugs.

2,459,024
FLORAL RACK
Charles O. Gipson, Elwood, Ind., assignor to Heinz Manufacturing Company, Inc., Elwood, Ind., a corporation of Indiana
Application September 25, 1946, Serial No. 699,229
4 Claims. (Cl. 248—27.8)



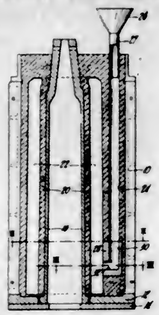
1. In a rack structure, a bar adapted to be erected in a substantially vertical position and rest at its lower end on a supporting surface, a prong pivotally mounted on said bar, and a rod connected to said prong rearwardly of the bar and of such a length as to engage said supporting surface at its lower end and swing the prong to an extended position.

2,459,025

ating the latch, a member movable to a first position in which the handle is operative for releasing

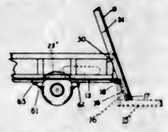
2,459,031
THREE-WAY RUPTURE TRUSS APPLIANCE
James A. Kiser, Hunsperford, Pa.

2,459,025
MOLD
Edwin A. Graham, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application June 3, 1944, Serial No. 538,636
2 Claims. (Cl. 22—134)



1. A mold of the character described comprising a body of sand having an upright mold cavity of great height therein to suit the size, shape and design of the casting desired, an upright sprue of great height in the mold body adapted to receive the molten metal to be cast, a brick of refractory material embedded in the sand body of the mold and having an upright passageway communicating with the lower extremity of the sprue and a laterally extending gate passageway opening into the mold cavity, the bottom surface of said gate passageway being a flat substantially horizontal plane from end to end.

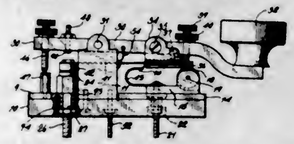
2,459,026
CAMPING TRAILER
Russell F. Hardy, Dayton, Ohio
Application April 10, 1944, Serial No. 530,343
12 Claims. (Cl. 296—23)



11. A trailer having a body portion and a member connected thereto, said connection including means intermediate said body portion and said member and pivotally connected to each thereof, said member and connection being so constructed as to be capable of acting alternately as a top for the trailer or as a floor in contact with the ground, and means on the body portion spaced from said connection to support the said member when it is being moved between its alternate positions.

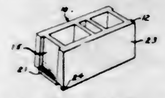
2,459,027
TELEGRAPH KEY
Charles M. Hayman, Brooklyn, N. Y.
Application June 7, 1945, Serial No. 598,065
17 Claims. (Cl. 178—102)

1. A key controlled circuit closer comprising a base provided with an upstanding support, a key bar fulcrumed to said support and provided at one end with a manually depressible finger piece, a swinging bracket pivoted to the key bar between its fulcrum and the finger piece and depending from the key bar, a contact lever having one end secured to the bracket, extending slightly forward from its fulcrum towards the finger piece and forming a stop lever and said contact lever having another arm formed mainly of a long, flat spring extending from front to rear beyond the key bar fulcrum and provided at its rear free end with a movable wiping contact, a roller bearing carried by the base, located in the path of movement of the stop lever as it is lowered by the depression of the finger piece and forms a rotatable stop about which the stop lever swings



as a fulcrum, a compression spring between the key bar and stop lever tending at all times to maintain the stop lever in pressing engagement to said bearing, and a fixed contact carried by the base disposed in the path of movement of the movable contact and coacting therewith to change the status of a circuit when the movable contact is actuated by the depression of the finger piece, said key bar, stop lever, roller bearing and movable and fixed contacts being disposed in a vertical plane.

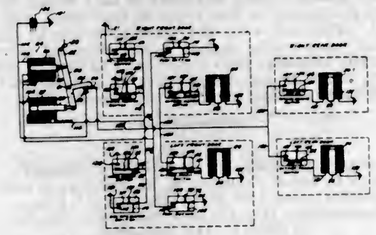
2,459,028
BUILDING BLOCK
Russell P. Hester, Chelsea, Okla.
Application September 5, 1946, Serial No. 694,906
2 Claims. (Cl. 72—41)



1. A concrete building block comprising upstanding inner and outer walls, opposite end walls extending from the top edge to the bottom edge of said inner and outer walls and spaced inwardly from the end edges thereof connecting said inner and outer walls together, a pair of spaced apart intermediate walls between said inner and outer walls and extending to the top edge thereof, a lip depending from the bottom edge of each of said end walls and extending below the bottom edge of said inner and outer walls, said lip being substantially the width of one-half the distance between said spaced apart intermediate walls, whereby the lips of adjacent blocks may be locked in the space between the spaced apart intermediate walls of the block below, and the outer side of said lips being coplanar with said end edges whereby the outer sides of the lips of adjacent blocks will be in substantial contact for closing the lower end of the chamber formed between the adjacent inwardly spaced end walls.

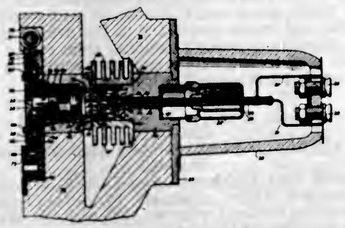
2,459,029
DOOR LOCKING SYSTEM
Jeannot G. Ingres and David T. Ayers, Jr., Richmond, Va., assignors to Empire Electric Brake Company, Newark, N. J., a corporation of New Jersey
Application April 17, 1946, Serial No. 662,870
19 Claims. (Cl. 70—264)

1. In a door locking mechanism wherein the door is provided with a latch, a handle for operating the latch, a member movable to a first position in which the handle is operative for releasing the latch, and to a second position in which the handle is inoperative for releasing the latch; means constantly biasing said member to said second position, a solenoid energizable for moving said member to said first position, a circuit



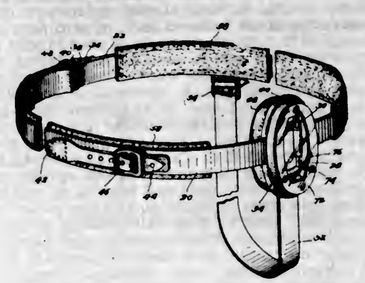
for said solenoid comprising a pair of switches in series, one of said switches being biased to closed position to move to such position upon initial operation of said handle to energize said solenoid if the other switch is closed, a push button operable solely for opening said other switch, and key-controlled means carried by the door for closing said other switch.

2,459,030
TUNABLE MAGNETRON
Herbert C. Jonas, Great Neck, N. Y., Joseph P. Laico, Springfield, N. J., and Victor L. Ronci, New York, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 7, 1945, Serial No. 581,410
5 Claims. (Cl. 315—39)



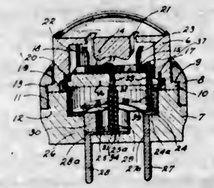
1. An electron discharge device comprising a first structure assembly including a body having a bore extending therethrough and a cylindrical anode within said bore and coaxial therewith, said anode having portions defining a plurality of tubular cavity resonators extending parallel to the axis of said anode, a cathode in cooperative relation with said anode, a second structure assembly including a hollow member joined to said body and having thereon a guide extending parallel to said bore, said second assembly including also a driving member located by said guide for movement in the direction parallel to said axis, a carrier fixedly coupled to said driving member and a plurality of tuning members, one for each of said resonators and extending therein, mounted by said carrier, and means coupled thereto for moving said driving member in said direction.

2,459,031
THREE-WAY RUPTURE TRUSS APPLIANCE
James A. Kiser, Hungerford, Pa.
Application April 27, 1945, Serial No. 590,549
1 Claim. (Cl. 128—95)



In a rupture appliance, the combination which comprises an elliptical shaped pad base having a correspondingly shaped concave buckle receiving recess in the rear surface, a comparatively shallow pad receiving recess in the opposite surface or face thereof and a continuous bead on the outer peripheral surface and spaced from the face, said face having strap receiving slots in the opposite sides and lower end thereof, a cover plate removably secured to the rear surface of said base and enclosing the concave recess therein, a buckle including a rectangular shaped link positioned in the concave recess in the rear surface of the base, laterally extended straps attached to the sides of the link and positioned in the slots in the sides of the base, means adjustably connecting the ends of the straps, thereby forming a belt, resilient pads on the inner surfaces of the straps, an understrap connected to the lower end of the said link, extended through the slot in the lower end of the base, and adjustably connected to the belt at a point spaced from the pad face, and a removable resilient cup-shaped cover positioned on the face of the pad base with the sides thereof contracted over the continuous bead on the outer peripheral surface of the base.

2,459,032
ELECTRICAL CONNECTOR
William J. Korth, Cleveland, Ohio, assignor of one-half to Sam W. Levine, Cleveland, Ohio
Application October 3, 1946, Serial No. 700,848
2 Claims. (Cl. 173—324)



1. In a device of the character described, two hollow molded dielectric shell members adapted to be mounted with their hollow portions opening toward each other and detachably joined together for relative rotation about a common axis, a cross member secured to one of said shell members, contacts carried by said cross member on the inner face thereof to make electrical

connection with the prongs of a male plug con-

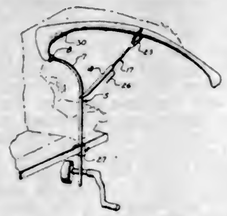
er stems pivotally connected at their upper ends

ly thereof, said resilient means including sealing

2,459,038
COMBINED TOY RAILROAD AND SOUND

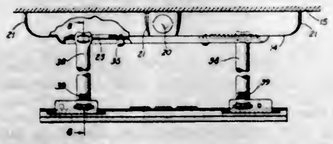
connection with the prongs of a male plug connecting device entering into said one hollow shell, two guideways formed in said cross member, one extending along the axis of rotation of said shell members and the other parallel thereto, pins slidably carried in each of said guideways, electrical connections between each of said pins and through said contacts to each of said prongs respectively, a shield of insulating material enclosing substantially the whole free length of the axially extending pin, a terminal in one plane of said other shell and in alignment with said axially mounted pin, an annular terminal ring mounted in another plane of said other shell spaced from said first plane and adapted to encircle said axially mounted pin, coil springs encircling each of said pins and bearing at one end against said cross member and at the other end against said pins to urge said axially mounted pin into electrical contact with said terminal and said other pin into electrical contact with said terminal ring, and electrical connector prongs integral with said terminal and terminal ring respectively and passing through said other shell to the exterior thereof for engagement with a female plug socket.

2,459,033
ARM SUPPORT FOR USE ON SURGICAL OPERATING TABLES
Alvin R. Kraus, North Hollywood, Calif.
Application March 30, 1948, Serial No. 17,915
7 Claims. (Cl. 311—10)



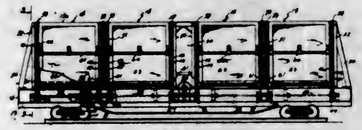
1. In an arm support including an upright member secured to an operating table, a cradle shaped arm support pivotally secured to said upright member to provide a fixed pivotal support, said arm support being long enough to support an entire arm, and means between said upright member and said arm support for adjusting the elevation of said arm support about said fixed pivotal support, said means being detachable from said arm support.

2,459,034
HANGER
Michael Henry Kruger, Malden, Mass., assignor to A. L. Smith Iron Company, Chelsea, Mass., a corporation of Massachusetts
Application October 4, 1946, Serial No. 701,137
10 Claims. (Cl. 248—343)



1. In a hanger for a lighting fixture, the combination of a bracket attached to a ceiling, hanger stems pivotally connected at their upper ends to said bracket, a main plate having openings therein, a plurality of small plates having main openings therein registering with the openings in said main plate and pivotally positioned adjacent the lower face of said main plate, said small plates having wings extending upwardly through the openings in said main plate, said small plates having openings in said wings, and nuts positioned in the wings of said small plates and registering with the main openings in said small plates, said stems having external screw threads adjacent their lower ends to receive said nuts, the nuts movably anchoring said stems to said wings in turn to support said main plate.

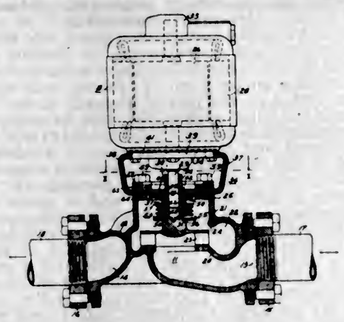
2,459,035
FREIGHT CAR WITH DUMPING BODY
Henry C. Lima, Flushing, N. Y., assignor of one-fourth to Max W. Davis, Bridgeport, Conn.
Application May 30, 1944, Serial No. 538,014
2 Claims. (Cl. 105—273)



1. A dumping car comprising a supporting structure, a plurality of containers mounted on said structure, means mounting each container to swing toward either side of the car from an upright intermediate position so as to dump the container at either side of the car, mechanism on the structure for swinging each individual container in either direction to dump the container comprising a longitudinal shaft, means for operating said shaft, secondary shafts operated at times by the first shaft, clutch means for controlling the operation of the secondary shafts by said longitudinal shaft, drums on said secondary shafts, and cables connected to the drums and to the opposite, laterally extending sides of the container and to the supporting structure to swing the container in opposite directions.

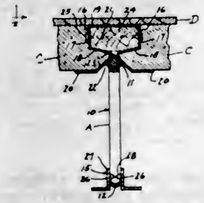
2,459,036
COMBINED PUMP MEANS AND MOTOR MEANS
Bruce R. Lipe, Cincinnati, and Earle E. Schroeder, Norwood, Ohio, assignors to Allis Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application July 8, 1947, Serial No. 759,498
3 Claims. (Cl. 103—87)

1. Pumping apparatus, comprising: a motor having a stator, a rotor, and a bearing mounted on said stator for supporting said rotor; pumping means comprising a housing having an opening in a side thereof and an impeller within said housing; means for connecting said impeller to said rotor, said connecting means extending through said opening to said impeller; means for supporting said stator on said opening side of said housing comprising a pedestal interposed between said housing and said stator; retaining means cooperating with said housing for fastening said pedestal to said housing; resilient means interposed between said pedestal and said housing and between said pedestal and said retaining means whereby said stator and said pedestal and said impeller may vibrate laterally and longitudinally relative to said housing and independently thereof, said resilient means including sealing means cooperating in liquid sealing relation with said pedestal and with said housing for closing said opening in said housing, and further sealing



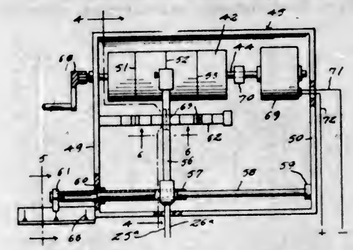
means cooperating in liquid sealing relation with said connecting means and said pedestal at a place between said bearing and said impeller, while leaving said impeller free to vibrate laterally relative to said pedestal.

2,459,037
JOIST
Samuel F. McIntosh, Scarsdale, N. Y.
Application September 6, 1945, Serial No. 614,699
3 Claims. (Cl. 189—40)



1. In a structural joist, a web consisting of a bar bent at longitudinally spaced points into undulating formation to provide upper and lower longitudinally spaced reversely curved upper and lower portions joined by diagonally extending straight portions, upper and lower chords extending longitudinally of said web and secured to said curved portions respectively, said upper chord consisting of oppositely disposed mating members each including a longitudinally extending upper wall portion, a longitudinally extending inturned lower wall portion and longitudinally extending top and bottom horizontally disposed flanges projecting inwardly and outwardly respectively at the upper and lower edges of said wall portions, said mating members being disposed on opposite sides of the web with the inturned lower wall portions thereof secured to opposite sides of the upper curved portions of the web to thereby provide a longitudinally extending upwardly opening channel between said mating members and a longitudinally extending nailing strip arranged in said channel with the inwardly directed flanges thereof overlying opposite longitudinal edges of said nailing strip to thereby provide means for securing a wooden flooring upon a concrete floor supported by said outwardly directed lower horizontal flanges.

2,459,038
COMBINED TOY RAILROAD AND SOUND PRODUCING MEANS THEREFOR
Joseph H. McKnight, Pittsburgh, Pa.
Application February 25, 1946, Serial No. 649,877
1 Claim. (Cl. 274—17)

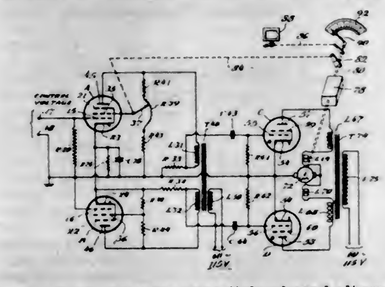


A sound producing means comprising an enclosed housing including top, bottom, front, rear and side walls, a platen rotatably carried by said housing and having a driving connection with an electric motor mounted on said bottom wall, a record on said platen formed with a plurality of spaced apart sound tracks, a sound pickup means including an arm of triangular cross section for a portion of its length, a pickup member carried by said arm, and rockable supporting means for said arm, said supporting means including a supporting bar fixed relative to said housing and formed with a plurality of spaced notches, corresponding to the spaced apart sound tracks on said record, with oppositely inclined ridges between said notches in a selected one of which said triangular portion of said arm is adapted to engage, a pair of horizontally telescoping members, the inner member being fixedly carried by said housing and the outer member at one end thereof being fixed to said arm and having rotatable and slidable engagement with said inner member and said housing, the opposite end of said outer telescoping member extending through a side wall of said housing and having a combined operating crank arm and indicating pointer fixedly attached thereto at right angles to said arm, a plate, having indicia corresponding to said spaced apart sound tracks, attached to the side wall through which said outer member extends and disposed substantially below said indicating pointer whereby an external indication is had of the sound track with which said pickup member is in engagement.

2,459,039
AUTOMATIC POSITIONING APPARATUS
Joseph O. Mesa, Bayside, N. Y., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application June 26, 1945, Serial No. 601,692
5 Claims. (Cl. 318—28)

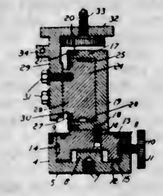
1. In an apparatus for positioning a part in response to a varying control voltage, the combination of a pair of thermionic electron discharge devices each having a cathode, control grid, screen grid, and anode or plate; common self-bias means connected to the cathodes of said devices; an output circuit for each of said devices; circuit means for maintaining the control grids of said devices at the potential difference of the control voltage; a common self-bias resistor connected to the cathodes of said devices; means for impressing oppositely phased alternating plate voltages on the respective output circuits of said devices; means for adjusting the potential of the

screen grid of one of said devices relative to its cathode; a pair of thyratrons, each having a cathode, control grid, and plate; means for coupling the plates of said devices to the control grids of said thyratrons so as to have the voltages thereon vary inversely with reference to the plate current flow through said devices respectively;



means for impressing oppositely phased alternating voltage on the plates of said thyratrons; a reversible motor for moving the part to be positioned and having oppositely phased field windings respectively in the plate circuits of said thyratrons; and means mechanically coupled to said motor for varying the position of said screen potential adjusting means.

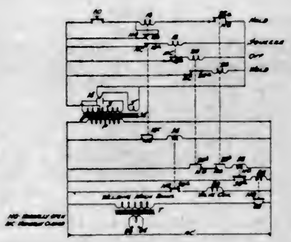
2,459,040
TRIPOD HEAD
Eric Miller, Rose Bay, near Sydney, New South Wales, Australia
Application November 12, 1947, Serial No. 785,397
In Australia December 5, 1946
5 Claims. (Cl. 248—183)



1. A tripod head consisting of two members each rotatable in a cylinder, one said cylinder having means whereby it is affixed to a foundation and the member therein being affixed to the wall of the other cylinder, the other said member constituting a mounting for a machine; both said cylinders being charged with a liquid which surrounds the members.

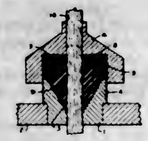
2,459,041
AUTOMATIC TIMING DEVICE
William H. Mitsch, Wheeling, W. Va.
Application February 9, 1946, Serial No. 646,674
2 Claims. (Cl. 171—97)

1. An electric sequence timer system, comprising a D. C. control circuit, an A. C. power circuit, a transformer including a primary winding connected in said power circuit and a secondary winding in said control circuit, a rectifier connected to and between said secondary winding and said control circuit to supply D. C. to the latter, a plurality of electromagnetic relays connected in said control circuit, a plurality of electromagnetic switches connected in said power circuit, and a manually operated switch connected in said control circuit, one of said relays having its winding connected in series with said switch and a pair of normally open contacts in series with said winding and shunted about said switch, a second of said relays having its winding connected in said control circuit and in parallel with the winding and contacts of said one relay and in series with a second pair of normally closed contacts of the latter, said second relay having a pair of normally closed contacts connected in said control circuit and in parallel with its winding, a third of said relays having its winding connected in said control circuit and in parallel with the winding of said second relay and in series with the contacts of the latter, said third relay having a pair of normally closed contacts connected in said control circuit and in parallel with its winding, a fourth of said relays having its winding connected in said control circuit and in parallel with the winding of said third relay and in series with the contacts of the latter, said fourth relay having a third pair of normally open contacts connected in said control circuit and in series with the winding of said one relay, said one relay having a third pair of normally open contacts connected in said power circuit and in parallel with the primary winding of said transformer,



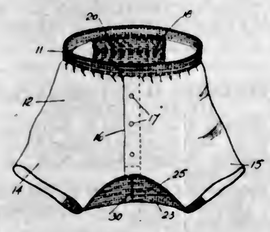
one of said electromagnetic switches having its winding connected in said power circuit in series with said third pair of contacts and having a pair of normally open contacts also connected in said power circuit and in parallel with its winding and in series with the winding of an electromagnetic device for the operative control thereof, said third relay having a second pair of normally open contacts connected in said power circuit and in parallel with the winding of said one electromagnetic switch and in series with a second pair of normally open contacts of said fourth relay and the winding of a second of said electromagnetic switches, said second electromagnetic switch having a pair of normally open contacts connected in said power circuit and in parallel with its winding and in series with the winding of a third electromagnetic switch, said one electromagnetic switch having a pair of normally open contacts connected in said power circuit and in parallel with its winding, said third electromagnetic switch having a pair of normally open contacts connected in said power circuit and in parallel with its winding and in series with the primary winding of an output transformer, whereby, upon the momentary closing of said manually operated switch, the windings of said relays and said electromagnetic switches will be sequentially energized to perform their respective functions through a single cycle of operation.

2,459,042
CAPILLARITY CONTROL MEANS
David T. Nave and Raymond L. Sullivan, Los Angeles, Calif.
Application August 11, 1947, Serial No. 768,026
2 Claims. (Cl. 67—53)



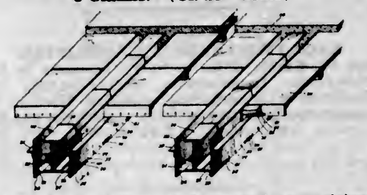
1. A container for fuel or other liquids having a fitting, a wick fed through said fitting for delivering liquid by capillarity from said container, said fitting comprising a bushing fixed in the container and having an upstanding externally threaded neck portion, said bushing having an upwardly opening conical socket terminating at its lower end in a cylindrical opening for the passage of the wick, a second bushing having a central opening therein and a depending internally threaded annular flange threadedly engaged with the threaded wick on the first named bushing and a ball-shaped compressible gasket between said bushings and being smaller than the normal chamber space between the bushings and having an opening therethrough for the passage of the wick and adapted to be compressed when the second named bushing is screwed into the first named bushing for squeezing that portion of the wick extending therethrough and thereby control capillarity of the wick.

2,459,043
GARMENT
Paul Owenby and Frank Owenby, Marietta, Ga., and Joseph A. Sacks, New York, N. Y.
Application December 8, 1945, Serial No. 633,694
1 Claim. (Cl. 2—224)



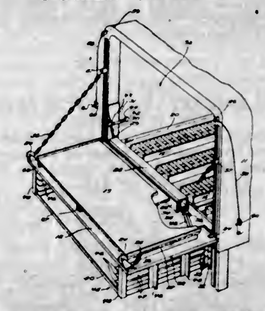
A garment, comprising a non-stretchable woven body portion having two leg openings, a knitted insert connected to said body portion at the rear of said garment and stretchable in the longitudinal direction, said insert extending the full length of the rear of said garment, a knitted crotch portion extending from the seat portion between said leg openings of the garment to a point at the front of the garment and secured to said body portion and said insert, said crotch portion being stretchable in the transverse direction, and transversely stretchable leg inserts secured to said crotch portion and said body portion and extending between said leg openings and said crotch portion.

2,459,044
CONSTRUCTION FORM FOR CONCRETE FLOORS
Joseph J. Pirz, Flushing, N. Y.
Application March 13, 1947, Serial No. 734,340
3 Claims. (Cl. 25—131.5)



2. A concrete form and support comprising in combination a supporting beam, an inverted channel disposed in substantially parallel relation beneath said supporting beam, side walls disposed against the outer faces of the channel flanges and extending upward above the channel web to provide therewith a trough to receive the concrete, a suspension wire hung over the supporting beam and passing downward through the channel web and looped outward through recesses in the channel flanges and the adjacent side wall, and pins in the loop portions of said suspension wire outside said side walls to lock the members in assembled relation.

2,459,045
LOADING AND UNLOADING APPARATUS FOR VEHICLES
George H. Pride, New York, N. Y.
Application April 25, 1947, Serial No. 743,937
9 Claims. (Cl. 214—65)

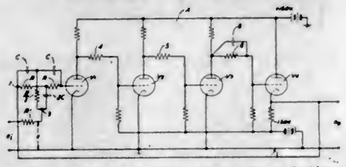


1. Load handling means comprising a vehicle body having a bottom, a tailgate connected to the rear end of said body, a plurality of substantially flat, separately and independently horizontally-movable floor elements of relatively thin material adapted to be supported by said bottom in a series extending longitudinally of said body, shifting means for horizontally moving said floor elements separately, longitudinally of said body from said tailgate onto said bottom and vice versa, an elongate abutment bar carried by said body at the latter's rear end and movable from an inactive position clear of the path of such movement of said floor elements and loads thereon to an active position wherein said bar extends horizontally transversely of and above the said path of movement of said floor elements but in the path of movement of such a load on a floor element, and mechanical means for moving said abutment bar from its said inactive to its said active position;

to the latter, a plurality of electromagnetic relays operation.

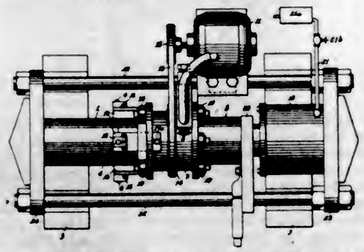
the said shifting means being adapted to pull a said floor element from said tailgate, horizontally toward the forward end of said body while said abutment bar prevents such forward movement of a load on the latter floor element.

2,459,046
NEGATIVE FEEDBACK AMPLIFIER
John W. Rieke, Astoria, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 30, 1946, Serial No. 644,271
8 Claims. (Cl. 179—171)



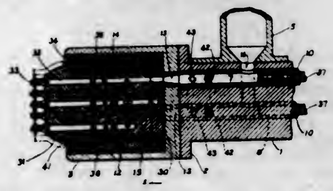
1. A frequency selective wave translating system comprising a wave source, an amplifier, a negative feedback path from the amplifier output circuit to the amplifier input circuit, and a three-terminal resistance-capacitance network included in said path with one terminal connected to a point of the amplifier output circuit, a second terminal connected to a point of the amplifier input circuit, the third terminal connected through said source to a common point of the amplifier output and input circuits of potential different from the potentials of the two first-mentioned points, and the attenuation of said network for transmission therethrough from said first and third terminals to said second and third terminals having a peak value at a prescribed frequency with lower values at lower and higher frequencies.

2,459,047
METHOD AND APPARATUS FOR ELECTRIC ARC WELDING
Paul B. Scharf, Bradford, Pa., assignor to Dresser Industries, Inc., a corporation of Pennsylvania
Application March 25, 1944, Serial No. 528,049
18 Claims. (Cl. 219—10)



9. The method of welding together the abutting end surfaces of electrically conductive cylindrical sections which comprises striking and maintaining an electric arc between an arcing element and the end portions of said sections while effecting rapid relative rotation between said sections and element at a rate of speed sufficiently high to cause the arc to move by jumps from spot to spot along a narrow path extending around the circumference of said section, producing areas of high current concentration at said spots and heating a narrow band of material adjacent said weld surfaces concurrently throughout its entire circumferential extent, continuing said arcing and rotation until said surfaces are heated throughout to welding temperature and pressing said surfaces together to effect a weld.

2,459,048
MOLD INJECTION HEAD
Benjamin Schwartz and Eugene H. Schwartz, Brooklyn, N. Y.
Application April 25, 1946, Serial No. 664,804
12 Claims. (Cl. 18—30)



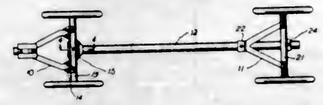
1. A mold injection head comprising a casting having a plurality of spaced channels formed therein and extending therethrough, a plurality of reservoirs supported on said casting, each of said reservoirs having an opening in its bottom, said casting having openings communicating with the openings in said reservoirs, a plunger in each of said channels, a hollow shell having a closed base at its inner end and an open outer end secured to one end of said casting and forming an extension thereof, the base of said shell having openings communicating with the channels in said casting, a cylinder within the shell having main passages extending longitudinally therethrough and communicating with the channels in the casting through the openings in the base of the shell and having secondary passages leading to the outer end of the cylinder and with branch passages connecting the main passages with the respective secondary passages and a head member in the outer end of said shell having passages extending therethrough and communicating with the passages in the cylinder.

2,459,049
PHOTOCHEMICAL CHLORINATION OF HYDROCARBONS
James S. Sconce and Arnold N. Johnson, Niagara Falls, N. Y., assignors to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
Original application November 22, 1943, Serial No. 511,344. Divided and this application May 4, 1946, Serial No. 667,474
5 Claims. (Cl. 204—163)

1. The process for photochemical vapor phase chlorination of paraffinic hydrocarbons of three to seven carbon atoms to yield predominantly the monochloride substantially free from decomposition and secondary reaction products which com-

prises; (a) continuously forming, in darkness and at a temperature below 120° C., a mixture consisting substantially of gaseous chlorine and the vaporized hydrocarbon, in which the proportion of chlorine is below the range within which such mixtures, when activated, react violently, and not more than one half by volume; (b) causing the mixture to flow vigorously through a reaction zone irradiated by actinic light and simultaneously withdrawing heat to limit the temperature during the ensuing reaction to between 200° and 400° C., to yield chiefly the monochloride; (c) continuously deactivating the reaction mixture by causing it to flow through a darkened zone, and there cooling it to below 120° C.; (d) continuously adding to the stream of deactivated mixture more chlorine, in amount resulting in a mixture with the residual hydrocarbon in which the proportion of chlorine is still below the range of violent reaction, and not greater than that of the hydrocarbon by volume; and (e) treating the augmented mixture in accordance with step (b) to yield more of the monochloride.

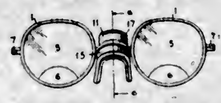
2,459,050
RUNNING GEAR ASSEMBLY FOR TRAILER WAGONS
Kenneth L. Smith and Elmo D. Smith, Eufaula, Okla.
Application August 16, 1946, Serial No. 691,020
2 Claims. (Cl. 280—132)



1. A wagon construction comprising a front axle having wheels thereon and of hollow formation with an opening in the rear face thereof, a front hound connected to the front axle and adapted to receive a tongue, a rear axle having a sleeve formation extending rearwardly thereof, a rear hound extending forwardly of the rear axle and having a sleeve formation, a reach pole extending through the sleeve formation of the rear axle and the rear hound, a half circular guide member extending through the opening of the front axle with its straight edge in alignment with the front portion of the axle and having an opening from the top to the bottom, said reach pole having its end extending into the guide member and having an opening adapted to be aligned with the opening of the guide member, a bolster mounted on the top of the front axle, a bolster mounted on the top of the rear axle, and a king pin extending downwardly from the bolster of the front axle through the front axle, the guide member and the opening in the forward end of the reach pole lying within the guide member.

2,459,051
TEMPORARY LIFT FOR BIFOCAL SPECTACLES
Earl K. Smith, Montrose, Pa.
Application February 19, 1947, Serial No. 729,425
3 Claims. (Cl. 88—51)

1. As a new article of manufacture, a temporary support for bifocal spectacles comprising a self-sustaining arched lift member to be applied onto the bridge of the nose of the wearer at the zone at which the spectacles normally rest on the nose so that the spectacles will rest on the lift member, said lift member being wholly independent of the spectacles but substantially conforming to the transverse shape of the nose and extended over a substantial area lengthwise thereof,



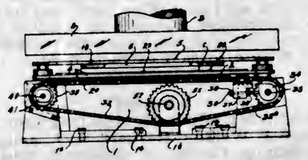
and said lift member varying in thickness in at least two zones for selective supporting engagement with spectacles of different types, whereby to elevate the spectacles above the position normally occupied when resting directly on the nose.

2,459,052
SIZED GLYCOL TEREPHTHALATE YARN, PROCESS, AND COMPOSITION FOR PRODUCING SAME
Richard James Smith, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application March 27, 1947, Serial No. 737,727. In Great Britain March 29, 1946
4 Claims. (Cl. 117—138.8)

1. A process for sizing multifilament yarns of a linear polyester of a terephthalic acid and a glycol of the series $HO(CH_2)_nOH$ where n is an integer from 2 to 10 inclusive, which comprises impregnating said yarns with an aqueous solution of a partially hydrolyzed polyvinyl acetate having a saponification number of from 10 to 300, and a water-soluble resin obtainable by the condensation of an alkylolurea with formaldehyde, said polyvinyl acetate and said water-soluble resin constituting from 2% to 12% by weight of said solution.

3. A solution for sizing yarn of a linear polyester of terephthalic acid and a glycol of the series $HO(CH_2)_nOH$ where n is an integer from 2 to 10 inclusive, which consists of 6% by weight of a partially hydrolyzed polyvinyl acetate having a saponification number of 140, 6% of the water-soluble condensate from N-ethanol urea and formaldehyde, and 88% of water.

2,459,053
SELF-CONTAINED DIE SET WITH AUTOMATIC STAMPING AND/OR PUNCHING REMOVING MEANS
Charles Henry Tauser, Venita Park, Mo., assignor to McDonnell Aircraft Corporation, St. Louis, Mo., a corporation of Maryland
Application April 21, 1947, Serial No. 742,946
15 Claims. (Cl. 164—118)



15. A die set comprising vertically movable punch and die members, a wiper member for removing from beneath said members stampings and punchings produced thereby, a fluid pressure cylinder, a piston working in said cylinder and operatively connected to said wiper member for imparting a horizontally reciprocating movement thereto, a self-closing valve for admitting fluid

pressure to said cylinder for reciprocating the piston therein, and means operated by the movement of said die set for opening said valve after each complete operation of said die set, said means including a first lever for opening said valve, a spring-actuated second lever for moving said first lever to valve opening position, a member for locking said first lever in valve opening position, a lower spring-supported plunger normally holding said second lever in inoperative position, an upper spring supported plunger operable by the downward movement of said die member to move said lower plunger downwardly clear of said second lever and to hold the latter in an inoperative position relative to said first lever while permitting limited movement of said second lever in an operative direction, a member releasable by such limited movement of said second lever for locking said lower plunger in down position, said upper plunger being adapted to move upwardly when said die plate ascends and thereby permit said second lever to move said first lever to valve opening position, and means operable by the movement of said piston for releasing said first lever locking member and for returning said second lever to inoperative position, said return movement of said second lever permitting said lower plunger locking member to return to inoperative position and said lower plunger to return to its position for holding said second lever in inoperative position.

2,459,054

FATTY ACID SEPARATION

Charles C. Towne, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application July 17, 1945, Serial No. 605,610
3 Claims. (Cl. 260—419)

1. In the fractional separation of a higher fatty acid mixture comprising oleic and linoleic acids substantially free from saturated acids, the method which comprises extracting said mixture with a low boiling aliphatic ketone in an extraction zone at a temperature in the range of about 70 to 150° F., forming as a result of said extraction, an extract phase rich in linoleic acid, and a raffinate phase in which linoleic acid ranges from about 5 to 25% of the oleic acid present therein, and containing a relatively small proportion of solvent, separately removing said phases, adding an additional quantity of said solvent to remove raffinate phase thereby forming a mixture comprising about 1 volume of unsaturated fatty acid and about 3 to 4 volumes of solvent, chilling the resulting mixture of raffinate phase and solvent to about minus 60° F. to precipitate oleic acid in substantially pure form, filtering chilled raffinate phase to remove precipitated acid as a filter cake, and forming a filtrate comprising solvent and residual linoleic acid, removing said filter cake and recycling resulting filtrate to said extraction zone.

2,459,055

BUFF AND METHOD OF MAKING THE SAME

Lawrence J. Walling, Keyport, N. J., assignor of one-fifth to Charles R. Stoddard, New York, and one-fifth to Robert Harding, Jr., Elmsford, N. Y.

Continuation of application Serial No. 158,598, August 11, 1937. This application April 28, 1947, Serial No. 744,356
10 Claims. (Cl. 51—193)

1. The method of making a buff which comprises interlacing a plurality of strands of buffing material to form a seamless tube, contracting the center of said tube to decrease the diameter thereof, and expanding the ends of said tube and

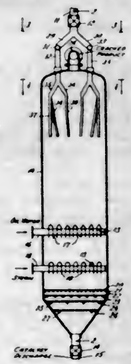
bringing them together to form a substantially flat disc.

2,459,056

GAS-SOLID CONTACTING APPARATUS

Kenneth M. Watson, Madison, Wis., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine

Application December 31, 1945, Serial No. 638,533
1 Claim. (Cl. 23—288)



In a vertical shaft chamber for contacting a granular solid of varying particle size with an aeriform fluid, the granular solid being passed downwardly through the chamber, the combination with baffling means in the lower portion of the chamber for maintaining the rate of downward flow of the granular solid substantially uniform across the chamber, of a system of tubes associated with the upper portion of the chamber for distributing the fine and coarse particles of the granular solid uniformly over a horizontal section of the chamber, said system of tubes being characterized in that each tube in the system is disposed, if not vertically, at an angle of inclination greater than 45° and in that it comprises together with a primary tube connected with a source of supply of the granular solid, an even number of terminal tubes therebelow and mediately connected thereto the lower ends of which are in substantially the same horizontal plane and constitute ports opening to the chamber and serving substantially equal areas thereof, each of said terminal tubes representing one of two branching arms of a tube thereabove, that tube being one of a group of tubes above the terminal tubes, each tube in such group representing one of two branching arms of a tube thereabove, that tube in turn being one of a group of tubes above the group of tubes above the terminal tubes, and so on until the number of tubes in a group is two, both being branches of the primary tube, said system of tubes being further characterized in that the length of each tube below a point of

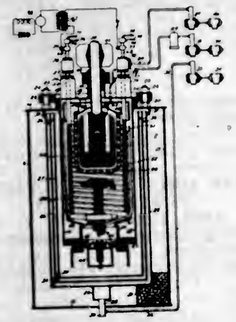
branching is at least equal to three times its diameter and in that the tubes representing branching arms of a tube thereabove in addition to forming equal angles with the horizontal form equal angles with such tube in all planes.

2,459,057

VAPOR ELECTRIC DEVICE WITH COOLING COIL SERVING AS HEATING RESISTOR

Harold Winograd, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application February 6, 1948, Serial No. 6,716
20 Claims. (Cl. 250—27.5)



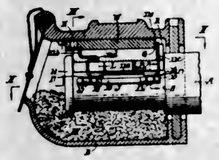
1. In combination, an electric valve comprising an evacuated casing and conductive elements disposed within said casing, conducting means for cooling said valve disposed within said casing adjacent to said elements, and means including a source of current connected to said conducting means for the heating thereof to heat said elements of said electric valve to expel occluded gases therefrom.

2,459,058

WIPER DEVICE FOR CAR AXLE JOURNALS AND THE LIKE

Ernest Armstrong, Camden, N. J.

Application February 19, 1944, Serial No. 523,104
7 Claims. (Cl. 308—89)



1. A wiper device for a car axle journal box wherein a wedge plate is interposed between the top wall of said journal box and a bearing plate resting on the journal, said device comprising a pair of wiper bars adapted to bear longitudinally against opposite sides of the axle journal at a level below the bearing plate; and a supporting frame having transverse yoked end portions for respectively engaging over the opposite ends of the bearing plate and abutting end surfaces of the wedge plate, and longitudinal side portions between the yoked end portions from which the wiper bars are hung.

2,459,059

METHOD FOR PREPARING ALKYL ACYLOXY ACRYLATES

Robert D. Babson, Rahway, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application July 12, 1946, Serial No. 683,143
2 Claims. (Cl. 260—484)

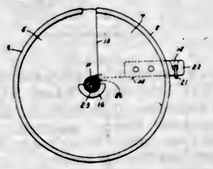
1. The process which comprises reacting, in dialkyl ether solution, an alkyl α-metallo-formyl-acetate with a lower aliphatic carboxylic acid halide, directly neutralizing the reaction mixture to a pH of approximately 7 and recovering the corresponding alkyl β-acyloxy-acrylate from said neutralized reaction mixture.

2,459,060

RAT GUARD

Ean Lee Bush, San Francisco, Calif.

Application November 20, 1945, Serial No. 629,751
11 Claims. (Cl. 114—221).



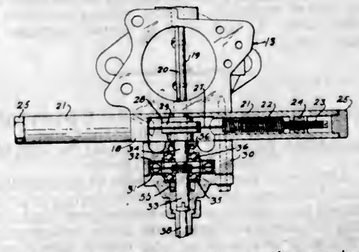
1. A rat guard of the character described for mooring lines and the like, comprising a pair of superimposed discs rotatable relatively to one another, said discs having substantially radial aligned slits extending from the axis of relative rotation to the peripheries of the respective discs, the central end of each slit being adapted to fit over a portion of the periphery of said line, and said central ends of said slits complementing one another to surround said line when said discs are turned to shift said slits from said aligned position to an angularly offset position, and releasable means to hold said discs in said offset position.

2,459,061

GOVERNOR

Irven E. Coffey, Normandy, Mo.

Application September 28, 1944, Serial No. 556,252
7 Claims. (Cl. 123—108)



1. In an internal combustion engine, an induction conduit, a governing valve of the butterfly type mounted in said conduit, spring means applied symmetrically to the valve shaft and urging said valve open, a housing on said conduit and receiving an end of said shaft, a fluid coupling in said housing and comprising centrifugal impeller and driven wheels, said driven wheels being carried rigidly by said valve shaft, and an operative

bers, crutches carried by said side members, a

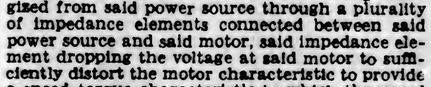
2,459,068

prises interlacing a plurality of strands of buffing material to form a seamless tube, contracting the system of tubes being further characterized in that the length of each tube below a point of

connection between said impeller wheel and a rotating part of the engine for applying closing force to said driven wheel and valve in proportion to the speed of the engine.

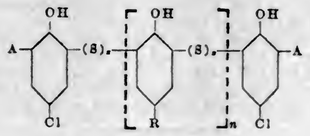
2,459,062
QUATERNARY AMMONIUM COMPOUNDS
Elmer W. Cook, New York, N. Y., and Philip H. Moss, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 8, 1944, Serial No. 521,588
5 Claims. (Cl. 260—404.5)

1. A germicidal composition containing as an effective germicidal agent the quaternary ammonium compound of the following formula



2,459,063
DIVALENT METAL SALTS OF HALOGEN SUBSTITUTED PHENYLOL SULFIDES
Elmer W. Cook, New York, N. Y., and Philip H. Moss, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 9, 1946, Serial No. 668,457
3 Claims. (Cl. 260—429)

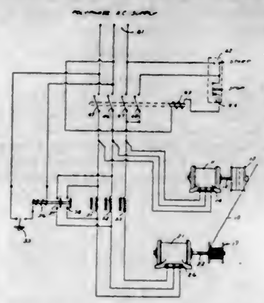
1. A salt of a halogenated polyphenol sulfide having the formula:



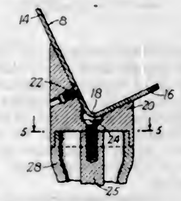
with a divalent metal of the group consisting of zinc, copper, calcium, barium, mercury, iron, and magnesium and wherein A is a member of the group consisting of hydrogen and halogen, R is a member of the group consisting of halogen and lower alkyl radicals, x is a whole number not greater than 2, and n is a whole number not greater than 8.

2,459,064
ELECTROMECHANICAL DRIVE SYSTEM
Ralph L. Davis, Wallingford, Conn.
Application January 5, 1946, Serial No. 639,447
7 Claims. (Cl. 318—6)

7. Apparatus for reeling a wire at substantially constant tension, said apparatus having a predetermined maximum power requirement and comprising a polyphase induction drive motor and a polyphase power source, said motor being energized from said power source through a plurality of impedance elements connected between said power source and said motor, said impedance element dropping the voltage at said motor to sufficiently distort the motor characteristic to provide a speed-torque characteristic in which the speed is inversely proportional to the torque over wide ranges, said motor having a normal power rating substantially in excess of said predetermined maximum power requirement, said polyphase induction drive motor having a rated normal operating voltage substantially equal to the voltage of said power source.



2,459,065
PLATTER AND PLATTER SUPPORT FOR POSTAL SCALES
Robert A. Dohl, Rochester, N. Y., assignor to Commercial Controls Corporation, a corporation of Delaware
Application December 7, 1945, Serial No. 633,293
4 Claims. (Cl. 265—73)



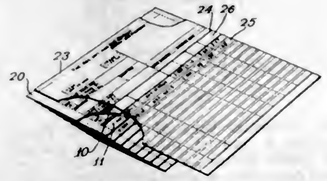
3. In postal scales, the combination of, a generally cylindrical base member having a vertical axis and also having a peripheral skirt on its lower end and a horizontal groove at its upper end formed by a first surface in a plane which is substantially thirty degrees from the horizontal and a second surface in a plane which is substantially sixty degrees from the horizontal, a cap-plug axially positioned with respect to said base member at the lower end thereof, a screw extending axially through said base member and threaded into said cap-plug, an adapted head which forms part of a balancing arm and which has an upwardly projecting portion which is recessed to receive said cap-plug and which is adapted to be snugly received within said skirt, a platter member formed by a single sheet of rigid material formed to be snugly received in said groove and having two angularly disposed portions which rest respectively on said first and second surfaces, and a screw extending through said platter member and threaded into said base member.

2,459,066
VEHICLE FOR INVALIDS
Sam Duke, Chicago, Ill.
Application September 7, 1945, Serial No. 614,965
4 Claims. (Cl. 155—22)

1. In a vehicle for invalids, a frame including side members, braces connecting said side members, crutches carried by said side members, a seat, a seat post supporting said seat at one side

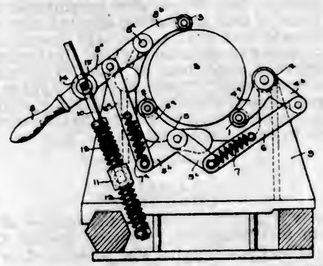
of said crutches, and a seat bar for said seat extending therefrom to the opposite side of said crutches and supported by said braces.

2,459,067
METHOD OF DUPLICATING
Andrew L. Erickson, Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application April 7, 1945, Serial No. 587,039
4 Claims. (Cl. 101—149.4)



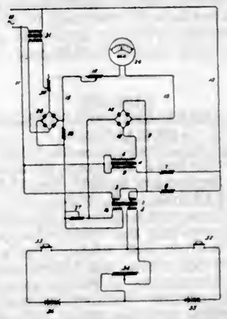
1. In the art of hectograph duplicating from reverse related copy whereby to transfer like and unlike copy from a primary master to a plurality of moistened copy card unit strips of like width, the steps of securing a plurality of such unit copy cards into a unitary card assembly with the cards in stepped relation, preparing a primary master having general data thereon at one portion thereof intended for transfer to a predetermined place on said cards and having thereon at a portion thereof spaced from said general data portion a distance at least as great as the offset distance of said stepped cards a plurality of parallel sections of specialized data related to said general data whose distance from center line to center line corresponds to the offset distance of said stepped cards, superposing said primary master against said moistened unitary card assembly with the said specialized data sections respectively in juxtaposition with the offset portions of all except the uppermost of said cards so that the specialized data sections are individually imprinted on different cards, then separating said cards from each other by detaching said cards from their unitary mounting, and imprinting said general data separately upon the said predetermined space of the unimprinted portion of each separate card upon which said specialized data had been imprinted.

2,459,068
CUTOFF MACHINE
Abraham B. Eastwood, Abington, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Continuation of application Serial No. 518,362, January 15, 1944. This application April 2, 1947, Serial No. 738,891
7 Claims. (Cl. 51—238)



1. A mechanism for revolubly supporting cylindrical bar stock to be severed by a cut-off machine comprising, in combination, a supporting structure for said mechanism, a plurality of levers pivotally mounted upon said supporting structure each having a freely extending arm terminating in a guide roll, said guide rolls being circumferentially spaced about a common circle, means interconnecting said levers for effecting common actuation thereof whereby to correspondingly adjust said guide rolls relatively to the center of said circle, and resilient means operatively associated with said lever-interconnecting means to provide for independent positional adjustment of said guide rolls to compensate for variations in the surface contour of the bar stock revolubly supported between said guide rolls.

2,459,069
ELECTROMAGNETIC SYSTEM
Alan S. Fitz Gerald, Wynnewood, Pa., assignor to Warren Webster & Company, Camden, N. J., a corporation of New Jersey
Application December 14, 1946, Serial No. 716,193
4 Claims. (Cl. 175—363)



1. A magnetic amplifier comprising: a saturable core device having an alternating current winding and a plurality of direct current saturating windings; means connecting said alternating current winding in series with a first impendance across an alternating current source; a transformer having primary and secondary wind-

ings; means connecting said primary winding

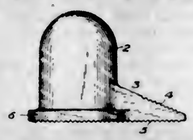
tively contact the differently curved areas of the

the rim thereof and defining a space substan-

tools in unison to simultaneously machine a work piece, a drive for rotating the tool head, tool

ings; means connecting said primary winding in series with a second impedance across said alternating current source; a circuit containing in series said saturable core alternating current winding, said transformer secondary winding, and a rectifier; a load device; an output circuit connecting said rectifier with said load device in series with one of said direct current saturating windings and an additional source of direct current voltage drop, the relative magnitudes of the excitation of said saturating winding, the resistance of said load device, and said direct current voltage, being so apportioned that the system has two different conditions of stability giving two different values of current in said output circuit; and means for predetermining which of said conditions shall obtain so as selectively to control the current in said output circuit.

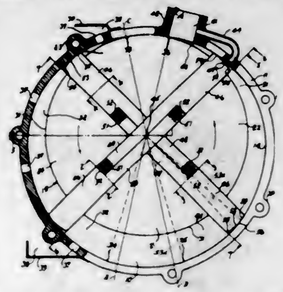
2,459,070
DOORSTOP
Arthur W. Gard, Edgewood, Pa., assignor of one-fourth to William H. Parmelee, Bethel Township, Allegheny County, Pa., and one-fourth to James M. Guthrie, Crafton, Pa.
Application December 21, 1944, Serial No. 569,139
1 Claim. (Cl. 292—343)



A door stop device comprising an integrally molded mass of vitreous material having a weight-affording body portion formed at its bottom with a relatively expansive basal area for laterally extended contact with a floor upon which the device is placed, and an integral tapered portion extending outward from said body portion and being relatively narrow with respect to said laterally extended floor-contacting area of said body portion and having a correspondingly diminished basal area for contact with said floor at a concentrated pressure point beneath the lower side edge of a door with which said tapered portion is wedged, whereby said body portion with its laterally extended contact with the floor and said relatively narrow tapered portion provide an effective combination of laterally supported mass and concentrated wedging action to secure said door against unintended movement.

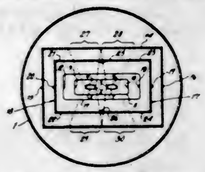
2,459,071
SLIDING VANE AIR COMPRESSOR AND EXHAUSTER
Harry A. Garrison, Minneapolis, Minn., assignor of one-half to Joe F. Schwan, St. Paul, Minn.
Application September 8, 1945, Serial No. 615,152
6 Claims. (Cl. 230—153)

1. In a rotary compressor, a cylindrical rotor, a casing surrounding the rotor of greater cross-sectional area than that of the rotor, said rotor having a portion contacting the circumferential wall of the casing so as to leave a generally crescent-shaped pumping chamber between the outer wall of the rotor and the inner wall of the casing, said inner wall having its cross-sectional curvature partly in arcs of a circle and partly in non-circular curves, and pistons carried by the rotor and movable outwardly relative thereto to contact the inner wall of the pumping chamber, each of said pistons having a multiplicity of curved contact faces at each end which respectively contact the differently curved areas of the inner walls of the chamber, whereby large areas of contact between the piston heads and the



chamber walls are secured throughout the movement of the piston heads about the full surrounding extent of said contacted walls.

2,459,072
BEAM POWER TUBE
Donald G. Haines, Elmhurst, Ill., assignor to National Union Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 8, 1946, Serial No. 639,848
3 Claims. (Cl. 250—27.5)



1. An amplifier tube of the beam power type comprising a pair of substantially parallel and spaced linear cathodes, a control grid surrounding said cathodes, a shield grid surrounding said control grid, an output anode for said cathodes, a pair of beam-forming elements mounted adjacent the end sections of said grids, and a conductive member mounted in said region and connected to said elements to provide a retarding potential gradient in said region with respect to electrons tending to move from the anode toward the control grid, said beam-forming elements cooperating with said cathodes to form the electron streams into respective and substantially non-overlapping beams diverging towards said anode and with a region between said beams having low electron density.

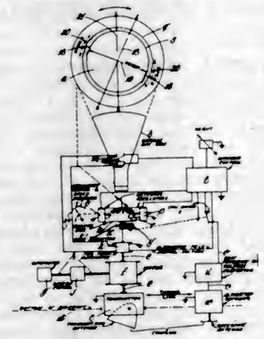
2,459,073
PAPER CUP HAVING A POURING LIP EXTENDING OUTWARDLY FROM SIDE WALL
Kenneth C. Hamilton, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 4, 1944, Serial No. 561,903
6 Claims. (Cl. 229—4.5)

1. In a container made of fibrous material and having a bottom and a substantially conical side wall, a lip formed in the container side wall and extending therefrom for pouring the container contents therefrom, the lip extending from substantially the bottom of the container through

the rim thereof and defining a space substantially triangular in cross sectional area in conjunction with the continuation of the line of the

container side wall, the space increasing in area from the end of the lip adjacent the container bottom to the rim of the container.

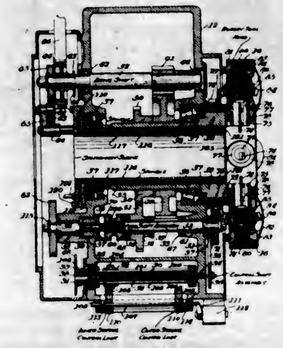
2,459,074
COURSE AND HEIGHT INDICATOR FOR AIRCRAFT
Horace Warren Hastings-Hodgkins, Lincoln, England, assignor to Radio Corporation of America
Application May 1, 1943, Serial No. 485,562
In Great Britain July 3, 1942
6 Claims. (Cl. 343—9)



1. In a radio avigational device for aircraft comprising, in combination, a radio transmitter having means for continuously emitting frequency modulated signals in a rotating beam which will strike the earth on a cyclic curve as the aircraft advances, means for generating a reference current in synchronism with said rotating beam, means for receiving said signals after reflection from the earth, means for combining said emitted signals with said received reflected signals, and indicating means responsive to the frequency and phase of said combined signals and said reference current for indicating simultaneously the speed, altitude and true course of said aircraft.

2,459,075
PIPE CUTOFF MACHINE
Robert L. Hibbard, deceased, late of Bellevue, Pa., by Stewart C. Hibbard, Ross Township, Allegheny County, and Robert L. Hibbard, Jr., and Hays M. Junkin, both of Bellevue, Pa., executors, assignors of one-half to William K. Stamets, Mars, Pa.
Application April 3, 1945, Serial No. 586,401
13 Claims. (Cl. 164—60)

9. In a machine tool the combination of a rotary tool head having an annular series of spaced threaded tool holders each arranged to carry a tool, an internally threaded pinion engaging the threaded portion of its respective tool holder and arranged when rotated to feed or retract the tools in unison to simultaneously machine a work piece, a drive for rotating the tool head, tool drive means rotatably mounted relative to the tool head and arranged to engage said pinions to move the tools toward and away from the work piece when rotated at speeds different than the speed of the tool head and arranged to maintain the position of the tools when rotated in synchronism with the tool head, manually adjust-



able trip means to automatically select different operating speeds and synchronous speed for the tool drive means to feed and retract and to idle the tools for tool cutting strokes of predetermined position and length, and limit control means to change the tool feed movement to retracting movement at the ultimate limit of the tool feed and to idle the tools at the ultimate limit of the tool retraction.

2,459,076
PROCESS OF PREPARING 1,1,3,3-TETRAALKOXYPROPANES
Martin E. Hultquist, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 11, 1948, Serial No. 14,382
5 Claims. (Cl. 260—615)

1. A method of preparing 1,1,3,3-tetraalkoxypropanes which comprises reacting an ester of orthoformic acid with a vinyl ester in the presence of an acid-reacting halide catalyst.

2,459,077
QUICK ACTION SWITCH
Max L. Jeffrey, Cleveland, Ohio
Application June 28, 1945, Serial No. 602,035
9 Claims. (Cl. 200—70)

5. A switch comprising a housing, a partition dividing the housing into separate compartments, an operating shaft rotatably journalled in the housing and extending into one of said compartments and a latch operating lever carried thereby, an operating lever carried by said shaft outside the housing, spring means connecting said lever in the housing to said shaft and permitting relative movement between the lever and the shaft upon either the lever or shaft meeting with predetermined resistance, a rock shaft journalled in said partition and a contact carrying lever carried thereby in said other compartment, means for rocking said second shaft and swinging said contact carrying lever comprising a rocker secured to said shaft in said first compartment and hav-

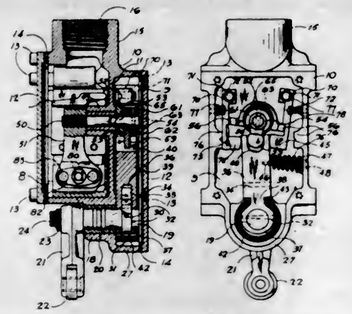
ing a pair of pawl engaging arm carried thereby, pawls supported by the housing movable for

2,459,079
GAS TURBINE POWER UNIT

nally adjustably mounted upon the upper end of each of said posts and having an end swingable within and across said working zone an angular

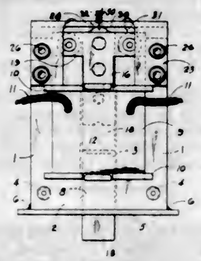
means connected to said shaft for rotating the same having two separated and closed compartments, a shaft extending therethrough, a slurry

ing a pair of pawl engaging arm carried thereby, pawls supported by the housing movable for alternate engagement with said pawl engaging arms, extensions for said pawls extending opposite to said latch operating lever and spring means for holding said pawls into engagement with said latch operating lever; and means for



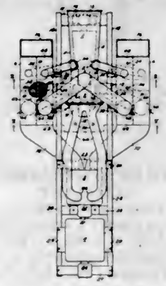
rocking said shaft by said latch operating lever through said rocker comprising a lever rotatably mounted on said rock shaft and having a projection thereon, said rocker being provided with a projection and a C shaped spring engaging said projections and providing a resilient driving connection therebetween said rocker.

2,459,078
SHOCK ABSORBENT STOP FOR SOLENOIDS
Max L. Jeffrey, Shaker Heights, Ohio
Continuation of application Serial No. 595,290, May 23, 1945. This application August 4, 1947, Serial No. 766,055
11 Claims. (Cl. 175—341)



1. An electromagnet comprising a laminated soft iron stator of generally E shape, a winding for said stator, said stator having an inner pole extending into said winding and outer poles extending beyond the winding, a saddle member for connection to said outer poles having a portion on each end formed to provide spaced parallel walls embracing each of said poles and extending beyond the inner face of each of said poles to form parallel guide surfaces, an armature for said magnet having a core portion for extension and attraction into said winding and a head carried thereby for guiding engagement with said guide surfaces, said saddle member being formed with a bridge portion connecting said parallel walls.

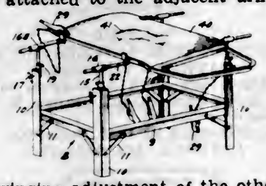
2,459,079
GAS TURBINE POWER UNIT
John Algot Johnson, Wauwatosa, and Clarence E. Kenney, West Allis, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application June 22, 1944, Serial No. 541,562
6 Claims. (Cl. 60—41)



1. A compact gas turbine power plant comprising a compressor, a turbine drivingly connected with said compressor, a separate, independently rotating power turbine means, a supporting structure operatively mounting said compressor, compressor turbine and power turbine means with the inlet of the compressor turbine disposed immediately adjacent the discharge end of the compressor and with the exhaust end of the power turbine means opposing the exhaust end of the compressor turbine, a pair of heat exchangers mounted on said structure adjacent opposite sides of said compressor turbine in parallel relation with respect to each other and with respect to the longitudinal axis of the turbine, said heat exchangers each including means providing an exhaust gas passage extending therethrough in a direction approximately parallel to said axis and at least two pairs of conductors extending transversely through said exhaust gas passage each pair having a set of inlet and outlet connections said sets being on opposite sides of the heat exchanger and adjacent to the opposed ends of the compressor and compressor turbine, a first group of spaced conduits severally connecting the inlet of each pair of conductors with the discharge of the compressor, a second group of spaced conduits embodying combustion chamber means and severally connecting the outlet of each pair of conductors with the inlet of the compressor turbine, a third group of spaced conduits connecting the exhaust of the compressor turbine with the inlet of the power turbine means, and a fourth group of conduits severally connecting the exhaust of the power turbine means with the adjacent ends of the exhaust gas passages in said heat exchangers.

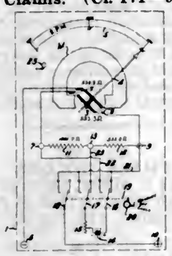
2,459,080
MECHANIC'S WORK-HOLDING TABLE FURNISHED WITH ADJUSTABLE WORK-SUPPORTING ARMS
William Killius, Altadena, Calif., assignor to Blackhawk Mfg. Co., Milwaukee, Wis.
Application March 13, 1948, Serial No. 14,746
4 Claims. (Cl. 29—288)

3. In a mechanics work holding table, a frame having four corners defining an intervening rectangular working zone, an upright cylindrical post rotatably and vertically adjustably supported at each corner of said frame, an elongated horizontal cylindrical arm rotatably and longitudinally adjustably mounted upon the upper end of each of said posts and having an end swingable within and across said working zone, an angular work holding element swingably attached to said end of each arm, each of said elements having a pair of integral work engaging flanges disposed perpendicular to each other and one of which is pivotally attached to the adjacent arm end to



permit swinging adjustment of the other flange across or eccentrically about the arm axis for engagement of said other flange with the work either at any angle relative to said axis or from above or below, and a work clamp flexibly suspended from the adjacent arm end and being universally disposable for cooperation with either element flange and with the work coacting therewith.

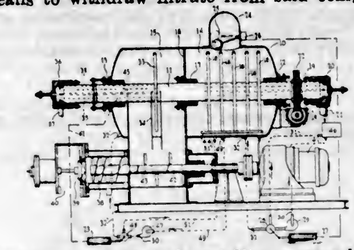
2,459,081
ELECTRICAL MEASURING INSTRUMENT
Miles C. Kunz, Union, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application January 31, 1945, Serial No. 575,453
9 Claims. (Cl. 171—95)



1. An electrical measuring instrument of the permanent magnet-moving coil type comprising a moving system having a suppression coil and a measuring coil, a pointer carried by the moving system and movable along a graduated scale, a source of current, circuit connections between the source of current and the suppression coil and including a switch adapted to be closed in one position to permit current to flow through said suppression coil in one direction to oppose movement of said moving system by current flow in said measuring coil, and alternatively to be closed in a second position to cause the current to flow through the suppression coil in the opposite direction, means for adjusting the magnitude of the current flowing in the suppression coil to a predetermined value, and circuit connections from the measuring coil to terminals across which an electrical potential that varies with the function to be measured may be impressed.

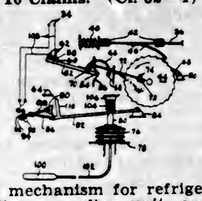
2,459,082
FILTER
William McCaskell, Los Angeles, Calif.
Application July 11, 1945, Serial No. 604,363
9 Claims. (Cl. 210—200)

1. In a filter of the class described, the combination comprising a closed container rotating means connected to said shaft for rotating the same having two separated and closed compartments, a shaft extending therethrough, a slurry thickener in one compartment of said container including filter means mounted on said shaft, means to withdraw filtrate from said compart-



ment through said shaft and filter, a second filter mounted on said shaft in a second compartment, means to transfer thickened slurry from said first compartment to said second compartment, means to remove filtrate from said second compartment, and means to remove filter cake from said second compartment.

2,459,083
REFRIGERATOR PROVIDED WITH A DEFROSTING CONTROL FOR THE REFRIGERATION SYSTEM THEREOF
Graham S. McCloy, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 11, 1946, Serial No. 682,896
10 Claims. (Cl. 62—4)



6. Control mechanism for refrigerating apparatus including a cooling unit, an electrically-driven refrigerant apparatus for supplying refrigerant to said cooling unit, and electric supply lines for operating said apparatus, said mechanism comprising a first and a second electric switch adapted to be located in said lines in series with said apparatus, said first switch being actuated through resilient means by an actuating member adapted for response to the temperature of said cooling unit to assume a plurality of positions, said first switch and actuating member controlling said apparatus to maintain said cooling unit at a substantially constant temperature, said actuating member closing said second switch when the temperature of the cooling unit rises to above freezing temperatures.

2,459,084
METHOD OF AND MEANS FOR MAKING DIES
Frank E. McGary, Narberth, and Edward Hochreiter, Charles F. Schlecht, and Frank Shannon, Philadelphia, Pa., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 3, 1940, Serial No. 350,502
13 Claims. (Cl. 22—202)

2. The method of forming a female checking fixture having means to locate flange and trim

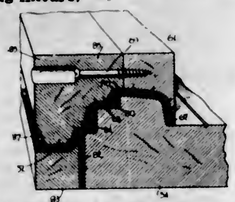
lines which comprises superimposing a frame-

and limit endwise movement of the pin, at least

2,459,088

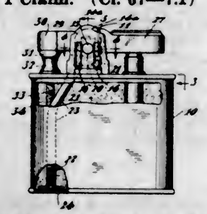
obtained by reacting substantially one mol of

lines which comprises superimposing a framework on a master male model in such a manner that a free space of small dimension having large surface area per unit of volume is interposed between the bottom of the framework and the surface of the master model, positioning retaining means such as nails in the framework with their heads projecting into the free space, introducing molten alloy of the Wood's metal group into said free space to engage the heads of the nails and bond the alloy to the framework, and removing said framework and alloy from the master model when the alloy solidifies for use as a checking fixture.



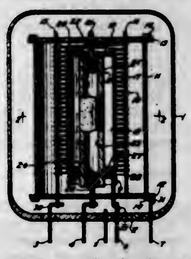
6. In a device for checking two coordinated dies designed to be used in imparting the desired form to a stamping in successive steps, the combination comprising a checking fixture member having a checking surface presenting a negative replica of a surface contour desired to be produced in both of said dies, a second checking fixture member attachable to the first in complemental relation thereto and having a checking surface presenting a negative replica of a surface contour desired to be produced in the first of said dies which surface is to differ from the desired corresponding surface contour of the second of said dies, said second checking fixture member being detachable from said first checking fixture member after attachment thereto, whereby said second checking fixture member may be replaced by a third checking fixture member attachable to the first in complemental relation thereto and having a checking surface contour presenting a negative replica of said desired corresponding surface of the second of said dies.

2,459,085
PYROPHORIC LIGHTER
Frederick Meyer, Union, N. J., assignor to Ronson Art Metal Works, Inc., Newark, N. J., a corporation of New Jersey
Application January 10, 1946, Serial No. 640,311
1 Claim. (Cl. 67—7.1)



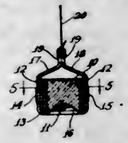
A lighter having a casing, a pair of spaced standards extending therefrom and having transverse alined passages extending therethrough, a pivot pin for operating parts of the lighter having its opposite end portions mounted within and slidable endwise through said passages, cover plates respectively overlying the outer sides of said standards and the outer end portions of said passages and pivot pin to conceal the latter and limit endwise movement of the pin, at least one of said cover plates and its corresponding standard having parts interengaging to afford sliding movement of said plate in a plane transverse to the pin to expose the corresponding end of the pin and afford endwise removal of the pin past said last mentioned cover plate.

2,459,086
ELECTRON TUBE AND HEATER TYPE CATHODE THEREFOR
Carl F. Miller, Summit, N. J., assignor to National Union Radio Corporation, Orange, N. J., a corporation of Delaware
Application April 16, 1948, Serial No. 21,325
10 Claims. (Cl. 250—27.5)



1. A heater type cathode for electron tubes, comprising a heater element in the form of a rigid tubular body constituted of composite insulator and conductor materials, heater current supply members attached to opposite ends of said tubular body, a tubular metal sleeve surrounding said body in fixed circumferential spaced relation thereto, and a coating of electron-emissive material on the external surface of said sleeve.

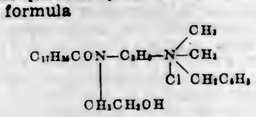
2,459,087
CHALK HOLDER
George F. Miller, Chicago, Ill.
Application September 17, 1945, Serial No. 616,756
1 Claim. (Cl. 273—20)



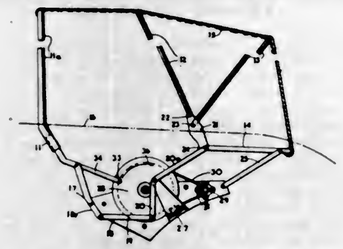
A holder for a cubical piece of billiard cue chalk having a single face engaged by the end of the cue, comprising two separate flexible strips each substantially the width of one of the chalk sides, one strip being of a length to extend entirely around the chalk but not over the engageable face and the ends overlapping on one face, the other strip having a single cue end opening intermediate its ends to register with the engageable face and of a length to extend around the chalk at right angles to the first strip with the ends extending together outwardly opposite the cue opening and with perforations in the ends adapting the holder to be suspended by a supporting cord engaging therein, and fastening means connecting the two strips together at opposite sides of the chalk where these strips cross, and the chalk being insertable in the holder by spreading apart the perforated ends of the suspending strip at the side of the holder opposite the single cue opening.

2,459,088
ALIPHATIC AMIDE-SUBSTITUTED PROPYL QUATERNARY AMMONIUM COMPOUNDS
Philip H. Moss, Stamford, Conn., and Elmer W. Cook, New York, N. Y., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 24, 1947, Serial No. 750,368
3 Claims. (Cl. 260—404.5)

1. The quaternary ammonium compound having the formula



2,459,089
FOLDING HOOD FOR MOTOR VEHICLES AND THE LIKE
John H. Orr, Coventry, England, assignor to Carbodies Limited, Coventry, England
Application September 18, 1947, Serial No. 774,772
In Great Britain September 25, 1946
6 Claims. (Cl. 296—117)



3. A drop-head automobile body including a main hoop, for supporting the front edge of the head fabric, pivotally mounted on opposite sides of the automobile body, subsidiary hoops, for supporting the rear portion of the head fabric, pivotally mounted at opposite sides of the automobile body, a rotary disc carrying a crank pin, a rotary type of motor, a speed reduction belt drive between said motor and disc, a connecting rod between said crank pin and said main hoop such that when said motor is operated one part of a revolution of said disc will move said main hoop from the fully lowered to the fully raised position and the remaining part of the revolution of said disc will return said main hoop to said lowered position, and connections between said main and subsidiary hoops whereby the latter are raised and lowered simultaneously with said main hoop.

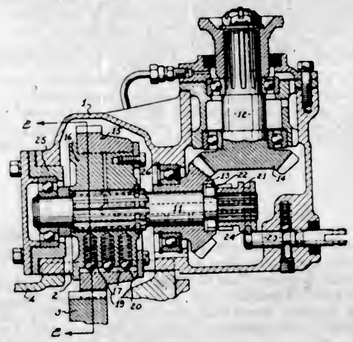
2,459,090
PRODUCTS OBTAINED BY REACTING PHOSPHORUS PENTASULFIDE WITH SULFURIZED KETONES
Ferdinand P. Otto, Woodbury, N. J., and Ronald E. Meyer, Cumberland, Md., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application July 25, 1945, Serial No. 607,090
5 Claims. (Cl. 260—125)

1. As a new composition of matter, a phosphorus- and sulfur-containing reaction product obtained by reacting substantially one mol of phosphorus pentasulfide with four mols of a sulfurized ketone at a temperature between about 100° C. and about 200° C., said sulfurized ketone being obtained by sulfurizing an unsaturated acyclic ketone containing no substituents other than hydrogen, with elementary sulfur at a temperature above about 150° C. and below the decomposition temperature of said sulfurized ketone.

2,459,091
ADJUSTING MEANS FOR GLUING MACHINES
Roland A. Page, New York, N. Y.
Application December 1, 1945, Serial No. 632,142
5 Claims. (Cl. 91—51)

4. In a gluing machine, a glue roll, a doctor roll adapted to be moved to and from the glue roll, means for moving said doctor roll toward the glue roll comprising an adjusting screw, supporting means for the doctor roll, a stem carried by said supporting means and having a head at one end against which the adjusting screw is operative, said screw being independent of the stem and a spring tending to hold the stem in contact with the adjusting screw.

2,459,092
SLIP CLUTCH POWER TAKE-OFF UNIT
Carl D. Peterson, Albert H. Deimel, and Carl H. Wolcott, Toledo, Ohio, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application April 19, 1945, Serial No. 589,138
2 Claims. (Cl. 74—15.86)



1. A power take off unit for transmission mechanisms, the unit including a casing having drive and driven shafts journalled therein, the shafts being arranged at an angle to each other, intermeshing gears on said shafts, the gear on one shaft being rotatably mounted thereon and clutchable thereto, a manually operable clutch mounted on the said one shaft and shiftable to clutch and unclutch the gear thereon and said one shaft, a drive gear for the drive shaft and for meshing with a gear on the output shaft of the transmission mechanism, and an overload

release coupling between the drive shaft and the drive gear, the manually operable clutch being

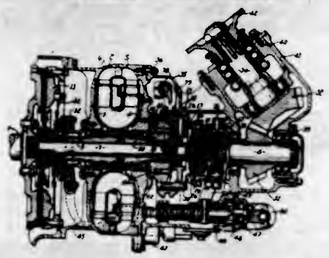
ially alined therewith, clutch means operable to connect either of the drive shafts to the driven

2,459,096
METHOD AND APPARATUS FOR FLUID

2,459,097
PUMP FOR EVAPORATIVE AIR COOLERS OR THE LIKE

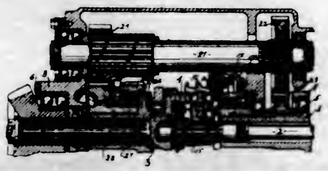
release coupling between the drive shaft and the drive gear, the manually operable clutch being located in the space at the intersection of the axes of the drive and driven shafts.

2,459,093
ANGLE DRIVE TORQUE CONVERTER TRANSMISSION
Carl D. Peterson and Albert H. Deimel, Toledo, Ohio, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application May 23, 1945, Serial No. 595,264
10 Claims. (Cl. 74—189.5)



1. In a transmission mechanism, outer and inner concentric drives, a drive member common to both drives and a driven shaft axially alined with the outer and inner drives, the outer drive including a hydraulic torque converter having input and output shafts, a normally engaged clutch between the drive member and the input shaft of the converter, motion transmitting means between the converter output shaft and the driven shaft including an overrunning clutch permitting the driven shaft to overrun the output shaft of the converter, when rotating faster than the same, the inner drive including a shaft extending axially through the input and output shafts of the converter, a normally disengaged jaw clutch for connecting the driven shaft directly to the inner drive shaft including a shiftable collar operable to engage and disengage the jaw clutch, an angle drive including intermeshing bevel gears, one of which is mounted on the driven shaft, and a casing for the transmission having bearings on opposite sides of the bevel gear on the driven shaft in an axial direction, the bearing on one side of the bevel gear being located between the shiftable clutch collar and the bevel gear.

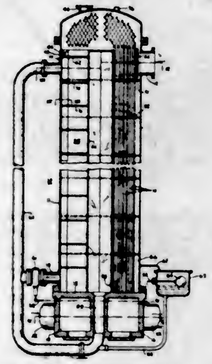
2,459,094
TRANSMISSION MECHANISM
Carl D. Peterson and Albert H. Deimel, Toledo, Ohio, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Original application August 7, 1943, Serial No. 497,839. Divided and this application November 6, 1945, Serial No. 626,942
4 Claims. (Cl. 74—368)



1. In a transmission mechanism, inner and outer concentric drive shafts, a driven shaft axially alined therewith, clutch means operable to connect either of the drive shafts to the driven shaft, and indirect drive means between the outer drive shaft and the driven shaft including an overrunning clutch permitting the driven shaft to overrun the indirect drive when the inner drive shaft is connected to the driven shaft to drive the same.

2. In a transmission mechanism, inner and outer concentric drive shafts, a driven shaft axially alined therewith, a clutch operable in one direction from neutral to connect the outer drive shaft to the driven shaft and in the other direction from neutral to clutch the inner drive shaft to the driven shaft, and an indirect reduction drive gearing between the outer drive shaft and the driven shaft including an overrunning clutch to permit the driven shaft to overrun the indirect drive when the inner shaft is clutched to the driven shaft.

2,459,095
HEAT EXCHANGE APPARATUS
John P. Rathbun, Prospect Park, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 13, 1944, Serial No. 530,821
2 Claims. (Cl. 257—32)



1. Heat exchange apparatus comprising a vertical shell having a steam inlet and a condensate outlet, a removable bundle of tubes disposed vertically in said shell, water box structure associated with the terminal portions of the tubes and providing for circulation of water therethrough, vertical partition structure removable from the shell with the tube bundle and cooperating with the shell to segregate a portion of the space about the tubes from the remaining space within the shell, bifurcated vertical edges on the partition structure providing vertical channels opening toward the cooperating shell, resilient sealing members carried by the branches of the bifurcations and frictionally contacting the contiguous shell, a source of condensate comprising upper portions of the tubes which extend through the segregated portion of space and thereabove, and a pan-like structure positioned beneath said source of condensate for reception of condensate therefrom and discharge of condensate to the vertical channels to maintain them flooded.

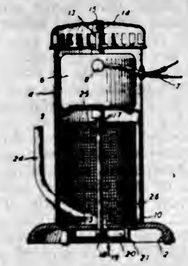
2,459,096
METHOD AND APPARATUS FOR FLUID HYDROCARBON CONVERSION
Frederick E. Ray, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application November 7, 1946, Serial No. 708,245
9 Claims. (Cl. 196—52)

1. A method for conversion of fluid hydrocarbons to lower boiling gaseous hydrocarbons in the presence of a moving particle-form contact material which method comprises: introducing particle-form contact material into the upper section of a confined, elongated conversion zone at a suitable temperature for said hydrocarbon conversion; passing said contact material downwardly through said zone as a substantially compact column of downwardly flowing particles; withdrawing used contact material from the lower section of said zone, introducing fluid hydrocarbons into the upper section of said conversion zone; passing said fluid hydrocarbons downwardly through the major portion of the length of said column of contact material within said conversion zone to effect conversion of said hydrocarbons to lower boiling gaseous hydrocarbon products; baffling the flow of contact material in the lower section of said column at a plurality of vertically spaced locations to provide a plurality of vertically spaced apart gas collecting spaces of equal width which are shielded from gravity flow of contact material from said column but open to said column along their lower sides, said gas spaces being so vertically spaced one from another that the open base of any given gas space above the lowermost gas collecting space is positioned a greater vertical distance above the highest horizontal plane of maximum cross-sectional area across the gas space next below than the distance, d, as expressed by the formula,

$$d = \frac{W}{2}(\tan b + \tan c)$$

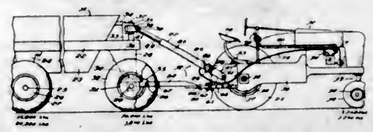
where W is the maximum width of said gas spaces, b is the characteristic angle of internal flow of said contact material, and c is the angle of repose of said contact material; collecting said gaseous products in all of said gas collecting spaces, withdrawing the gaseous products from said collecting spaces as confined streams and imposing a fixed throttle on the gas flowing from each collecting space at the location of its exit from the collecting space, the throttle being progressively less for flow from successively lower collecting spaces.

2,459,097
PUMP FOR EVAPORATIVE AIR COOLERS OR THE LIKE
Gene C. Rudd and Cornelius B. Wright, Fort Worth, Tex.
Application April 5, 1947, Serial No. 739,710
1 Claim. (Cl. 103—87)



A pump comprising a base, a tubular housing vertically mounted on said base, a motor mounted within the upper end of said tubular housing and spaced from the wall thereof, shafts extending vertically above and below said motor and driven thereby, a cup shaped combination fan and cover secured to the upper end of said shaft, vertically disposed louvers in the periphery of of said fan, an impeller housing mounted beneath said base, impeller blades within said impeller housing and secured to the lower end of said shaft, fluid inlet means in said base and communicating with the interior of said impeller housing, fluid outlet means in said base over said blades and asymetrically positioned with respect to the center thereof, and the said blades being angularly disposed for directing the action of the same toward the said outlet.

2,459,098
WEIGHT-TRANSFERRING VEHICLE COUPLING OR HITCH STRUCTURE
Lovel R. Simmons, Jackson, Miss.
Application January 15, 1944, Serial No. 518,336
1 Claim. (Cl. 280—33.44)



An apparatus for coupling a tractor to a vehicle to be propelled thereby and self-supported upon a plurality of ground-engaging parts; the combination of a hitch structure adjustable to accommodate variation in the elevations of said tractor and vehicle while they traverse an uneven course, said structure including a chamber which expands and contracts attendant to such adjustment and which chamber is receivable of fluid under pressure to energize the structure for transferring weight from said vehicle onto the tractor in an amount constituting a function of the pressure of the fluid, and said hitch structure being universally articulately connected between said tractor and vehicle whereby stability of the vehicle with respect to tipping sidewise would be diminished if the hitch should lift the vehicle sufficiently to terminate contact of any ground-engaging part thereof with the ground; and fluid supply means for delivering energizing fluid into

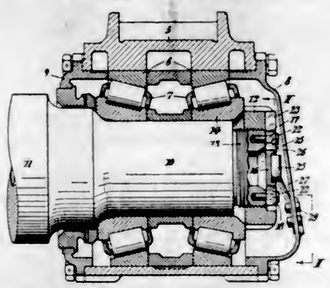
the chamber when it expands and for receiving

predetermined pitch change at maximum throw

vidual to said mobile unit and responsive to car-

the chamber when it expands and for receiving fluid from said chamber when it contracts to modulate the pressure of fluid therein pursuant to adjustments of said structure, said fluid supply means including a fluid reservoir, a constant delivery pump driven from the tractor to withdraw fluid from the reservoir, a conduit connecting said chamber with the pump outlet, pressure relief valve means connected between the pump outlet and the reservoir and also between said chamber and the reservoir, said pressure relief valve means being settable to limit the pressure of fluid delivered by the pump and contained in said chamber to a value insufficient to energize the structure for raising any of the ground-engaging parts of the vehicle from the ground, and a manually controlled valve means selectively settable in an adjustment establishing concurrent communication of said chamber and of the pump with the reservoir independently of the pressure relief valve means and instantaneously settable in another adjustment reestablishing communication of the pump outlet and of said chamber with the reservoir only through the pressure relief valve means.

2,459,099
BEARING SHUNT MEANS
Carleton K. Steins, Merion, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 13, 1945, Serial No. 622,201
3 Claims. (Cl. 308—1)



1. Bearing shunt means for use in connection with a wheel axle journal box of an electric locomotive or an electrically powered railway car, comprising a contact element with means for securing it to the end of the axle journal and having in its outer face a recess coaxial with said journal; a complemental cooperative contact element occupying the recess in the first contact element and frictionally bearing on the bottom of the same; and a leaf spring with one end thereof fixedly secured to a removable cover of the journal box and with its other end supporting the complemental contact element to maintain it in pressure contact with the bottom of the recess in said first contact element.

2,459,100
ARTICULATE FIGURE
Frank Larned Treuting, Newark, N. J., assignor to Herbert R. Treuting, Sr., Newark, N. J.
Application August 14, 1946, Serial No. 690,479
4 Claims. (Cl. 46—161)

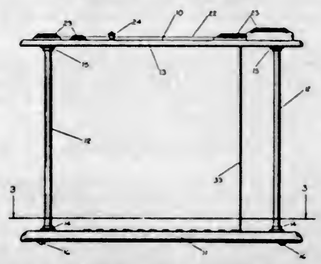
1. An articulate animal figure comprising a body portion, a head having a neck portion and front and rear leg members, said body portion having a front cavity, ends of upper portions of said front leg members pivotally attached to and held in frictional engagement to the outer surfaces of opposite walls of said cavity, said neck portion having opposite surfaces of one end thereof disposed in frictional engagement with the inner

surfaces of the opposite walls of said cavity and pivotally attached to said walls, said body portion having a rear cavity, upper portions of said rear leg members having ends thereof disposed in said rear cavity and pivotally held in frictional engagement with the inner surfaces of the walls of said rear cavity.

2,459,101
BACK GAUGE FOR PUNCHES
Ralph R. Uhrmacher, Chicago, Ill., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application October 18, 1946, Serial No. 704,254
3 Claims. (Cl. 164—59)

1. In a punch, a transverse rod, a back gauge comprising a gauge bar and a holder, said holder having a pair of resilient side walls frictionally holding said gauge in any lateral position on said rod, a front wall, and a resilient rear wall cooperating with said front wall to hold said gauge bar in any depth regulating position.

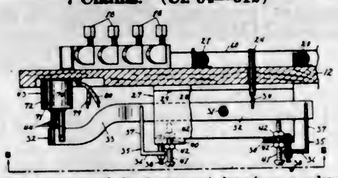
2,459,102
MUSICAL INSTRUMENT
Newton J. Adair, Fresno, Calif.
Application January 25, 1947, Serial No. 724,386
7 Claims. (Cl. 84—312)



1. A musical instrument comprising a support, a plurality of strings tensioned thereon, means individual to the strings for progressively varying their tension as the instrument is played, keys individually operating the tensioning means, stops limiting the throws of the keys to achieve

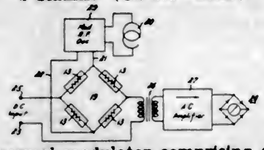
predetermined pitch change at maximum throw, pedals manipulating single keys, and chord pedals each manipulating a plurality of keys to achieve single string and chordal tuning of the strings.

2,459,103
MUSICAL INSTRUMENT
Newton J. Adair, Fresno, Calif.
Application August 19, 1947, Serial No. 769,374
7 Claims. (Cl. 84—312)



1. In a musical instrument having a plurality of tensioned strings disposed for audible vibration, means for progressively varying the tension of the strings comprising a pair of fixedly positioned members in spaced engagement with the strings, solenoids individually connected to the strings intermediate said members and arranged to draw their respective strings between the members when activated, and manually controlled electric means for selectively activating the solenoids.

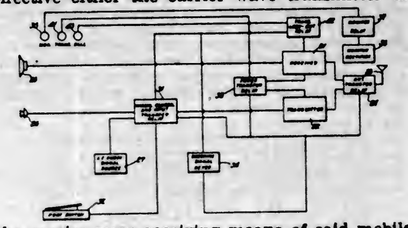
2,459,104
ELECTRONIC MEASURING APPARATUS
Roswell W. Gilbert, Montclair, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application June 8, 1945, Serial No. 598,401
2 Claims. (Cl. 179—171.5)



1. A thermal modulator comprising a continuously balanced resistance bridge, each arm of said bridge being a resistance element having an appreciable temperature coefficient of resistance and a short thermal time constant, a direct current circuit connected across one pair of opposite junctions of said bridge, and a source of relatively high frequency heating current connected across the other pair of bridge junctions and including means for modulating the high frequency current at a relatively low frequency, whereby the resistance of said bridge will vary cyclically at the low frequency.

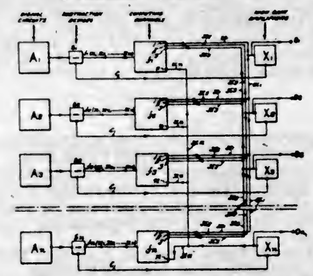
2,459,105
TRAFFIC SIGNALING SYSTEM
William S. Halstead, Purchase, N. Y., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application April 12, 1941, Serial No. 388,338
4 Claims. (Cl. 250—6)

1. In a traffic signaling system for effecting automatic supervisory signalling between a station and a remote mobile unit, a carrier wave transmitter for said station, a second carrier wave transmitter for said remote mobile unit, carrier wave receiving means individual to said station and responsive to carrier wave energy from said mobile unit, carrier wave receiving means individual to said mobile unit and responsive to carrier wave energy from said station, a source of control signal energy, means for intermittently effecting emission of a control signal modulated carrier wave by said station transmitter, a transfer means for said mobile unit adapted to render effective either the carrier wave transmitter or



the carrier wave receiving means of said mobile unit and switching means coupled to said transfer means and operable for actuating said transfer means to initiate operation of the carrier wave transmitter of said remote mobile unit during a period between intermittent transmission of carrier wave energy by said station.

2,459,106
COMPUTING APPARATUS
Arthur C. Hardy, Wellesley, Mass., and Edward C. Dench, West Hartford, Conn., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
Application August 6, 1946, Serial No. 688,750
8 Claims. (Cl. 235—61)



1. An electrical apparatus for solving a set of simultaneous equations, comprising signal circuits and means for establishing in them signals corresponding to the known terms of the equations, computing channels arranged to perform the mathematical operations which the equations indicate as to be performed on the unknown quantities, subtracting devices of which each has its input terminals connected to the signal circuit and the computing channel corresponding to one equation, high-gain amplifiers having their output terminals connected to the computing channels and to the output terminals of the apparatus, and a connection between the output terminal of each subtraction device and the input of one of the amplifiers.

2,459,107
DRUM TYPE INDICATOR ALARM CLOCK
Arthur A. Johnson, Bridgeport, Conn., assignor to Casco Products Corporation, Bridgeport, Conn., a corporation of Connecticut
Application December 3, 1940, Serial No. 368,329
31 Claims. (Cl. 58—19)
8. In combination with a direct reading clock

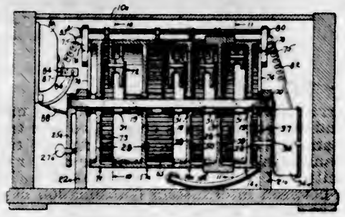
having a plurality of rotary drums arranged side

ence of a catalyst comprising a stable aliphatic

4. Chemical compounds having the formula

the aldehyde, of at least about one-half molar

having a plurality of rotary drums arranged side by side for coaxial rotation, and bearing time-indicating indicia on their peripheral surfaces, enclosed in a housing provided with a sight opening, and having means for moving the drums intermittently in timed relation so as to indicate the time by means of the indicia on the peripheral surfaces of said drums aligned with the sight opening, an alarm attachment comprising a plurality of adjustably movable switches, one for each drum, connected in series; an electric alarm connected in series with said switches; a plurality of switch-closing means carried



on the peripheral surfaces of said drums at angular intervals corresponding to the num- at angular intervals corresponding to the number of indicia carried by each drum and arranged so that only the switch-closing means corresponding to like indicia on the same drum are in mutual alignment, said switches being adapted in any one position to be actuated only by the aligned switch-closing means; and means for adjusting the position of said switches with reference to said drums so that all of the switches will be closed only when a preselected set of indicia appears at the sight opening in the clock.

2,459,108

METHOD OF PRODUCING ETHERS AND ESTERS OF CARBOHYDRATES

Jan Lolkema, Hoogezand, Netherlands; vested in the Attorney General of the United States

No Drawing. Application February 25, 1941, Serial No. 380,562. In the Netherlands January 23, 1940

Section 3, Public Law 690, August 8, 1946
Patent expires January 23, 1960

9 Claims. (Cl. 260—209)

1. The process of manufacturing adhesive alkyl ethers of a gelatinizable carbohydrate soluble in water to form a paste which comprises mixing the carbohydrate with an alkaline solution and an etherifying agent, spreading the mixture to form a thin layer and quickly heating the layer to a gelatinizing temperature while evaporating the solution to accelerate the etherification.

2,459,109

DIRECT SYNTHESIS OF ALKYL SUBSTITUTED STYRENE POLYMERS

Arthur Ferguson McKay, Montreal, Quebec, Canada, assignor to Dominion Tar & Chemical Company Limited, Montreal, Quebec, Canada, a corporation of Canada

No Drawing. Application September 27, 1945, Serial No. 618,983

7 Claims. (Cl. 260—91)

1. A method for the direct synthesis of alkyl substituted styrene polymers which comprises reacting acetylene with an alkylated benzene having not more than three alkyl groups in the presence of a catalyst comprising a stable aliphatic ether-boron trifluoride complex saturated with boron trifluoride in the presence of a mercury salt.

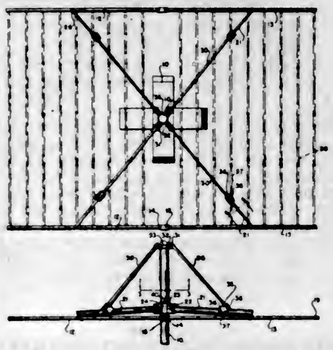
2,459,110

COLLAPSIBLE CLOTHESLINE

Stephen P. Mideabas, Bristol, Pa., assignor to Kemlite Metal Products Company, Inc., Bristol, Pa., a corporation of Pennsylvania

Application December 2, 1947, Serial No. 789,275

7 Claims. (Cl. 211—178)



1. A folding clothes drier comprising a pair of spaced arms, each of which is formed in plural sections which are pivotally joined together, each of the arms being arranged to be extended to cause their sections to be axially aligned, and means for supporting the arms in horizontally spaced relation while so aligned, said means comprising a vertical post, a brace pivotally connected at one end thereof to each arm section intermediate its ends, the opposite ends of the brace being interconnected and arranged for sliding movement vertically of the post, and a link pivotally connected at one end thereof to each brace and at the other end thereof to a point adjacent the upper end of the post.

2,459,111

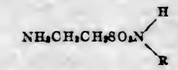
PANTOYLTAURAMIDES AND PREPARATION OF THE SAME

Wilbur H. Miller, Springdale, and Richard O. Roblin, Jr., Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application November 24, 1945, Serial No. 630,696

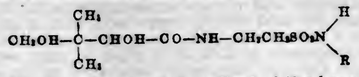
11 Claims. (Cl. 260—251)

2. A method of preparing pantoyltauramides which comprises mixing together in substantially anhydrous ethyl alcohol, alpha-hydroxy-beta,beta - dimethyl - gamma-butyrolactone, a tauramide having the general formula



in which R is an aromatic radical and an alkali metal alkoxide and allowing the mixture to react at a temperature between about 20° C. and 80° C. after reaction thereof recovering the resulting pantoyltauramide.

4. Chemical compounds having the formula



in which R is an aromatic radical of the benzene series.

2,459,112

MINERAL OIL COMPOSITION

Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application July 6, 1945, Serial No. 603,587

16 Claims. (Cl. 252—51.5)

1. An improved mineral oil containing a minor proportion, sufficient to depress the pour point and improve the oxidation stability of said oil, of a reaction product obtained by reaction, at a temperature within the range of from about 25° C. to about 110° C., of an aldehyde, a hydroxy-aromatic compound and a polyamine in which each amino group has at least on hydrogen atom; the proportions of reactants, on the basis of one mol of aldehyde, being about one mol of hydroxy-aromatic compound and at least about one-fourth mol of polyamine.

2,459,113

MINERAL OIL COMPOSITION

Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application July 6, 1945, Serial No. 603,590

13 Claims. (Cl. 252—32.7)

1. An improved mineral oil containing a minor proportion, sufficient to inhibit said oil against the deleterious effects of oxidation, of an oil-soluble, phosphorus-containing reaction product obtained by reacting one molar equivalent of an aldehyde with about one molar equivalent of a hydroxyaromatic compound and at least about one-half molar equivalent of a polyamine in which each amino group has at least one hydrogen atom, in the presence of an inert diluent, at a temperature falling within the range varying between about 20° C. and the reflux temperature of the diluent and for a time sufficient to effect condensation, to produce a condensation product, and reacting said product with about one molar equivalent of a phosphorus compound selected from the group consisting of a phosphorus halide, a phosphorus thiohalide and a phosphorus sulfide, in the presence of an inert solvent, at a temperature falling within the range varying between about 20° C. and the reflux temperature of the inert solvent and for a time sufficient to effect phosphorization of said condensation product.

2,459,114

MINERAL OIL COMPOSITION

Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application July 6, 1945, Serial No. 603,592

15 Claims. (Cl. 252—42.7)

1. An improved mineral oil containing a minor proportion, sufficient to inhibit said oil against the deleterious effects of oxidation, of an oil-soluble, sulfur-containing reaction product obtained by reacting an aldehyde, a hydroxyaromatic compound and a polyamine in which each amino group has at least one hydrogen atom, in the ratio, on the basis of one molar equivalent of the aldehyde, of at least about one-half molar equivalent to the polyamine and about one molar equivalent of the hydroxyaromatic compound, in the presence of an inert solvent, at a temperature falling within the range varying between about room temperature and the reflux temperature of the solvent and for a time sufficient to effect condensation, to produce a condensation product, and reacting said product with a sulfurizing material selected from the group consisting of elementary sulfur, a sulfur halide and a mixture thereof in the ratio corresponding to about one molar equivalent of sulfurizing material per molar equivalent of aldehyde employed in producing said condensation product, in the presence of an inert diluent at a temperature falling within the range varying between about 20° C. and the reflux temperature of the inert diluent, and for a time sufficient to effect sulfurization of said condensation product.

2,459,115

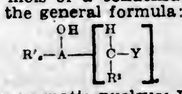
MINERAL OIL COMPOSITION

Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application July 6, 1945, Serial No. 603,593

6 Claims. (Cl. 252—47.5)

1. An improved mineral oil composition comprising a mineral oil having in admixture therewith a small proportion, sufficient to inhibit said oil against the deleterious effects of oxidation, of an oil-soluble phosphorus-containing reaction product obtained by reacting, at a temperature between about 20° C. and about 200° C., one mol of a phosphorus compound selected from the group consisting of a phosphorus halide, a phosphorus thiohalide and a phosphorus sulfide, with about 2.5 mols of a condensation product represented by the general formula:



wherein A is an aromatic nucleus; R' is selected from the group consisting of hydrogen, alkyl, aralkyl, alkaryl, aryl, cycloalkyl, alkoxy and aroxy groups; *a* represents the number of R' groups attached to an aromatic nucleus A, and is an integer from 0 to 3; R^2 is selected from the group consisting of hydrogen, alkyl, alkaryl, aralkyl, cycloalkyl and aryl groups; Y is a morpholine group attached at the nitrogen atom thereof to the carbon atom of the

group; and c represents the number of

groups attached to an aromatic nucleus A and is an integer from 1 to 3.

2,459,116

MINERAL OIL COMPOSITION

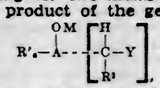
Edward A. Oberright, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application July 6, 1945, Serial No. 603,594

8 Claims. (Cl. 252—42.7)

1. An improved mineral oil containing a small proportion, sufficient to inhibit said oil against

the deleterious effects of oxidation, of an oil-soluble, sulfur-containing reaction product obtained by reacting (1) two molar equivalents of a condensation product of the general formula



in which A is an aromatic nucleus; R′ is selected from the group consisting of hydrogen, alkyl, aralkyl, alkaryl, aryl, cycloalkyl, alkoxy and aroxy groups; *a* represents the number of R′ groups attached to the aromatic nucleus A and varies from 0 to 3; M is selected from the group consisting of hydrogen and metal; R^2 is selected from the group consisting of hydrogen, alkyl, alkaryl, aralkyl, cycloalkyl and aryl groups; Y is a secondary heterocyclic amine group attached at the nitrogen atom thereof to the carbon atom of the

group; and c represents the number of

groups attached to the aromatic nucleus A and varies from 1 to 3; with (2) about one molar equivalent of a sulfurizing material selected from the group consisting of elementary sulfur, a sulfur halide and a mixture thereof, in the presence of an inert diluent, at a temperature falling within the range varying between about 20° C. and the reflux temperature of the diluent and for a time sufficient to effect sulfurization of said condensation product.

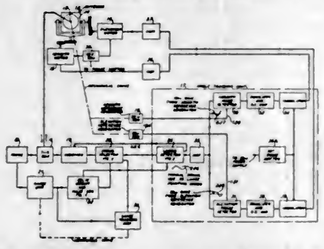
2,459,117

OBJECT LOCATING SYSTEM

Bernard M. Oliver, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Original application February 24, 1944, Serial No. 523,722. Divided and this application March 19, 1945, Serial No. 583,472

3 Claims. (Cl. 343—7)



1. In combination, a rotating element the axis of which it is desired to keep aimed at an object, means including said element for forming a voltage wave comprising a plurality of short pulses of varying amplitude but of the same polarity spaced apart by time intervals which are long compared to the duration of a pulse, said voltage wave having a low frequency envelope, means for generating two reference waves by the rotation of said element, said reference waves being 90 degrees displaced from one another and of the same frequency as the envelope in said voltage wave, separate motor means for shifting the position of the axis of said rotating element through horizontal and vertical angles, means for modifying the said voltage wave to a wave comprising a plurality of steps, each step corresponding in amplitude to that of a pulse in said voltage wave and the steps being separated by time intervals which are short compared to the duration of each step, means for comparing the phase of said stepped wave and each of said reference waves to produce two signal voltages the amplitude and direction of which varies with the error in printing said element towards said object in vertical and horizontal angles, respectively, and means for utilizing said two signal voltages to drive said two motor means to shift the position of the axis of said rotating element in such a direction as to reduce the error in horizontal and vertical angles to substantially zero.

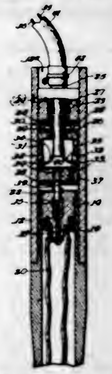
2,459,118

• ELECTRIC SWIVEL CONNECTION

Frank J. Rehm, Jr., Elmwood Park, Ill., assignor to Sittler Manufacturing Corp., Chicago, Ill., a corporation of Illinois

Application February 2, 1946, Serial No. 645,023

9 Claims. (Cl. 173—324)



3. A swivel connection of a character described, embodying a sectional tubular housing, a bearing member and a contact carrying member secured within the respective housing sections, against rotation with respect thereto and spaced from each other in a direction lengthwise of the housing, conductor members electrically connected with the said contacts, a rotatable contact carrying member disposed in one of the housing sections and in the space between said bearing member and the first said contact carrying member, and conductors electrically connected with the contacts on said rotatable member, the last said conductors passing through the said bearing member, the parts of the connection in the respective housing section being removable therefrom as separate and assembled units, when the housing sections are separated.

2,459,119

CORROSION RETARDER

John T. Rucker, Lewiston, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York

No Drawing. Application September 27, 1946, Serial No. 699,640

3 Claims. (Cl. 252—148)

1. As a new composition of matter, useful as a retarder of corrosion of metals by acids, a substantially eutectic mixture consisting of lauryl pyridinium chloride and benzyl thiocyanate in substantially equal proportions by weight.

2,459,120

METHOD OF MAKING WEATHER STRIPS

Louis Spraragen, Bridgeport, Conn., assignor to Bridgeport Fabrics, Inc., Bridgeport, Conn., a corporation of Connecticut

Original application March 23, 1942, Serial No. 435,782. Divided and this application September 28, 1945, Serial No. 619,228

4 Claims. (Cl. 154—84)

1. In the method of forming a weather strip, the steps of placing an attaching flange on each side of a separator strip; molding a bead of sponge rubber about one edge of the assembly so that the bead extends equally on each side of the separator strip and is symmetrical with respect thereto; removing the separator strip and separating the flanges and half bead molded thereto; and enclosing each of the beads and flanges with a cover material.

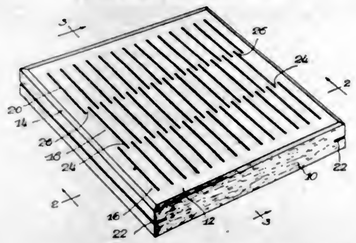
2,459,121

ACOUSTICAL TILE

Grant S. Willey, Chicago, and Orcutt W. Frost, Highland Park, Ill., assignors to United States Gypsum Company, Chicago, Ill., a corporation of Illinois

Application September 17, 1943, Serial No. 502,728

4 Claims. (Cl. 181—33)



1. A sound absorbent consisting essentially of interlaced fibrillated lignocellusic fibers formed into a rigid cellular porous mat, the said mat having on one surface therein a series of discontinuous, parallel slots, the said slots sloping within the body of said mat to within the other surface thereof.

2,459,122

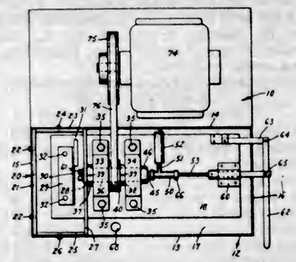
ABRASIVE TUBE DRILL MEANS

Hugh V. Allison, Fairfield, Conn., assignor to The Allison Company, Bridgeport, Conn., a corporation of Connecticut

Application May 10, 1947, Serial No. 747,292

17 Claims. (Cl. 125—20)

1. In an abrasive drilling machine, a base, a chuck, means mounting said chuck for rotation on the base, spaced axially extending ribs on the inner surface of said chuck, a tube drill in said chuck and comprising elongated transversely curved sections each located between a pair of said ribs to be driven through their longitudinal edges by the ribs as the chuck is rotated, said sections slidable longitudinally in said chuck between said ribs while said chuck is rotating and carrying said sections with it, a work holder on the base spaced from one end of said chuck, and means for moving said drill through said end of the chuck toward said work holder while said chuck and drill are rotating.



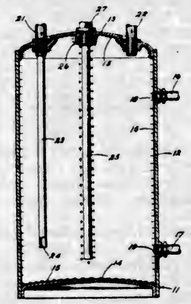
2,459,123

WATER HEATING DEVICE WITH CORROSION PROTECTIVE ANODE

Herbert T. Bates, Lincoln, Nebr., and Daniel J. Fergus and Albert F. Craver, Cleveland, Ohio, assignors to The Cleveland Heater Company, Cleveland, Ohio, a corporation of Ohio

Application September 10, 1946, Serial No. 696,064

5 Claims. (Cl. 204—197)



3. In combination, a hot water heating device into which water is to be charged and from which heated water is to be discharged, comprising a ferrous metal tank adapted to contain conventionally available water to be heated and maintained hot for indeterminate periods of time, a zinc lining on the interior of the tank, and a magnesium alloy electrode in the tank to suppress corrosion of the zinc and ferrous metal when the tank contains water, the electrode being directly electrically connected with the tank, the essentially active elements of the magnesium alloy electrode being at least 60% magnesium to provide magnesium ions when the electrode is in use in the water heating tank, and the remainder of said essentially active elements being adapted to

wave, separate motor means for shifting the po-

1. As a new composition of matter, useful as a retarder of corrosion of metals by acids, a sub-

chuck, means mounting said chuck for rotation

essentially active elements being adapted to

regulate the rate of consumption of the magnesium and being at least one of the group consisting of aluminum, zinc, manganese and cadmium.

2,459,124
MANUFACTURE OF CHLORINE DIOXIDE
George M. Booth, Westfield, N. J., assignor to Novadel-Agene Corporation, Belleville, N. J., a corporation of Delaware
No Drawing. Application October 20, 1947, Serial No. 781,007
9 Claims. (Cl. 23—152)

1. A method of producing chlorine dioxide comprising reacting nitrogen trichloride with sodium chlorite.

3. A method of producing chlorine dioxide comprising passing successive quanities of gaseous nitrogen trichloride into contact with sodium chlorite to react therewith and removing from the reaction zone successively produced quantities of chlorine dioxide in gaseous form, while preventing accumulation of sodium hydroxide in the presence of the sodium chlorite, by maintaining the reaction zone substantially free of water which would enter the reaction to produce sodium hydroxide.

2,459,125
FILM OF COPOLYMER OF VINYLIDENE CHLORIDE AND VINYL CHLORIDE
La Verne E. Cheyney, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application October 24, 1944, Serial No. 560,205
4 Claims. (Cl. 260—45.5)

2. A homogeneous resin film comprised essentially of an intimately blended mixture of 30 to 70 parts by weight of a copolymer of 50 to 70 percent (by weight of the polymerizable components) of vinylidene chloride and from 50 to 30 percent of vinyl chloride, and from 70 to 30 parts of at least one resin of the group consisting of polyvinyl chloride and a copolymer of over 70 percent of vinyl chloride and up to 30 percent of another mono-olefinic monomer.

2,459,126
COPOLYMERS OF VINYL COMPOUNDS CONTAINING OLEFINS
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application June 25, 1940, Serial No. 342,271
7 Claims. (Cl. 260—84.5)

1. A method of preparing a synthetic rubber material which comprises polymerizing in an aqueous emulsion a mixture of about 25 percent to 75 percent of an acrylonitrile having the formula

where x is a whole number from 0 to 1 inclusive with about 75 percent to 25 percent of a cracked-petroleum fraction containing about 40 percent to 95 percent of butadiene and about 5 percent to 60 percent of olefins of 3 to 5 carbon atoms.

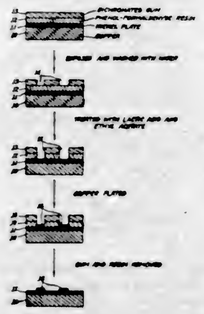
2,459,127
COLOR STABILIZATION OF VINYL HALIDE RESINS
Fred W. Cox, Birmingham, Ala., and James M. Wallace, Jr., Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application September 18, 1945, Serial No. 617,168
12 Claims. (Cl. 260—78.5)

1. A vinyl chloride resin capable of resisting discoloration upon heating which comprises a copolymer of 70 to 98 percent of vinyl chloride and from 2 to 30 percent of another polymerizable mono-olenfic compound, said resin containing from 0.05 to 10 percent by weight based on the copolymer, of zirconium oxide.

2,459,128
METHOD FOR PRODUCING NITRILES
Marvin Jay Fahrenbach, Westfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 18, 1946, Serial No. 670,533
10 Claims. (Cl. 260—297)

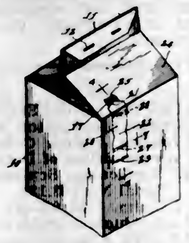
1. A method of dehydrating monoamides which comprises heating the amide with phosphorus oxychloride in the presence of an inorganic sulfite and recovering the resulting nitrile.

2,459,129
PRODUCTION OF PHOTOGRAPHIC STENCILS
Donald Charles Gresham and Erich Eduard Loening, Harrow, England, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 30, 1944, Serial No. 566,027
In Great Britain December 9, 1943
2 Claims. (Cl. 204—11)



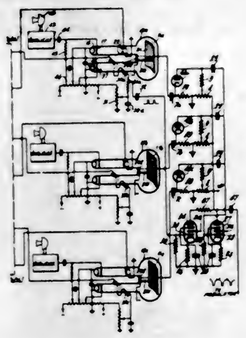
1. The method of producing a stencil in an element comprising a support, a first phenol-formaldehyde layer carried thereby, and a second light-sensitive bichromated glue layer superimposed thereon comprising the light printing of an image in the second layer and the transformation of said light image to a hardened relief image, characterised by the treatment of said element after formation of said relief image, with an etching bath of 90% lactic acid and 10% ethyl acetate that etches any unhardened portions of the outermost layer and also the portions of the first layer exposed through said relief image.

2,459,130
CREAM DISPENSER
John Paul Jones, Omaha, Nebr., assignor to The Dairy Specialties Company, Incorporated, Omaha, Nebr., a corporation of Nebraska
Application January 12, 1946, Serial No. 640,934
6 Claims. (Cl. 229—7)



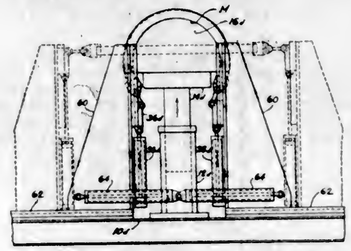
1. In a milk and cream dispensing container of the normally upright paper bottle type, means forming a normally sealed dispensing opening at one side of the top of the container, the walls of the container being wrapped around and overlapped at the vertically opposite side of the container, a narrow flap in the outer vertical overlapping wall, and a pair of horizontal openings in the inner vertical wall, one at the lower cream level and the other above the upper cream level, both of said openings being normally closed by the flap and uncovered when the flap is swung downwardly therefrom.

2,459,131
ELECTRONIC DISTRIBUTOR FOR MULTIPLEX PULSE COMMUNICATION SYSTEMS
Max H. Mesner, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 24, 1946, Serial No. 698,931
17 Claims. (Cl. 179—15)



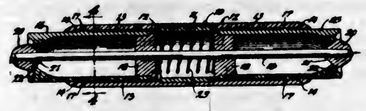
11. In a multiplex communication system, a double-gun cathode ray tube for each channel, each tube having a "put-on" gun, a "take-off" gun in each said tube, and means including sawtooth wave generators for deflecting the beams of the different "take-off" guns so that their sweeps are sequential and occupy mutually exclusive portions of the scanning cycle.

2,459,132
METAL BENDING AND STRETCHING APPARATUS
James S. Nielsen, Stow, Ohio, assignor to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application June 7, 1943, Serial No. 489,911
3 Claims. (Cl. 153—48)



1. Metal forming apparatus including a pair of gripping jaws adapted to grip opposite ends of a length of metal to be formed, a die, hydraulic means for moving the die toward and from a metal length gripped between the jaws, mounting means pivotally supporting each jaw for tilting movement toward and from the die, a hydraulic means associated with each of the mounting means for moving said mounting means in a direction substantially parallel to the direction of movement of the die, and a hydraulic means associated with each mounting means for moving it in a direction at substantially right angles to the movement of the die.

2,459,133
SALT AND PEPPER SHAKER
Curt E. Nyberg, Chicago, Ill., assignor of one-half to William Jameson, Miami, Fla.
Application October 4, 1946, Serial No. 701,364
7 Claims. (Cl. 65—45)



1. In a dispensing device, a cylinder, a pair of containers mounted therein in spaced and slidable relation and having their outer ends each provided with an opening, a closure member in each of said openings, and a rod slidably mounted in said containers and connecting said closures whereby movement of said rod to advance either of said containers toward the other opens the closure in the latter container.

2,459,134
PAWL RELEASE FOR PENDULUM ARMS OF TESTING MACHINES
Robert W. Rogers, Barrington, and Charles C. Blanch, Providence, R. I., assignors to Scott Testers, Inc., a corporation of Rhode Island
Application June 13, 1947, Serial No. 754,334
6 Claims. (Cl. 73—98)

1. In a testing machine of the character described, a pivotally mounted arm, a pair of specimen clamps, means for applying load to the specimen through one of the clamps, means for interconnecting the other clamp with said arm for

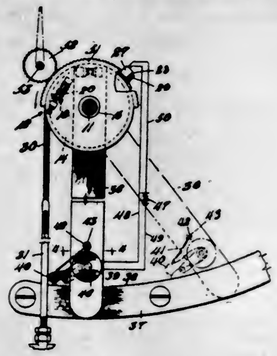
with about 75 percent to 25 percent of a cracked-petroleum fraction containing about 40 percent to 95 percent of butadiene and about 5 percent to 60 percent of olefins of 3 to 5 carbon atoms.

etching bath of 90% lactic acid and 10% ethyl acetate that etches any unhardened portions of the outermost layer and also the portions of the first layer exposed through said relief image.

tooth wave generators for deflecting the beams of the different "take-off" guns so that their sweeps are sequential and occupy mutually exclusive portions of the scanning cycle.

scribed, a pivotally mounted arm, a pair of specimen clamps, means for applying load to the specimen through one of the clamps, means for interconnecting the other clamp with said arm for

swinging said arm about its pivot as load is applied to a specimen, a segment having ratchet teeth, a pawl carried by said arm to engage said teeth and hold the arm in the position to which it is swung about its pivot, means responsive to



the application of load for lifting said pawl from engagement with said teeth and responsive to release of the load for movement of the pawl into engagement with said teeth whereby the friction of dragging the pawl over the teeth as load is applied is eliminated.

2,459,135
PURIFICATION OF CARBAZOLE
Bernard W. Rottschaefer, East Greenbush, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application February 3, 1945, Serial No. 576,153
4 Claims. (Cl. 260—318)

1. The method of purifying carbazole containing 2-amino diphenyl as an impurity which comprises dissolving said impure carbazole in a water-immiscible volatile organic solvent therefor, mixing the thus-formed solution with a dilute aqueous solution of a strong mineral acid in an amount sufficient to dissolve said amino diphenyl present in said carbazole and of such predetermined concentration that the resulting mixture has a pH less than 2 and said amino diphenyl is soluble while carbazole is insoluble therein, distilling off the organic solvent from said mixture while maintaining the amount of acid in said mixture being distilled substantially constant and adding water to maintain the volume of said mixture substantially constant, thereby producing a slurry of carbazole in dilute acid, and separating said dilute acid with said amino diphenyl dissolved therein from said carbazole.

2,459,136
DRY DEVELOPING NEGATIVE
Sam Charles Slifkin, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application September 7, 1944, Serial No. 553,121
1 Claim. (Cl. 95—6)

A process of reproduction which comprises subjecting a base having a coating comprising mercuric chloride, ammonium oxalate and ferric oxalate to light from an image to be reproduced, then exposing said composition to ammonia.

2,459,137
PROCESS OF PRODUCING RESINOUS PRODUCTS FROM ACETYLENE AND SECONDARY AND TERTIARY ALKYL PHENOLS
Abraham O. Zoss, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 30, 1946, Serial No. 658,588
8 Claims. (Cl. 260—62)

1. The method of producing resinous condensation products, which comprises causing acetylene to act at a temperature between 150° and 300° C. and at a superatmospheric pressure on a compound selected from the group consisting of phenols and cresols having an alkyl substituent selected from the class consisting of secondary and tertiary alkyl groups containing 3 to 12 carbon atoms, but which are free of substituents other than alkyl groups and which are unsubstituted in two of the positions ortho and para to a hydroxy group, in the presence of a strongly alkaline-reacting alkali metal compound as a catalyst.

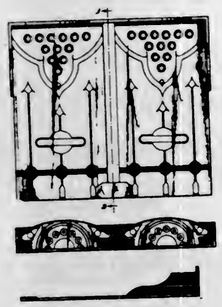
DESIGNS

JANUARY 11, 1949

152,313
DESIGN FOR A COMBINATION ASH TRAY AND COASTER
Gustaf E. Andre, Chicago, Ill.
Application August 28, 1947, Serial No. 141,099
Term of patent 14 years
(Cl. D85—2)

The ornamental design for a combination ash tray and coaster, substantially as shown.

152,314
DESIGN FOR A BALL GAME BOARD
George Ray Armstrong, McKeesport, Pa.
Application November 1, 1946, Serial No. 134,461
Term of patent 14 years
(Cl. D34—5)



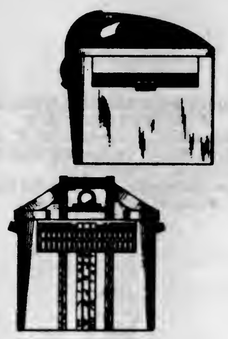
The ornamental design for a ball game board, as shown.

152,315
DESIGN FOR AN ELECTRICAL-CONNECTOR BODY
Herbert S. Barnhart, Scarsdale, N. Y., assignor to The Whitney Blake Company, Hamden, Conn., a corporation of Connecticut
Application March 30, 1948, Serial No. 145,453
Term of patent 14 years
(Cl. D26—1)

The ornamental design for an electrical-connector body, substantially as shown and described.

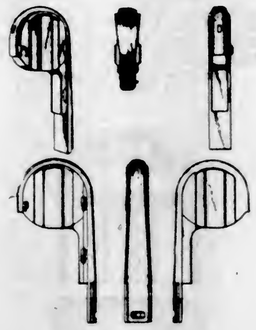
152,316
DESIGN FOR A VEHICLE HEATER
Adolph G. Bergstrom, Rockford, Ill.
Application April 29, 1946, Serial No. 129,077
Term of patent 7 years
(Cl. D14—6)

152,316—Continued



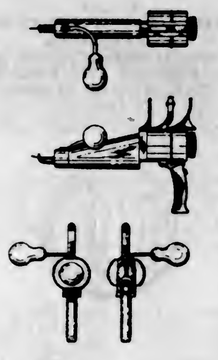
The ornamental design for a vehicle heater, substantially as shown and described.

152,317
DESIGN FOR A HOOD FOR A POWER MEAT CUTTER
Vincent G. Biro, Ottawa County, Ohio, assignor to The Biro Manufacturing Company, Marblehead, Ohio, a corporation of Ohio
Application October 19, 1945, Serial No. 123,021
Term of patent 14 years
(Cl. D55—1)



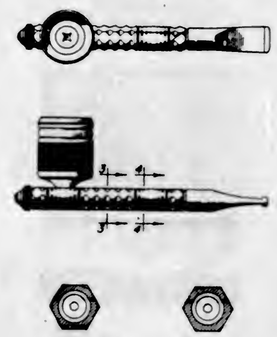
The ornamental design for a hood for a power meat cutter, as shown.

152,318
DESIGN FOR A HAND OPERATED RUG HOOKER
Joseph Blumfield, Los Angeles, Calif.
Application June 16, 1947, Serial No. 139,717
Term of patent 7 years
(Cl. D2—19)



The ornamental design for a hand operated rug hooker, substantially as shown.

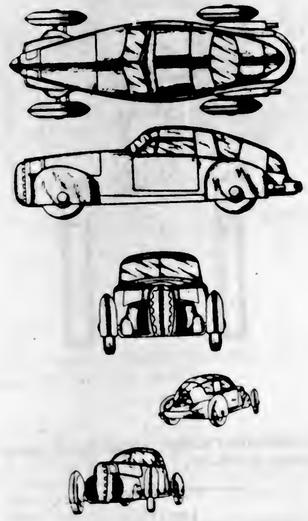
152,319
DESIGN FOR A SMOKING PIPE
Clarence W. Booker, San Diego, Calif.
Application August 2, 1948, Serial No. 147,880
Term of patent 14 years
(Cl. D85—8)



The ornamental design for a smoking pipe, substantially as shown.

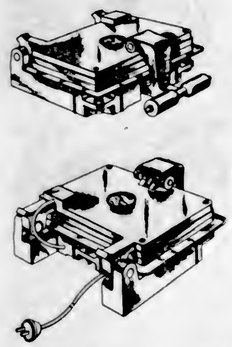
The ornamental design for a ball game board, as shown.

152,320
DESIGN FOR AN AUTOMOBILE
Gordon M. Buehrig, South Bend, Ind., assignor to The Tasco Corporation, Hartford, Conn., a corporation of Connecticut
Application November 16, 1946, Serial No. 134,833
Term of patent 3½ years
(Cl. D14—3)



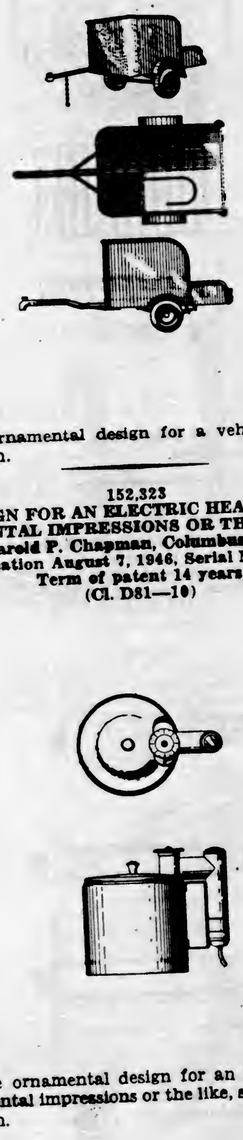
The ornamental design for an automobile, as shown.

152,321
DESIGN FOR A BAKING UNIT
John F. Cavanagh, Providence, R. I.
Application May 1, 1947, Serial No. 138,741
Term of patent 14 years
(Cl. D61—10)



The ornamental design for a baking unit, substantially as shown.

152,322
DESIGN FOR A VEHICLE TRAILER
Edward Chapin, Buffalo, N. Y.
Application May 8, 1947, Serial No. 138,904
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a vehicle trailer, as shown.

152,323
DESIGN FOR AN ELECTRIC HEATER FOR DENTAL IMPRESSIONS OR THE LIKE
Harold P. Chapman, Columbus, Ohio
Application August 7, 1946, Serial No. 132,348
Term of patent 14 years
(Cl. D61—10)

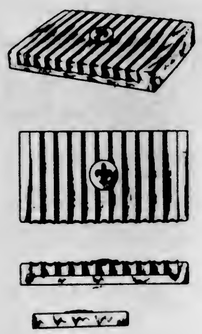
The ornamental design for an electric heater for dental impressions or the like, substantially as shown.

152,330

The ornamental design for a hood for a power meat cutter, as shown.

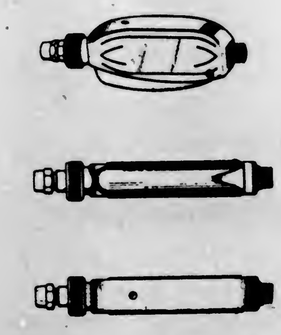
The ornamental design for a smoking pipe, substantially as shown.

152,324
DESIGN FOR A WATCH BOX OR SIMILAR ARTICLE
Richmond L. Chipman, Jr., Montclair, N. J.
Application March 29, 1947, Serial No. 138,026
Term of patent 7 years
(Cl. D58—12)



The ornamental design for a watch box or similar article, as shown.

152,325
DESIGN FOR A WATER SPRAY GUN
William M. Cissell, St. Mathews, near Louisville, Ky.
Application February 11, 1946, Serial No. 126,437
Term of patent 14 years
(Cl. D62—2)



The ornamental design for a water spray gun, substantially as shown.

152,326
DESIGN FOR A WATER SPRAY GUN
William M. Cissell, St. Mathews, near Louisville, Ky.
Application February 11, 1946, Serial No. 126,438
Term of patent 14 years
(Cl. D62—2)

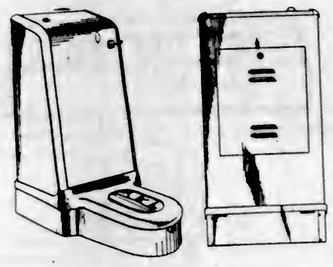
The ornamental design for a water spray gun, substantially as shown.

152,327
DESIGN FOR A CONTAINER CAP
William N. Connolly, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
Application August 10, 1946, Serial No. 132,408
Term of patent 14 years
(Cl. D58—26)

The ornamental design for a container cap, as shown.

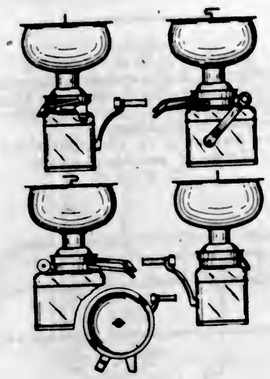
The ornamental design for a baking unit, substantially as shown.

152,328
DESIGN FOR A SHOE SHINING MACHINE
Porter De Douglass, Hayward, Calif.
Application June 5, 1947, Serial No. 139,477
Term of patent 14 years
(Cl. D9—2)



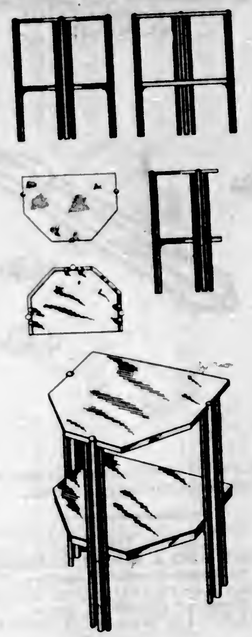
The ornamental design for a shoe shining machine, as shown and described.

152,329
DESIGN FOR A CREAM SEPARATOR
Herman R. Diiger, Stanley E. Kline, and Thomas M. Leonard, Waterloo, Iowa, assignors to Associated Manufacturers Inc., Waterloo, Iowa, a corporation of Iowa
Application September 27, 1946, Serial No. 133,602
Term of patent 14 years
(Cl. D23—1)



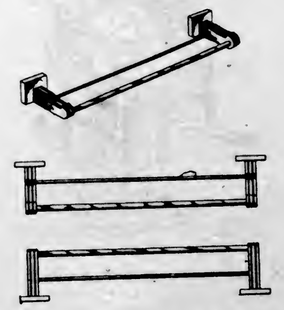
The ornamental design for a cream separator, as shown.

152,330
DESIGN FOR A GLASS TOP END TABLE
Roy A. Dillon, Racine, Wis.
Application November 23, 1946, Serial No. 135,033
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a glass top end table, as shown and described.

152,331
DESIGN FOR A TOWEL RACK
Travice R. Eakins, Bowling Green, Ky.
Application March 4, 1947, Serial No. 137,333
Term of patent 14 years
(Cl. D33—16)

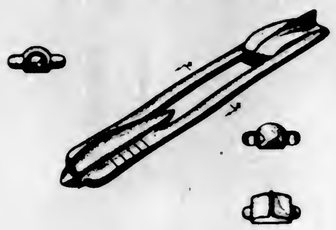


The ornamental design for a towel rack, as shown.

The ornamental design for a water spray gun, substantially as shown.

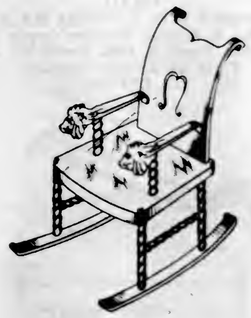
The ornamental design for a container cap, as shown.

152,332
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application January 6, 1947, Serial No. 135,964
Term of patent 7 years
(Cl. D26—14)



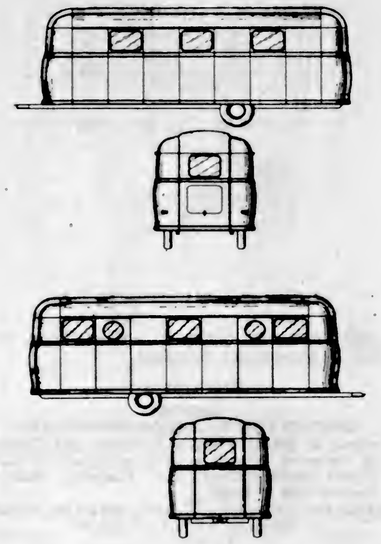
The ornamental design for a phonograph tone arm or the like, substantially as shown.

152,333
DESIGN FOR A ROCKING CHAIR
Louise M. Jones Foulke, Brooklyn, N. Y.
Application May 23, 1947, Serial No. 139,237
Term of patent 14 years
(Cl. D15—6)



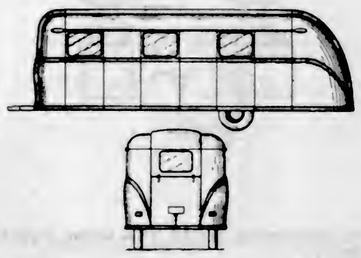
The ornamental design for a rocking chair, as shown.

152,334
DESIGN FOR A TRAILER
Frank D. Hanson, Independence, Mo., and David D. Arehart and Ralph T. Dittmer, Flint, Mich., assignors to Palace Corporation, Flint, Mich., a corporation of Michigan
Application November 25, 1947, Serial No. 142,803
Term of patent 14 years
(Cl. D14—3)

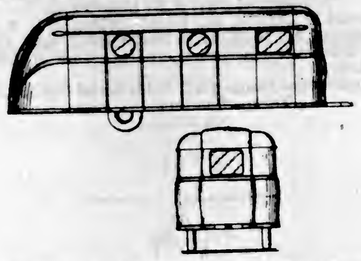


The ornamental design for a trailer, substantially as shown.

152,335
DESIGN FOR A TRAILER
Frank D. Hanson, Independence, Mo., and David D. Arehart and Ralph T. Dittmer, Flint, Mich., assignors to Palace Corporation, Flint, Mich., a corporation of Michigan
Application November 25, 1947, Serial No. 142,804
Term of patent 14 years
(Cl. D14—3)

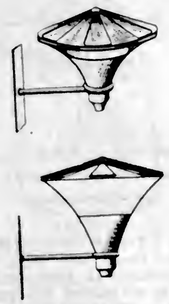


152,335—Continued



The ornamental design for a trailer, substantially as shown.

152,336
DESIGN FOR A LAMP
Stella J. Hirshfield, New York, N. Y.
Application March 1, 1947, Serial No. 137,266
Term of patent 14 years
(Cl. D48—4)

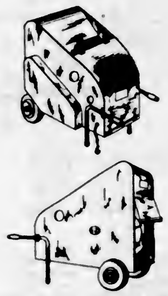


The ornamental design for a lamp, as shown.

152,337
DESIGN FOR A NECKLACE
William W. Hobé, New York, N. Y.
Application October 15, 1948, Serial No. 149,137
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a necklace, substantially as shown and described.

152,338
DESIGN FOR A POWER PULVERIZER FOR COMPOST AND THE LIKE
Leonard G. Hough and Robert J. Collins, Toronto, Ontario, Canada
Application August 15, 1946, Serial No. 132,547.
Term of patent 14 years
(Cl. D55—1)



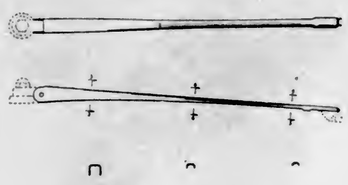
The ornamental design for a power pulverizer for compost and the like, as shown.

152,339
DESIGN FOR A COMBINED LAMP AND SHADE
Emanuel Kehlmann, New York, N. Y.
Application December 18, 1947, Serial No. 143,210
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a combined lamp and shade, substantially as shown and described.

152,346

152,340
DESIGN FOR A WINDSHIELD WIPER ARM
Fred A. Krohm, Gary, Ind., assignor to Productive Inventions, Inc., a corporation of Indiana
Application May 13, 1947, Serial No. 139,011
Term of patent 14 years
(Cl. D14—6)

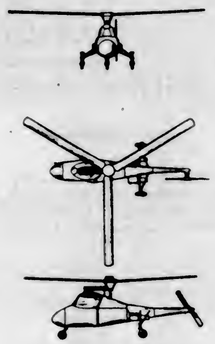


The ornamental design for a windshield wiper arm, substantially as shown and described.

152,341
DESIGN FOR A TELEVISION RECEIVER
Johan C. Kromhout, Forest Hills, N. Y., assignor to Sylvania Electric Products Inc., a corporation of Massachusetts
Application May 9, 1947, Serial No. 138,935
Term of patent 14 years
(Cl. D56—4)

The ornamental design for a television receiver, substantially as shown and described.

152,342
DESIGN FOR A HELICOPTER
Harold E. Lemont, Jr., East Providence, R. I., assignor to Helicopter Engineering and Construction Corporation, a corporation of Rhode Island
Application January 27, 1947, Serial No. 136,455
Term of patent 3½ years
(Cl. D71—1)



The ornamental design for a helicopter, substantially as shown and described.

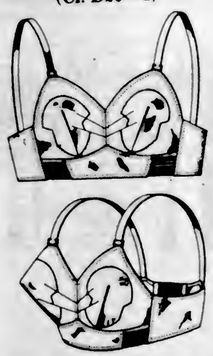
152,343
DESIGN FOR A LAMP OR SIMILAR ARTICLE
Samuel Lewis, New York, N. Y.
Application February 14, 1948, Serial No. 144,490
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a lamp or similar article, substantially as shown and described.

152,344
DESIGN FOR AN ELECTRIC FAN OR SIMILAR ARTICLE
Carl A. Lindberg, Toledo, Ohio
Application August 4, 1947, Serial No. 140,691
Term of patent 14 years
(Cl. D26—7)

The ornamental design for an electric fan or similar article, as shown.

152,345
DESIGN FOR A BRASSIÈRE
Jack J. Lo Cascio, Bayonne, N. J., assignor to Even-Pul Foundations, Inc., New York, N. Y., a corporation of New York
Application November 25, 1947, Serial No. 142,791
Term of patent 14 years
(Cl. D20—4)

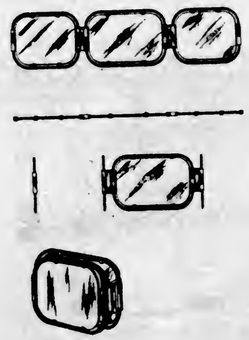


The ornamental design for a brassière, as shown.

152,346
DESIGN FOR A RECLINING CHAIR OR SIMILAR ARTICLE
Eugene J. Lux, New York, N. Y., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J., a corporation of New Jersey
Application March 28, 1947, Serial No. 138,021
Term of patent 7 years
(Cl. D15—11)

The ornamental design for a reclining chair or similar article substantially as shown and described.

152,347
DESIGN FOR A MIRROR
Frank A. Marty, Los Angeles, Calif.
Application February 26, 1947, Serial No. 137,172
Term of patent 3½ years
(Cl. D33—9)

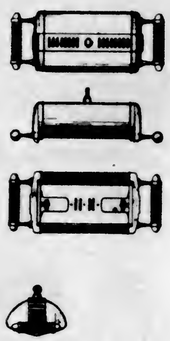


The ornamental design for a mirror, substantially as shown.

substantially as shown and described.

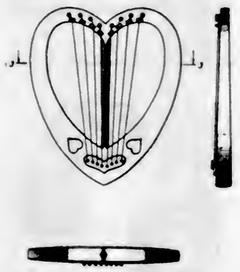
article, substantially as shown and described.

152,348
DESIGN FOR A REFLECTOR HEAD FOR AN ULTRAVIOLET LAMP
Jacob A. Mehr, St. Louis, Mo.
Application August 30, 1947, Serial No. 141,134
Term of patent 7 years
(Cl. D48—20)



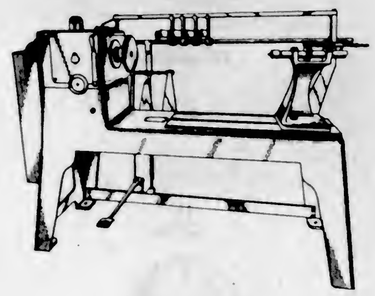
The ornamental design for a reflector head for an ultraviolet lamp, as shown.

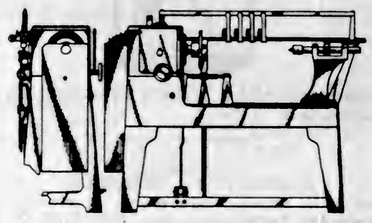
152,349
DESIGN FOR A HARP
Juanita Miller, Oakland, Calif.
Application April 8, 1947, Serial No. 138,220
Term of patent 14 years
(Cl. D56—1)

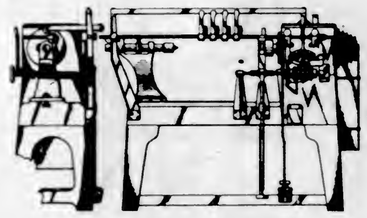


The ornamental design for a harp, as shown.

152,350
DESIGN FOR A COIL WINDING MACHINE
Harry W. Moore, Dayton, Ohio
Application December 29, 1945, Serial No. 125,164
Term of patent 14 years
(Cl. D54—6)

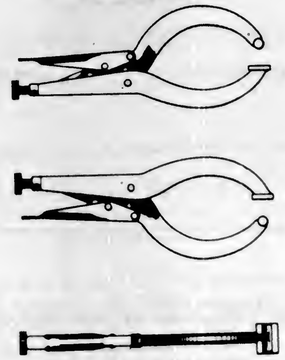






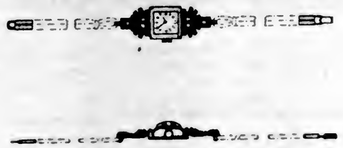
The ornamental design for a coil winding machine, as shown.

152,351
DESIGN FOR A CLAMP
John Oros and Gordon R. Dawson, Cleveland, Ohio
Application November 28, 1947, Serial No. 142,848
Term of patent 14 years
(Cl. D54—13)



The ornamental design for a clamp, substantially as shown.

152,352
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application June 25, 1948, Serial No. 147,185
Term of patent 7 years
(Cl. D42—8)



The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

152,353
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application July 9, 1948, Serial No. 147,462
Term of patent 7 years
(Cl. D42—8)

The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

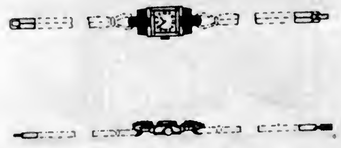
152,354
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application July 9, 1948, Serial No. 147,463
Term of patent 7 years
(Cl. D42—8)

The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

152,355
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application July 9, 1948, Serial No. 147,464
Term of patent 7 years
(Cl. D42—8)

The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

152,356
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application July 9, 1948, Serial No. 147,466
Term of patent 7 years
(Cl. D42—8)



The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

The ornamental design for a harp, as shown.

The ornamental design for a coil winding machine, as shown.

152,357
DESIGN FOR A COMBINED WRIST WATCH AND HOLDER STRAP THEREFOR
Oreste Pennino, New York, N. Y.
Application July 24, 1948, Serial No. 147,760
Term of patent 7 years
(Cl. D42—8)

The ornamental design for a combined wrist watch and holder strap therefor, substantially as shown and described.

152,358
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1948, Serial No. 148,901
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,359
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1948, Serial No. 148,902
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,360
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1948, Serial No. 148,903
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,361
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 1, 1948, Serial No. 148,904
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

152,362
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 7, 1948, Serial No. 149,003
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,363
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application October 7, 1948, Serial No. 149,004
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,364
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 6, 1948, Serial No. 149,519
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,365
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 6, 1948, Serial No. 149,520
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

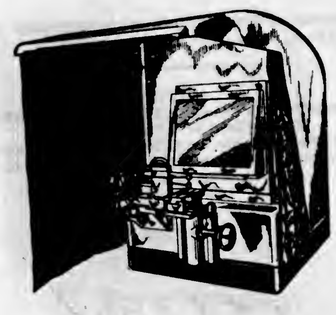
152,366
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 6, 1948, Serial No. 149,522
Term of patent 7 years
(Cl. D45—19)

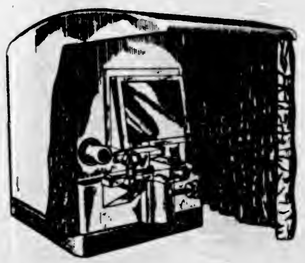
The ornamental design for a brooch or similar article, substantially as shown.

152,367
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 6, 1948, Serial No. 149,523
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,368
DESIGN FOR AN OPTICAL COMPARATOR
Herbert Rosengren, Woodcliff Lake, N. J., assignor to The Jones & Lamson Machine Company, a corporation of Vermont
Application June 5, 1947, Serial No. 139,476
Term of patent 14 years
(Cl. D57—1)



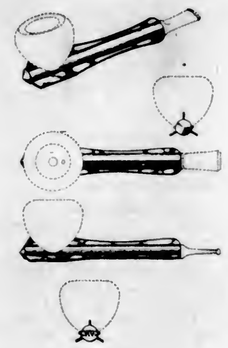


The ornamental design for an optical comparator, substantially as shown.

lar article, substantially as shown and described.

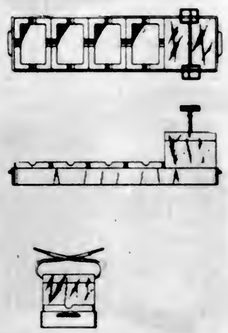
lar article, substantially as shown.

152,369
DESIGN FOR A SMOKER'S PIPE
Merrill G. Sampson, Santa Monica, Calif.
Application May 11, 1948, Serial No. 146,278
Term of patent 14 years
(Cl. D85—8)



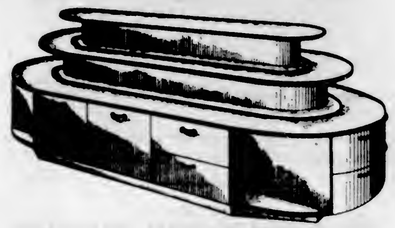
The ornamental design for a smoker's pipe, substantially as shown and described.

152,370
DESIGN FOR A COMBINED ASH TRAY RACK AND CIGARETTE HOLDER
Charles M. Sanders, Ponca City, Okla.
Application November 24, 1947, Serial No. 142,763
Term of patent 14 years
(Cl. D85—2)



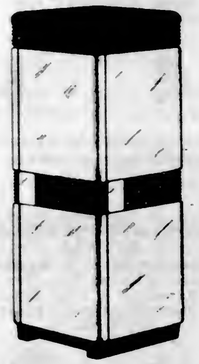
The ornamental design for a combined ash tray rack and cigarette holder, as shown.

152,371
DESIGN FOR A DISPLAY FIXTURE
Howard M. Schick, Lee's Summit, Mo.
Application April 28, 1947, Serial No. 138,653
Term of patent 14 years
(Cl. D80—11)



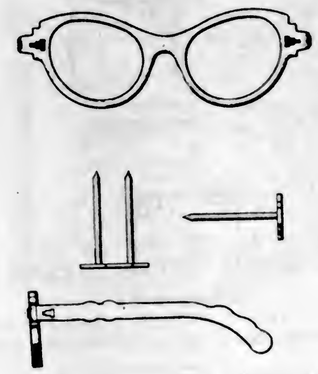
The ornamental design for a display fixture, substantially as shown and described.

152,372
DESIGN FOR A SPACE COOLER CABINET OR THE LIKE
John H. Schreiber, St. Louis, Mo., assignor to General Engineering & Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application April 1, 1947, Serial No. 138,097
Term of patent 7 years
(Cl. D62—4)



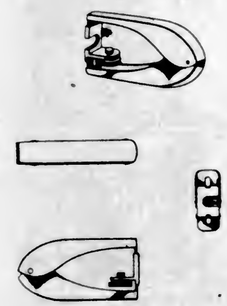
The ornamental design for a space cooler cabinet or the like, substantially as shown and described.

152,373
DESIGN FOR A SPECTACLE FRAME OR SIMILAR ARTICLE
Morris Schwartz, Sunnyside, N. Y.
Application May 1, 1948, Serial No. 146,118
Term of patent 3½ years
(Cl. D57—1)



The ornamental design for a spectacle frame or similar article, as shown and described.

152,374
DESIGN FOR A WIRE STRIPPER
Leslie H. Soore, Chino, Calif., assignor to H. A. Weil, Los Angeles, Calif.
Application July 19, 1947, Serial No. 140,402
Term of patent 14 years
(Cl. D54—13)



The ornamental design for a wire stripper, as shown.

152,375
DESIGN FOR A COMBINED CLEANING AND SCRAPING DEVICE
Sidney C. Seley, Erie, Pa.
Application January 31, 1947, Serial No. 136,552
Term of patent 14 years
(Cl. D9—6)

The ornamental design for a combined cleaning and scraping device, as shown.

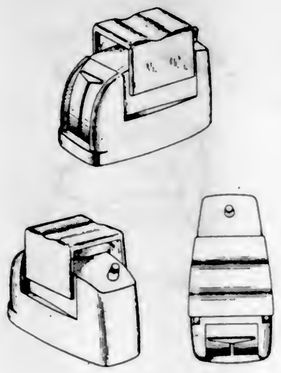
152,376
DESIGN FOR A LADY'S BOOT OR THE LIKE
Ralph J. Sherwin, Toledo, Ohio
Application October 16, 1947, Serial No. 141,941
Term of patent 3½ years
(Cl. D7—4)

The ornamental design for a lady's boot or the like, substantially as shown.

The ornamental design for a combined ash tray rack and cigarette holder, as shown.

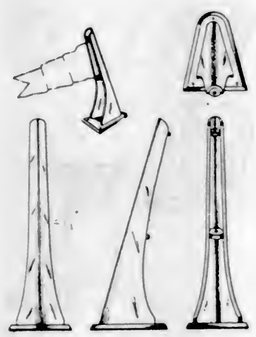
The ornamental design for a space cooler cabinet or the like, substantially as shown and described.

152,377
DESIGN FOR A POSTAL SCALE
Newson Shewitz, Phyllis L. Sloane, and Anthony Vaiksnoras, Jr., Cleveland, Ohio, assignors to Accurate Parts Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application March 15, 1947, Serial No. 137,614
Term of patent 7 years
(Cl. D52—10)



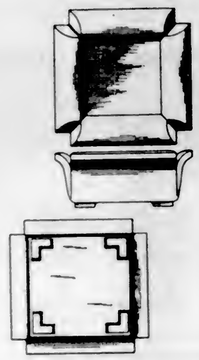
The ornamental design for a postal scale, as shown and described.

152,378
DESIGN FOR A FLAG HOLDER
Claiborne Adams Skinner, Webster Groves, Mo.
Application October 20, 1947, Serial No. 142,011
Term of patent 14 years
(Cl. D29—17)



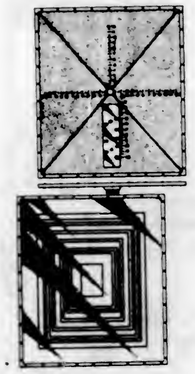
The ornamental design for a flag holder, substantially as shown and described.

152,379
DESIGN FOR AN ASH TRAY
Joseph B. Stier, New York, N. Y.
Application January 14, 1948, Serial No. 143,740
Term of patent 3½ years
(Cl. D85—2)



The ornamental design for an ash tray, substantially as shown.

152,380
DESIGN FOR A CAMERA BACK OR SIMILAR ARTICLE
Clarence G. Strang, Paterson, N. J., assignor to Hamilton Products, Inc., Paterson, N. J., a corporation of New Jersey
Application February 27, 1947, Serial No. 137,195
Term of patent 14 years
(Cl. D61—1)

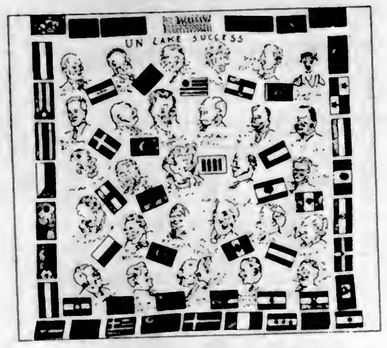


The ornamental design for a camera back or similar article, substantially as shown and described.

The ornamental design for a wire stripper, as shown.

The ornamental design for a lady's boot or the like, substantially as shown.

152,381
DESIGN FOR A SCARF OR SIMILAR ARTICLE
Eugen Tanzer, New York, N. Y.
Application August 15, 1947, Serial No. 140,885
Term of patent 7 years
(Cl. D3—12)



The ornamental design for a scarf or similar article, substantially as shown and described.

152,382
DESIGN FOR A CANDLE HOLDER
Virginia B. Tawresey, Philadelphia, Pa.
Application August 1, 1947, Serial No. 140,659
Term of patent 14 years
(Cl. D48—2)

The ornamental design for a candle holder, substantially as shown.

152,383
DESIGN FOR A HIGH CHAIR
Walter W. Waaranan, Hubbardston, Mass., assignor to Arlington Chair Co., Gardner, Mass., a corporation of Massachusetts

Astringent, skin tonic, tissue cream, etc. Harzeld's, Inc. 299,516, Dec. 6, 1932. Republished Jan. 11.

Bath salts, Foaming. United Industries. 505,639, Jan. 11; Serial No. 522,273.

Carbon dioxide, Solidified. Publicker Incorporated. 274,075, Aug. 19, 1930. Republished Jan. 11.

Chemical concentrate adapted to be used in lubricants. The Elco Lubricant Corporation. 432,420, Sept. 2, 1947. Republished Jan. 11.

Chemical for non-acid treatment of water. Solvent Manufacturing Company. 505,637, Jan. 11; Serial No. 520,976.

Cleaning compound, Boiler. Ross Manufacturing Company. 287,147, Sept. 15, 1931. Republished Jan. 11.

Compound for stopping leaks in boilers. Ross Manufacturing Company. 284,768, July 7, 1931. Republished Jan. 11.

Deodorants. Delsyn-Gould, Inc. 505,664, Jan. 11; Serial No. 553,346.

Disinfectant. N. S. Hillyard. 174,861, Oct. 23, 1923. Republished Jan. 11.

Diuretic stimulant. Friendly Laboratories. 358,106, June 28, 1938. Republished Jan. 11.

Dyes and dyestuffs. I. G. Farbenindustrie Aktiengesellschaft. 227,300, May 3, 1927. Republished Jan. 11.

Dyes and dyestuffs. I. G. Farbenindustrie Aktiengesellschaft. 227,413, May 3, 1927. Republished Jan. 11.

Dyes and dyestuffs. General Dyestuff Corporation. 226,492, Apr. 12, 1927. Republished Jan. 11.

Dyes and dyestuffs. O. P. Rubardt. 282,540, Apr. 21, 1931. Republished Jan. 11.

Dyestuffs. General Dyestuff Corporation. 232,223, Sept. 6, 1927. Republished Jan. 11.

Dyestuffs. General Dyestuff Corporation. 235,202–3, Nov. 15, 1927. Republished Jan. 11.

Emulsion for the preservation of fruits and vegetables. The Wilbur White Chemical Company. 298,232, Oct. 18, 1932. Republished Jan. 11.

Gases, Compressed. Gases Incorporated. 319,017, Nov. 13, 1934. Republished Jan. 11.

Halibut liver oil. A. E. Mallard. 324,730, May 28, 1935. Republished Jan. 11.

Ice cream salt. Worcester Salt Co. 310,203, Feb. 13, 1934. Republished Jan. 11.

Insecticides. Koch Butchers' Supply Company. 403,984, Oct. 26, 1943. Republished Jan. 11.

Insecticides. I. Lower. 423,782, Sept. 10, 1946. Republished Jan. 11.

Insecticides. The Sherwin-Williams Company. 313,845, June 12, 1934. Republished Jan. 11.

Insecticides. The Sherwin-Williams Co. 361,955, Nov. 8, 1938. Republished Jan. 11.

Insecticides. The Sherwin-Williams Co. 381,074, Sept. 10, 1940. Republished Jan. 11.

Insecticides and fungicides. The Sherwin-Williams Company. 240,802, Apr. 10, 1928. Republished Jan. 11.

Insecticides and fungicides. The Sherwin-Williams Company. 263,042, Oct. 29, 1929. Republished Jan. 11.

Insecticides and fungicides. The Sherwin-Williams Company. 263,943, Nov. 12, 1929. Republished Jan. 11.

Insecticides and fungicides. The Sherwin-Williams Co. 353,267, Dec. 28, 1937. Republished Jan. 11.

Insecticides and fungicides. The Sherwin-Williams Co. 355,903, Apr. 5, 1938. Republished Jan. 11.

Insecticides, fungicides, and flocculators. The Sherwin-Williams Company. 350,551, Sept. 28, 1937. Republished Jan. 11.

Insecticides, fungicides, and germicides. The Sherwin-Williams Company. 263,944, Nov. 12, 1929. Republished Jan. 11.

Laxative. Friendly Laboratories. 386,062, Mar. 25, 1941. Republished Jan. 11.

Liniment, Medicinal. Plough, Inc. 433,160, Sept. 30, 1947. Republished Jan. 11.

Liver powder. La Compagnie Pharmaceutique Desbergers. 298,678, Nov. 1, 1932. Republished Jan. 11.

Lotion, Skin. S. Greenberg. 430,484, June 10, 1947. Canceled Dec. 6, 1948. O. G. Jan. 11.

Make-up and lipstick. Gibbs & Company. 418,336, Dec. 18, 1945. Republished Jan. 11.

Medicinal powder. La Compagnie Pharmaceutique Desbergers. 331,957, Jan. 28, 1936. Republished Jan. 11.

Medicines, Poultry and bird. Dr. Salsbury's Laboratories. 325,993, July 9, 1935. Amended. O. G. Jan. 11.

Mixture of chemicals. Dixie Chemical Company. 502,127, Sept. 14, 1948. Corrected. O. G. Jan. 1.

Ointments, Skin, healing salves, antiseptic liniment, etc. W. L. Bechtold. 315,871, Aug. 14, 1934. Republished Jan. 11.

Perfume. Harzeld's Inc. 298,223, Oct. 18, 1932. Republished Jan. 11.

Perfumeries and toilet water, face powder, etc. Goldenberg's. 237,185, Jan. 3, 1928. Republished Jan. 11.

Pest inhibiting compositions. The Sherwin-Williams Company. 424,217, Sept. 24, 1948. Republished Jan. 11.

Poison for extermination of rats, Liquid. F. L. Wiley. 505,632, Jan. 11; Serial No. 512,552.

Powder, Insect. The Frank Tea & Spice Company. 141,553, Apr. 26, 1921. Republished Jan. 11.

Preparation for the treatment of inflamed, spongy, and receded gums. W. L. Bechtold. 322,364, Mar. 5, 1935. Republished Jan. 11.

Preparation to prevent rust and corrosion and to remove scale formation in steam boilers. The Bird-Archer Company. 331,670, Jan. 14, 1936. Republished Jan. 11.

Preparation used to condition water. The Bird-Archer Co. 395,315, May 19, 1942. Republished Jan. 11.

Salve. G. Satterfield. 505,658, Jan. 11; Serial No. 542,357.

Soporific medicine. La Compagnie Pharmaceutique Desbergers. 297,077, Aug. 30, 1932. Republished Jan. 11.

Starch, Gloss laundry. Scoville, Brown & Company. 316,710, Sept. 4, 1934. Republished Jan. 11.

Steepwater used for mold growth in the production of antibiotics, Refined. A. E. Staley Manufacturing Company. 505,651–6, Jan. 11; Serial Nos. 536,720–5.

Suppositories, Prophylactic. A. E. Mallard. 356,325, Apr. 26, 1938. Republished Jan. 11.

Tablets. A. E. Mallard. 291,952, Feb. 23, 1932. Republished Jan. 11.

Tablets and capsules. A. E. Mallard. 244,136, July 10, 1928. Republished Jan. 11.

Tablets and capsules. A. E. Mallard. 314,509, July 3, 1934. Republished Jan. 11.

CLASS 7

Ribbon composed of cellulose composition material. Freydberg Brothers, Incorporated. 282,631, Apr. 28, 1931. Republished Jan. 11.

Rope. American Manufacturing Company. 505,663, Jan. 11; Serial No. 552,381.

Tape for package tying, Cotton. General Printed String Company. 505,646, Jan. 11; Serial No. 529,980.

Twine. Blake, Moffitt and Towne. 193,741, Jan. 6, 1925.

Twine, Florists'. Riverside & Dan River Cotton Mills, Inc. 426,166, Dec. 17, 1946. Republished Jan. 11.

Wire rope or cable. Walter Kidde & Company, Inc. 417,762, Nov. 13, 1945. Republished Jan. 11.

CLASS 8

Cigarette paper. Michalitschke Bros. & Co. 505,648, Jan. 11; Serial No. 530,543.

Cigarette paper booklets. Champagne Paper Corporation. 505,574, Jan. 11; Serial No. 532,560, published Oct. 5, 1948.

CLASS 9

Matches. Scoville, Brown & Company. 365,715, May 14, 1939. Republished Jan. 11.

CLASS 10

Fertilizer. Kentucky Fertilizer Works. 505,626, Jan. 11; Serial No. 500,308.

Limestone, and fertilizers, Pulverized agricultural. Annville Stone Company. 435,273, Dec. 16, 1947. Republished Jan. 11.

CLASS 11

Carbon paper and typewriter ribbons. De-Fi Manufacturing Company. 138,234, Dec. 21, 1920. Republished Jan. 11.

Carbon-paper and typewriter ribbons. De-Fi Manufacturing Company. 138,802, Jan. 11, 1921. Republished Jan. 11.

Carbon-paper and typewriter ribbons. De-Fi Manufacturing Company. 138,960, Jan. 18, 1921. Republished Jan. 11.

CLASS 12

Brick, Fire, tile, and articles made of fire-clay. Harbison & Walker. 24,272–3, Feb. 20, 1894. Republished Jan. 11.

Building materials. Porcelain Products Company. 353,109, Dec. 28, 1937. Republished Jan. 11.

Building paper. Blake, Moffitt & Towne. 190,973, Oct. 28, 1924. Republished Jan. 11.

Building-paper and composite roofing. The Paraffine Paint Company. 79,002, July 26, 1910. Republished Jan. 11.

Cement, Powdered. Ash Grove Lime & Portland Cement Company. 397,501, Sept. 8, 1942. Republished Jan. 11.

Lime, Hydrated. Marblehead Lime Company. 180,902, Mar. 11, 1924. Republished Jan. 11.

Mouldings of aluminum, Store front and window, aluminum alloys. The Alumiline Corp. 434,724, Dec. 2, 1947. Republished Jan. 11.

Prepared mixture of which the main ingredients are sand, gravel, and cement. The Cleveland Builders Supply and Brick Company. 153,137, Mar. 14, 1922. Republished Jan. 11.

Roofing asphalt, Straight petroleum. Shallow Water Refining Company. 386,213, Apr. 1, 1941. Republished Jan. 11.

Roofings and building-papers, Waterproof. The Paraffine Companies, Inc. 132,772, June 29, 1920. Republished Jan. 11.

Shingles, Copper. The New Haven Copper Co. 336,646, July 14, 1936. Republished Jan. 11.

Steel bars, Concrete reinforcement. Connors Steel Company. 386,207, Apr. 1, 1941. Republished Jan. 11.

Tiles, Plastic, and plastic slabs. American Brake Shoe Company. 411,946, Feb. 13, 1945. Republished Jan. 11.

CLASS 13

Ball cocks, flush valves, tank fittings. Scoville Manufacturing Company. 234,663, Nov. 1, 1927. Republished Jan. 11.

Brackets for supporting cylinders of fire extinguishing medium. Walter Kidde & Company, Inc. 423,227, Aug. 27, 1946. Republished Jan. 11.

Lavatory handles, High tensile brass and bronze, bathroom soap dishes, etc. Titan Metal Manufacturing Company. 304,975–6, July 25, 1933. Republished Jan. 11.

Nipples, Soldering. Mueller Co. 229,813, July 5, 1927. Republished Jan. 11.

Pipe fittings, Metal. E. M. Dart Mfg. Co. 145,068, July 26, 1921. Republished Jan. 11.

Pipe flanges, Forged and rolled steel. Standard Steel Works Company. 165,484, Mar. 13, 1923. Republished Jan. 11.

Spikes, Railroad. The West Virginia Rail Company. 255,260, renewed Apr. 16, 1949. O. G. Jan. 11.

Sprays, Massage shower bath. Knickerbocker Mfg. Co. 140,618, Mar. 22, 1921. Republished Jan. 11.

Tank balls. American Rubber Products Corporation. 203,750, Sept. 22, 1925. Republished Jan. 11.

Valves and cocks. Mueller Co. 231,322, Aug. 16, 1927. Republished Jan. 11.

Valves and faucets. Mueller Co. 231,257, Aug. 16, 1927. Republished Jan. 11.

CLASS 14

Alloy-metal steels, Non-corrosive, non-magnetic. Cyclops Steel Company, Inc. 249,429, renewed Nov. 13, 1948. O. G. Jan. 11.

Alloy steels, Non-rusting, non-staining. Cyclops Steel Company, Inc. 249,571, renewed Nov. 20, 1948. O. G. Jan. 11.

Bronzes, round, square, and hexagonal bronze bars, etc. Titan Metal Company. 120,800, Mar. 5, 1918. Republished Jan. 11.

Castings. Bendix Aviation Corporation. 413,926, May 22, 1945. Republished Jan. 11.

Die steels, Chromium-tungsten. Cyclops Steel Company, Inc. 249,427–8, renewed Nov. 13, 1948. O. G. Jan. 11.

Forgings, Brass, brass castings, and welding rods. Titan Metal Manufacturing Company. 408,610, Aug. 22, 1944. Republished Jan. 11.

Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 339,747, Oct. 20, 1936. Republished Jan. 11.

Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 363,676, Feb. 24, 1942. Republished Jan. 11. Class 39.

CLASS 20

Fiber material in the nature of oiled cloth for covering fixtures. Clopay Corporation. 356,788, May 10, 1938.

Hollow ware. W. & S. Blackinton Co., Inc. 505,657, Jan. 11; Serial No. 540,242.

Jewelry. Helsberg's Diamond Shops, Inc. 505,645, Jan. 11; Serial No. 529,642.

Die steels, Chromium-tungsten. Cyclops Steel Company, Inc. 249,427–8, renewed Nov. 13, 1948. O. G. Jan. 11.
Forgings, Brass, brass castings, and welding rods. Titan Metal Manufacturing Company. 408,610, Aug. 22, 1944. Republished Jan. 11.
Iron castings. Louis Sacks, Inc. 246,715, renewed Sept. 11, 1948. O. G. Jan. 11.
Metals comprising babbitt metal and manganese-bronze. The Wm. Cramp & Sons Ship & Engine Building Co. 64,766, Aug. 20, 1907. Republished Jan. 11.
Rods, Brass and bronze, shapes, and forgings and automatic screw machine parts. Titan Metal Manufacturing Company. 288,569, Nov. 3, 1931. Republished Jan. 11.
Rods, Brass, naval brass, munts's metal, etc. Titan Metal Company. 120,801, Mar. 5, 1918. Republished Jan. 11.
Stampings, castings, and forgings, Unfinished or partially finished metal. Ace Manufacturing Corporation. 433,727, Oct. 28, 1947. Republished Jan. 11.
Steel, aluminum, and copper sheets, steel bars, brass rods, etc. Hancock Steel Co., Inc. 505,641, Jan. 11; Serial No. 523,586.
Steel for tools, and iron and steel in the form of pigs, ingots, billets, etc. Hall & Pickles Limited. 133,691, Aug. 3, 1920. Republished Jan. 11.
Wire, Galvanized. Continental Steel Corporation. 411,284, Jan. 9, 1945. Republished Jan. 11.

CLASS 15

Gasoline and lubricating oils. Black Eagle Oil Company. 299,061, Nov. 22, 1932. Republished Jan. 11.
Grease for ball and roller bearings. Norma-Hoffmann Bearings Corporation. 386,295, Apr. 1, 1941. Republished Jan. 11.
Lubricant concentrate. The Elco Lubricant Corporation. 416,305, Sept. 4, 1945. Republished Jan. 11.
Lubricant concentrate. The Elco Lubricant Corporation. 430,561–3, June 17, 1947. Republished Jan. 11.
Oils and greases, Lubricating. The Elco Grease and Oil Company. 413,784, May 15, 1945. Republished Jan. 11.
Oils and greases, Lubricating. The Elco Lubricant Corporation. 413,792, May 15, 1945. Republished Jan. 11.
Oils, Lubricating. The Elco Grease and Oil Company. 407,622, June 13, 1944. Republished Jan. 11.

CLASS 16

Coating materials. Franklin Research Company. 340,296, Nov. 3, 1936. Republished Jan. 11.
Filler, primer, sealer, and surfacer. The Lowe Brothers Company. 210,539, Mar. 16, 1926. Republished Jan. 11.
Floor dressing. N. S. Hillyard. 175,130, Oct. 30, 1923. Republished Jan. 11.
Floor dressing, Liquid. Hillyard Chemical Company. 410,525, Nov. 28, 1944. Republished Jan. 11.
Floor polish, Liquid. Hillyard Chemical Company. 299,270, Nov. 29, 1932. Republished Jan. 11.
Floor polish, Liquid. Hillyard Chemical Company. 416,944, Oct. 9, 1945. Republished Jan. 11.
Floor wax, Liquid. Hillyard Chemical Company. 295,831–2, July 12, 1932. Republished Jan. 11.
Floor wax, Liquid. Hillyard Chemical Company. 299,325, Nov. 29, 1932. Republished Jan. 11.
Lacquer, Brushing. The Smith-Alsop Paint and Varnish Company. 210,704, Mar. 23, 1926. Republished Jan. 11.
Lacquers and enamels, Nitrocellulose. The Sherwin-Williams Company. 203,242, Sept. 15, 1925. Republished Jan. 11.
Paint and paint compounds. The Paraffine Paint Co. 65,279, Sept. 17, 1907. Republished Jan. 11.
Paint and paint compounds. The Paraffine Paint Company. 80,941, Feb. 14, 1911. Republished Jan. 11.
Paint enamels. North American Paint & Chemical Co., Ltd. 293,190, Apr. 12, 1932. Republished Jan. 11.
Paint, paint enamels, primers, paint oil, etc. The Sherwin-Williams Company. 168,111, May 15, 1923. Republished Jan. 11.
Paint, Semi-paste. The Lowe Brothers Company. 194,107, Jan. 13, 1925. Republished Jan. 11.
Paints and paint enamels. The Lowe Brothers Company. 432,091, Aug. 19, 1947. Republished Jan. 11.
Paints and paint enamels. The Sherwin-Williams Company. 413,297, Apr. 17, 1945. Republished Jan. 11.
Paints, Black ready-mixed. The Dayton Color Works Company. 154,915, May 16, 1922. Republished Jan. 11.
Paints, enamels, japans, etc. The Sherwin-Williams Company. 196,878, Mar. 31, 1926. Republished Jan. 11.
Paints, finishes, and enamels. The Sherwin-Williams Company. 150,107, Dec. 27, 1921. Republished Jan. 11.
Paints, finishes, varnishes, etc. The Sherwin-Williams Company. 206,908, Dec. 15, 1925. Republished Jan. 11.
Paints, Liquid and paste. The Lowe Brothers Company. 56,989, Oct. 30, 1906. Republished Jan. 11.
Paints, Liquid and paste, colors in oil, dry colors, and varnishes. The Lowe Bros. Co. 58,562, Dec. 18, 1906. Republished Jan. 11.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 11TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Boucher, Charles P., deceased, Newark, N. J., by National Inventions Corporation, New York, N. Y., assignee. Space discharge tube and electrode therefor. Re. 23,073, Jan. 11.
Cemenstone Corporation. The, assignee: *See*—
Henderson, Albert.
General Controls Co., assignee: *See*—
Ray, William A.
Henderson, Albert, assignor, by mesne assignments, to The Cemenstone Corporation, Pittsburgh, Pa. Precast concrete corrugated connection. Re. 23,074, Jan. 11.
Joy Manufacturing Company, assignee: *See*—
Simmons, Leon E.
Lyon, George A., Allenhurst, N. J. Wheel cover. Re. 23,075, Jan. 11.
National Inventions Corporation, assignee: *See*—
Boucher, Charles P.
Permutit Company, The, assignee: *See*—
Pick, Eric.
Pick, Eric, East Rockaway, assignors to The Permutit Company, New York, N. Y. Plural valve actuation and control. Re. 23,076, Jan. 11.
Rapids-Standard Co., Inc., assignee: *See*—
Woldring, Bert and Sebastian.
Ray, William A., North Hollywood, Calif., assignor to General Controls Co. Control apparatus. Re. 23,077, Jan. 11.
Sebastian, James R.: *See*—
Woldring, Bert, and Sebastian.
Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Mining machine. Re. 23,078, Jan. 11.
Woldring, Bert, and J. R. Sebastian, assignors to Rapids-Standard Co., Inc., Grand Rapids, Mich. Conveyer. Re. 23,079, Jan. 11.

LIST OF PLANT PATENTEES

Aller, Curtis C., Yakima County, Wash. Apple tree. 819, Jan. 11.
Kern, Carl E., Wyoming, Ohio. Magnolia plant. 820, Jan. 11.

LIST OF DESIGN PATENTEES

Accurate Parts Manufacturing Company, assignee: *See*—
Shewitz, Newson, Sloane, and Valksnoras.
Andre, Gustaf E., Chicago, Ill. Combination ash tray and coaster. 152,313, Jan. 11.
Arehart, David D.: *See*—
Hanson, Frank D., Arehart, and Dittmer.
Arlington Chair Co., assignee: *See*—
Waaranan, Walter W.
Armstrong, George R., McKeesport, Pa. Ball game board. 152,314, Jan. 11.
Associated Manufacturers Inc., assignee: *See*—
Dilger, Herman R., Kline, and Leonard.
Astatic Corporation, The, assignee: *See*—
Federico, Joseph B.
Barnhart, Herbert S., Scarsdale, N. Y., assignor to The Whitney Blake Company, Hamden, Conn. Electrical-connector body. 152,315, Jan. 11.
Bergstrom, Adolph G., Rockford, Ill. Vehicle heater. 152,316, Jan. 11.
Biro Manufacturing Company, The, assignee: *See*—
Biro, Vincent G.
Biro, Vincent G., Ottawa County, assignor to The Biro Manufacturing Company, Marblehead, Ohio. Hood for a power meat cutter. 152,317, Jan. 11.
Blumfield, Joseph, Los Angeles, Calif. Hand operated rug hooker. 152,318, Jan. 11.
Booker, Clarence W., San Diego, Calif. Smoking pipe. 152,319, Jan. 11.
Buehrig, Gordon M., South Bend, Ind., assignor to The Tasco Corporation, Hartford, Conn. Automobile. 152,320, Jan. 11.
Cavanagh, John F., Providence, R. I. Baking unit. 152,321, Jan. 11.
Chapin, Edward, Buffalo, N. Y. Vehicle trailer. 152,322, Jan. 11.
Chapman, Harold P., Columbus, Ohio. Electric heater for dental impressions or the like. 152,323, Jan. 11.
Chipman, Richmond L., Jr., Montclair, N. J. Watch box or similar article. 152,324, Jan. 11.
Cissell, William M., St. Mathews, near Louisville, Ky. Water spray gun. 152,325, Jan. 11.
Cissell, William M., St. Mathews, near Louisville, Ky. Water spray gun. 152,326, Jan. 11.
Collins, Robert J.: *See*—
Hough, Leonard G., and Collins.
Columbia Protektosite Company, Inc., assignee: *See*—
Lux, Eugene J.
Connolly, William N., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Container cap. 152,327, Jan. 11.
Dawson, Gordon R.: *See*—
Oros, John, and Dawson.
De Douglass, Porter, Hayward, Calif. Shoe shining machine. 152,328, Jan. 11.
Dilger, Herman R., S. E. Kline, and T. M. Leonard, assignors to Associated Manufacturers Inc., Waterloo, Iowa. Cream separator. 152,329, Jan. 11.
Dillon, Roy A., Racine, Wis. Glass top end table. 152,330, Jan. 11.
Dittmer, Ralph T.: *See*—
Hanson, Frank D., Arehart, and Dittmer.
Eakins, Travice R., Bowling Green, Ky. Towel rack. 152,331, Jan. 11.
Even-Pul Foundations, Inc., assignee: *See*—
Lo Cascio, Jack J.
Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,332, Jan. 11.
Foulke, Louise M. J., Brooklyn, N. Y. Rocking chair. 152,333, Jan. 11.
General Engineering & Manufacturing Company, assignee: *See*—
Schreiber, John H.
Gross, A. Edward, assignee: *See*—
Wheeler, Henry F.
Hamilton Products, Inc., assignee: *See*—
Strang, Clarence G.
Hanson, Frank D., Independence, Mo., and D. D. Arehart, and R. T. Dittmer, assignors to Palace Corporation, Flint, Mich. Trailer. 152,334, Jan. 11.
Hanson, Frank D., Independence, Mo., and D. D. Arehart, and R. T. Dittmer, assignors to Palace Corporation, Flint, Mich. Trailer. 152,335, Jan. 11.
Helicopter Engineering and Construction Corporation, assignee: *See*—
Lemont, Harold E., Jr.
Hirshfield, Stella J., New York, N. Y. Lamp. 152,336, Jan. 11.
Hobé, William W., New York, N. Y. Necklace. 152,337, Jan. 11.
Hough, Leonard G., and R. J. Collins, Toronto, Ontario, Canada. Power pulverizer for compost and the like. 152,338, Jan. 11.
Johnson, S. C., & Son, Inc., assignee: *See*—
Connolly, William N.
Jones & Lamson Machine Company, The, assignee: *See*—
Rosengren, Herbert.
Kehlmann, Emanuel, New York, N. Y. Combined lamp and shade. 152,339, Jan. 11.

Kline, Stanley E.: *See*—
Dilger, Herman R., Kline, and Leonard.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel Inc., New York, N. Y. Brooch or similar

Kline, Stanley E.: *See*—
Dilger, Herman R., Kline, and Leonard.
Krohm, Fred A., Gary, Ind., assignor to Productive Inventions, Inc. Windshield wiper arm. 152,340, Jan. 11.
Kromhout, Johan C., Forest Hills, N. Y., assignor to Sylvania Electric Products, Inc. Television receiver. 152,341, Jan. 11.
Lemont, Harold E., Jr., East Providence, R. I., assignor to Helicopter Engineering and Construction Corporation. Helicopter. 152,342, Jan. 11.
Leonard, Thomas M.: *See*—
Dilger, Herman R., Kline, and Leonard.
Lewis, Samuel, New York, N. Y. Lamp or similar article. 152,343, Jan. 11.
Lindberg, Carl A., Toledo, Ohio. Electric fan or similar article. 152,344, Jan. 11.
Lo Cascio, Jack J., Bayonne, N. J., assignor to Even-Pul Foundations, Inc., New York, N. Y. Brassière. 152,345, Jan. 11.
Lux, Eugene J., New York, N. Y., assignor to Columbia Protektosite Company, Inc., Carlstadt, N. J. Reclining chair or similar article. 152,346, Jan. 11.
Marty, Frank A., Los Angeles, Calif. Mirror. 152,347, Jan. 11.
Mehr, Jacob A., St. Louis, Mo. Reflector head for an ultraviolet lamp. 152,348, Jan. 11.
Miller, Juanita, Oakland, Calif. Harp. 152,349, Jan. 11.
Moore, Harry W., Dayton, Ohio. Coil winding machine. 152,350, Jan. 11.
Oros, John, and G. R. Dawson, Cleveland, Ohio. Clamp. 152,351, Jan. 11.
Palace Corporation, assignee: *See*—
Hanson, Frank D., Arehart, and Dittmer.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,352, Jan. 11.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,353, Jan. 11.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,354, Jan. 11.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,355, Jan. 11.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,356, Jan. 11.
Pennino, Oreste, New York, N. Y. Combined wrist watch and holder strap therefor. 152,357, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 152,358, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 152,359, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 152,360, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar article. 152,361, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 152,362, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 152,363, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 152,364, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 152,365, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 152,366, Jan. 11.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 152,367, Jan. 11.
Productive Inventions, Inc., assignee: *See*—
Krohm, Fred A.
Rosengren, Herbert, Woodcliff Lake, N. J., assignor to The Jones & Lamson Machine Company. Optical comparator. 152,368, Jan. 11.
Rosengren, Herbert, Woodcliff Lake, N. J., assignor to The Jones & Lamson Machine Company. Comparator. 152,387, Jan. 11.
Sampson, Merrill G., Santa Monica, Calif. Smoker's pipe. 152,369, Jan. 11.
Sanders, Charles M., Ponca City, Okla. Combined ash tray rack and cigarette holder. 152,370, Jan. 11.
Schick, Howard M., Lee's Summit, Mo. Display fixture. 152,371, Jan. 11.
Schreiber, John H., assignor to General Engineering & Manufacturing Company, St. Louis, Mo. Space cooler cabinet or the like. 152,372, Jan. 11.
Schwartz, Morris, Sunnyside, N. Y. Spectacle frame or similar article. 152,373, Jan. 11.

Kromhout, Johan C.
Tanzer, Eugen, New York, N. Y. Scarf or similar article. 152,381, Jan. 11.
Tasco Corporation, The, assignee: *See*—
Buehrig, Gordon M.
Tawresey, Virginia B., Philadelphia, Pa. Candle holder. 152,382, Jan. 11.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Valkanoras, Anthony, Jr.: *See*—
Shewitz, Newson, Sloane, and Valkanoras.
Waaranan, Walter W., Hubbardston, assignor to Arlington Chair Co., Gardner, Mass. High chair. 152,383, Jan. 11.
Weaver, William W., Houston, Tex. Record cabinet. 152,384, Jan. 11.
Weil, H. A., assignee: *See*—
Score, Leslie H.
Wheeler, Henry F., assignor of one-half to A. E. Gross, Richmond Heights, Mo. Phonograph. 152,385, Jan. 11.
Whitney Blake Company, The, assignee: *See*—
Barnhart, Herbert S.
Zelenka, Robert, Chicago, Ill. Combined key retainer, flashlight, and lighter. 152,386, Jan. 11.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 11TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abell, Gurdon R., Jr., Poughkeepsie, N. Y. Gauge for measuring subatmospheric pressures. 2,458,759, Jan. 11.
Accuheat Electric, assignee: *See*—
Cornelius, Yngve R.
Acme Steel Company, assignee: *See*—
Singley, Fred A.
Adair, Newton J., Fresno, Calif. Musical instrument. 2,459,102, Jan. 11.
Adair, Newton J., Fresno, Calif. Musical instrument. 2,459,103, Jan. 11.
Adamson, Arthur P., Ballston Spa, N. Y., assignor to General Electric Company. Angular motion transmitting apparatus. 2,458,921, Jan. 11.
Agriculture, the United States of America, as represented by the Secretary of, assignee: *See*—
Fleck, Elmer E.
Mann, Charles W.
Rehberg, Chessie E., and Fisher.
Ahlf, Robert E.: *See*—
Marencik, William J., and Ahlf.
Air Reduction Company, Incorporated, assignee: *See*—
Tyrner, Joseph M.
Aktiebolaget Fr. Ranström, assignee: *See*—
Axelsson, Johan A.
Allen, Harold D.: *See*—
Varney, Kenneth W., and Allen.
Alley, Gordon T.: *See*—
Murray, William A., and Alley.
Allied Chemical Dye Corporation, assignee: *See*—
McCann, Harold G.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Johnson, John A., and Kenney.
Lipe, Bruce R., and Schroeder.
Winograd, Harold.
Allison Company, The, assignee: *See*—
Allison, Hugh V.
Allison, Hugh V., Fairfield, assignor to The Allison Company, Bridgeport, Conn. Abrasive tube drill means. 2,459,122, Jan. 11.
American Brass Company, The, assignee: *See*—
Davis, Charles H.
American Can Company, assignee: *See*—
Renard, Roland E.
Socke, John E.
American Cyanamid Company, assignee: *See*—
Barnes, Robert B.
Cooke, Elmer W., and Moss.
Fahrenbach, Marvin J.
Hultquist, Martin E.
Miller, Wilbur H., and Roblin.
Moss, Philip H., and Cook.
Parker, Robert P., Reeves, and Conn.
American Enka Corporation, assignee: *See*—
Weeldenburg, Johannes G.
American Viscose Corporation, assignee: *See*—
Bouvet, Rene.
Clark, James A.
Amsler Morton Corporation, assignee: *See*—
Morton, William A., and Smith.
Andersen, Walther M. A., assignor to Crystal Research Laboratories, Incorporated, Hartford, Conn. Crystal controlled frequency modulation system. 2,458,760, Jan. 11.
Anderson, Harry J., and M. V. Hartman, assignors to Hills-McCanna Company, Chicago, Ill. Pump and stroke adjusting mechanism. 2,458,821, Jan. 11.
Andresen, Amanda M. C., assignee: *See*—
Andresen, Herman P.
Andresen, Edward W. H., assignee: *See*—
Andresen, Herman P.
Andresen, Ella V., assignee: *See*—
Andresen, Herman P.
Andresen, Ella V., executrix: *See*—
Andresen, Herman P.
Andresen, Herman P., deceased, Chicago, Ill.; E. V. Andresen, executrix, assignor of one-fourth to E. V. Andresen, one-fourth to A. M. C. Andresen, one-fourth to E. W. H. Andresen, and one-fourth to E. C. M. Dettmer, as tenants in common. Caster. 2,458,922, Jan. 11.
Andrews, Edward F., assignor, by mesne assignments, to N. M. Seeburg, Chicago, Ill. Automatic phonograph. 2,458,496, Jan. 11.
Anxionnaz, Rene, assignee: *See*—
Imbert, Roger J., and Sedille.
Armstrong, Ernest, Camden, N. J. Wiper device for car axle journals and the like. 2,459,058, Jan. 11.
Armstrong, Frank W., Jr.: *See*—
Carpenter, Otis R., and Armstrong.
Aro Equipment Corporation, The, assignee: *See*—
Shearman, Spicer D.
Aronson, Charles N., Niagara Falls, N. Y. Wheel suspension for vehicles. 2,458,548, Jan. 11.
Askawa Regulator Company, assignee: *See*—
Glass, Paul.
Atlas Powder Company, assignee: *See*—
Creighton, Henry J., and Hales.
Attorney General of the United States, Vested in: *See*—
Lolkema, Jan.
Aust, Robert J., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibrator. 2,458,822, Jan. 11.
Auten, Howard L., Glen Ellyn, Ill. Cigarette and match case. 2,458,923, Jan. 11.
Avakian, Souren, Oreland, assignor to The National Drug Company, Philadelphia, Pa. Benzoic acid derivatives. 2,458,823, Jan. 11.
Axelrad, Bernard A.: *See*—
Fitzhugh, Robert R., Frederick, and Axelrad.
Axelsson, Johan A., Eskilstuna, assignor to Aktiebolaget Fr. Ramström, Stockholm, Sweden. Chuck. 2,458,824, Jan. 11.
Ayers, David T., Jr.: *See*—
Ingres, Jeannot G., and Ayers, Jr.
B. F. D. Company, assignee: *See*—
Foote, James.
Babcock & Wilcox Company, The, assignee: *See*—
Bailey, Ervin G.
Carpenter, Otis R., and Armstrong.
Babson, Robert D., assignor to Merck & Co., Inc., Rahway, N. J. Preparing alkyl acyloxy acrylates. 2,459,059, Jan. 11.
Bachman, Benjamin B., Philadelphia, and D. J. Macklin, St. Davids, Pa. Suspension system. 2,458,549, Jan. 11.
Bailey, Ervin G., Easton, Pa., assignor to The Babcock & Wilcox Company, Rockleigh, N. J. Combustion chamber. 2,458,497, Jan. 11.
Baker, Frederick W., Oldswinford, Stourbridge, England. Vehicle road wheel. 2,458,761, Jan. 11.
Baker, Ridgway, Minneapolis, Minn. Golf club carrier. 2,458,924, Jan. 11.
Barger, Cecil K., Statesville, N. C. Corner joint for wallboards. 2,458,925, Jan. 11.
Barley, Robert: *See*—
Zulinski, Edward J., and Barley.
Barnbrook, Thomas G., Wolverhampton, England, assignor to The Timken Roller Bearing Company, Canton, Ohio. Making cages for ball bearings. 2,458,762, Jan. 11.
Barnes, Robert B., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Infrared spectrophotometry. 2,458,973, Jan. 11.
Barth, Jay E., Pitman, N. J., assignor to Radio Corporation of America. Adjustable shaft stop. 2,459,012, Jan. 11.
Basic Refractories, Inc., assignee: *See*—
Schoenlaub, Robert A.
Bassett, Merton O., Schenectady, N. Y., assignor to General Electric Company. Web scanning device. 2,458,926, Jan. 11.
Bates, Herbert T., Lincoln, Nebr., and D. J. Fergus and A. F. Craver, assignors to The Cleveland Heater Company, Cleveland, Ohio. Water heating device with corrosion protective anode. 2,459,123, Jan. 11.
Battey, Alexander J., Skaneateles, N. Y. Spark plug cleaner. 2,458,825, Jan. 11.
Bauer, William M., Glen Ridge, assignor to Curtiss-Wright Corporation, Bloomfield, N. J. Method of and apparatus for testing ignitions. 2,458,974, Jan. 11.
Baulch, Ernest L., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Trainer for enabling the giving of radio instruction. 2,458,550, Jan. 11.
Baxter Laboratories, Inc., assignee: *See*—
Nesset, Naurice M., and Nawoj.
Beck, Robert F., Paterson, assignor to Bendix Aviation Corporation, Teterboro, N. J. Electrical switch device. 2,458,927, Jan. 11.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Boyle, Homer G., Dobbs Ferry, assignor, by mesne assign-

Campbell, Robert C., Milburn, N. J., assignor to The
Columbia Broadcasting System, Inc., assignee: *See*—
Schlesinger, Kurt.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Baulch, Ernest L.
Blattner, David G.
Boghosian, William H., and Och.
Bowen, Arnold E.
Cox, Leslie R., and Huber.
De Monte, Robert W., and Haines.
D'Heedene, Albert R.
Feldman, Carl B. H.
Giroud, Henry A.
Hussey, Luther W.
Johnson, John B.
Jonas, Herbert C., Laico, and Roncl.
Mason, Warren P.
Oliver, Bernard M.
Rieke, John W.
Sears, Raymond W.
Southworth, George C.
Warren, Clifford A.
Willard, Gerald W.

Belmont Radio Corporation, assignee: *See*—
Dunn, William L.

Bendix Aviation Corporation, assignee: *See*—
Beck, Robert F.
Dickey, John W., Henry, and Riggen.
Fox, Kenneth H.
Neild, William G.

Benning, Anthony F., Woodstown, N. J., J. D. Park, Boulder, Colo., and S. E. Krahler, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of carbon tetrafluoride. 2,458,551, Jan. 11.

Bergstrom, Eric V., Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of fluid hydrocarbons. 2,458,498, Jan. 11.

Bergstrom, Eric V., Short Hills, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of fluid hydrocarbons. 2,458,499, Jan. 11.

Berry, Ruth P.: *See*—
Hardick, Floyd W.

Berry, Ruth P., assignee: *See*—
Kroenlein, Henry A.

Bertrand, Frederic E., Lynn, and A. S. Clark, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Ribbed strip for insoles. 2,458,500, Jan. 11.

Bieker, Lawrence W., Munster, Ind., and W. J. Lewis, Chicago, Ill., assignors to Graver Tank & Mfg. Co. Filter underdrain. 2,458,673, Jan. 11.

Bird, John R.: *See*—
Garand, John C., Cooper, Bird, and Miller.

Bird & Son, Inc., assignee: *See*—
Trepp, Samuel G.

Birmann, Rudolph, Newtown, Pa., assignor, by mesne assignments, to Turbo Engineering Corporation. Lubricating system for mechanisms operating at high altitudes. 2,458,763, Jan. 11.

Blackhawk Mfg. Co., assignee: *See*—
Killius, William.

Blanch, Charles C.: *See*—
Rogers, Robert W., and Blanch.

Blanchard, Charles E., Randolph, and A. W. Ferre, Wellesley, Mass., assignors, by mesne assignments, to Westinghouse Electric Corporation. Dusting apparatus. 2,458,674, Jan. 11.

Blattner, David G., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Making electrical contacting elements. 2,458,552, Jan. 11.

Bloomquist, Donald W., Chicago, Ill. Collet chuck. 2,458,889, Jan. 11.

Blumberg, Hamilton G., and E. M. Stevens, San Antonio, Tex. Water heating type fuel conditioner. 2,458,826, Jan. 11.

Boehm, Ray H., Racine, Wis. Game holder link. 2,458,675, Jan. 11.

Boese, Arthur H., Clinton, Okla. Toy gun. 2,458,828, Jan. 11.

Boghosian, William H., Forest Hills, and H. G. Och, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electronic computing device. 2,458,553, Jan. 11.

Bolley, Don S., Brooklyn, and E. C. Gallagher, Freeport, assignors to National Lead Company, New York, N. Y. Treating fatty oils. 2,458,554, Jan. 11.

Booe, James M., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electrodeposition of lead-tin-antimony alloys. 2,458,827, Jan. 11.

Booth, Earl C., assignor to Nobilitt-Sparks Industries, Inc., Columbus, Ind. Metal chair. 2,458,890, Jan. 11.

Booth, George M., Westfield, assignor to Novadel-Agene Corporation, Belleville, N. J. Manufacture of chlorine dioxide. 2,459,124, Jan. 11.

Bouvet, René, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Winding system and apparatus. 2,458,555, Jan. 11.

Bowen, Arnold E., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupled cavity resonator and wave guide apparatus. 2,458,556, Jan. 11.

Bowen, Edward L., McComb City, Miss. Reamer clamp for railroad car axles. 2,459,013, Jan. 11.

Boyle, Homer G., Dobbs Ferry, assignor, by mesne assignments, to Philips Laboratories, Inc., Irvington on Hudson, N. Y. Cathode-ray tube focusing circuit. 2,458,891, Jan. 11.

Bradley, George G., Great Neck, N. Y., assignor to Radio Corporation of America. Radiotelephone equipment. 2,458,558, Jan. 11.

Bradley, George G., Great Neck, and H. F. Mohr, Lynbrook, N. Y., assignors to Radio Corporation of America. Dual control and lockout means for telephone stations. 2,458,557, Jan. 11.

Brady, George W., Upper Montclair, N. J., assignor to Curtiss-Wright Corporation. Rib reinforcing means for propeller blades. 2,458,975, Jan. 11.

Braitberg, Leo D.: *See*—
Friedman, Harris L., and Braitberg.

Brenner, Abner, Chevy Chase, Md., and T. S. Meltes, Princeton, N. J., assignors to the United States of America as represented by the Secretary of Commerce. Apparatus for electroplating. 2,458,676, Jan. 11.

Bridgeport Fabrics, Inc., assignee: *See*—
Spraragen, Louis.

Brinnick, Frederic E.: *See*—
Tuve, Richard L., Fogelberg, Brinnick, and Springer.

Bristol Company, The, assignee: *See*—
Cowherd, Robert D., and Stahl.
Waidelich, James R.

Britton, Rex O., Lebanon, Oreg. Window sash lock. 2,458,559, Jan. 11.

Brooks, Percy E., Woodridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Welding fixture. 2,458,928, Jan. 11.

Bruce, William A., Tulsa, Okla., assignor to Standard Oil Development Company. Apparatus for adjusting the electrical condition of electrical analyzers. 2,458,829, Jan. 11.

Brundage, Alan D., assignor to F. L. Jacobs Co., Detroit, Mich. Visor. 2,458,677, Jan. 11.

Brunel, Henri, Paris, France. Preparing solutions of colloidal sulfur and the products thereof. 2,458,764, Jan. 11.

Bryant Chucking Grinder Company, assignee: *See*—
Bryant, William J., and Ljunggren.

Bryant, William J., Springfield, Vt., and T. H. Ljunggren, Charlestown, N. H., assignors to Bryant Chucking Grinder Company, Springfield, Vt. Planetary grinding machine. 2,458,765, Jan. 11.

Buchanan, Leslie B. M., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Two temperature refrigeration apparatus. 2,458,560, Jan. 11.

Budd Company, The, assignee: *See*—
McGary, Frank E., Hochreiter, Schlecht, and Shannon.

Buffalo Machinery Company, Incorporated, assignee: *See*—
Miller, Frank A.

Bulldog Electric Products Company, assignee: *See*—
Frank, William H.

Bunte, George F., Detroit, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio. Unidirectional flow gear pump. 2,458,678, Jan. 11.

Burdick, William H., Chicago, Ill., assignor, by mesne assignments of one-half to V. T. Connor and one-half to T. A. Kruse. Amusement game apparatus having illuminating means simulating dropping of a bomb from an airplane upon a boat. 2,458,892, Jan. 11.

Burens Products, Inc., assignee: *See*—
Root, Lin.

Burford, George E., Oklahoma City, Okla. Foot supporting device for shoes. 2,458,501, Jan. 11.

Burgess-Norton Manufacturing Company, assignee: *See*—
Waller, Gustav M.

Burndy Engineering Company, Inc., assignee: *See*—
Rogoff, Julian.

Burnett, Llewellyn W.: *See*—
Johns, Iral B.

Burt, William C.: *See*—
Johnson, Carl O., and Burt.

Bush, Ean L., San Francisco, Calif. Rat guard. 2,459,060, Jan. 11.

Buxton, Loran O., Maplewood, N. J., assignor to Nopco Chemical Company. Preparation of vitamin-fortified meals. 2,458,679, Jan. 11.

Buxton, Loran O., assignor to Nopco Chemical Company, Maplewood, N. J. Treatment of oil-bearing vegetable meals. 2,458,680, Jan. 11.

Byrne, John F., Wellesley Hills, Mass., assignor to The United States of America as represented by the Secretary of War. Modulation indicator. 2,458,830, Jan. 11.

Cady, Willoughby M., Cambridge, Mass., assignor, by mesne assignments, to The United States of America as represented by the Secretary of War. Optical gun sight with horisontal and vertical deflection adjustments. 2,458,831, Jan. 11.

Caliendo, Thomas A., South Ozone Park, N. Y. Reamer tool for pipes and the like. 2,458,681, Jan. 11.

Calkins, Willis A.: *See*—
Torrence, George W., and Calkins.

Campbell, James T., Detroit, Mich. Plate developer. 2,458,561, Jan. 11.

Campbell, Robert C., Milburn, N. J., assignor to The Dorr Company (Inc.), New York, N. Y. Apparatus for conducting ion exchange operations. 2,458,893, Jan. 11.

Campbell, Rollin E., Anderson, Ind. Multiple power application device. 2,458,976, Jan. 11.

Campos, Adolph, Clifton, N. J. Pocket lighter. 2,458,832, Jan. 11.

Cape, Arthur T., Columbus, assignor to Coast Metals, Inc., Canton, Ohio. Structural element for high temperature service use. 2,458,502, Jan. 11.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Quarles, Richard W.

Carbodies Limited, assignee: *See*—
Orr, John H.

Cárdenas, Francisco A., assignee: *See*—
Márquez, Nemesio.

Carignan, Raymond, Bradford, Vt., assignor, by mesne assignments, to Mer-Wall Enterprises, Incorporated, Wallingford, Conn. Spring compression tubing and pipe connection. 2,458,833, Jan. 11.

Carmody, Don E., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, New York, N. Y. Hydrocarbon conversion process. 2,458,977, Jan. 11.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Graham, Edwin A.
Schulz, Herman B.

Carpenter, Otis R., and F. W. Armstrong, Jr., Barberton, Ohio, assignors to The Babcock & Wilcox Company, Rockleigh, N. J. Electrical control system. 2,458,503, Jan. 11.

Casco Products Corporation, assignee: *See*—
Johnson, Arthur A.

Cavanaugh, Robert M., and J. E. Lufkin, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Making dimethyl terephthalate. 2,459,014, Jan. 11.

Celanese Corporation of America, assignee: *See*—
Pratt, Robert H., and Underwood.

Centrifugal & Mechanical Industries, Inc., assignee: *See*—
Howe, Andrew F.

Chace, Thomas B., Winnetka, assignor to The Dole Valve Company, Chicago, Ill. Fluid control system and mechanism. 2,458,978, Jan. 11.

Chateauneuf, Archie J., Lockport, N. Y. Container. 2,458,834, Jan. 11.

Chemlinski, Raymond, Schenectady, N. Y. Combined bottle container and support. 2,458,766, Jan. 11.

Chester, Allan E., Highland Park, and F. F. Reisinger, Waukegan, assignors to Poor & Company, Chicago, Ill. Reaction products of gelatin and aldonic acids and making same. 2,458,504, Jan. 11.

Cheyney, La Verne E., assignor to Wingfoot Corporation, Akron, Ohio. Film of copolymer of vinylidene chloride and vinyl chloride. 2,459,125, Jan. 11.

Churchill, Joseph L., Seattle, Wash. Milk bottle indicator. 2,458,979, Jan. 11.

Ciba Limited, assignee: *See*—
Ott, Gustav H., and Kraus.

Cincinnati Milling Machine Co., The, assignee: *See*—
Hoier, Walter, and Clifton.

Clair Manufacturing Company, Inc., assignee: *See*—
Johnson, Carl O., and Burt.

Clark, Alfred S.: *See*—
Bertrand, Frederic E., and Clark.

Clark, Carleton B., assignor to Kingsbury Machine Tool Corporation, Keene, N. H. Chip breaking mechanism for metal drilling and like machines. 2,458,929, Jan. 11.

Clark, James A., White Plains, N. Y., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del. Producing a molding material and the article produced. 2,458,562, Jan. 11.

Clarvan Corporation, assignee: *See*—
Edelston, Frederick C.

Clement, Clyde H., assignor of one-half to C. R. Cox, Phoenix, Ariz. Automatic switch. 2,459,015, Jan. 11.

Cleveland Heater Company, The, assignee: *See*—
Bates, Herbert T., Fergus, and Craver.

Cleveland Punch & Shear Works Co., The, assignee: *See*—
Weiland, John N.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Copolymers of vinyl compounds containing olefins. 2,459,126, Jan. 11.

Clifton, Richard N.: *See*—
Hoier, Walter, and Clifton.

Coast Metals, Inc., assignee: *See*—
Cape, Arthur T.

Coffey, Irven E., Normandy, Mo. Governor. 2,459,061, Jan. 11.

Cohen, Abe, Omaha, Nebr. Vehicle antiskid mechanism and wheel jack. 2,459,016, Jan. 11.

Cole, Robert M., Oakland, assignor to Shell Development Company, San Francisco, Calif. Production of gasoline. 2,458,980, Jan. 11.

Collins, Fred V., Des Plains, assignor to W. F. Stahl, Kenilworth, Ill. Tube-forming device. 2,458,563, Jan. 11.

Collins, Samuel C., assignor, by mesne assignments, to Arthur D. Little, Inc., Cambridge, Mass. Low-temperature refrigeration system. 2,458,804, Jan. 11.

Columbia Broadcasting System, Inc., assignee: *See*—
Schlesinger, Kurt.

Combustion Processes Company, assignee: *See*—
Urquhart, Norman J.

Commerce, the United States of America as represented by the Secretary of, assignee: *See*—
Brenner, Abner, and Meltes.

Commercial Controls Corporation, assignee: *See*—
Dohl, Robert A.

Conklin, Clarence A., Northport, N. Y. Convertible knockdown garden trellis. 2,458,931, Jan. 11.

Conn, Robert C.: *See*—
Parker, Robert P., Reeves, and Conn.

Connor, Vincent T.: *See*—
Burdick, William H., Connor, and Kruse.

Cook, Elmer W.: *See*—
Moss, Philip H., and Cook.

Cook, Elmer W., New York, N. Y., and P. H. Moss, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Quaternary ammonium compounds. 2,459,062, Jan. 11.

Cook, Elmer W., New York, N. Y., and P. H. Moss, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Divalent metal salts of halogen substituted phenylol sulfides. 2,459,063, Jan. 11.

Cooper, Allyn R., Marshalltown, Iowa. Clutch control. 2,458,767, Jan. 11.

Cooper, Benjamin G., assignor to W. E. Dunn Manufacturing Company, Holland, Mich. Cement slab molding machine. 2,458,564, Jan. 11.

Cooper, Eli G.: *See*—
Garand, John C., Cooper, Bird, and Miller.

Cork, Edward C., Ealing, London, assignor to Electric & Musical Industries Limited, Hayes, England. Apparatus for measuring field intensity in high-frequency electric fields. 2,458,565, Jan. 11.

Cornelius, Yngve R., Seattle, Wash., assignor to Accuheat Electric, Portland, Oreg. Heating apparatus. 2,458,835, Jan. 11.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Cotherman, Charles B., Goshen, Ind. Eliminating offset. 2,458,981, Jan. 11.

Cottingham, Rufus F., Scunthorpe, England. Golf practicing and teaching apparatus. 2,458,932, Jan. 11.

Couper, Samuel, Baltimore, Md. Roller bearing chain. 2,458,682, Jan. 11.

Cowherd, Robert D., Atlanta, Ga., and W. H. Stahl, Jr., assignors to The Bristol Company, Waterbury, Conn. Sequence control. 2,458,683, Jan. 11.

Cox, Arthur, assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Optical objective of the telephoto type having axially separated convergent front and divergent rear members. 2,458,836, Jan. 11.

Cox, Cleo R.: *See*—
Clement, Clyde H.

Cox, Fred W., Birmingham, Ala., and J. M. Wallace, Jr., assignors to Wingfoot Corporation, Akron, Ohio. Color stabilization of vinyl halide resins. 2,459,127, Jan. 11.

Cox, Leslie R., Rutherford, and G. H. Huber, Short Hills, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Distortion reduction in channel switching. 2,458,566, Jan. 11.

Cramer, Martha K., New York, N. Y. Combination bag and spectacle case. 2,458,567, Jan. 11.

Crandell, Ervin L., assignor, by mesne assignments, to Stevens-Arnold, Inc., Boston, Mass. Radio-frequency apparatus. 2,458,684, Jan. 11.

Craver, Albert F.: *See*—
Bates, Herbert T., Fergus, and Craver.

Creighton, Henry J., Swarthmore, and R. A. Hales, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del. Electrolytic process for reducing sugars. 2,458,895, Jan. 11.

Crew, La Vonne R., Compton, Calif. Revolving serving table. 2,459,017, Jan. 11.

Crimora Research and Development Corporation, assignee: *See*—
Jacobs, James H.

Crockford, Joseph R., assignor to H. Radzinsky and S. W. Dean, Jr., New York, N. Y. Making tampons. 2,458,685, Jan. 11.

Crooke, Fred F., Jefferson City, Tenn. Master safety switch. 2,458,930, Jan. 11.

Crystal Research Laboratories, Incorporated, assignee: *See*—
Andresen, Walther, M. A.

Cummings, Archibald M., Port Angeles, Wash. Dynamo-electric machine. 2,458,569, Jan. 11.

Cummings, Frank B.: *See*—
Cummings, John A. and Frank B.

Cummings, John A. and F. B., Bangor, Maine, said F. B. Cummings assignor to said J. A. Cummings. Potato seed cutter. 2,458,568, Jan. 11.

Curtis-Wright Corporation, assignee: *See*—
Bauer, William M.
Brady, George W.
Darby, Robert A.
Erny, Frank.

Daily, Edward J., Highland Park, Mich. Grinding wheel dressing device. 2,458,768, Jan. 11.

Dairy Specialties Company, Incorporated, The, assignee: *See*—
Jones, John P.

Dana Corporation, assignee: *See*—
Peterson, Carl D., and Deimel.

Dougherty, James, Silver Creek, Pa. Lunch can. 2,458,837, Jan. 11.

Farnsworth Research Corporation, assignee: *See*—
Halstead, William S.

Gard, Arthur W., Edgewood, assignor of one-fourth to W. H. Parmelee, Bethel Township, Allegheny County, and one-fourth to J. M. Guthrie, Crafton, Pa. Door-

Dana Corporation, assignee: *See*—
Peterson, Carl D., and Delmel.
Peterson, Carl D., Delmel, and Wolcott.

Darby, Robert A., Eggertsville, N. Y., assignor to Curtiss-Wright Corporation. Differential balance for airfoils. 2,458,896, Jan. 11.

Dasher, Paul J., Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Resilient mounting for fluid containers. 2,458,571, Jan. 11.

Davidson, William L., and H. W. Lewis, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Mounting for fluid containers. 2,458,570, Jan. 11.

Davie, Robert P., Jr., Manhattan Beach, assignor to North American Aviation, Inc., Inglewood, Calif. Extruded shape. 2,458,686, Jan. 11.

Davis, Alfred U., Baltimore, Md. Blasting machine. 2,458,687, Jan. 11.

Davis, Charles H., Cheshire, assignor to The American Brass Company, Waterbury, Conn. Welding cupro-nickel alloys. 2,458,688, Jan. 11.

Davis, Max W., assignee: *See*—
Lima, Henry C.

Davis, Meyer, Chicago, Ill. Sweater blocker. 2,458,689, Jan. 11.

Davis, Ralph L., Wallingford, Conn. Electromechanical drive system. 2,459,064, Jan. 11.

Dawson, Francis A., assignor to Kingston Products Corporation, Kokomo, Ind. Tuning and indicating mechanism. 2,458,690, Jan. 11.

Dean, Sidney W., Jr.: *See*—
Crockford, Joseph R.

Debrie, André V. L. C., Paris, France. Apparatus for the photographic reproduction of doucuments. 2,458,769, Jan. 11.

Deere Manufacturing Co., assignee: *See*—
Hill, George B.
Linderer, Francis.

Defiance Machine Works, Inc., assignee: *See*—
Hummer, Ralph G.

Dehmel, Richard C., Summit, N. J. Aircraft training instrument for simulating attitude gyros. 2,458,982, Jan. 11.

Delmel, Albert H.: *See*—
Peterson, Carl D., and Delmel.

De Monte, Robert W., Glen Ridge, and A. B. Haines, Millburn, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coating electrical devices. 2,459,018, Jan. 11.

Dench, Edward C.: *See*—
Hardy, Arthur C., and Dench.

Denig, Fred, assignor to Koppers Company, Inc., Pittsburgh, Pa. Gas purification process. 2,458,505, Jan. 11.

Dentler, Arnold E., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism for railway draft riggings. 2,458,572, Jan. 11.

De Swart, Jan, Los Angeles, Calif., assignor to Shellmar Products Corporation, Chicago, Ill. Article support. 2,458,897, Jan. 11.

Dettmer, Elsa C. M., assignee: *See*—
Andresen, Herman P.

Deutschmann, A. L., assignee, et al.: *See*—
Hanopol, Louis.

Deutschmann, L.: *See*—
Hanopol, Louis.

D'heedene, Albert R., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal filter. 2,459,019, Jan. 11.

Di Addario, Thomas D., Buffalo, N. Y. Combination spool and bobbin assembly. 2,458,898, Jan. 11.

Dickey, John W., M. M. Henry, and T. K. Riggen, assignors to Bendix Aviation Corporation, Elmira, N. Y. Electrically actuated pump. 2,458,770, Jan. 11.

Dillens, William J., Philadelphia, Pa. Fastener. 2,459,020, Jan. 11.

Ditto, Incorporated, assignee: *See*—
Erickson, Andrew L.

Dodson, Wayne E., Caldwell, N. J., assignor to General Electric Company. Unloader for reciprocating gas compressors. 2,458,933, Jan. 11.

Dobl, Robert A., Rochester, N. Y., assignor to Commercial Controls Corporation. Platter and platter support for postal scales. 2,459,065, Jan. 11.

Dole Valve Company, The, assignee: *See*—
Chace, Thomas B.
Kempton, Leslie A.

Domestic Industries, Inc.: *See*—
Hitselhammer, Mathew.

Dominion Tar & Chemical Company Limited, assignee: *See*—
McKay, Arthur F.

Donahue, Howard, Allais, Ky. Insulated cable and rope spooling guide. 2,458,573, Jan. 11.

Dorr Company (Inc.), The, assignee: *See*—
Campbell, Robert C.

Dorsky, Julian, G. W. Mattson, and C. M. Neher, Baton Rouge, La., assignors to Ethyl Corporation, New York, N. Y. Apparatus for chlorination processes. 2,458,691, Jan. 11.

Doubrava, Eugene N., assignor to Thompson Products, Inc., Cleveland, Ohio. Coupling. 2,458,899, Jan. 11.

Dougherty, James, Silver Creek, Pa. Lunch can. 2,458,837, Jan. 11.

Douglas, James K.: *See*—
Ferris, Walter, and Douglas.

Dow, Orville E., Rocky Point, N. Y., assignor to Radio Corporation of America. Pulse communication. 2,458,574, Jan. 11.

Dowell, A. Yates, assignee: *See*—
McCormick, William R.

Downer, John H., Toronto, Ontario, Canada. Device for mixing dental amalgams. 2,458,692, Jan. 11.

Dresser Industries, Inc., assignee: *See*—
Scharf, Paul B.

Drieschman, Donald F., Los Altos, and R. Leonard, assignors to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube. 2,458,693, Jan. 11.

Duff-Norton Manufacturing Company, The, assignee: *See*—
Schwerin, Frank H.

Duke, Sam, Chicago, Ill. Vehicle for invalids. 2,459,066, Jan. 11.

Dunham, Guy, Bono, Ark. Bee comb frame construction. 2,458,838, Jan. 11.

Dunn, W. E., Manufacturing Company, assignee: *See*—
Cooper, Benjamin G.

Dunn, William L., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Electric motor follow-up control system. 2,458,983, Jan. 11.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Benning, Anthony F., Park, and Krahler.
Cavanaugh, Robert M., and Lufkin.
Plambeck, Louis, Jr.

Durland, John R., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilization of vinyl compounds. 2,458,494, Jan. 11.

Dyer, John R., Jr., and T. J. Rowan, Utica, assignors to The Indium Corporation of America, New York, N. Y. Electrodeposition of indium and its alloys. 2,458,839, Jan. 11.

Eakins, Everett A., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Method of making sponge rubber material. 2,458,694, Jan. 11.

Eastman Kodak Company, assignee: *See*—
Gresham, Donald C., and Loening.

Eastwood, Abraham B., Abington, assignor to The Tabor Manufacturing Company, Philadelphia, Pa. Cutoff machine. 2,459,068, Jan. 11.

Eaton Manufacturing Company, assignee: *See*—
Bunte, George F.

Edelston, Frederick C., assignor to Clarvan Corporation, Milwaukee, Wis. Combination shipping and display package for typewriters. 2,458,695, Jan. 11.

Eitel-McCullough, Inc., assignee: *See*—
Drieschman, Donald F., and Leonard.

Eklund, Elias N., Stockholm, Sweden. Grinding machine. 2,458,840, Jan. 11.

Electric & Musical Industries Limited, assignee: *See*—
Cork, Edward C.

Elevator Supplies Company, Inc., assignee: *See*—
Hains, Randall.

Elias, Solomon, New York, N. Y. Brassière halter. 2,458,696, Jan. 11.

Elmore, Norman M., Elizabeth, and A. M. Gessler, Cranford, N. J., assignors to Standard Oil Development Company. Rubber softened with sulfur dioxide and chlorine treated polyisobutylene reacted with ammonia. 2,458,841, Jan. 11.

Empire Electric Brake Company, assignee: *See*—
Ingres, Jeannot G., and Ayers.

Engle, Charles A., Pawtucket, R. I. Football instructing device. 2,458,984, Jan. 11.

Ensinger, Earl H., Cleveland, Ohio. Belt tightening means for engine units. 2,458,575, Jan. 11.

Erickson, Andrew L., Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill. Duplicating. 2,459,067, Jan. 11.

Erny, Frank, Kenmore, N. Y., assignor to Curtiss-Wright Corporation. Flap operating means. 2,458,900, Jan. 11.

Ethyl Corporation, assignee: *See*—
Dorsky, Julian, Mattson, and Neher.

Etten, Nicholas L., Waterloo, Iowa, assignor, by mesne assignments, to United States of America as represented by the Secretary of War. Fragmentation bomb. 2,458,576, Jan. 11.

Evans, Guy J., Buffalo, N. Y. Folding box. 2,458,578, Jan. 11.

Evans, John, Hightstown, N. J., assignor to Radio Corporation of America. High-potential power supply. 2,458,577, Jan. 11.

Evensen, Christian, Melrose Park, Ill. Flange forming tool for openings in sheet metal. 2,458,842, Jan. 11.

Everett, Samuel J., Thornton Heath, assignor to James A. Jobling & Co. Ltd., Sunderland, England. Forming precision bore glass tubing. 2,458,934, Jan. 11.

Ewald, Raymond L., and H. A. Skog, assignors to Special Equipment Company, Portland, Oreg. Half fruit peeler with cooperating retainer means. 2,458,506, Jan. 11.

Fahrenbach, Marvin J., Westfield, N. J., assignor to American Cyanamid Company, New York, N. Y. Producing nitriles. 2,459,128, Jan. 11.

Falter, Clarence L.: *See*—
Webster, Hugh G., and Falter.

Farnsworth Research Corporation, assignee: *See*—
Halstead, William S.

Feldman, Carl B. H., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Microwave modulator. 2,458,579, Jan. 11.

Fenske, Ellsworth R., Lyons, assignor to Universal Oil Products Company, Chicago, Ill. Electrical computer. 2,458,697, Jan. 11.

Fergus, Daniel J.: *See*—
Bates, Herbert T., Fergus, and Craver.

Ferre, Albert W.: *See*—
Blanchard, Charles E., and Ferre.

Ferris, Walter, Milwaukee, and J. K. Douglas, Shorewood, assignors to The Oilgear Company, Milwaukee, Wis. Hydrodynamic machine. 2,458,985, Jan. 11.

Fields, Clifford, Mount Vernon, Ill. Scalp conditioning cabinet. 2,458,901, Jan. 11.

Firestone, Floyd A., assignor to The Regents of the University of Michigan, Ann Arbor, Mich. Supersonic reflectoscope. 2,458,771, Jan. 11.

Firestone, Floyd A., Washington, D. C., and J. R. Frederick, Ann Arbor, Mich., assignors to Sperry Products, Inc., Hoboken, N. J. Supersonic inspection. 2,458,581, Jan. 11.

Fischer, Albert W.: *See*—
Kettering, Charles F., and Fischer.

Fischer, Wilbur F., Roselle Park, N. J., assignor to Standard Oil Development Company. Improving cured butyl rubber for pressure working. 2,458,843, Jan. 11.

Fisher, Charles H.: *See*—
Rehberg, Chessie E., and Fisher.

Fisketti, Henry D., and J. G. Lenta, Duluth, Minn. Mask. 2,458,580, Jan. 11.

Fitz Gerald, Alan S., Wynnewood, Pa., assignor to Warren Webster & Company, Camden, N. J. Electromagnetic system. 2,459,069, Jan. 11.

Fitshugh, Robert R., Nicaro, Cuba, R. F. Frederick and R. A. Axelrad, Freeport, Tex., assignors to Nicaro Nickel Company, New York, N. Y. Recovery of ammonia from ore tailings pulp. 2,458,902, Jan. 11.

Fleck, Elmer E., Silver Spring, Md., assignor to United States of America as represented by the Secretary of Agriculture. Polymerising the glyceryl ester of levoprimaric acid-maleic anhydride adduct. 2,458,772, Jan. 11.

Flohr, Henry, Jr., Saratoga, Wyo. Cattle restraining device. 2,458,582, Jan. 11.

Foard, Robert F., Los Angeles, Calif. Screen printing machine. 2,458,773, Jan. 11.

Fogelberg, John M.: *See*—
Tuve, Richard L., Fogelberg, Brinnick, and Springer.

Foote, James, Plattsburg, assignor to B. F. D. Company, New York, N. Y. Packaging. 2,458,844, Jan. 11.

Forbes, Charles J., Terre Haute, Ind. Straddle link connector. 2,458,935, Jan. 11.

Foster, Jackson W., Austin, Tex., assignor to Merck & Co., Inc., Rahway, N. J. Fermentation. 2,458,495, Jan. 11.

Fox, Kenneth H., Red Bank, assignor to Bendix Aviation Corporation, Teterboro, N. J. Dynamotor. 2,458,507, Jan. 11.

Francis, Willard A., Sr., Bowerston, Ohio. Derailer bridge for railway track systems. 2,458,903, Jan. 11.

Frank, William H., assignor to Bulldog Electric Products Company, Detroit, Mich. Protective device for use with enclosed bus bar distribution systems. 2,458,583, Jan. 11.

Frederick, Benjamin F.: *See*—
Fitzhugh, Robert R., Frederick, and Axelrad.

Frederick, Julian R.: *See*—
Firestone, Floyd A., and Frederick.

Frey, George, Philadelphia, Pa., assignor to Globe Hoist Company, Des Moines, Iowa. Chassis engaging device for vehicle lifts. 2,458,986, Jan. 11.

Friedman, Harris L., New York, and L. D. Braitberg, assignors to Pyridium Corporation, Yonkers, N. Y. Methylene sulfonate derivatives of alkyl compounds and aryl compounds. 2,458,584, Jan. 11.

Friedman, Harris L., New York, and L. D. Braitberg, assignors to Pyridium Corporation, Yonkers, N. Y. Aminopyridine compounds. 2,458,585, Jan. 11.

Frommer, Moses, New York, N. Y. Binocular loupe. 2,459,021, Jan. 11.

Frost, Orcutt W.: *See*—
Willey, Grant S., and Frost.

Fruth, Hal F., Chicago, and R. J. Pierce, Park Ridge, Ill., assignors to Motorola, Inc. Piezoelectric crystal unit. 2,458,987, Jan. 11.

Fuller, Clarence M., Warwick, assignor to Holbrook Raw Hide Co., Providence, R. I. Loop picker. 2,458,936, Jan. 11.

Gabel, Wilbur H., Kulm, N. Dak. Film controlled safety stop for motion-picture projectors. 2,458,774, Jan. 11.

Galbraith, Fred, New York, N. Y. Combined ironing board cover and iron pad or pad holder. 2,458,698, Jan. 11.

Gallagher, Edwin C.: *See*—
Bolley, Don S., and Gallagher.

Garand, John C., Springfield, E. G. Cooper, Framingham, and J. R. Bird, Pittsfield, Mass., and H. C. Miller, Billings, Mo. Grenade sight for firearms. 2,458,510, Jan. 11.

Gard, Arthur W., Edgewood, assignor of one-fourth to W. H. Parmelee, Bethel Township, Allegheny County, and one-fourth to J. M. Guthrie, Crafton, Pa. Doorstop. 2,459,070, Jan. 11.

Gardner, Emil M., Barberton, Ohio. Landing mechanism for airplanes. 2,458,845, Jan. 11.

Garrard Engineering and Manufacturing Company, The, assignee: *See*—
Mortimer, Edmund W.

Garrett Corporation, Airesearch Manufacturing Company division, The, assignee: *See*—
Morris, Charles W.
Williams, Louis B.

Garrison, Harry A., Minneapolis, assignor of one-half to J. F. Schwan, St. Paul, Minn. Sliding vane air compressor and exhauster. 2,459,071, Jan. 11.

Gayer, George F., Palo Alto, Calif., assignor, by mesne assignments, to Westinghouse Electric Corporation, East Pittsburgh, Pa. Labyrinth packing. 2,458,988, Jan. 11.

General Aniline & Film Corporation, assignee: *See*—
Harsh, Harold C., Haff, and Kaszuba.
Rottschaefer, Bernard W.
Slifkin, Sam C.
Zoss, Abraham O.

General Electric Company, assignee: *See*—
Adamson, Arthur P.
Bassett, Merton O.
Dodson, Wayne E.
Hall, Chester I.
Harlow, Winton G.
Lincks, George F.

General Motors Corporation, assignee: *See*—
Kettering, Charles F., and Fischer.
Megeber, David W.

Gentry, William W., Chickasha, Okla. Convertible truck body. 2,459,022, Jan. 11.

George, Edwin S., Bloomfield Hills, assignor to Moto-Mower Company, Detroit, Mich. Making machine handles. 2,458,989, Jan. 11.

Gessler, Albert M.: *See*—
Elmore, Norman M., and Gessler.

Giacomelli, Carlo, New York, N. Y. Water ski. 2,458,775, Jan. 11.

Gilbert, Roswell W., Montclair, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Electronic measuring apparatus. 2,459,104, Jan. 11.

Gilman, Wayne H., Oak Park, assignor to Permoflux Corporation, Chicago, Ill. Transformer mounting. 2,459,023, Jan. 11.

Gilmore, Robert H., Los Angeles, Calif. Adjustable work guide for saw tables. 2,458,846, Jan. 11.

Ginsberg, Abraham J., New York, N. Y. Film rack. 2,459,699, Jan. 11.

Gipson, Charles O., assignor to Heinz Manufacturing Company, Inc., Elwood, Ind. Floral rack. 2,459,024, Jan. 11.

Girman, Peter, assignee: *See*—
Reynolds, Charles H.

Giroud, Henry A., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Self-synchronous system. 2,458,586, Jan. 11.

Glass, Paul, assignor to Askania Regulator Company, Chicago, Ill. Electrical control circuit. 2,458,937, Jan. 11.

Globe Hoist Company, assignee: *See*—
Frey, George.

Gloss, Gunter H., Redwood City, assignor to Marine Magnesium Products Corporation, South San Francisco, Calif. Manufacture of magnesium products. 2,458,847, Jan. 11.

Goetz, Henry E., Brooklyn, N. Y. Sampling device. 2,458,508, Jan. 11.

Goff, Clarence W., Washington, Iowa. Hitch mechanism. 2,458,848, Jan. 11.

Goff, Loyal G.: *See*—
Reynolds, Orr E., and Goff.

Gogan, Joseph, Lakewood, Ohio. Apparatus for treating hollow bodies. 2,458,587, Jan. 11.

Goodrich Company, B. F., The, assignee: *See*—
Dasher, Paul J.
Davidson, William L., and Lewis.

Goodyear Aircraft Corporation, assignee: *See*—
Nielsen, James S.

Gordon, Herbert W., assignee, et al.: *See*—
Hanopol, Louis.

Gordon, Le Roy, Richmond, Mich., and L. L. Williams, Cleveland Heights, Ohio. Upholstery pad. 2,458,588, Jan. 11.

Gorin, Everett: *See*—
Kinney, Robert E., and Gorin.

Graham, Edwin A., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Mold. 2,459,025, Jan. 11.

Grambsch, Russell J., Marshfield, Wis. Direct-coupled amplifier with direct-current feedback. 2,458,849, Jan. 11.

Grandjean, Philippe, assignor to Sandoz Limited, Basel, Switzerland. Diazo dyestuffs and their manufacture. 2,458,776, Jan. 11.

Graver Tank & Mfg. Co., assignee: *See*—
Bieker, Lawrence W., and Lewis.

Greenhow, Sydney, Windsor, Ontario, Canada. Automatic key case. 2,458,938, Jan. 11.

Greenough, Maurice L., Groveland, Mass., assignor to Radio Corporation of America. Correction device for electronic function generators. 2,458,700, Jan. 11.

Hartough, Howard D., Pitman, N. J., and A. I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated. Acylation of thiophene. 2,458,676, Jan. 11.

Houdaille-Hershey Corporation, assignee: *See*—
Sebok, Joseph B., and Sebok.

Howeman, Isaac D., Cleveland, Ohio. Safety attachment. 2,458,939, Jan. 11.

Johns, Iral B., Ames, Iowa, and L. W. Burnette, Easton, Pa., assignors to Iowa State College Research Foundation, Ames, Iowa. Method of producing methylfuran. 2,458,777, Jan. 11.

Greenough, Maurice L., Groveland, Mass., assignor to Radio Corporation of America. Correction device for electronic function generators. 2,458,700, Jan. 11.

Greenough, Maurice L., Groveland, Mass., assignor, to Radio Corporation of America. Shaded pole motor control. 2,458,701, Jan. 11.

Gresham, Donald C., and E. E. Loening, Harrow, England, assignors to Eastman Kodak Company, Rochester, N. Y. Production of photographic stencils. 2,459,129, Jan. 11.

Griffon, Gaston, Neuilly-sur-Seine, assignor to Societe Anonyme Solex, Neuilly-sur-Seine, Seine, France. Pneumatic control accelerating pump. 2,458,990, Jan. 11.

Groat, Keith P., assignor to York Corporation, York, Pa. Two temperature refrigeration unit. 2,458,589, Jan. 11.

Grossbart, Lloyd L., Boicourt, Kans. Posthole digger. 2,458,991, Jan. 11.

Grupe, William F., Lyndhurst, N. J., assignor to Interchemical Corporation, New York, N. Y. Apparatus for tinning steel. 2,458,509, Jan. 11.

Gulf Research & Development Company, assignee: *See*— Pigott, Reginald J. S., and Mori.

Guthrie, James M., assignee, et al.: *See*— Gard, Arthur W.

Haff, Richard M.: *See*— Harsh, Harold C., Haff, and Kaszuba.

Hague, Floyd T., Drexel Hill, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Pulverized fuel burner. 2,458,992, Jan. 11.

Haines, Atwell B.: *See*— De Monte, Robert W., and Haines.

Haines, Donald G., Elmhurst, Ill., assignor to National Union Radio Corporation, Newark, N. J. Beam power tube. 2,459,072, Jan. 11.

Hains, Randall, Boonton, assignor to Elevator Supplies Company, Inc., Perth Arboy, N. J. Elevator hatchway door operator. 2,458,702, Jan. 11.

Hales, Ralph: *See*— Creighton, Henry J.

Hall, Chester I., Vischers Ferry, N. Y., assignor to General Electric Company. Control device. 2,458,939, Jan. 11.

Halstead, William S., Purchase, N. Y., assignor, by mesne assignments, to Farnsworth Research Corporation. Traffic signaling system. 2,459,105, Jan. 11.

Hamilton, Kenneth C., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis. Paper cup having a pouring lip extending outwardly from sidewall. 2,459,073, Jan. 11.

Hamilton Watch Company, assignee: *See*— Mentser, Ralph B.

Hanopol, Louis, Jamaica Plain, assignor to A. L., A., and L. Deutschmann, and H. W. Gordon, doing business as Technical Apparatus Company, Roxbury, Mass. Testing socket. 2,458,993, Jan. 11.

Hanshaw, Hugh H.: *See*— Harris, George W., and Hanshaw.

Happe, Reynold, Pittstown, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dynamoelectric machine with integral connector boxes. 2,458,904, Jan. 11.

Hardick, Floyd W., assignor to R. P. Berry, Jackson, Mich. Target release actuator for toy cash registers. 2,458,850, Jan. 11.

Harding, Robert, Jr.: *See*— Walling, Lawrence J.

Hardy, Arthur C., Wellesley, Mass., and E. C. Dench, West Hartford, Conn., assignor to Interchemical Corporation, New York, N. Y. Computing apparatus. 2,459,106, Jan. 11.

Hardy, Russell F., Dayton, Ohio. Camping trailer. 2,459,026, Jan. 11.

Harless, Reginald F., Ossining, N. Y. Refrigerating device for the manufacture of frozen comestibles. 2,458,940, Jan. 11.

Harlow, Winton G., Upper Darby, Pa., assignor to General Electric Company. Combined switch stud and fuse clip. 2,458,511, Jan. 11.

Harris, Frank, Orlando, Fla. Figured spinning toy. 2,458,851, Jan. 11.

Harris, George W., Ransomville, N. C., and H. H. Hanshaw, Norfolk, Va. Combination automobile jack and engine starting device. 2,458,590, Jan. 11.

Harris, Henry L., Richland, Wash. Spring wheel. 2,458,941, Jan. 11.

Harsh, Harold C., R. M. Haff, and F. J. Kaszuba, Binghamton, assignors to General Aniline & Film Corporation, New York, N. Y. Photographic process for converting black and white or monochrome pictures into multicolor pictures. 2,458,905, Jan. 11.

Hartford National Bank and Trust Company, assignee, trustee: *See*— Janssen, Johannes C. Shelton, Edward B. Taylor, Henry G. Vingerhoets, Antonius W., and Nieuwdorp.

Hartley, Emmett C.: *See*— Parker, Arthur L., and Hartley.

Hartman, Milton V.: *See*— Anderson, Harry J., and Hartman.

Hartough, Howard D.: *See*— Kosak, Alvin I., and Hartough.

Hartough, Howard D., Pitman, N. J., and A. I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated. Acylation of thiophene. 2,458,512, Jan. 11.

Hartough, Howard D., Pitman, N. J., and A. I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated. Acylation of thiophene. 2,458,513, Jan. 11.

Harvard College, The President and Fellows of, assignee: *See*— Volkmann, John.

Hastings-Hodgkins, Horace W., Lincoln, England, assignor to Radio Corporation of America. Course and height indicator for aircraft. 2,459,074, Jan. 11.

Hatcher, David B., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Reduction of compounds of silicon and halogen. 2,458,703, Jan. 11.

Hayman, Charles M., Brooklyn, N. Y. Telegraph key. 2,459,027, Jan. 11.

Hazeltine, Stacey B., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Door fastener. 2,458,591, Jan. 11.

Healy, Thomas F., assignor to Saf-Mont, Inc., Washington, D. C. Safety mounting for spectacles. 2,458,592, Jan. 11.

Healy, Thomas F., assignor to Saf-Mont, Inc., Washington, D. C. Safety mounting for lenses. 2,458,593, Jan. 11.

Healy, Thomas F., assignor to Saf-Mont, Inc., Washington, D. C. Safety mounting for lenses. 2,458,594, Jan. 11.

Heinz Manufacturing Company, Inc., assignee: *See*— Gipson, Charles O.

Hellan, Sigurd H., assignor to Whitin Machine Works, Whitinsville, Mass. Roll tension device. 2,458,852, Jan. 11.

Helmold, J. F., & Bro., Inc., assignee: *See*— Messersmith, George G.

Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Spring testing scales. 2,458,704, Jan. 11.

Henry, Millard M.: *See*— Dickey, John W., Henry, and Riggen.

Hepp, Harold J., and H. R. Sailors, Bartlesville, Okla., assignors to Phillips Petroleum Company. Purification of hydrocarbons. 2,458,777, Jan. 11.

Herta, Jack H. B., assignor to John Widdicomb Company, Grand Rapids, Mich. Bed fastener, brace, and caster support. 2,458,595, Jan. 11.

Herzog, Gerhard, Houston, Tex., assignor to The Texas Company, New York, N. Y. Radio activity well logging method. 2,458,596, Jan. 11.

Hester, Russell P., Chelsea, Okla. Building block. 2,459,028, Jan. 11.

Hevener, Tyris M., Los Angeles, Calif. Collapsible hod. 2,458,942, Jan. 11.

Hibbard, Robert L., deceased, Bellevue; by S. C. Hibbard, Ross Township, Allegheny County, and R. L. Hibbard, Jr., and H. M. Junkin, Bellevue, executors, assignors of one-half to W. K. Stamets, Mars, Pa. Pipe cutoff machine. 2,459,075, Jan. 11.

Hibbard, Robert L., Jr., executor: *See*— Hibbard, Robert L.

Hibbard, Stewart C., executors: *See*— Hibbard, Robert L.

Hill, George B., Ottumwa, Iowa, assignor to Deere Manufacturing Co. Baling press. 2,458,994, Jan. 11.

Hills-McCanna Company, assignee: *See*— Anderson, Harry J., and Hartman.

Himmel Brothers Company, The, assignee: *See*— Himmel, Fred and I.

Himmel, Fred and I., New Haven, assignors to The Himmel Brothers Company, Hamden, Conn. Supplementary forming means for strip-metal forming machines. 2,458,906, Jan. 11.

Himmel, Isidore: *See*— Himmel, Fred and I.

Hines, William J., San Francisco, Calif. Cork remover. 2,458,778, Jan. 11.

Hitzelhammer, Mathew, Highland Park, Mich., assignor to Domestic Industries, Inc., Chicago, Ill. Locking mechanism for jigs and the like. 2,458,705, Jan. 11.

Hochreiter, Edward: *See*— McGary, Frank E., Hochreiter, Schlecht, and Shannon.

Hodsdon, Floyd G., Milwaukee, Wis., assignor to International Harvester Company. Pressure releaser milker. 2,458,779, Jan. 11.

Hoewischer, Frederick W.: *See*— Woodberry, John H., and Hoewischer.

Hoier, Walter, and R. N. Clifton, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Milling machine. 2,458,597, Jan. 11.

Holbrook Raw Hide Co., assignee: *See*— Fuller, Clarence M.

Holmgren, Eric A., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for trimming shoe parts. 2,458,598, Jan. 11.

Hooker Electrochemical Company, assignee: *See*— Rucker, John T. Sconce, James S., and Johnson.

Hopax Industries, Inc., assignee: *See*— Tucker, John W.

Hoppe, Boris, Kew Gardens, N. Y. Serving combination. 2,458,907, Jan. 11.

Houdaille-Hershey Corporation, assignee: *See*— Sobek, Joseph B., and Sobek.

Houseman, Isaac D., Cleveland, Ohio. Safety attachment. 2,458,943, Jan. 11.

Howard, Harry A.: *See*— Kelly, Howard E., and Howard.

Howe, Andrew F., assignor, by mesne assignments, to Centrifugal & Mechanical Industries, Inc., St. Louis, Mo. Differential gearing for centrifugal machines. 2,458,706, Jan. 11.

Howland, Louis H., Watertown, Conn., assignor to United States Rubber Company, New York, N. Y. Antioxidants. 2,458,780, Jan. 11.

Huber, George H.: *See*— Cox, Leslie R., and Huber.

Hughes, Ralph L., Los Angeles, Calif. Time controlled switch mechanism. 2,458,853, Jan. 11.

Hughes Tool Company, assignee: *See*— Lewis, William L., and Pahl. Young, John, Jr.

Hull, Henry E., and P. L. Takacs, assignors to The Parker Appliance Company, Cleveland, Ohio. Machine for beading tubes by radial expansion followed by axial pressure. 2,458,854, Jan. 11.

Hultquist, Martin E., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Process of preparing 1,1,3,3-tetraalkoxypropanes. 2,459,076, Jan. 11.

Hummer, Ralph G., assignor to Defiance Machine Works, Inc., Defiance, Ohio. Cutter tool vibration control. 2,458,995, Jan. 11.

Huntley, William F.: *See*— Klemperer, Hans, and Huntley.

Hussey, Luther W., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Circuit for sampling balanced signals. 2,458,599, Jan. 11.

Hyde, George J.: *See*— Sampson, Frederick W., and Hyde.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organo-siloxanes and making them. 2,458,944, Jan. 11.

Hyler, Loiell L., assignor to La Plant-Choate Manufacturing Co., Inc., Cedar Rapids, Iowa. Universal hitch. 2,458,781, Jan. 11.

Hyman, Benjamin M., and E. K. Karlsson, Moline, Ill., assignors to International Harvester Company. Tractor-mounted corn picker. 2,458,782, Jan. 11.

Imbert, Roger J., and M. H. L. Sédille, assignors to Societe Rateau (Societe Anonyme) and Rene Anxionnaz, Paris, France. Aerodynamic propelling means operating through direct reaction jet and scavenging. 2,458,600, Jan. 11.

Imperial Chemical Industries Limited, assignee: *See*— Smith, Richard J.

Indium Corporation of America, The, assignee: *See*— Dyer, John R., Jr., and Rowan.

Ingres, Jeannot G., and D. T. Ayers, Jr., Richmond, Va., assignors to Empire Electric Brake Company, Newark, N. J. Door locking system. 2,459,029, Jan. 11.

Interchemical Corporation, assignee: *See*— Grupe, William F. Hardy, Arthur C., and Dench.

International Harvester Company, assignee: *See*— Hodson, Floyd G. Hyman, Benjamin M., and Karlsson. Messenger, Robert P. Orendorff, John W. Turnbull, Glen O.

Iowa State College Research Foundation, assignee: *See*— Johns, Iral B., and Burnette.

Isacco, Vittorio, London, England. Parachute and the like with rotating sustaining blades. 2,458,855, Jan. 11.

Jacobs, F. L., Co., assignee: *See*— Brundage, Alan D. Jacobs, Fred L.

Jacobs, Fred L., Grosse Pointe, assignor to F. L. Jacobs Co., Detroit, Mich. Visor. 2,458,707, Jan. 11.

Jacobs, James H., Boulder City, Nev., assignor, by mesne assignments, to Crimora Research and Development Corporation, Crimora, Va. Stripping electrodeposited manganese. 2,458,908, Jan. 11.

Jacobson, Jesse B., San Jose, Calif. Kitchen knife sharpener. 2,458,856, Jan. 11.

Jameson, William, assignee: *See*— Nyberg, Curt E.

Janssen, Johannes C., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electric discharge tube comprising electrodes secured to rods. 2,458,945, Jan. 11.

Jeffrey, Max L., Cleveland, Ohio. Quick action switch. 2,459,077, Jan. 11.

Jeffrey, Max L., Shaker Heights, Ohio. Shock absorbent stop for solenoids. 2,459,078, Jan. 11.

Jensen, Joseph W., Los Angeles, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Constant reference point manometer. 2,458,783, Jan. 11.

Jobling, James A., & Co., Ltd., assignee: *See*— Everett, Samuel J.

John, Harry J., Philadelphia, Pa. Spray trap. 2,458,909, Jan. 11.

Johns, Iral B., Ames, Iowa, and L. W. Burnette, Easton, Pa., assignors to Iowa State College Research Foundation, Ames, Iowa. Method of producing methylfuran. 2,458,857, Jan. 11.

Johnson, Arnold N.: *See*— Sconce, James S., and Johnson.

Johnson, Arthur A., assignor to Casco Products Corporation, Bridgeport, Conn. Drum type indicator alarm clock. 2,459,107, Jan. 11.

Johnson, Carl E., St. Louis, Mich., assignor to Standard Oil Company, Chicago, Ill. Preparation of ketones by catalytic reaction of olefins and acid anhydrides. 2,458,603, Jan. 11.

Johnson, Carl O., Springville, and W. C. Burt, assignors to Clair Manufacturing Company, Inc., Olean, N. Y. Polishing and glazing machine. 2,458,708, Jan. 11.

Johnson, George, Ironwood, Mich. Snow protector for skis. 2,458,602, Jan. 11.

Johnson, John A., Wauwatosa, and C. E. Kenney, West Allis, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Gas turbine power unit. 2,459,079, Jan. 11.

Johnson, John B., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Method of and apparatus for measuring pressure. 2,458,601, Jan. 11.

Johnson, Paul P., Willoughby, assignor to Thompson Products, Inc., Cleveland, Ohio. Quick disconnect coupling. 2,458,910, Jan. 11.

Johnston, Edwin F., Earlington, Ky. Bit holder for coal-cutting chains. 2,458,946, Jan. 11.

Jonas, Herbert C., Great Neck, N. Y., J. P. Laico, Springfield, N. J., and V. L. Ronci, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Tunable magnetron. 2,459,030, Jan. 11.

Jones, John P., assignor to The Dairy Specialties Company, Incorporated, Omaha, Nebr. Cream dispenser. 2,459,130, Jan. 11.

Junkin, Hays M., executor: *See*— Hibbard, Robert L.

Kappes, Frank J., San Mateo, Calif. Garage door. 2,458,604, Jan. 11.

Karlsson, Elof K.: *See*— Hyman, Benjamin M., and Karlsson.

Kaszuba, Frank J.: *See*— Harsh, Harold C., Haff, and Kaszuba.

Kayer, Jean H., Hollywood, Calif. Fingernail guard. 2,458,709, Jan. 11.

Keeling, William O., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc. Heating coking retort ovens with enriched mixtures of fuel gas. 2,458,515, Jan. 11.

Kellett, John, III, and H. E. Rasmussen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporater. Continuous catalytic process for the acylation of thiophenes. 2,458,514, Jan. 11.

Kelly, Howard E., Los Angeles, Calif., and H. A. Howard, Seattle, Wash. Apparatus for packing asparagus. 2,458,858, Jan. 11.

Kemline Metal Products Company, Inc., assignee: *See*— Mitdouhas, Stephen P.

Kempton, Leslie A., St. Petersburg, Fla., assignor to The Dole Valve Company, Chicago, Ill. Multiple check valve. 2,458,710, Jan. 11.

Kennecott Copper Corporation, assignee: *See*— Martin, Rhetherford B.

Kenney, Clarence E.: *See*— Johnson, John A., and Kenney.

Kerr, Ellen, Coventry, England. Device for depilatory purposes. 2,458,911, Jan. 11.

Kestell, Thomas A., Thurmaston, assignor to Power Jets (Research & Development) Limited, London, England. Locating and locking means. 2,458,859, Jan. 11.

Kettering, Charles F., and A. W. Fischer, assignors to General Motors Corporation, Detroit, Mich. Automatic control. 2,458,784, Jan. 11.

Kiillus, William, Altadena, Calif., assignor ot Blackhawk Mfg. Co., Milwaukee, Wis. Mechanic's work-holding table furnished with adjustable work-supporting arms. 2,459,080, Jan. 11.

King, Clarence D., Pittsburgh, Pa., and P. D. Nielsen, Lorain, Ohio, assignors to United States Steel Corporation of Delaware. Improving blast furnace operations. 2,458,947, Jan. 11.

Kingsbury Machine Tool Corporation, assignee: *See*— Clark, Carleton B.

Kingston Products Corporation, assignee: *See*— Dawson, Francis A.

Kinney, Robert E., and E. Gorin, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Manufacture of carbon black. 2,458,996, Jan. 11.

Kirin, Charles W., Detroit, Mich. Crush forming grinding wheels. 2,458,606, Jan. 11.

Kiser, James A., Hungerford, Pa. Three-way rupture truss appliance. 2,459,031, Jan. 11.

Klemperer, Hans, Belmont, and W. F. Huntley, Lowell, assignors to Raytheon Manufacturing Company, Newton, Mass. Rectifying system. 2,458,516, Jan. 11.

Knabe, Martin C., Library, Pa. Building structure. 2,458,606, Jan. 11.

Knapp-Monarch Company, assignee: *See*— Schwarts, Louis K.

Knee, Simon, Newark, N. J. Wallet with auxiliary or secret billfold. 2,458,711, Jan. 11.

Knight, Arthur R., Dayton, Ohio. Cathode-ray ultra high

Lewis, William L., Glendale, and F. C. Pahl, Culver City, Calif.; said Pahl assignor to Hughes Tool Company, Houston, Tex. Jig for assembling hollow structures.

Maabruch, Henry, assignor to Russell Manufacturing Company, Platteville, Wis. Bull halter and controller. 2,458,717, Jan. 11.

Miller, Wilbur H., Springdale, and R. O. Roblin, Jr., Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Pantoyltauramides and preparation of

Knee, Simon, Newark, N. J. Wallet with auxiliary or secret billfold. 2,458,711, Jan. 11.
Knight, Arthur R., Dayton, Ohio. Cathode-ray ultra high frequency receiver. 2,458,517, Jan. 11.
Kogel, John, Malverne Park, Long Island, assignor to Kollmorgen Optical Corporation, Brooklyn, N. Y. Scanning lens with mounting means for sound projectors. 2,458,860, Jan. 11.
Kohl, Everard F., Lakewood, Ohio. Snap acting device. 2,458,518, Jan. 11.
Kohler, Alfred, Neuchatel, assignor to Sirco A.-G., Zurich, Switzerland. Mercury vapor discharge vessel and connection arrangements for the same. 2,458,861, Jan. 11.
Kollmorgen Optical Corporation, assignee: *See*— Kogel, John.
Koppers Company, assignee: *See*— Denig, Fred.
Koppers Company, Inc., assignee: *See*— Keeling, William O.
Kops Bros., Inc., assignee: *See*— Kops, Richard S.
Kops, Richard S., Scarsdale, assignor to Kops Bros., Inc., New York, N. Y. Convertible foundation garment. 2,458,712, Jan. 11.
Korth, William J., assignor of one-half to S. W. Levine, Cleveland, Ohio. Electrical connector. 2,459,032, Jan. 11.
Kosak, Alvin I.: *See*— Hartough, Howard D., and Kosak.
Kosak, Alvin I., Columbus, Ohio, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Acylating thiophene with silica-alumina catalyst. 2,458,519, Jan. 11.
Kosak, Alvin I., Columbus, Ohio, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Acylation of thiophene. 2,458,520, Jan. 11.
Kosak, Alvin I., Columbus, Ohio, and H. D. Hartough, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Acylating thiophene with silica-hydrous metallic oxide catalyst. 2,458,521, Jan. 11.
Kottke, Edward R., St. Paul, Minn. Trolling plate attachment. 2,458,785, Jan. 11.
Krahler, Stanley E.: *See*— Benning, Anthony F., Park, and Krahler.
Kraus, Alvin R., North Hollywood, Calif. Arm support for use on surgical operating tables. 2,459,033, Jan. 11.
Kraus, Wilhelm: *See*— Ott, Gustav H., and Kraus.
Krebs, Robert W., Baton Rouge, La., assignor to Standard Oil Development Company. Preventing secondary reactions in catalytic processes. 2,458,862, Jan. 11.
Kroenlein, Henry A., Los Angeles, Calif., assignor to R. P. Berry, Jackson, Mich. Combination key holder and tension member for toy cash registers. 2,458,863, Jan. 11.
Kruger, Michael H., Malden, assignor to A. L. Smith Iron Company, Chelsea, Mass. Hanger. 2,459,034, Jan. 11.
Kruse, Theodore A.: *See*— Burdick, William H., Connor, and Kruse.
Kuns, Miles C., Union, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Electrical measuring instrument. 2,459,081, Jan. 11.
Lagergren, Earl E., King County, Wash. Ski towrope gripper. 2,458,786, Jan. 11.
Laico, Joseph P.: *See*— Jonas, Herbert C., Laico, and Ronci.
Lamothe, Joseph A.: *See*— Lamothe, Onesime and J. A.
Lamothe, Onésime, Champlain, and J. A. Lamothe, Lachine, Quebec, Canada. Batten clamp. 2,458,787, Jan. 11.
Lampson, Curtis W.: *See*— Stoner, Richard G., and Lampson.
Langley Corporation, assignee: *See*— Von Koscielski, George.
La Plant-Choate Manufacturing Co., Inc., assignee: *See*— Hyler, Lotell L.
Larsen Company, The, assignee: *See*— Winters, Russell H.
Lauchenauer, Hermann, Zurich, Switzerland. Self-priming centrifugal pump. 2,458,607, Jan. 11.
Lea, Ellis, South Charleston, W. Va. Piston machine rest. 2,458,608, Jan. 11.
Lenta, Joseph G.: *See*— Fiskettl, Henry D., and Lenta.
Leonard, Eugene V.: *See*— Schreiner, Louis W., and Leonard.
Leonard, Radford: *See*— Drieschman, Donald F., and Leonard.
Levesque du Rostu, Georges, assignor to Society Anonyme Andre Citroen, Paris, France. Cooling device by vaporisation for internal-combustion engines. 2,458,609, Jan. 11.
Levine, Arnold J., Cincinnati, Ohio, now by change of name J. A. Lindon. Skirt hanger. 2,458,997, Jan. 11.
Levine, Sam W., assignee: *See*— Korth, William J.
Lewis, Hubert W.: *See*— Davidson, William L., and Lewis.
Lewis, William J.: *See*— Bieker, Lawrence W., and Lewis.
Lewis, William L., Glendale, and F. C. Pahl, Culver City, Calif.; said Pahl assignor to Hughes Tool Company, Houston, Tex. Jig for assembling hollow structures. 2,458,788, Jan. 11.
Libbey-Owens-Ford Glass Company, assignee: *See*— Hatcher, David B.
Lima, Henry C., Flushing, N. Y., assignor of one-fourth to M. W. Davis, Bridgeport, Conn. Freight car with dumping body. 2,459,035, Jan. 11.
Lincks, George F., Pittsfield, Mass., assignor to General Electric Company. Protective device. 2,458,948, Jan. 11.
Linderer, Francis Boise, Idaho, assignor, by mesne assignments, to Deere Manufacturing Co. Crop compressor. 2,458,713, Jan. 11.
Lindon, John A., by change of name: *See*— Levine, Arnold J.
Lindsay, John D., Grosse Pointe Woods, Mich. Making integral molded structures. 2,458,864, Jan. 11.
Lindström, Nils E., Stockholm, Sweden. Gas detector. 2,458,610, Jan. 11.
Line Material Company, assignee: *See*— Schultz, William O.
Lipe, Bruce R., Cincinnati, and E. E. Schroeder, Norwood, Ohio, assignors to Allis Chalmers Manufacturing Company, Milwaukee, Wis. Combined pump means and motor means. 2,459,036, Jan. 11.
Little, Arthur D., Inc., assignee: *See*— Collins, Samuel C.
Ljunggren, Thor H.: *See*— Bryant, William J., and Ljunggren.
Loening, Erich E.: *See*— Gresham, Donald C., and Loening.
Lolkema, Jan, Hoogesand, Netherlands; vested in the Attorney General of the United States. Producing ethers and esters of carbohydrates. 2,459,108, Jan. 11.
Long, Tom K., Akron, Ohio. Illuminating unit for conventional fishing lures or bait. 2,458,611, Jan. 11.
Lowenheim, Frederick A., Plainfield, N. J., assignor to Metal & Thermit Corporation, New York, N. Y. Electroplating of tin. 2,458,912, Jan. 11.
Lufkin, James E.: *See*— Cavanaugh, Robert M., and Lufkin.
Lull, Le Grand H., Minneapolis, Minn. Load carrier mounting. 2,458,949, Jan. 11.
Luzardo, Rodolfo, Chacao, Venezuela. Child's nursing stand. 2,458,950, Jan. 11.
Luzzatto, Ferdinand, and J. C. Palmer, Gary, Ind. Automatic shearing apparatus. 2,458,612, Jan. 11.
Lyon, Ethel S., Williamsburg, Va. Protecting apron for ironing boards. 2,458,613, Jan. 11.
MacKay, Raymond F, Worcester, Mass. Traction aiding device for self-propelled vehicles. 2,458,522, Jan. 11.
Macklin, Donald J.: *See*— Bachman, Benjamin B., and Macklin.
Mahoney, Frank D., San Francisco, Calif. Coupling. 2,458,714, Jan. 11.
Malchus, Johannes A. C., Amsterdam, Netherlands. Dust aspirator with a rotatable flexible tube connection. 2,458,614, Jan. 11.
Mallnak, Samuel H., Butte, Mont. Drill bit loosener. 2,458,951, Jan. 11.
Mallory, P. R., & Co., Inc., assignee: *See*— Aust, Robert J. Booe, James M. Giles, Herbert E.
Malluk, Assad M., New York, N. Y. Legging boot. 2,458,952, Jan. 11.
Malm, William A. R., New Orleans, La. Invisible light television system. 2,458,865, Jan. 11.
Mann, Charles W., Silver Spring, Md., assignor to United States of America as represented by the Secretary of Agriculture. Apparatus and method for determining the scuff resistance of leather. 2,458,953, Jan. 11.
Marciniak, Emil J.: *See*— Wheeler, Ralph F., and Marciniak.
Marencik, William J., and R. E. Ahlf, assignors to Thompson Products, Inc., Cleveland, Ohio. Preventing scaling. 2,458,715, Jan. 11.
Marendaz, Donald M. K., Bergh Apton, England. Clutch gearing. 2,458,716, Jan. 11.
Marine Magnesium Products Corporation, assignee: *See*— Gloss, Gunter H.
Marinsky, Davis, assignee: *See*— Morin, Louis H.
Márquez, Nemesio, Buenos Aires, Argentina, assignor to F. A. Cardenas, Rio de Janeiro, Brazil. Automatic control system for electric circuits. 2,458,954, Jan. 11.
Marsden, John E., Philadelphia, Pa. Baseball bat. 2,458,919, Jan. 11.
Marter, Hans, assignor to Societa Tecnica Applicazioni Metalli Duri Ed Affini-S. T. A. M. A., Milan, Italy. Wire coiling machine particularly for producing coiled filaments for electric lamps and electronic tubes. 2,458,789, Jan. 11.
Martin, Fred O., assignee: *See*— Zimmerman, Maximilian E.
Martin, Homer Z., Roselle, N. J., assignor to Standard Oil Development Company. Removing entrained gaseous fluids from solids. 2,458,866, Jan. 11.
Martin, Rhetherford B., assignor to Kennecott Copper Corporation, New York, N. Y. Froth flotation of sulfide ores in the presence of a N-dichlorothiocarbanilide. 2,458,523, Jan. 11.

Masbruch, Henry, assignor to Russell Manufacturing Company, Platteville, Wis. Bull halter and controller. 2,458,717, Jan. 11.
Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,458,615, Jan. 11.
Mattson, George W.: *See*— Dorsky, Julian, Mattson, and Neher.
Maynor, Tracy L., Beckley, W. Va. Trigger safety for shotguns and the like. 2,458,616, Jan. 11.
McCann, Harold G., Flushing, N. Y., assignor to Allied Chemical & Dye Corporation. Stabilization of sulfur trioxide. 2,458,718, Jan. 11.
McCaskell, William, Los Angeles, Calif. Filter. 2,459,082, Jan. 11.
McCloy, Graham S., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Refrigerator provided with a defrosting control for the refrigeration system thereof. 2,459,083, Jan. 11.
McConnaughay, Kenneth E., West Lafayette, Ind. Drier. 2,458,617, Jan. 11.
McCormick, William R., Chicago, Ill., assignor to A. Y. Dowell, Washington, D. C. Colonic device. 2,458,719, Jan. 11.
McDonald, Albert W., Elkhart, Ind. Foldable step for trailers. 2,458,618, Jan. 11.
McDonnell Aircraft Corporation, assignee: *See*— Tauser, Charles H.
McFall, William W., River Forest, Ill. Shirt packaging device. 2,458,998, Jan. 11.
McGary, Frank E., Narberth, E. Hochreiter, C. F. Schlecht, and F. Shannon, assignors to The Budd Company, Philadelphia, Pa. Method of and means for making dies. 2,459,084, Jan. 11.
McIntosh, Samuel F., Scarsdale, N. Y. Joist. 2,459,037, Jan. 11.
McKay, Arthur F., assignor to Dominion Tar & Chemical Company Limited, Montreal, Quebec, Canada. Direct synthesis of alkyl substituted styrene polymers. 2,459,109, Jan. 11.
McKinley, Orman O., Indianapolis, Ind. Louvered awning. 2,458,619, Jan. 11.
McKnight, Joseph H., Pittsburgh, Pa. Combined toy railroad and sound producing means therefor. 2,459,038, Jan. 11.
Megeber, David W., assignor to General Motors Corporation, Dayton, Ohio. Sliding vane compressor. 2,458,620, Jan. 11.
Meltes, Thelma S.: *See*— Brenner, Abner, and Meltes.
Mentzer, Ralph B., assignor to Hamilton Watch Company, Lancaster, Pa. Pallet stone cutting and polishing. 2,458,913, Jan. 11.
Merck & Co., Inc., assignee: *See*— Babson, Robert D. Foster, Jackson W.
Merts, Harry J., Webster City, Iowa, assignor to Solar Corporation, Milwaukee, Wis. Power transmission drive adjustment. 2,458,720, Jan. 11.
Mer-Wall Enterprises, Incorporated, assignee: *See*— Carignan, Raymond.
Mesa, Joseph O., Bayside, N. Y., assignor to Stewart-Warner Corporation, Chicago, Ill. Automatic positioning apparatus. 2,459,039, Jan. 11.
Mesner, Max H., Princeton, N. J., assignor to Radio Corporation of America. Electronic distributor for multiplex pulse communication systems. 2,459,131, Jan. 11.
Messenger, Robert P., Kenilworth, Ill., assignor to International Harvester Company. Beet topper. 2,458,790, Jan. 11.
Messenger, Robert P., Kenilworth, Ill., assignor to International Harvester Company. Stalk forwarder for corn pickers and huskers. 2,458,791, Jan. 11.
Messersmith, George G., assignor to J. F. Helmold & Bro., Inc., Chicago, Ill. Method of and apparatus for preparing creasing counters. 2,458,867, Jan. 11.
Metal & Thermit Corporation, assignee: *See*— Lowenheim, Frederick A.
Meyer, Frederick, Union, assignor to Ronson Art Metal Works, Inc., Newark, N. J. Pyrophoric lighter. 2,459,085, Jan. 11.
Meyer, Ronald E.: *See*— Otto, Ferdinand P.
Midouhas, Stephen P., assignor to Kemline Metal Products Company, Inc., Bristol, Pa. Collapsible clothesline. 2,459,110, Jan. 11.
Miller, Carl F., Summit, assignor to National Union Radio Corporation, Orange, N. J. Electron tube and heater type cathode therefor. 2,459,086, Jan. 11.
Miller, Charles E., assignor to Time Oil Co., Seattle, Wash. Disposal receptacle. 2,458,868, Jan. 11.
Miller, Eric, Rose Bay near Sydney, New South Wales, Australia. Tripod head. 2,459,040, Jan. 11.
Miller, Frank A., assignor to Buffalo Machinery Company, Incorporated, Buffalo, N. Y. Stud driver. 2,458,622, Jan. 11.
Miller, George F., Chicago, Ill. Chalk holder. 2,459,087, Jan. 11.
Miller, Harold C.: *See*— Garand, John C., Cooper, Bird, and Miller.
Miller, Robert E., Bronxville, N. Y. Furniture leg shoe. 2,458,621, Jan. 11.
618 O. G.—41c
Miller, Wilbur H., Springdale, and R. O. Roblin, Jr., Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Pantoyltauramides and preparation of the same. 2,459,111, Jan. 11.
Mills, Will R. S., Crystal, Okla. Primer and idler. 2,458,999, Jan. 11.
Milwaukee Lace Paper Company, assignee: *See*— Hamilton, Kenneth C.
Miner, W. H., Inc., assignee: *See*— Dentler, Arnold E. Haseltine, Stacy B.
Mishawaka Rubber and Woolen Manufacturing Company, assignee: *See*— Eakins, Everett A.
Mitchell Manufacturing Company, assignee: *See*— Wiedenhoeft, Arthur E.
Mitsch, William H., Wheeling, W. Va. Automatic timing device. 2,459,041, Jan. 11.
Mohr, Harry F.: *See*— Bradley, George G.
Monogram Manufacturing Company, assignee: *See*— Wallace, Frank C.
Monsanto Chemical Company, assignee: *See*— Durland, John R.
Mori, Ernest A.: *See*— Pigott, Reginald J. S., and Mori.
Morin, Louis H., assignor of one-half to D. Marinsky, Bronx, N. Y. Slider and constructing the same. 2,458,914, Jan. 11.
Morrell, Charles E.: *See*— Yowell, Howard L., and Morrell.
Morris, Charles W., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif. Spill valve. 2,459,000, Jan. 11.
Mortimer, Edmund W., assignor to The Garrard Engineering and Manufacturing Company, Limited, Swindon, England. Control means for gramophones. 2,458,623, Jan. 11.
Morton, William A., and E. G. Smith, Mount Lebanon Township, Allegheny County, assignors, by mesne assignments, to Amsler Morton Corporation, Pittsburgh, Pa. Method and apparatus for artificially compensating for thermal load changes in heat-treatment furnaces. 2,458,624, Jan. 11.
Moss, Jack, Youngstown, Ohio. Special order form. 2,458,955, Jan. 11.
Moss, Philip H.: *See*— Cook, Elmer W., and Moss.
Moss, Philip H., Stamford, Conn., and E. W. Cook, assignors to American Cyanamid Company, New York, N. Y. Aliphatic amide-substituted propyl quaternary ammonium compounds. 2,459,088, Jan. 11.
Motley, Lewis, London, England. Gun mounting. 2,458,956, Jan. 11.
Moto-Mower Company, The, assignee: *See*— George, Edwin S.
Motorola, Inc., assignee: *See*— Fruth, Hal F.
Murphy, James F., Philadelphia, Pa. Punch jig. 2,458,524, Jan. 11.
Murray & Tregurtha, Inc., assignee: *See*— Wanser, Arthur W.
Murray, William A., Ajo, and G. T. Alley, Tucson, Ariz. Curtain rod guide. 2,459,001, Jan. 11.
Natchtman, John S., Youngstown, Ohio. Method and apparatus for brightening tin plate. 2,458,525, Jan. 11.
National Automatic Tool Company, Inc., assignee: *See*— Schafer, Robert A.
National Drug Company, The, assignee: *See*— Avakian, Souren.
National Lead Company, assignee: *See*— Bolley, Don S., and Gallagher.
National Lock Company, assignee: *See*— North, Edwin W.
National Union Radio Corporation, assignee: *See*— Haines, Donald G. Miller, Carl F.
Nave, David T., and R. L. Sullivan, Los Angeles, Calif. Capillarity control means. 2,459,042, Jan. 11.
Nawoj, Edward J.: *See*— Nesset, Maurice M., and Nawoj.
Naylor, Joshua C., Monkseaton, assignor to Vickers-Armstrongs Limited, London, England. Reciprocating pump or motor. 2,458,869, Jan. 11.
Neher, Clarence M.: *See*— Dorsky, Julian, Mattson, and Neher.
Neild, William G., Warren Point, assignor to Bendix Aviation Corporation, Teterboro, N. J. Temperature compensator for electrical regulators. 2,458,957, Jan. 11.
Nenno, Howard F., Rochester, N. Y. Electric shaving kit. 2,458,721, Jan. 11.
Nesset, Maurice M., Glenview, and E. J. Nawoj, Chicago, assignors to Baxter Laboratories, Inc., Glenview, Ill. Tubing set. 2,458,722, Jan. 11.
New York Air Brake Company, The, assignee: *See*— Sudduth, Henry N.
Nicaro Nickel Company, assignee: *See*— Fitzhugh, Robert R., Frederick, and Axelrad.
Nielsen, James S., Stow, assignor to Goodyear Aircraft Corporation, Akron, Ohio. Metal bending and stretching apparatus. 2,459,132, Jan. 11.
Nielsen, Peer D.: *See*— King, Clarence D., and Nielsen.

Nieuwdorp, Hendrik: *See*—
Parker Appliance Company, The, assignee: *See*—

Radio Corporation of America, assignee: *See*—
Roethell, Bruno H., Cranford, and W. G. Scharmann, Roselle, N. J., assignors to Standard Oil Development Company. Method of and apparatus for separating solid particles from a fluid stream. 2,458,870, Jan. 11.

Nieuwdorp, Hendrik: *See*—
Vingerhoets, Antonius W., and Nieuwdorp.
Nijland, Hendrik A. H., Laren, Netherlands. Electric circuit breaker. 2,458,792, Jan. 11.
Nilsson, Gustaf F., Minneapolis, Minn. Electrode holder. 2,458,723, Jan. 11.
Nisolek, John J., Chicago, Ill. Water filter bowl. 2,458,625, Jan. 11.
Noblitt-Sparks Industries, Inc., assignee: *See*—
Booth, Earl C.
Nopco Chemical Company, assignee: *See*—
Buxton, Loran O.
Norige, Anthony, East Hartford, Conn. Drill chuck. 2,458,626, Jan. 11.
North, Edwin W., assignor to National Lock Company, Rockford, Ill. Table lid support. 2,458,627, Jan. 11.
North American Aviation, Inc., assignee: *See*—
Davie, Robert P., Jr.
Novadel-Agene Corporation, assignee: *See*—
Booth, George M.
Nyberg, Curt E., Chicago, Ill., assignor of one-half to W. Jameson, Miami, Fla. Salt and pepper shaker. 2,459,133, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,458,526, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,458,527, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,459,112, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,459,113, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,459,114, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,459,115, Jan. 11.
Oberright, Edward A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,459,116, Jan. 11.
Och, Henry G.: *See*—
Boghosian, William H., and Och.
O'Donnell, Vincent T., Aberdeen, S. Dak. Wrist watch holder. 2,458,793, Jan. 11.
Ogden, James H., San Diego, Calif. Lock for adjustable end wrench. 2,458,794, Jan. 11.
Ogorsaly, Henry J., Summit, N. J., assignor to Standard Oil Development Company. Hydrogenation of an oxide of carbon. 2,458,870, Jan. 11.
Oilgear Company, The, assignee: *See*—
Ferris, Walter, and Douglas.
Okun, Nathaniel N., Bronx, N. Y. Vest-pocket circuit testing device. 2,458,628, Jan. 11.
Oles, Herbert E., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Marking device. 2,458,871, Jan. 11.
Oliver, Bernard M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Object locating system. 2,459,117, Jan. 11.
Olvis, James E., Glendale, Calif. Adjustable door holder and doorstop. 2,458,528, Jan. 11.
Orendorff, John W., Canton, Ill., assignor to International Harvester Company. Beet topper. 2,458,795, Jan. 11.
Orley, George, Detroit, Mich. Serpentine freezer shelf. 2,458,629, Jan. 11.
Orr, John H., assignor to Carbodies Limited, Coventry, England. Folding hood for motor vehicles and the like. 2,459,089, Jan. 11.
Ott, Gustav H., Riehen, and W. Kraus, assignors to Ciba Limited, Basel, Switzerland. Phenol oxide resin lacquers and their manufacture. 2,458,796, Jan. 11.
Otto, Ferdinand P., Woodbury, N. J., and R. E. Meyer, Cumberland, Md., assignors to Socony-Vacuum Oil Company, Incorporated. Products obtained by reacting phosphorus pentasulfide with sulfurised ketones. 2,459,090, Jan. 11.
Owenby, Frank: *See*—
Owenby, Paul and F., and Sacks.

Schmerling, Louis, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Preparation of methoxy acetic acid. 2,458,741, Jan. 11.
Schoenlaub, Robert A., Tiffin, assignor to Basic Refractories, Inc., Cleveland, Ohio. Magnesia refractory. 2,458,533, Jan. 11.
Schreiner, Louis W., and E. V. Leonard, assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Coaxial line generator. 2,458,650, Jan. 11.
Schroeder, Earle E.: *See*—
Lipe, Bruce E., and Schroeder.
Schultz, William O., assignor to Line Material Company, South Milwaukee, Wis. Drop-out fuse construction. 2,458,742, Jan. 11.
Schultz, William O., South Milwaukee, assignor to Line Material Company, Milwaukee, Wis. Drop-out fuse construction. 2,458,743, Jan. 11.

Stevens, Elbert M.: *See*—

Turnbull, Glen O., Rock Island, Ill., assignor to International Harvester Company. Supporting strut. 2,458,808, Jan. 11.

Schultz, William O., South Milwaukee, assignor to Line Material Company, Milwaukee, Wis. Automatic switch construction. 2,458,800, Jan. 11.

Schuls, Herman B., Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation. Producing low carbon chromium steels. 2,458,651, Jan. 11.

Schwan, Joe F., assignee: *See*—
Garrison, Harry A.

Schwartz, Benjamin and E. H., Brooklyn, N. Y. Mold injection head. 2,459,048, Jan. 11.

Schwartz, Eugene H.: *See*—
Schwartz, Benjamin and E. H.

Schwartz, Louis K., East Orange, N. J., assignor, by mesne assignments, to Knapp-Monarch Company, St. Louis, Mo. Electrically energizable fabric. 2,458,801, Jan. 11.

Schwerin, Frank H., assignor to The Duff-Norton Manufacturing Company, Pittsburgh, Pa. Hydraulic jack. 2,458,744, Jan. 11.

Schwerin, Paul, White Plains, assignor to Sonotone Corporation, Elmsford, N. Y. Vibration suppressing suspension for tensioned filaments of electron space charge devices. 2,458,534, Jan. 11.

Scientific Research and Development, The United States of America as represented by the Executive Secretary of the Office of: *See*—
Volkmann, John.

Sconce, James S., and A. N. Johnson, assignors to Hooker Electrochemical Company, Niagara Falls, N. Y. Photochemical chlorination of hydrocarbons. 2,459,049, Jan. 11.

Scott Testers, Inc., assignee: *See*—
Rogers, Robert W., and Blanch.

Sears, Raymond W., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,458,852, Jan. 11.

Sebok, Frank: *See*—
Sebok, Joseph B. and F.

Sebok, Joseph B. and F., assignors to Houdaille-Hershey Corporation, Detroit, Mich. Air cleaner. 2,458,745, Jan. 11.

Sedille, Marcel H. L.: *See*—
Imbert, Roger J., and Sedille.

Seeburg, N. Marshall, assignee: *See*—
Andrews, Edward F.

Seybold, René, Strasbourg-Meinau, France. Double valve for accordions and like musical instruments. 2,458,653, Jan. 11.

Shannon, Frank: *See*—
McGary, Frank E., Hochreiter, Schlecht, and Shannon.

Shappirio, Sol, Washington, D. C. Modified hydrocarbon compositions and petroleum distillates. 2,458,535, Jan. 11.

Shearman, Spicer D., assignor to The Aro Equipment Corporation, Bryan, Ohio. Pipe joint. 2,459,005, Jan. 11.

Shell Development Company, assignee: *See*—
Cole, Robert M.

Shellmar Products Corporation, assignee: *See*—
De Swart, Jan.

Shelton, Edward E., London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Cathode-ray tube. 2,458,962, Jan. 11.

Sherman, C. Lawrence, Cherry Valley, assignor of one-half to J. E. Tabor, Belvidere, Ill. Wire terminal loop former. 2,458,536, Jan. 11.

Shields, Charles B., Penn Township, Allegheny County, assignor to The Union Switch & Signal Company, Swissvale, Pa. Coded track circuits. 2,458,746, Jan. 11.

Shoemaker, J. H., assignee: *See*—
Webster, Hugh G.
Webster, Hugh G., and Falter.

Silex Company, The, assignee: *See*—
Reichold, Ludwig.

Simmons, Lovel R., Jackson, Miss. Weight transferring vehicle coupling or hitch structure. 2,459,098, Jan. 11.

Sinclair Refining Company, assignee: *See*—
Watson, Kenneth M.

Singer, Kurt: *See*—
Rettinger, Michael, and Singer.

Singer Manufacturing Company, The, assignee: *See*—
Happe, Reynold.

Singley, Fred A., Detroit, Mich., assignor to Acme Steel Company, Chicago, Ill. Device for attaching metal baling ribbons to anchorage plates. 2,458,747, Jan. 11.

Sirco A.-G., assignee: *See*—
Kohler, Alfred.

Sittler Manufacturing Corp., assignee: *See*—
Rehm, Frank J., Jr.

Skelly, James J., Cleveland Heights, Ohio. Flexible wall structure. 2,458,537, Jan. 11.

Skog, Henry A.: *See*—
Ewald, Raymond L.

Slayton, John W., Jr., Pittsburgh, Pa. Tool. 2,458,880, Jan. 11.

Slifkin, Sam C., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Dry developing negative. 2,459,136, Jan. 11.

Smith, A. L., Iron Company, assignee: *See*—
Kruger, Michael H.

Smith, Clyde E.: *See*—
Ringer, Robert L., Jr., and Smith.

Smith, Earl K., Montrose, Pa. Temporary lift for bifocal spectacles. 2,459,061, Jan. 11.

Smith, Edwin G.: *See*—
Morton, William A.

Smith, Elmo D.: *See*—
Smith, Kenneth L. and E. D.

Smith, Kenneth L. and E. D., Eufaula, Okla. Running gear assembly for trailer wagons. 2,459,060, Jan. 11.

Smith, Richard J., Manchester, England, assignor to Imperial Chemical Industries Limited. Mixed glycol terephthalate yarn, process, and composition for producing same. 2,459,052, Jan. 11.

Snyder, Charles A., Philadelphia, Pa. Telescoping tube screw jack. 2,458,961, Jan. 11.

Societa Tecnica Applicazioni Metalli Duri Ed Affini-S. T. A. M. A., assignee: *See*—
Marter, Hans.

Societe Anonyme Andre Citroen, assignee: *See*—
Lavesque du Rostu, Georges.

Societe Anonyme Solex, assignee: *See*—
Griffin, Gaston.

Societe Rateau (Societe Anonyme), assignee: *See*—
Imbert, Roger J., and Sedille.

Socke, John E., Pelham Manor, assignor to American Can Company, New York, N. Y. Cutting blanks. 2,458,538, Jan. 11.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Bergstrom, Eric V.
Carmody, Don R.
Hartough, Howard D., and Kosak.
Kellett, John, III, and Rasmussen.
Kinney, Robert E., and Gorin.
Kosak, Alvin I., and Hartough.
Oberright, Edward A.
Otto, Ferdinand P., and Meyer.
Ray, Frederick E.

Solar Aircraft Company, assignee: *See*—
Bitt, Paul A., and Sprenger.

Solar Corporation, assignee: *See*—
Martin, Harry J.

Soller, Walter, Cincinnati, Ohio, assignor of one-half to W. H. Woodin, Jr., San Mateo, Calif. Secondary electron emission tube. 2,458,539, Jan. 11.

Sonotone Corporation, assignee: *See*—
Schwerin, Paul.

Southworth, George C., Rumson, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. System for and utilizing microwave radiation from the sun. 2,458,654, Jan. 11.

Sova, Clarence, Windsor, Ontario, Canada. Tie rack. 2,459,006, Jan. 11.

Sowa, Frank J., Cranford, N. J. Case-hardening metals. 2,458,655, Jan. 11.

Special Equipment Company, assignee: *See*—
Ewald, Raymond L., and Skog.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Magnetron assembly and method. 2,458,802, Jan. 11.

Sperry Products, Inc., assignee: *See*—
Fireston, Floyd A., and Frederick.

Spraragen, Louis, assignor to Bridgeport Fabrics, Inc., Bridgeport, Conn. Method of making weather strips. 2,459,120, Jan. 11.

Sprenger, Harold A.: *See*—
Pitt, Paul A., and sprenger.

Springer, Horace S.: *See*—
Tuve, Richard L., Fogelberg, Brinnick, and Springer.

Stahl, William F., assignee: *See*—
Collins, Fred V.

Stahl, William H., Jr.: *See*—
Cowherd, Robert D., and Stahl.

Stamets, William K., assignee: *See*—
Hibbard, Robert L.

Standard Oil Company, assignee: *See*—
Johnson, Carl E.

Standard Oil Development Company, assignee: *See*—
Bruce, William A.
Elmore, Norman M., and Gessler.
Fischer, Wilbur F.
Krebs, Robert W.
Martin, Homer Z.
Ogorsaly, Henry J.
Roethell, Bruno E., and Sharmann.
Rose, Walter D.
Young, David W.
Yowell, Howard L., and Morrell.

Steins, Carleton K., Merion, assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Bearing shunt means. 2,459,099, Jan. 11.

Stelzer, William, East Orange, N. J. Combined power and manually operated brake booster. 2,458,803, Jan. 11.

Steuer, Milton, San Francisco, Calif. Fishing rod holder. 2,458,881, Jan. 11.

Stevens-Arnold, Inc., assignee: *See*—
Crandell, Ervin L.
Reifel, Harry.

Stevens, Elbert M.: *See*—
Blumberg, Hamilton G., and Blumberg.

Stevens, Frederick A., Providence, R. I. Detachable bridge-brace-bar spectacle construction. 2,458,963, Jan. 11.

Stevenson, Harold E., Long Beach, Calif. Cambric and linen tape dispenser. 2,458,964, Jan. 11.

Stewart-Warner Corporation, assignee: *See*—
Mesa, Joseph O.
Williams, Lynn A., Jr.

Stoddard, Charlee R., assignee: *See*—
Walling, Lawrence J.

Stoner, Richard G., and C. W. Lampson, Princeton, N. J., assignors to the United States of America as represented by the Secretary of War. Timing device for high-speed motion-picture cameras. 2,458,882, Jan. 11.

Stupakoff Ceramic & Manufacturing Company, assignee: *See*—
Stupakoff, Semon H.

Stupakoff, Semon H., assignor to Stupakoff Ceramic & Manufacturing Company, Latrobe, Pa. Hermetic seal for electric terminals and the like. 2,458,748, Jan. 11.

Suddath, Henry N., Watertown, N. Y., assignor to The New York Air Brake Company. Variable load brake. 2,458,965, Jan. 11.

Sullivan, Raymond L.: *See*—
Nave, David T., and Sullivan.

Sundt, Edward V., Arcadia, Calif. Circuit protector. 2,458,804, Jan. 11.

Synerholm, Martin E., Hastings on Hudson, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc. Esters of piperonyl chrysanthemum carboxylic acid. 2,458,656, Jan. 11.

Tabor, Joe E., assignee: *See*—
Sherman, C. Lawrence.

Tabor Manufacturing Company, The, assignee: *See*—
Eastwood, Abraham B.

Takacs, Paul L.: *See*—
Hull, Henry E., and Tackacs.

Tanner, Charles H., Venita Park, assignor to McDonnell Aircraft Corporation, St. Louis, Mo. Self-contained die set with automatic stamping and/or punching removing means. 2,459,053, Jan. 11.

Taylor, Charles H., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Brush roll for suction cleaners. 2,459,007, Jan. 11.

Taylor, Henry G., London, England, assignor to The Hartford National Bank & Trust Company, Hartford, Conn., trustee. Apparatus for measuring electrical resistance. 2,458,805, Jan. 11.

Taylor, Taylor & Hobson Limited, assignee: *See*—
Cox, Arthur.

Taylor-Winfield Corporation, The, assignee: *See*—
Ringer, Robert L., Jr., and Smith.

Technical Apparatus Company, assignee: *See*—
Hanopol, Louis.

Teletype Corporation, assignee: *See*—
Reiber, Albert H. and E. Y.

Texas Company, The, assignee: *See*—
Hersog, Gerhard.
Towne, Charles C.

Thompson, Boyce Institute for Plant Research, assignee: *See*—
Synerholm, Martin E.

Thompson Products, Inc., assignee: *See*—
Doubrava, Eugene N.
Johnson, Paul P.
Marencik, William J., and Ahlf.

Thomson, William B., Boston, Mass. Apparatus for approximately squaring circles. 2,458,749, Jan. 11.

Time Oil Co., assignee: *See*—
Miller, Charles E.

Timken Roller Bearing Company, The, assignee: *See*—
Barnbrook, Thomas G.

Tippett, James C., Brockton, Mass. Receptacle cover pry-off tool. 2,458,806, Jan. 11.

Toledo Scale Company, assignee: *See*—
Hem, Halvor O.

Torrence, George W., and W. A. Calkins, Peoria, Ill. Card index of the rotary type. 2,458,657, Jan. 11.

Towne, Charles C., Beacon, assignor to The Texas Company, New York, N. Y. Fatty acid separation. 2,459,054, Jan. 11.

Transit Research Corporation, assignee: *See*—
Piron, Emil H.

Tratsch, Walter A., Chicago, Ill. Ratchet-operating means. 2,459,008, Jan. 11.

Trepp, Samuel G., Dedham, assignor to Bird & Son, inc., East Walpole, Mass. Removable floor or wall covering. 2,458,750, Jan. 11.

Treuting, Frank L., assignor to H. R. Treuting, Sr., Newark, N. J. Articulate figure. 2,459,100, Jan. 11.

Treuting, Herbert R., Sr., assignee: *See*—
Treuting, Frank L.

Trogman, William, Chicago, Ill. Box and package handle. 2,458,883, Jan. 11.

Tucker, John W., Peotone, assignor to Hopax Industries, Inc., Chicago, Ill. Thermostatic switch. 2,458,807, Jan. 11.

Turbo Engineering Corporation, assignee: *See*—
Birmann, Rudolph.

Turnbull, Glen O., Rock Island, Ill., assignor to International Harvester Company. Supporting strut. 2,458,808, Jan. 11.

Tuve, Richard L., Silver Spring, Md., J. M. Fogelberg, F. E. Brinnick, Washington, D. C., and H. S. Springer, Homestead, Fla. Shark repellent. 2,458,540, Jan. 11.

Twardowski, Zygfred A., East Detroit, Mich. Hose coupling valve. 2,458,809, Jan. 11.

Tyrner, Joseph M., assignor to Air Reduction Company, Incorporated, New York, N. Y. Electric arc welding. 2,458,658, Jan. 11.

Uhrmacher, Ralph R., assignor to Wilson-Jones Company, Chicago, Ill. Back gauge for punches. 2,459,101, Jan. 11.

Underwood, James Q., Jr.: *See*—
Pratt, Robert H., and Underwood.

Union Switch & Signal Company, The, assignee: *See*—
Shields, Charles B.

United Shoe Machinery Corporation, assignee: *See*—
Bertrand, Frederic E., and Clark.
Holmgren, Eric A.

United States Atomic Energy Commission, the United States of America as represented by the, assignee: *See*—
Parsons, Howard.

United States Gypsum Company, assignee: *See*—
Willey, Grant S., and Frost.

United States Rubber Company, assignee: *See*—
Howland, Louis H.

United States Steel Corporation of Delaware, assignee: *See*—
King, Clarence D., and Nielsen.

Universal Oil Products Company, assignee: *See*—
Fenske, Ellsworth R.
Schmerling, Louis.
Watson, Charles C.

Urquhart, Norman J., Scenery Hill, Pa., assignor to Combustion Processes Company. Low velocity oil burner. 2,458,541, Jan. 11.

Urquhart, Norman J., Scenery Hill, Pa., assignor to Combustion Processes Company. Low velocity oil and gas burner. 2,458,542, Jan. 11.

Urquhart, Norman J., Scenery Hill, Pa., assignor to Combustion Processes Company. Low velocity gas burner. 2,458,543, Jan. 11.

Varney, Kenneth W., and H. D. Allen, East Hampton, Conn. Aviator's belt. 2,458,810, Jan. 11.

Vickers-Armstrongs Limited, assignee: *See*—
Naylor, Joshua C.
Wallis, Barnes N.

Vingerhoets, Antonius W., and H. Nieuwdorp, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Discharge device for voltage measurement. 2,458,659, Jan. 11.

Voight, Henry G., Hamden, assignor to Sargent & Company, New Haven, Conn. Antijimmy tubular lock. 2,458,751, Jan. 11.

Volkmann, John, Cambridge, Mass., assignor to the United States of America as represented by the Executive Secretary of the Office of Scientific Research and Development, and The President and Fellows of Harvard College. Ear protector valve. 2,458,884, Jan. 11.

Von Koscielski, George, San Diego, Calif., assignor to Langley Corporation. Fish measuring tape. 2,458,811, Jan. 11.

Waldelich, James R., Naugatuck, assignor to The Bristol Company, Waterbury, Conn. Tappet-actuating member. 2,458,752, Jan. 11.

Waldrop, Jefferson P., Arlington, Va. Game board and playing pieces for a chance controlled game. 2,458,966, Jan. 11.

Wallace, Frank C., North Hollywood, Calif. Boring head. 2,458,753, Jan. 11.

Wallace, Frank C., North Hollywood, assignor to Monogram Manufacturing Company, Los Angeles, Calif. Handle device. 2,458,754, Jan. 11.

Wallace, James M., Jr.: *See*—
Cox, Fred W., and Wallace.

Wallen, Gerald J., San Francisco, Calif. Dressing tool for grinding wheels. 2,458,812, Jan. 11.

Waller, Gustav M., Dundee, assignor to Burgess-Norton Manufacturing Company, Geneva, Ill. Center guide tread member for endless tracks. 2,458,755, Jan. 11.

Walling, Lawrence J., Keyport, N. J., assignor of one-fifth to C. R. Stoddard, New York, and one-fifth to R. Harding, Jr., Elmsford, N. Y. Buff and making the same. 2,459,055, Jan. 11.

Wallis, Barnes N., Weybridge, assignor to Vickers-Armstrongs Limited, London, England. Aircraft body and wing arrangement. 2,459,009, Jan. 11.

Wanzer, Arthur W., assignor to Murray & Tregurtha, Inc., Quincy, Mass. Outboard propeller mechanism for barges, scows, and the like. 2,458,813, Jan. 11.

War, The Government of the United States of America, as represented by the Secretary of, assignee: *See*—
Byrne, John F.
Cady, Willoughby M.
Etten, Nicholas L.
Sampson, Frederick W., and Hyde.
Stoner, Richard G., and Lampson.

Warren, Clifford A., Watchung, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Directive antenna system. 2,458,885, Jan. 11.

Warren, Pat, Fort Worth, Tex. Tube testing apparatus. 2,458,814, Jan. 11.

Warren Webster & Company, assignee: *See*—
Fitz Gerald, Alan S.

Wilson, Henry E. and G. W., Grand Junction, Colo., assignors to Pittsburgh-Erie Saw Corporation, Pittsburgh, Pa. Method and apparatus for wrapping saw blades or the like. 2,458,971, Jan. 11.

LIST OF REISSUE INVENTIONS

Warren, Pat, Fort Worth, Tex. Tube testing apparatus. 2,458,814, Jan. 11.
Warren Webster & Company, assignee: *See*—
Fitz Gerald, Alan S.
Watson, Charles C., Evanston, assignor to Universal Oil Products Company, Chicago, Ill. Controlling and equalizing tube temperatures. 2,458,756, Jan. 11.
Watson, Kenneth M., Madison, Wis., assignor to Sinclair Refining Company, New York, N. Y. Gas-solid contacting apparatus. 2,459,056, Jan. 11.
Watson, Thomas S., Milwaukee, Wis., assignor to Zephyr Laundry Machinery Company, Chicago, Ill. Timer for folding apparatus. 2,458,544, Jan. 11.
Webster, Hugh G., Detroit, Mich. Preserving the effectiveness of a metal cleaning bath. 2,458,662, Jan. 11.
Webster, Hugh G., assignor to J. H. Shoemaker, Detroit, Mich. Molten salt baths. 2,458,663, Jan. 11.
Webster, Hugh G., Detroit, Mich., assignor to J. H. Shoemaker. Making composite metal articles. 2,458,660, Jan. 11.
Webster, Hugh G., and C. L. Falter, assignors to J. H. Shoemaker, Detroit, Mich. Cleaning metal surfaces and compositions therefor. 2,458,661, Jan. 11.
Weeldenburg, Johannes G., Velp, Netherlands, assignor to American Enka Corporation, Enka, N. C. Bonding cellulosic materials to rubber and composite products formed therefrom. 2,458,886, Jan. 11.
Weiland, John N., assignor to The Cleveland Punch & Shear Works Co., Cleveland, Ohio. Fluid actuated clutch and brake mechanism. 2,458,664, Jan. 11.
Western Electric Company, Incorporated, assignee: *See*—
Brooks, Percy E.
Westinghouse Electric Corporation, assignee: *See*—
Blanchard, Charles E., and Ferre.
Buchanan, Leslie B. M.
Gayer, George F.
Hagne, Floyd T.
McCloy, Graham S.
Ponomareff, Alexander I.
Rathbun, John P.
Taylor, Charles H.
Weston Electrical Instrument Corporation, assignee: *See*—
Gilbert, Roswell W.
Kuns, Miles C.
Weyandt, Carl S., Homer City, Pa. Permanent magnet vibratory motor. 2,458,545, Jan. 11.
Wheeler, Ralph F., Springfield, and E. J. Marciniak, Easthampton, assignors to A. G. Spalding & Bros. Inc., Chicopee, Mass. Golf club. 2,458,920, Jan. 11.
Whitin Machine Works, assignee: *See*—
Helland, Sigurd H.
Widdicomb, John, Company, assignee: *See*—
Herts, Jack H. B.
Wiedenhoeft, Arthur E., Chicago, Ill., assignor, by mesne assignments, to Mitchell Manufacturing Company. Support for adjustable lighting fixtures. 2,458,967, Jan. 11.
Willard, Gerald W., Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Method of and apparatus for measuring pressure. 2,458,665, Jan. 11.
Willey, Grant S., Chicago, and O. W. Frost, Highland Park, assignors to United States Gypsum Company, Chicago, Ill. Acoustical tile. 2,459,121, Jan. 11.
Williams, Chester, Ypsilanti, Mich. Trailer dolly. 2,458,666, Jan. 11.
Williams, Chester, Ypsilanti, Mich. Trailer hitch. 2,458,667, Jan. 11.
Williams, Harry E., Chicago, Ill. Amusement game apparatus. 2,459,011, Jan. 11.
Williams, Leo L.: *See*—
Gordon, Le Roy, and Williams.
Williams, Louis B., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif. High-pressure lubricatnig unit. 2,459,010, Jan. 11.
Williams, Lynn A., Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater having means to prevent fuel contamination of the ventilating air. 2,458,968, Jan. 11.
Wilson, Gerald W.: *See*—
Wilson, Henry E., and Wilson.
Wilson, Henry E. and G. W., Grand Junction, Colo., assignors to Pittsburgh-Erie Saw Corporation, Pittsburgh, Pa. Method and apparatus for wrapping saw blades or the like. 2,458,971, Jan. 11.
Wilson, Jack C., Garden City, N. Y. Mystery toy or puzzle. 2,458,969, Jan. 11.
Wilson, Jack C., Garden City, N. Y. Mystery toy or puzzle. 2,458,970, Jan. 11.
Wilson-Jones Company, assignee: *See*—
Uhrmacher, Ralph R.
Wingfoot Corporation, assignee: *See*—
Cheney, LaVerne E.
Clifford, Albert M.
Cox, Fred W., and Wallace.
Winkler, Julius, Detroit, Mich. Tool handle connection. 2,458,815, Jan. 11.
Winograd, Harold, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Vapor electric device with cooling coil serving as heating resistor. 2,459,057, Jan. 11.
Winters, Russell H., assignor to The Larsen Company, Green Bay, Wis. Bar screen grader for carrots and vegetables having like tapering forms. 2,458,887, Jan. 11.
Woehrel, Marie, New York, N. Y. Steriliser for barber shops and beauty parlors. 2,458,757, Jan. 11.
Wolcott, Carl H.: *See*—
Peterson, Carl D., Deimel, and Wolcott.
Wolf Brothers, assignee: *See*—
Wolf, Howard A.
Wolf, Elias, assignee, et al.: *See*—
Wolf, Howard A.
Wolf, Howard A., Philadelphia, Pa., assignor to E. H. A. and W. L. Wolf, copartners trading as Wolf Brothers. Making a bag having a filler mouthpiece in one end. 2,458,972, Jan. 11.
Wolf, Walter L., assignee, et al.: *See*—
Wolf, Howard A.
Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,458,817, Jan. 11.
Wood, Russell A., Cambridge, Mass. Skill device. 2,458,668, Jan. 11.
Woodberry, John H., and F. W. Hoewischer, Metuchen, N. J. Apparatus for discharging from feed chutes improperly oriented cartridges. 2,458,546, Jan. 11.
Woodin, Jr., William H., assignee: *See*—
Soller, Walter.
Woods, Ralph A., Morgantown, Ind. Tandem axle construction for trucks. 2,458,816, Jan. 11.
Worth, Weldon, Dayton, Ohio. Valve for oil temperature control units. 2,458,547, Jan. 11.
Wright, Cornelius B.: *See*—
Rudd, Gene C., and Wright.
Yeamans, Wilfred H., Plainville, Conn. Spring balance. 2,458,669, Jan. 11.
York Corporation, assignee: *See*—
Groat, Keith P.
Young, David W., Roselle, N. J., assignor to Standard Oil Development Company. Solid catalyst treatment of gaseous hydrocarbons. 2,458,818, Jan. 11.
Young, John, Jr., Southgate, Calif., assignor to Hughes Tool Company, Houston, Tex. Tube support. 2,458,670, Jan. 11.
Yowell, Howard L., Elizabeth, and C. E. Morrell, Westfield, N. J., assignors to Standard Oil Development Company. Purifying alkyl halides. 2,458,819, Jan. 11.
Zephyr Laundry Machinery Company, assignee: *See*—
Watson, Thomas S.
Zimmermann, Maximilian E., assignor to F. O. Martin, Los Angeles, Calif. Multiple hanger. 2,458,820, Jan. 11.
Zirbel, Carl J., Montesuma, Iowa. Bait applicator. 2,458,671, Jan. 11.
Zoch, Lawrence L., Jr., Madison, Wis. Reciprocating cylinder internal-combustion engine. 2,458,672, Jan. 11.
Zoss, Abraham O., Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y. Producing resinous products from acetylene and secondary and tertiary alkyl phenols. 2,459,137, Jan. 11.
Zulinski, Edward J., and R. Barley, assignors to Progressive Welder Company, Detroit, Mich. Apparatus for resistance welding. 2,458,758, Jan. 11.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Concrete corrugated, Precast. A. Henderson. Re. 23,074, Jan. 11.
Control apparatus. W. A. Ray. Re. 23,077, Jan. 11.
Conveyer. B. Woldring and J. R. Sebastian. Re. 23,079, Jan. 11.
Mining machine. L. E. Simmons. Re. 23,078, Jan. 11.
Space discharge tube and electrode therefor. C. P. Boucher. Re. 23,073, Jan. 11.
Valve actuation and control, Plural. E. Pick. Re. 23,076, Jan. 11.
Wheel cover. G. A. Lyon. Re. 23,075, Jan. 11.

LIST OF PLANT INVENTIONS

Apple tree. C. C. Aller. 819, Jan. 11.
Magnolia plant. C. E. Kern. 820, Jan. 11.

LIST OF DESIGN INVENTIONS

Ash tray. J. B. Stier. 152,379, Jan. 11.
Ash tray and coaster, Combination. G. E. Andre. 152,315, Jan. 11.
Automobile. G. M. Buehrig. 152,320, Jan. 11.
Baking unit. J. F. Cavanagh. 152,321, Jan. 11.
Boot or the like, Lady's. R. J. Sherwin. 152,376, Jan. 11.
Bracelet or similar article. A. Philippe. 152,361, Jan. 11.
Brassière. J. J. Lo Cascio. 152,345, Jan. 11.
Brooch or similar article. A. Philippe. 152,366–7, Jan. 11.
Cabinet or the like, Space cooler. J. H. Schreiber. 152,372, Jan. 11.
Cabinet, Record. W. W. Weaver. 152,384, Jan. 11.
Camera back or similar article. C. G. Strang. 152,380, Jan. 11.
Cap, Container. W. N. Connolly. 152,327, Jan. 11.
Chair, High. W. W. Waaranan. 152,383, Jan. 11.
Chair or similar article, Reclining. E. J. Lux. 152,346, Jan. 11.
Chair, Rocking. L. M. J. Foulke. 152,333, Jan. 11.
Clamp. J. Oros and G. R. Dawson. 152,351, Jan. 11.
Cleaning and scraping device, Combined. S. C. Seley. 152,376, Jan. 11.
Coil winding machine. H. W. Moore. 152,350, Jan. 11.
Comparator. H. Rosengren. 152,387, Jan. 11.
Comparator, Optical. H. Rosengren. 152,368, Jan. 11.
Display fixture. H. M. Schick. 152,371, Jan. 11.
Earring or similar article. A. Philippe. 152,358, Jan. 11.
Earring or similar article. A. Philippe. 152,362, Jan. 11.
Earring or similar article. A. Philippe. 152,364–5, Jan. 11.
Electric fan or similar article. C. A. Lindberg. 152,344, Jan. 11.
Electrical-connector body. H. S. Barnhart. 152,315, Jan. 11.
Frame or similar article, Spectacle. M. Schwartz. 152,373, Jan. 11.
Game board, Ball. G. R. Armstrong. 152,314, Jan. 11.
Harp. J. Miller. 152,349, Jan. 11.
Heater for dental impressions or the like, Electric. H. P. Chapman. 152,323, Jan. 11.
Heater, Vehicle. A. G. Bergstrom. 152,316, Jan. 11.
Helicopter. H. E. Lemont, Jr. 152,342, Jan. 11.
Holder, Candle. V. B. Tawresey. 152,382, Jan. 11.
Holder, Flag. C. A. Skinner. 152,378, Jan. 11.
Hood for a power meat cutter. V. G. Biro. 152,317, Jan. 11.
Key retainer, flashlight, and lighter, Combined. R. Zelenka. 152,386, Jan. 11.
Lamp. S. J. Hirshfield. 152,336, Jan. 11.
Lamp and shade, Combined. E. Kehlmann. 152,339, Jan. 11.
Lamp or similar article. S. Lewis. 152,343, Jan. 11.
Mirror. F. A. Marty. 152,347, Jan. 11.
Necklace. W. W. Hobé. 152,337, Jan. 11.
Necklace or similar article. A. Philippe. 152,359–60, Jan. 11.
Necklace or similar article. A. Philippe. 152,363, Jan. 11.
Phonograph. H. F. Wheeler. 152,367, Jan. 11.
Pipe, Smoker's. M. G. Sampson. 152,360, Jan. 11.
Pipe, Smoking. C. W. Booker. 152,319, Jan. 11.
Pulverizer for compost and the like, Power. L. G. Hough and R. J. Collins. 152,338, Jan. 11.
Rack and cigarette holder, Combined ash tray. C. M. Sanders. 152,370, Jan. 11.
Rack, Towel. T. R. Eakins. 152,331, Jan. 11.
Receiver, Television. J. C. Kromhout. 152,341, Jan. 11.
Reflector head for an ultraviolet lamp. J. A. Mehr. 152,348, Jan. 11.
Rug hooker, Hand operated. J. Blumfield. 152,318, Jan. 11.
Scale, Postal. N. Shewitz, P. L. Sloane, and A. Vaikmoras, Jr. 152,377, Jan. 11.
Scarf or similar article. E. Tanzer. 152,381, Jan. 11.
Separator, Cream. H. R. Dilger, S. E. Kline, and T. M. Leonard. 152,329, Jan. 11.
Shoe shining machine. P. De Douglass. 152,328, Jan. 11.
Spray gun, Water. W. M. Cissell. 152,325–6, Jan. 11.
Table, Glass top end. R. A. Dillon. 152,330, Jan. 11.
Tone arm or the like, Phonograph. J. B. Federico. 152,332, Jan. 11.
Trailer. F. D. Hanson, D. D. Arehart, and R. T. Dittmer. 152,334–5, Jan. 11.
Trailer, Vehicle. E. Chapin. 152,322, Jan. 11.
Watch and holder strap therefor, Combined wrist. O. Pennino. 152,352–7, Jan. 11.
Watch box or similar article. R. L. Chipman, Jr. 152,324, Jan. 11.
Wiper arm, Windshield. F. A. Krohm. 152,340, Jan. 11.
Wire stripper. L. H. Score. 152,374, Jan. 11.

LIST OF INVENTIONS

Carbon black, Manufacture of. R. E. Kinney and E. Gorin. 2,458,996, Jan. 11.
Carbon chromium steels, Producing low. H. B. Schuls. 2,458,651, Jan. 11.
Carbon tetrafluoride, Preparation of. A. F. Benning, J. D. Park, and S. E. Krahler. 2,458,551, Jan. 11.
Connection, Spring compression tubing and pipe. R. Carignan. 2,458,833, Jan. 11.
Connection, Tool handle. J. Winkler. 2,458,815, Jan. 11.
Contacting apparatus, Gas-solid. K. M. Watson. 2,459,056, Jan. 11.
Contacting elements, Making electrical. D. G. Blattner.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acrylic esters of ether-alcohols. C. E. Rehberg and C. H. Fisher. 2,458,888, Jan. 11.
Actuator for toy cash registers, Target release. F. W. Hardick. 2,458,850, Jan. 11.
Acyl-nitroarylides, Preparation of. R. P. Parker, R. F. Reeves, and R. C. Conn. 2,459,002, Jan. 11.
Acylating thiophene with silica-alumina catalyst. A. I. Kosak and H. D. Hartough. 2,458,519, Jan. 11.
Acylating thiophene with silica-hydrous metallic oxide catalyst. A. I. Kosak and H. D. Hartough. 2,458,521, Jan. 11.
Acylation of thiophene. H. D. Hartough and A. I. Kosak. 2,458,512, Jan. 11.
Acylation of thiophene. H. D. Hartough and A. I. Kosak. 2,458,513, Jan. 11.
Acylation of thiophene. A. I. Kosak and H. D. Hartough. 2,458,520, Jan. 11.
Adjusting means for gluing machines. R. A. Page. 2,459,091, Jan. 11.
Adjusting mechanism, Pump and stroke. H. J. Anderson and M. V. Hartman. 2,458,821, Jan. 11.
Adjustment device, Mannikin. J. Prisco. 2,458,917, Jan. 11.
Aerodynamic propelling means operating through direct reaction jet and scavenging. R. J. Imbert and M. H. L. Sédille. 2,458,600, Jan. 11.
Aiding device for self-propelled vehicles, Traction. R. F. MacKay. 2,458,522, Jan. 11.
Air cleaner. J. B. and F. Sebok. 2,458,745, Jan. 11.
Aircraft body and wing arrangement. B. N. Wallis. 2,459,009, Jan. 11.
Alkyl acyloxy acrylates, Preparing. R. D. Babson. 2,459,069, Jan. 11.
Alkyl halides, Purifying. H. L. Yowell and C. E. Morrell. 2,458,819, Jan. 11.
Alloys, Electrodeposition of lead-tin-antimony. J. M. Booe. 2,458,827, Jan. 11.
Alloys, Welding cupro-nickel. C. H. Davis. 2,458,688, Jan. 11.
Aminopyridine compounds. H. L. Friedman and L. D. Braitberg. 2,458,585, Jan. 11.
Ammonia from ore tailings pulp, Recovery of. R. R. Fitzhugh, B. F. Frederick, and B. A. Axelrad. 2,458,902, Jan. 11.
Ammonium compounds, Aliphatic amide-substituted propyl quaternary. P. H. Moss and E. W. Cook. 2,459,088, Jan. 11.
Ammonium compounds, Quaternary. E. W. Cook and P. H. Moss. 2,459,062, Jan. 11.
Amplifier, Negative feedback. J. W. Rieke. 2,459,046, Jan. 11.
Amplifier with direct-current feedback, Direct-coupled. H. J. Grambsch. 2,458,849, Jan. 11.
Antenna system, Directive. C. A. Warren. 2,458,885, Jan. 11.
Antijimmy tubular lock. H. G. Voight. 2,458,751, Jan. 11.
Antioxidants. L. H. Howland. 2,458,780, Jan. 11.
Antiskid mechanism and wheel jack, Vehicle. A. Cohen. 2,459,016, Jan. 11.
Apparatus and method for determining the scuff resistance of leather. C. W. Mann. 2,458,963, Jan. 11.
Apparatus for adjusting the electrical condition of electrical analysers. W. A. Bruce. 2,458,829, Jan. 11.
Apparatus for approximately squaring circles. W. B. Thomson. 2,458,749, Jan. 11.
Apparatus for chlorination processes. J. Dorsky, G. W. Mattson, and C. M. Neher. 2,458,691, Jan. 11.
Apparatus for conducting ion exchange operations. R. C. Campbell. 2,458,893, Jan. 11.
Apparatus for discharging from feed chutes improperly oriented cartridges. J. H. Woodberry and F. W. Hoewischer. 2,458,546, Jan. 11.
Apparatus for electroplating. A. Brenner and T. S. Meites. 2,458,676, Jan. 11.
Apparatus for measuring electrical resistance. H. G. Taylor. 2,458,805, Jan. 11.
Apparatus for measuring field intensity in high-frequency electric fields. E. C. Cork. 2,458,565, Jan. 11.
Apparatus for packing asparagus. H. E. Kelly and H. A. Howard. 2,458,858, Jan. 11.
Apparatus for reactions requiring short contact time. B. E. Roethell and W. G. Scharmann. 2,458,960, Jan. 11.
Apparatus for resistance welding. E. J. Zulinski and R. Barley. 2,458,758, Jan. 11.
Apparatus for the photographic reproduction of documents. A. V. L. C. Debrie. 2,458,769, Jan. 11.
Apparatus for tinning steel. W. F. Grupe. 2,458,509, Jan. 11.
Apparatus for treating hollow bodies. J. Gogan. 2,458,587, Jan. 11.
Appliance, Three-way rupture truss. J. A. Kiser. 2,459,031, Jan. 11.
Applicator, Bait. C. J. Zirbel. 2,458,671, Jan. 11.
Apron for ironing boards, Protecting. E. S. Lyon. 2,458,613, Jan. 11.
Arc welding, Electric. J. M. Tyrner. 2,458,658, Jan. 11.
Arc welding, Method and apparatus for electric. P. B. Scharf. 2,459,047, Jan. 11.
Article support. J. de Swart. 2,458,897, Jan. 11.
Aspirator with a rotatable flexible tube connection, Dust. J. A. C. Malchus. 2,458,614, Jan. 11.
Attachment for sadirons, Combing and brushing. D. Resnick. 2,458,530, Jan. 11.
Auto tire chain ring. C. H. Reynolds. 2,458,642, Jan. 11.
Automatic control. C. F. Kettering and A. W. Fischer. 2,458,784, Jan. 11.
Automatic key case. S. Greenhow. 2,458,938, Jan. 11.
Automatic switch. C. H. Clement. 2,459,015, Jan. 11.
Awning, Louvered. O. O. McKinley. 2,458,619, Jan. 11.
Axle construction for trucks, Tandem. R. A. Woods. 2,458,816, Jan. 11.
Baffle and oil supply means for oil burners, Combined. G. C. Peter. 2,458,916, Jan. 11.
Baffle for water tube boilers. G. P. Reintjes. 2,458,798, Jan. 11.
Bag having a filler mouthpiece in one end, Making a. H. A. Wolf. 2,458,972, Jan. 11.
Balance for airfoils, Differential. R. A. Darby. 2,458,896, Jan. 11.
Balance, Spring. W. H. Yeamans. 2,458,669, Jan. 11.
Baling press. G. B. Hill. 2,458,994, Jan. 11.
Bat, Baseball. J. E. Marsden. 2,458,919, Jan. 11.
Batten clamp. O. and J. A. Lamothe. 2,458,787, Jan. 11.
Beam power tube. D. G. Haines. 2,459,072, Jan. 11.
Bearing shunt means. C. K. Steins. 2,459,099, Jan. 11.
Belt, Aviator's. K. W. Varney and H. D. Allen. 2,458,810, Jan. 10.
Belt tightening means for engine units. E. H. Ensinger. 2,458,575, Jan. 11.
Benzoic acid derivatives. S. Avakian. 2,458,823, Jan. 11.
Binocular loupe. M. Frommer. 2,459,021, Jan. 11.
Birdproofing. J. S. Peles. 2,458,727, Jan. 11.
Blasting machine. A. U. Davis. 2,458,687, Jan. 11.
Block: *See*—
Building block.
Blocker, Sweater. M. Davis. 2,458,689, Jan. 11.
Bomb, Fragmentation. N. L. Etten. 2,458,576, Jan. 11.
Boot, Legging. A. M. Malluk. 2,458,952, Jan. 11.
Boring head. F. C. Wallace. 2,458,753, Jan. 11.
Bowl, Water filter. J. J. Niziolek. 2,458,625, Jan. 11.
Box: *See*—
Folding box. Music box.
Box and package handle. W. Trogman. 2,458,883, Jan. 11.
Box consisting of accordion folded pages in a box, Book. I. Politzer. 2,458,729, Jan. 11.
Bracket for drapery fixtures. E. W. Riley. 2,458,643, Jan. 11.
Brake: *See*—
Variable load brake.
Brake booster, Combined power and manually operated. W. Stelzer. 2,458,803, Jan. 11.
Brake or arresting means, Positive. G. Reget. 2,458,733, Jan. 11.
Bridge for railway track systems, Derailer. W. A. Francis, Sr. 2,458,903, Jan. 11.
Brightening tin plate, Method and apparatus for. J. S. Nachtman. 2,458,525, Jan. 11.
Buff and making the same. L. J. Walling. 2,459,055, Jan. 11.
Building block. R. P. Hester. 2,459,028, Jan. 11.
Burner: *See*—
Low velocity gas burner. Pan type oil gasifying burner.
Low velocity oil and gas burner. Pulverized fuel burner.
Low velocity oil burner.
Butyl rubber for pressure working, Improving cured. W. F. Fischer. 2,458,843, Jan. 11.
Cabinet: *See*—
Scalp conditioning cabinet.
Cages for ball bearings, Making. T. G. Barnbrook. 2,458,762, Jan. 11.
Cambric and linen tape dispenser. H. E. Stevenson. 2,458,964, Jan. 11.
Can: *See*—
Lunch can.
Car with dumping body, Freight. H. C. Lima. 2,459,035, Jan. 11.
Carbazole, Purification of. B. W. Rottschaefer. 2,459,135, Jan. 11.

Carbon black, Manufacture of. R. E. Kinney and E. Gorin. 2,458,996, Jan. 11.
Carbon chromium steels, Producing low. H. B. Schuls. 2,458,651, Jan. 11.
Carbon tetrafluoride, Preparation of. A. F. Benning, J. D. Park, and S. E. Krahler. 2,458,551, Jan. 11.
Carrier: *See*—
Golf club carrier.
Case: *See*—
Automatic key case. Combination bag and spectacle case.
Cigarette and match case.
Caster. H. P. Andresen. 2,458,922, Jan. 11.
Catalyst treatment of gaseous hydrocarbons, Solid. D. W. Young. 2,458,818, Jan. 11.
Catalytic process for the acylation of thiophenes, Continuous. J. Kellett, III, and H. E. Rasmussen. 2,458,514, Jan. 11.
Cathode-ray tube. E. E. Shelton. 2,458,962, Jan. 11.
Cathode-ray tube circuit. K. Schlesinger. 2,458,532, Jan. 11.
Cathode-ray tube focusing circuit. H. G. Boyle. 2,458,891, Jan. 11.
Cell, Alkaline primary. S. Ruben. 2,458,878, Jan. 11.
Cellulosic materials to rubber and composite products formed therefrom, Bonding. J. G. Weeldenburg. 2,458,886, Jan. 11.
Chain: *See*—
Roller bearing chain.
Chair: *See*—
Metal chair.
Chalk holder. G. F. Miller. 2,459,087, Jan. 11.
Chassis engaging device for vehicle lifts. G. Frey. 2,458,986, Jan. 11.
Child's nursing stand. R. Lusardo. 2,458,950, Jan. 11.
Chlorine dioxide, Manufacture of. G. M. Booth. 2,459,124, Jan. 11.
Chuck. J. A. Axelsson. 2,458,824, Jan. 11.
Chuck, Collet. D. W. Bloomquist. 2,458,889, Jan. 11.
Chuck, Drill. A. Norige. 2,458,626, Jan. 11.
Cigarette and match case. H. L. Auten. 2,458,923, Jan. 11.
Ciphering system, Mechanical. A. H. Reiber. 2,458,734, Jan. 11.
Circuit: *See*—
Cathode-ray tube circuit. Electrical control circuit.
Cathode-ray tube focusing circuit.
Circuit breaker, Electric. H. A. H. Nijland. 2,458,792, Jan. 11.
Circuit for sampling balanced signals. L. W. Hussey. 2,458,599, Jan. 11.
Circuit protector. E. V. Sundt. 2,458,804, Jan. 11.
Circuit testing device, Vest-pocket. N. N. Okun. 2,458,628, Jan. 11.
Circuits, Coded track. C. B. Shields. 2,458,746, Jan. 11.
Clamp: *See*—
Batten clamp.
Clamp for railroad car axles, Reamer. E. L. Bowen. 2,459,013, Jan. 11.
Cleaner: *See*—
Air cleaner. Spark plug cleaner.
Cleaning metal surfaces and compositions therefor. H. G. Webster and C. L. Palter. 2,458,661, Jan. 11.
Clock, Drum type indicator alarm. A. A. Johnson. 2,459,107, Jan. 11.
Clothesline, Collapsible. S. P. Midouhas. 2,459,110, Jan. 11.
Clutch and brake mechanism, Fluid actuated. J. N. Weiland. 2,458,664, Jan. 11.
Clutch control. A. R. Cooper. 2,458,767, Jan. 11.
Coating electrical devices. R. W. De Monte and A. B. Haines. 2,459,018, Jan. 11.
Coaxial line generator. L. W. Schreiner and E. V. Leonard. 2,458,650, Jan. 11.
Cocking bolt of machine guns. F. W. Sampson and G. J. Hyde. 2,458,647, Jan. 11.
Coffee maker, Automatic. L. Reichold. 2,458,640, Jan. 11.
Colonic device. W. R. McCormick. 2,458,718, Jan. 11.
Combination bag and spectacle case. M. K. Cramer. 2,458,567, Jan. 11.
Combustion chamber. E. G. Bailey. 2,458,497, Jan. 11.
Compensating for thermal load changes in heat-treatment furnaces, Method and apparatus for artificially. W. A. Morton and E. G. Smith. 2,458,624, Jan. 11.
Compensator for electrical regulators, Temperature. W. G. Neild. 2,458,957, Jan. 11.
Compounds of silicon and halogen, Reduction of. D. B. Hatcher. 2,458,703, Jan. 11.
Compressor and exhauster, Sliding vane air. H. A. Garrison. 2,459,071, Jan. 11.
Compressor, Crop. F. Linderer. 2,458,713, Jan. 11.
Compressor, Refrigerant. A. I. Ponomareff. 2,458,730, Jan. 11.
Compressor, Sliding vane. D. W. Megeber. 2,458,620, Jan. 11.
Computer, Electrical. E. R. Fenske. 2,458,697, Jan. 11.
Computing apparatus. A. C. Hardy and E. C. Dench. 2,459,106, Jan. 11.
Computing device, Electronic. W. H. Boghosian and H. G. Och. 2,458,553, Jan. 11.
Connection, Electric swivel. F. J. Rehm, Jr. 2,459,118, Jan. 11.
Connection, Spring compression tubing and pipe. R. Carignan. 2,458,833, Jan. 11.
Connection, Tool handle. J. Winkler. 2,458,815, Jan. 11.
Contacting apparatus, Gas-solid. K. M. Watson. 2,459,056, Jan. 11.
Contacting elements, Making electrical. D. G. Blattner. 2,458,552, Jan. 11.
Connector: *See*—
Electrical connector. Straddle link connector.
Preinsulated aerial cable tap connector.
Container: *See*—
Shock-proof bottle container.
Container. A. J. Chateauneuf. 2,458,834, Jan. 11.
Container and support, Combined bottle. R. Chemlinski. 2,458,766, Jan. 11.
Control and lockout means for telephone stations, Dual. G. G. Bradley and H. F. Mohr. 2,458,557, Jan. 11.
Control device. C. I. Hall. 2,458,939, Jan. 11.
Control means, Capillarity. D. T. Nave and R. L. Sullivan. 2,459,042, Jan. 11.
Control means for gramophones. E. W. Mortimer. 2,458,623, Jan. 11.
Control system and mechanism, Fluid. T. B. Chace. 2,458,978, Jan. 11.
Control system, Electric motor follow-up. W. L. Dunn. 2,458,983, Jan. 11.
Control system, Electrical. O. R. Carpenter and F. W. Armstrong, Jr. 2,458,503, Jan. 11.
Control system for electric circuits, Automatic. N. Márques. 2,458,954, Jan. 11.
Control system utilising automatic phase shift, Electronic. R. L. Ringer, Jr., and C. E. Smith. 2,458,644, Jan. 11.
Controlling frequency characteristics in sound recording, Method and apparatus for. M. Rettinger and K. Singer. 2,458,641, Jan. 11.
Conversion of fluid hydrocarbons, Method and apparatus for. E. V. Bergstrom. 2,458,498-9, Jan. 11.
Cooling device by vaporisation for internal-combustion engines. G. Levesque du Roatu. 2,458,609, Jan. 11.
Copolymers of vinyl compounds containing olefins. A. M. Clifford. 2,459,126, Jan. 11.
Correction device for electronic function generators. M. L. Greenough. 2,458,700, Jan. 11.
Cotton and other textile fibers, Method and machine for combing. F. Raubitschek. 2,458,732, Jan. 11.
Coupling: *See*—
Quick disconnect coupling.
Coupling. E. N. Doubrava. 2,458,899, Jan. 11.
Coupling. F. D. Mahoney. 2,458,714, Jan. 11.
Coupling for tubes. A. L. Parker. 2,458,874, Jan. 11.
Coupling for tubes. J. N. Wolfram. 2,458,817, Jan. 11.
Cover: *See*—
Wheel cover.
Cover and iron pad or pad holder, Combined ironing board. F. Galbraith. 2,458,698, Jan. 11.
Covering, Removable floor or wall. S. G. Trepp. 2,458,750, Jan. 11.
Cream dispenser. J. P. Jones. 2,459,130, Jan. 11.
Creasing counters, Method of and apparatus for preparing. G. G. Messersmith. 2,458,867, Jan. 11.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,458,615, Jan. 11.
Crystal controlled frequency modulation system. W. M. A. Andersen. 2,458,760, Jan. 11.
Crystal unit, Piezoelectric. H. F. Fruth and R. J. Pierce. 2,458,987, Jan. 11.
Cup having a pouring lip extending outwardly from sidewall, Paper. K. C. Hamilton. 2,459,073, Jan. 11.
Cutter: *See*—
Potato seed cutter.
Cutoff machine. A. B. Eastwood. 2,459,068, Jan. 11.
Cutting blanks. J. E. Socke. 2,458,538, Jan. 11.
Detector, Gas. N. E. Lindström. 2,458,610, Jan. 11.
Developer, Plate. J. T. Campbell. 2,458,561, Jan. 11.
Device for attaching metal baling ribbons to anchorage plates. F. A. Singley. 2,458,747, Jan. 11.
Device for continuous pressure politserization, Portable. O. E. Reynolds and G. G. Loyal. 2,458,959, Jan. 11.
Device for depilatory purposes. E. Kerr. 2,458,911, Jan. 11.
Device for mixing dental amalgams. J. H. Downer. 2,458,892, Jan. 11.
Device for use with enclosed bus bar distribution systems, Protective. W. H. Frank. 2,458,583, Jan. 11.
Die set with automatic stamping and/or punching removing means, Self-contained. C. H. Tauser. 2,459,053, Jan. 11.
Dies, Making. F. E. McGary, E. Hochreiter, C. F. Schlecht, and F. Shannon. 2,459,084, Jan. 11.
Digger, Posthole. L. L. Grosshart. 2,458,991, Jan. 11.
Dimethyl terephthalate, Making. R. M. Cavanaugh and J. E. Lufkin. 2,459,014, Jan. 11.
Discharge device for voltage measurement. A. W. Vingerhoets and H. Nieuwdorp. 2,458,659, Jan. 11.
Dispenser: *See*—
Cambric and linen tape dispenser. Cream dispenser.
Dispensing-display stand. S. A. Prag. 2,458,797, Jan. 11.
Disposal receptacle. C. E. Miller. 2,458,868, Jan. 11.

Distortion reduction in channel switching. L. R. Cox and G. H. Huber. 2,458,566, Jan. 11.
Fuse construction, Drop-out. W. O. Schults. 2,458,743, Jan. 11.

Hydrocarbon conversion, Method and apparatus for fluid. F. H. Ray. 2,459,096, Jan. 11.
Hydrocarbon conversion process. D. R. Carmody.
Magnesia refractory. R. A. Schoenlaub. 2,458,533, Jan. 11.
Magnesium products, Manufacture of. G. H. Gloss.

Distortion reduction in channel switching. L. R. Cox and G. H. Huber. 2,458,566, Jan. 11.
Distributor for multiplex pulse communication systems, Electronic. M. H. Mesner. 2,459,131, Jan. 11.
Door: *See*—
Garage door.

Folding box. G. J. Evans. 2,458,578, Jan. 11.
Follow-up apparatus, Electrical. K. Rath. 2,458,731, Jan. 11.
Foot supporting device for shoes. G. E. Burford. 2,458,501, Jan. 11.
Form for concrete floors, Construction. J. J. Pirs. 2,459,044, Jan. 11.
Forming means for strip-metal forming machines, Supplementary. F. and I. Himmel. 2,458,906, Jan. 11.
Forming precision bore glass tubing. S. J. Everett. 2,458,934, Jan. 11.
Forwarder for corn pickers and huskers, Stalk. R. P. Messenger. 2,458,791, Jan. 11.
Frame construction, Bee comb. G. Dunham. 2,458,838, Jan. 11.
Froth flotation of sulfide ores in the presence of a N-dichlorothiocarbanilide. R. B. Martin. 2,458,523, Jan. 11.
Fuel conditioner, Water heating type. H. G. Blumberg and E. M. Stevens. 2,458,826, Jan. 11.
Furnace operations, Improving blast. C. D. King and P. D. Nielsen. 2,458,947, Jan. 11.
Fuse construction, Drop-out. W. O. Schultz. 2,458,742, Jan. 11.
Fuse construction, Drop-out. W. O. Schultz. 2,458,743, Jan. 11.
Game apparatus, Amusement. H. E. Williams. 2,459,011, Jan. 11.
Game apparatus having illuminating means simulating dropping of a bomb from an airplane upon a boat, Amusement. W. H. Burdick. 2,458,892, Jan. 11.
Game board and playing pieces for a chance controlled game. J. P. Waldrop. 2,458,966, Jan. 11.
Garage door. F. J. Kappes. 2,458,604, Jan. 11.
Garment. P. and F. Owenby and J. A. Sacks. 2,459,043, Jan. 11.
Garment, Convertible foundation. R. S. Kops. 2,458,712, Jan. 11.
Gas purification process. F. Denig. 2,458,505, Jan. 11.
Gasoline, Production of. R. M. Cole. 2,458,980, Jan. 11.
Gauge: *See*—
Electric pressure and deflection gauge.
Gauge for measuring subatmospheric pressures. G. R. Abell, Jr. 2,458,759, Jan. 11.
Gauge for punches, Back. R. R. Uhrmacher. 2,459,101, Jan. 11.
Gear assembly for trailer wagons, Running. K. L. and E. D. Smith. 2,459,050, Jan. 11.
Gearing, Clutch. D. M. K. Marendaz. 2,458,716, Jan. 11.
Gearing for centrifugal machines, Differential. A. F. Howe. 2,458,706, Jan. 11.
Gelatin and aldonic acids and making same, Reaction products of. A. E. Chester and F. F. Reisinger. 2,458,504, Jan. 11.
Generator: *See*—
Coaxial line generator.
Glyceryl ester of levo-pimaric acid-maleic anhydride adduct, Polymerizing the. E. E. Fleck. 2,458,772, Jan. 11.
Golf club. R. F. Wheeler and E. J. Marciniak. 2,458,920, Jan. 11.
Golf club carrier. R. Baker. 2,458,924, Jan. 11.
Golf practicing and teaching apparatus. R. F. Cottingham. 2,458,932, Jan. 11.
Governor. I. E. Coffey. 2,459,061, Jan. 11.
Grader for carrots and vegetables having like-tapering forms, Bar screen. R. H. Winters. 2,458,887, Jan. 11.
Grinding machine. E. N. Eklund. 2,458,840, Jan. 11.
Grinding machine, Planetary. W. J. Bryant and T. H. Ljunggren. 2,458,765, Jan. 11.
Grinding wheel dressing device. E. J. Daily. 2,458,768, Jan. 11.
Gripper, Ski towrope. E. E. Lagergren. 2,458,786, Jan. 11.
Guard, Fingernail. J. H. Kayer. 2,458,709, Jan. 11.
Guard, Rat. E. L. Bush. 2,459,060, Jan. 11.
Guide, Curtain rod. W. A. Murray and G. T. Alley. 2,459,001, Jan. 11.
Guide for saw tables, Adjustable work. R. H. Gilmore. 2,458,846, Jan. 11.
Guide, Insulated cable and rope spooling. H. Donahue. 2,458,573, Jan. 11.
Gun mounting. L. Motley. 2,458,956, Jan. 11.
Gun sight with horizontal and vertical deflection adjustments, Optical. W. M. Cady. 2,458,831, Jan. 11.
Halter and controller, Bull. H. Masbruch. 2,458,717, Jan. 11.
Halter, Brassière. S. Elias. 2,458,696, Jan. 11.
Handle: *See*—
Box and package handle.
Handle device. F. C. Wallace. 2,458,754, Jan. 11.
Handles, Making machine. E. S. George. 2,458,989, Jan. 11.
Hanger. M. H. Kruger. 2,459,034, Jan. 11.
Heat exchange apparatus. J. P. Rathbun. 2,459,095, Jan. 11.
Heater having means to prevent fuel-contamination of the ventilating air, Internal-combustion. L. A. Williams, Jr. 2,458,968, Jan. 11.
Heating apparatus. Y. R. Cornelius. 2,458,835, Jan. 11.
Heating coking retort ovens with enriched mixtures of fuel gas. W. O. Keeling. 2,458,515, Jan. 11.
Heating device with corrosion protective anode, Water. H. T. Bates, D. J. Fergus, and A. F. Craver. 2,459,123, Jan. 11.
Hanger: *See*—
Multiple hanger. Skirt hanger.
Hitch mechanism. C. W. Goff. 2,458,848, Jan. 11.
Hitch, Trailer. C. Williams. 2,458,667, Jan. 11.
Hitch, Universal. L. L. Hyler. 2,458,761, Jan. 11.
Hod, Collapsible. T. M. Hevener. 2,458,942, Jan. 11.
Holder: *See*—
Chalk holder. Fishing rod holder.
Electrode holder. Wrist watch holder.
Holder and tension member for toy cash registers, Combination key. H. A. Kroenlein. 2,458,863, Jan. 11.
Holder for coal-cutting chains, Bit. E. F. Johnston. 2,458,946, Jan. 11.
Hood for motor vehicles and the like, Folding. J. H. Orr. 2,459,069, Jan. 11.
Hose coupling valve. Z. A. Twardowski. 2,458,809, Jan. 11.
Hydraulic jack. F. H. Schwerin. 2,458,744, Jan. 11.
Hydrocarbon compositions and petroleum distillates, Modified. S. Shappirio. 2,458,535, Jan. 11.

Hydrocarbon conversion, Method and apparatus for fluid. F. R. Ray. 2,459,096, Jan. 11.
Hydrocarbon conversion process. D. R. Carmody. 2,458,977, Jan. 11.
Hydrocarbons, Photochemical chlorination of. J. S. Sconce and A. N. Johnson. 2,459,049, Jan. 11.
Hydrocarbons, Purification of. H. J. Hepp and H. R. Sailors. 2,458,777, Jan. 11.
Hydrodynamic machine. W. Ferris and J. K. Douglas. 2,458,985, Jan. 11.
Illustrations, Manufacture of integral, three-dimensional, self-erecting. A. Schenk. 2,458,879, Jan. 11.
Index of the rotary type, Card. G. W. Torrence and W. A. Calkins. 2,458,657, Jan. 11.
Indexing mechanism for valves. A. L. Parker and E. C. Hartley. 2,458,873, Jan. 11.
Indicator: *See*—
Milk bottle indicator. Modulation indicator.
Indicating device. D. W. Peterson. 2,458,634, Jan. 11.
Indicator for aircraft, Course and height. H. W. Hastings-Hodgkins. 2,459,074, Jan. 11.
Indium and its alloys, Electrodeposition of. J. R. Dyer, Jr., and T. J. Rowan. 2,458,839, Jan. 11.
Instructing device, Football. C. A. Engle. 2,458,984, Jan. 11.
Instrument, Electrical measuring. M. C. Kuns. 2,459,081, Jan. 11.
Instrument for simulating attitude gyros, Aircraft training. R. C. Dehmel. 2,458,982, Jan. 11.
Instrument, Musical. N. J. Adair. 2,459,102–3, Jan. 11.
Ionization chamber. J. H. Parsons. 2,458,632, Jan. 11.
Jack: *See*—
Hydraulic jack.
Telescoping tube screw jack.
Jack and engine starting device, Combination automobile. G. W. Harris. 2,458,590, Jan. 11.
Jig for assembling hollow structures. W. L. Lewis and F. C. Pahl. 2,458,788, Jan. 11.
Jig, Punch. J. F. Murphy. 2,458,524, Jan. 11.
Joint: *See*—
Pipe joint.
Joint for exhaust structures, Expansion. P. A. Pitt and H. A. Sprenger. 2,458,635, Jan. 11.
Joint for wallboards, Corner. C. K. Barge. 2,458,925, Jan. 11.
Joist. S. F. McIntosh. 2,459,037, Jan. 11.
Ketones for catalytic reaction of olefins and acid anhydrides, Preparation of. C. E. Johnson. 2,458,603, Jan. 11.
Key, Telegraph. C. M. Hayman. 2,459,027, Jan. 11.
Kit, Electric shaving. H. F. Nenno. 2,458,721, Jan. 11.
Labyrinth packing. G. F. Gayer. 2,458,988, Jan. 11.
Lacquers and their manufacture, Phenol oxide resin. G. H. Ott and W. Kraus. 2,458,796, Jan. 11.
Landing mechanism for airplanes. E. M. Gardner. 2,458,845, Jan. 11.
Latch tripping mechanism. H. W. Sanford. 2,458,738, Jan. 11.
Lens with mounting means for sound projectors, Scanning. J. Kogel. 2,458,860, Jan. 11.
Lift for bifocal spectacles, Temporary. E. K. Smith. 2,459,051, Jan. 11.
Lighter, Pocket. A. Campos. 2,458,832, Jan. 11.
Lighter, Pyrophoric. F. Meyer. 2,459,085, Jan. 11.
Link, Game holder. R. H. Boehm. 2,458,675, Jan. 11.
Load carrier mounting. L. H. Lull. 2,458,949, Jan. 11.
Loading and unloading apparatus for vehicles. G. H. Pride. 2,459,045, Jan. 11.
Locating and locking means. T. A. Kestell. 2,458,859, Jan. 11.
Locating system, Object. B. M. Oliver. 2,459,117, Jan. 11.
Lock: *See*—
Antijimmy tubular lock. Window sash lock.
Lock for adjustable end wrench. J. H. Ogden. 2,458,794, Jan. 11.
Locking mechanism for jigs and the like. M. Hitzelhammer. 2,458,705, Jan. 11.
Locking system, Door. J. G. Ingres and D. T. Ayers, Jr. 2,459,029, Jan. 11.
Loosener, Drill bit. S. H. Malinak. 2,458,951, Jan. 11.
Low velocity gas burner. N. J. Urquhart. 2,458,543, Jan. 11.
Low velocity oil and gas burner. N. J. Urquhart. 2,458,542, Jan. 11.
Low velocity oil burner. N. J. Urquhart. 2,458,541, Jan. 11.
Lubricating system for mechanisms operating at high altitudes. R. Birmann. 2,458,763, Jan. 11.
Lubricating unit, High-pressure. L. B. Williams. 2,459,010, Jan. 11.
Lunch can. J. Dougherty. 2,458,837, Jan. 11.
Machine for beading tubes by radial expansion followed by axial pressure. H. E. Hull and P. L. Takacs. 2,458,854, Jan. 11.
Machine for trimming shoe parts. E. A. Holmgren. 2,458,598, Jan. 11.
Machine particularly for producing coiled filaments for electric lamps and electronic tubes, Wire coiling. H. Marter. 2,458,789, Jan. 11.
Machine rest, Pistol. E. Lea. 2,458,608, Jan. 11.
Machine with integral connector boxes, Dynamoelectric. R. Happe. 2,458,904, Jan. 11.
Magnesia refractory. R. A. Schoenlaub. 2,458,533, Jan. 11.
Magnesium products, Manufacture of. G. H. Gloss. 2,458,847, Jan. 11.
Magnetron assembly and method. P. L. Spencer. 2,458,802, Jan. 11.
Magnetron, Tunable. H. C. Jonas, J. P. Laico, and V. L. Ronci. 2,459,030, Jan. 11.
Manganese, Stripping electrodeposited. J. H. Jacobs. 2,458,908, Jan. 11.
Manometer, Constant reference point. J. W. Jensen. 2,458,783, Jan. 11.
Marking device. H. E. Oles. 2,458,871, Jan. 11.
Mask. H. D. Fiskett and J. G. Lenta. 2,458,580, Jan. 11.
Master safety switch. F. F. Crooke. 2,458,930, Jan. 11.
Material handling apparatus. G. B. Palmer. 2,458,915, Jan. 11.
Means for controlling and equalizing tube temperatures. C. C. Watson. 2,458,756, Jan. 11.
Means for crush forming grinding wheels. C. W. Kirin. 2,458,605, Jan. 11.
Measuring apparatus, Electronic. R. W. Gilbert. 2,459,104, Jan. 11.
Measuring device, Fluid flow. R. H. Pratt and J. Q. Underwood, Jr. 2,458,637, Jan. 11.
Measuring pressure, Method of and apparatus for. J. B. Johnson. 2,458,601, Jan. 11.
Measuring pressure, Method of and apparatus for. G. W. Willard. 2,458,665, Jan. 11.
Mechanism for clinching covers onto cans. R. E. Renard. 2,458,529, Jan. 11.
Mechanism for metal drilling and like machines, Chip breaking. C. B. Clark. 2,458,929, Jan. 11.
Member for endless tracks, Center guide tread. G. M. Waller. 2,458,755, Jan. 11.
Metal articles, Making composite. H. G. Webster. 2,458,660, Jan. 11.
Metal band, Imbedded. S. Rosenberg and S. Padwe. 2,458,645, Jan. 11.
Metal bending and stretching apparatus. J. S. Nielsen. 2,459,132, Jan. 11.
Metal chair. E. C. Booth. 2,458,890, Jan. 11.
Metal salts of halogen substituted phenylol sulfides, Divalent. E. W. Cook and P. H. Moss. 2,459,063, Jan. 11.
Metals, Case-hardening. F. J. Sowa. 2,458,655, Jan. 11.
Methoxy acetic acid, Preparation of. L. Schmerling. 2,458,741, Jan. 11.
Methylene sulfonate derivatives of alkyl compounds and aryl compounds. H. L. Friedman and L. D. Braitberg. 2,458,584, Jan. 11.
Methylfuran, Producing. I. B. Johns and L. W. Burnette. 2,458,857, Jan. 11.
Milk bottle indicator. J. L. Churchill. 2,458,979, Jan. 11.
Milker, Pressure releaser. F. G. Hodsdon. 2,458,779, Jan. 11.
Milling machine. W. Hoier and R. N. Clifton. 2,458,597, Jan. 11.

Baling press.
Preventing secondary reactions in catalytic processes. R. W. Krebs. 2,458,862, Jan. 11.
Primer and idler. W. R. S. Mills. 2,458,999, Jan. 11.
Printing machine, Screen. R. F. Foard. 2,458,773, Jan. 11.
Products obtained by reacting phosphorus pentasulfide with sulfurized ketones. F. P. Otto and R. E. Meyer. 2,459,090, Jan. 11.
Propeller mechanism for barges, scows, and the like, Outboard. A. W. Wanzer. 2,458,813, Jan. 11.
Protective device. G. F. Lincks. 2,458,948, Jan. 11.
Protector: *See*—
Circuit protector.
Protector for skis, Snow. O. Johnson. 2,458,602, Jan. 11.
Pulse communication. O. E. Dow. 2,458,574, Jan. 11.
Pulse system. H. O. Peterson. 2,458,633, Jan. 11.
Pulverized fuel burner. F. T. Hague. 2,458,992, Jan. 11.
Pump: *See*—
Electrically actuated Self-printing centrifugal pump. pump.
Pneumatic control acceler- Unidirectional flow gear ating pump. pump.
Pump and compressor, Internal gear. R. J. S. Pigott and E. A. Morl. 2,458,958, Jan. 11.
Pump for evaporative air coolers or the like. G. C. Rudd and C. B. Wright. 2,459,097, Jan. 11.
Pump means and motor means, Combined. B. R. Lipe and E. E. Schroeder. 2,459,036, Jan. 11.
Pump or motor, Reciprocating. J. C. Naylor. 2,458,869, Jan. 11.
Quick action switch. M. L. Jeffrey. 2,459,077, Jan. 11.
Quick disconnect coupling. P. P. Johnson. 2,458,910, Jan. 10.
Rack: *See*—
Film rack. Tie rack.
Floral rack.
Radio-frequency apparatus. E. L. Crandell. 2,458,684, Jan. 11.
Radiotelephone equipment. G. G. Bradley. 2,458,558, Jan. 11.
Ratchet-operating means. W. A. Tratsch. 2,459,008, Jan. 11.
Receiver, Cathode-ray ultra high frequency. A. R. Knight. 2,458,517, Jan. 11.
Receptacle: *See*—
Disposal receptacle.
Receptacle cover pry-off tool. J. C. Tippett. 2,458,806, Jan. 11.
Reciprocating cylinder internal-combustion engine. L. L. Zoch, Jr. 2,458,672, Jan. 11.
Rectifying system. H. Klemperer and W. F. Huntley. 2,458,516, Jan. 11.
Reducing sugars, Electrolytic process for. H. J. Creighton and R. A. Hales. 2,458,895, Jan. 11.
Reflectoscope, Supersonic. F. A. Firestone. 2,458,771, Jan. 11.
Refrigerating device for the manufacture of frozen comestibles. R. F. Harless. 2,458,940, Jan. 11.
Refrigeration apparatus, Two temperature. L. B. M. Buchanan. 2,458,560, Jan. 11.
Refrigeration system, Low-temperature. S. C. Collins. 2,458,894, Jan. 11.
Refrigeration unit, Two temperature. K. P. Groat. 2,458,589, Jan. 11.
Refrigerator provided with a defrosting control for the refrigeration system thereof. G. S. McCloy. 2,459,083, Jan. 11.
Reinforcing means for propeller blades, Rib. G. W. Brady. 2,458,975, Jan. 11.
Release for pendulum arms of testing machines, Pawl. R. W. Rogers and C. C. Blanch. 2,459,134, Jan. 11.
Release mechanism, Standing valve. E. M. Roark. 2,459,003, Jan. 11.
Remover, Cork. W. J. Hines. 2,458,778, Jan. 11.
Removing entrained gaseous fluids from solids. H. Z. Martin. 2,458,866, Jan. 11.
Repellent, Shark. R. L. Tuve, J. M. Fogelberg, F. E. Brinnick, and H. S. Springer. 2,458,540, Jan. 11.
Resinous products from acetylene and secondary and tertiary alkyl phenols, Producing. A. O. Zoss. 2,459,137, Jan. 11.
Resonator and wave guide apparatus, Coupled cavity. A. E. Bowen. 2,458,556, Jan. 11.
Restraining device, Cattle. H. Flohr, Jr. 2,458,582, Jan. 11.
Retarder, Corrosion. J. T. Rucker. 2,459,119, Jan. 11.
Revolving serving table. L. Crew. 2,459,017, Jan. 11.
Ring: *See*—
Auto tire chain ring.
Roll for suction cleaners, Brush. C. H. Taylor. 2,459,007, Jan. 11.
Roll tension device. S. H. Helland. 2,458,852, Jan. 11.
Roller bearing chain. S. Couper. 2,458,682, Jan. 11.
Rubber material, Making sponge. E. A. Eakins. 2,458,894, Jan. 11.
Rubber softened with sulfur dioxide and chlorine treated polyisobutylene reacted with ammonia. N. M. Elmore and A. M. Gessler. 2,458,841, Jan. 11.
Safety attachment. I. D. Houseman. 2,458,943, Jan. 11.
Safety for shotguns and the like, Trigger. T. L. Maynor. 2,458,616, Jan. 11.
Salt baths, Molten. H. G. Webster. 2,458,663, Jan. 11.
Sampling device. H. E. Goetz. 2,458,508, Jan. 11.
Scales, Spring testing. H. O. Hem. 2,458,704, Jan. 11.
Scaling, Preventing. W. J. Marencik and R. E. Ahlf. 2,458,715, Jan. 11.
Scalp conditioning cabinet. C. Fields. 2,458,901, Jan. 11.
Scanning device, Web. M. O. Bassett. 2,458,926, Jan. 11.
Seal for electric terminals and the like, Hermetic. S. H. Stupakoff. 2,458,748, Jan. 11.
Secondary electron emission tube. W. Soller. 2,458,539, Jan. 11.
Self-priming centrifugal pump. H. Lauchenauer. 2,458,607, Jan. 11.
Self-synchronous system. H. A. Giroud. 2,458,586, Jan. 11.
Sequence control. R. D. Cowherd and W. H. Stahl, Jr. 2,458,683, Jan. 11.
Serving combination. B. Hoppe. 2,458,907, Jan. 11.
Servo mechanism, Self-contained hydraulic. E. A. Rockwell. 2,458,736, Jan. 11.
Set, Tubing. N. M. Nesset and E. J. Nawoj. 2,458,722, Jan. 11.
Shaker, Salt and pepper. C. E. Nyberg. 2,459,133, Jan. 11.
Sharpener, Kitchen knife. J. B. Jacobson. 2,458,856, Jan. 11.
Shearing apparatus, Automatic. F. Luzzatto and J. C. Palmer. 2,458,612, Jan. 11.
Shelf, Serpentine freezer. G. Orley. 2,458,629, Jan. 11.
Shock absorbing mechanism for railway draft riggings, Friction. A. E. Dentler. 2,458,572, Jan. 11.
Shock-proof bottle container. M. B. Salkowitz. 2,458,737, Jan. 11.

Wallet with auxiliary or secret billfold. S. Knee. 2,458,711, Jan. 11.

Weather strips, Making. L. Spraragen. 2,459,120, Jan. 11.

Well logging method, Radio activity. G. Herzog. 2,458,596, Jan. 11.

Wheel: *See*—
Spring wheel. Vehicle road wheel.

Winding system and apparatus. R. Bouvet. 2,458,555, Jan. 11.

Window sash lock. R. O. Britton. 2,458,559, Jan. 11.

Wiper device for car axle journals and the like. E. Armstrong. 2,459,058, Jan. 11.

Wrapping saw blades or the like, Method and apparatus for. H. E. and G. W. Wilson. 2,458,971, Jan. 11.

Wrist watch holder. V. T. O'Donnell. 2,458,793, Jan. 11.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 11, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

United States District Court for the District of Columbia

AMERICAN CYANAMID COMPANY AND WILLIAM B. JOHNSTON

v.

LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS

No. 56,850. Decided September 30, 1948

1. PATENTABILITY—INVENTION—ALCOHOLS AND ESTERS THEREOF.

Where applicant obtains a patent with claims to a method of producing particular alcohols and the alcohols so produced, and where in an application copending with that on which the patent issued applicant seeks claims to an ester of such alcohols, *Held* that there is no invention in an ester produced from the alcohols disclosed and claimed in applicant's patent.

2. SAME—SAME—ESTERS OF POLYMERIZED POLYENE FATTY ACID ALCOHOLS.

Certain claims to the product prepared by esterifying the alcohols produced from polymerized polyene fatty acids *Held* non-inventive over a patent claiming the alcohols.

3. SAME—SAME—SAME.

Certain claims to the product prepared by esterifying the alcohols produced from polymerized polyene fatty acids *Held* non-inventive over the prior art.

ACTION UNDER R. S. 4915 by American Cyanamid Company and William B. Johnston (Application Serial No. 340,840, Patent Office Division 50) against Lawrence C. Kingsland, Commissioner of Patents. Complaint dismissed.

James Edwin Archer (*Edmund H. Parry, Jr.*, of counsel) for plaintiff.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

MCGUIRE, *J.*:

Findings of Fact

1. This is a civil action under section 4915 Rev. Stat. (U. S. C., title 35, sec. 63) in which the plaintiffs (American Cyanamid Company, as assignee of the applicant, William B. Johnston, and the applicant, William B. Johnston) seek to have the court authorize the Commissioner of Patents to issue a patent on claims 1 to 9, inclusive, and 11 to 18, inclusive, of the patent application of plaintiff William B. Johnston, Serial No. 340,840, entitled "Esters of High Molecular Weight Polyhydric Alcohols and Processes of Producing the Same."

2. Claims 1 to 9, inclusive, set forth in the complaint were withdrawn by plaintiffs at the trial.

3. Claims 12, 13, 16 and 18, set forth in the complaint, are for species of the alleged invention different from that elected for prosecution in the application in the absence of an allowable generic claim; hence said claims are not properly before the court for judgment on their merits. Claims 11, 14, 15 and 17 are involved on the merits.

4. The application at bar describes methods for the production of esters and the esters so produced of the polyhydric alcohols obtained by hydrogenating certain polymeric polyene fatty acid esters. The procedure for producing the polyhydric alcohols is the same as that described and claimed in plaintiff's Johnston's Patent No. 2,347,562. The polyhydric alcohols so produced are esterified with any suitable acid, organic or inorganic, monobasic or polybasic. The physical characteristics of the esters depend upon the type of acid used, the polybasic acids tending to form resinous esters.

5. The Patent No. 2,347,562 granted to plaintiff Johnston on April 25, 1944, discloses and claims the method of producing the particular alcohols used to form the esters claimed in the application involved in this action. The alcohols so produced are also claimed in the patent. The physical properties of the alcohols are set forth and it is stated that they are useful for reaction with carboxylic and other acids, and that they may be reacted with monocarboxylic acids to produce esters.

6. The publication of Shriner and Fuson (1935) on the Systematic Identification of Organic Compounds states that in the identification of alcohols, particularly the polyhydric alcohols, it is customary to prepare benzoate and acetate esters of such alcohols. The procedures disclosed in the application at bar for the production of the benzoate and acetate esters are substantially the same as those described in this publication.

7. The patent to Jaeger, 1,864,909, granted June 28, 1932, relates to the preparation of synthetic resins of the polyhydric alcohol-polybasic acid type. These resins are esters. Among the alcohols listed as useful in the formation of such resinous esters are the polyglycerols and polyglycols. The acids used may be mono- or poly-carboxylic, the preferred acid being phthalic anhydride.

8. The patent to Hansley et al., 2,035,314, granted March 24, 1936, relates to the production of resinous esters of the polyhydric alcohol-polybasic acid type, and teaches that the solid glycols made by hydrogenating the corresponding fatty acid acyloins have a decided advantage over the liquid polyhydric alcohols.

9. The patent to Sly, 2,073,031, granted March 9, 1937, describes the production of esters of a specific polyhydric alcohol, octadecanediol, with polybasic acids.

10. The publication Chemistry of Synthetic Resins, by Carleton Ellis (1935) shows the general

declaratory judgment filed Dec. 2, 1948, D. C., E. D. Mich., S. Div., Doc. 7817, *Hopp Press, Inc., v. Shaw & Slawsky, Inc., et al.*

Dec. 112,929. T. Friedman, Mounting for a reading

T. M. 345,562, Rock Island Brewing Co., Beer, filed Nov. 12, 1948, D. C., N. D. Ill., E. Div., Doc. 48c1662, *Warsaw Brewing Corp. v. Atlantic Brewing Co. et al.*

T. M. 380,575, Brody Mfg. Co., Stockinette sheets made

knowledge in the art that resinous esters, alkyd resins, are formed by reaction between a polyhydric alcohol and a polybasic acid, and that different polyhydric alcohols yield different products with the same polybasic acid. The publication also describes various polyhydric alcohols that have been used in the preparation of these resinous esters. The use of any polyhydric alcohol for this purpose is indicated.

11. There is no invention in an ester produced from the alcohols disclosed and claimed in the Johnston patent.

12. There is no invention in using the alcohols described and claimed in the Johnston patent for the alcohols used in each of Jaeger, Hansley et al., Sly and Ellis.

13. Claims 11, 14, 15 and 17 define no invention over the Johnston patent.

14. Claims 11, 14, 15 and 17 define no invention over Jaeger, Hansley et al., Sly or Ellis.

15. Claims 11, 14, 15 and 17 are unpatentable.

Conclusions of Law

1. Plaintiffs are not entitled to a patent containing any of claims 1 to 9, inclusive, and 11, 14, 15 and 17, set forth in the complaint.

2. Plaintiffs are not entitled to a patent based upon the presently involved application containing any of claims 12, 13, 16 and 18 set forth in the complaint.

3. The complaint should be dismissed as to all the claims.

1,993,121, J. L. Travers, Artificial eye, filed June 22, 1948, D. C., N. D. Ala. (Birmingham), Doc. 6138, *Mager & Gougelman, Inc.*, v. *E. Melof.*

1,993,365. (See 1,932,068.) 1,993,366. (See 1,932,068.)

2,109,946, H. C. Little, Oil burner, D. C., N. D. Calif., S. Div., Doc. 26922–R, *H. C. Little Burner Co., Inc.*, v. *Hammer-Bray Co., Ltd., et al.* Certain claims held valid, and infringed by Hammer-Bray Co., Ltd., injunction; action dismissed as to P. V. Birsch and W. F. Ajello, Sept. 14, 1948.

2,127,943. (See 2,440,792.)

2,200,349, B. Walker, Venetian blind, D. C., N. D. Calif., S. Div., Doc. 27956–R, *Sunset Venetian Co. et al.* v. *B. Walker.* Consent decree holding patent valid and infringed, injunction June 25, 1948.

2,207,425, F. A. Arbogast, Artificial fish bait, D. C., N. D. Ohio (Cleveland), Doc. 25180, *F. A. Arbogast* v. *Stevens Mfg. Co. et al.* Consent decree holding patent valid and infringed, injunction Dec. 6, 1948.

2,252,692, Barnes & Minor, Means for applying expansible collars, D. C., S. D. Calif., N. Div., Doc. 699, *N. D. Bettis Rubber Co.* v. *B. & G. Service Co. et al.* Action, including counterclaim, dismissed with prejudice pursuant to stipulation Nov. 22, 1948.

2,302,932. (See 1,849,349.) 2,320,025. (See 1,849,349.)

2,333,059, W. R. Tucker, Two color injunction die, D. C., N. D. Calif., S. Div., Doc. 27144–G, *H-P-M Development Corp.* v. *Electric Mfg. Co., Inc.* Action dismissed without prejudice as to complaint and counterclaim Dec. 18, 1947.

2,333,234. (See 1,849,349.)

2,363,639, F. L. Brown, Life preserver, D. C., N. D. Calif., S. Div., Doc. 27730–H, *The American Pad & Textile Co.* v. *Wilber & Son.* Dismissed without prejudice Apr. 27, 1948.

2,370,235, L. J. Du Mais, Portable picture screen, filed Nov. 8, 1948, D. C., N. D. Ill., E. Div., Doc. 48c1644, *DaLite Screen Co., Inc.*, v. *Aurora Industries, Inc.*

2,377,767. (See 1,849,349.)

2,411,462, H. M. Plehn, Brassière and method of making same, filed Nov. 29, 1948, D. C., E. D. N. Y., Doc. 9527, *Peter Pan Foundations, Inc.*, v. *Carnival Creations, Inc.* Same, filed Dec. 2, 1948, D. C., S. D. N. Y., Doc. 48/274, *Peter Pan Foundations, Inc.*, v. *Lewel Mfg. Co., Inc.* Doc. 48/275, *Peter Pan Foundations, Inc.*, v. *Stephen Jay Co., Inc.*

2,428,206. (See 1,849,349.)

2,440,792, J. S. Wyllie, Method and means for forming rectangular flexible metal tubing; 2,127,943, R. H. Stone, Method of making corrugated flexible tube, filed Nov. 27, 1948, D. C. N. J., Doc. 11854, *Airtron, Inc., et al.* v. *Titeflex, Inc.*

2,441,482, E. D. Gerry, Shoulder pad construction, filed Dec. 3, 1948, D. C., S. D. N. Y., Doc. 48/286, *E-Z Thread Co.* v. *Betty Dain Creations, Inc.*

2,447,354, M. A. Morrill, Rotary side delivery rake, filed Dec. 2, 1948, D. C., N. D. Calif. (Sacramento), Doc. 6081, *West Coast Sales & Service Co.* v. *L. Croce.*

2,450,631, E. Buchler, Garment, filed Dec. 3, 1948, D. C., E. D. N. Y., Doc. 9535, *Arkay Infants Wear, Inc.*, v. *J. W. May's, Inc., et al.*

2,451,581, Slavsky & Slavsky, Price tag molding having a slide held tag and a transparent cover strip, suit for declaratory judgment filed Dec. 2, 1948, D. C., E. D. Mich., S. Div., Doc. 7817, *Hopp Press, Inc.*, v. *Shaw & Slavsky, Inc., et al.*

Des. 118,929, T. Friedman, Mounting for a reading glass, D. C. N. J. (Newark), Doc. 8575, *T. Friedman et al.* v. *Pyro Plastics Corp. et al.* Order dismissing action Nov. 29, 1948.

T. M. 345,562, Rock Island Brewing Co., Beer, filed Nov. 12, 1948, D. C., N. D. Ill., E. Div., Doc. 48c1662, *Warsaw Brewing Corp.* v. *Atlantic Brewing Co. et al.*

T. M. 380,575, Brody Mfg. Co., Stockinette sheets made with rubber insert, etc., D. C., N. D. Ill., E. Div., Doc. 44c952, *Lockwood Products* v. *Brody Mfg. Co.* Complaint and counterclaim dismissed with prejudice Nov. 23, 1948.

NOTICES

Adjudicated Patent

(C. A. N. Y.) Getz patent, No. 2,294,172, for a process of making aerated food products containing cream by use of nitrous oxide *Held* invalid. *Aeration Processes* v. *Walter Kidde & Co.*, 170 F.2d 437; 80 USPQ 80.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the OFFICIAL GAZETTE beginning November 9, 1948. The following patents (Reg. Nos. 16,804 through 16,815), are Schedule 9, Groups 26—11; 28—51—88; 35—59; 39—13.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 9

Patents Relating to Acrylic Polymers

Pat. 1,997,572. Sound Record. Apr. 16, 1935. A sound record having the recording surface made of thermoplastic acrylic resin.

Pat. 2,008,719. Process of Polymerization. July 23, 1935. Bubble free product by alternately heating and cooling during polymerization in the mold.

Pat. 2,030,901. Process for Depolymerising Alpha Substituted Acrylic Acid Esters. Feb. 18, 1936. Cracking polymeric methyl methacrylate.

Pat. 2,044,359. Apparatus for Casting. June 16, 1936. Rod casting mold with a monomer reservoir to compensate for shrinkage during polymerization.

Pat. 2,044,579. Process of Treating Resinous Products. June 16, 1936. After-cure of cast articles by heating.

Pat. 2,044,608. Diaphragm for Electrical Reproduction of Sound. June 16, 1936. Diaphragm for electrical reproduction of sound made from an acrylic resin having comminuted magnetic metal incorporated therein.

Pat. 2,045,660. Process of Polymerization. June 30, 1936. Removal of exothermic heat during polymerization.

Pat. 2,056,793. Process of Preparing Resin Compositions. Oct. 6, 1936. Preparation of molding compositions by colloiding of dry granular methyl methacrylate in a Banbury mixer.

Pat. 2,056,794. Resin Compositions and Process of Preparing Same. Oct. 6, 1936. Preparation of molding compositions by semi-colloiding of dry granular methyl methacrylate in a Banbury mixer.

Pat. 2,057,673. Preparation of Polymerized Organic Compounds. Oct. 20, 1936. Preparation of cast rod in continuous lengths.

Pat. 2,057,674. Polymerization Process. Oct. 20, 1936. Rod casting process in which a monomer/polymer sirup is polymerized in a mold by progressively applying heat to the mold.

Pat. 2,063,315. Preparation of Cast Resins. Dec. 8, 1936. Producing cast articles by polymerization of successive layers of monomer.

Pat. 2,067,234. Pigmented Granular Polymers. Jan. 12, 1937. Pigmented granular polymers using soya lecithin as dispersing agent.

Pat. 2,071,932. Process of Polymerization. Feb. 23, 1937. Process of polymerization in a mixer.

Pat. 2,084,399. Polymerization Process. June 22, 1937. Process for adding dyes to sirup during polymerization.

Pat. 2,084,415. Resinous Composition and Process for the Manufacture Thereof. June 22, 1937. Polymerization in solution with subsequent precipitation.

Pat. 2,097,274. Molds Used in the Preparation of Synthetic Resins. Oct. 26, 1937. Lead alloy molds used in polymerization casting.

Pat. 2,101,061. Casting. Dec. 7, 1937. Casting sirups prepared by dissolving polymer in monomer.

Pat. 2,101,107. Molding Compositions and Process of Molding. Dec. 7, 1937. Polyfunctional monomer/polymer molding compositions.

Pat. 2,120,006. Molding Organic Compounds. June 7, 1938. Monomer/polymer molding compositions, process for molding said composition and molded articles obtained.

Pat. 2,122,886. Process of Polymerization. July 5, 1938. Reuse of granulation liquid in granular polymerization.

Pat. 2,136,422. Polymerization. Nov. 15, 1938. Catalyst gradient in polymerization casting.

Pat. 2,136,423. Polymerization Process. Nov. 15, 1938. Heating only the bottom of mold in polymerization casting.

Pat. 2,136,424. Process of Polymerization. Nov. 15, 1938. Viscosity gradient in polymerization casting.

Pat. 2,136,425. Apparatus for Polymerization of Organic Compounds. Nov. 15, 1938. Removable plastic plug for rod casting mold.

Pat. 2,136,450. Preparation of Pigmented Plastics. Nov. 15, 1938. Paraffin wax as a white pigment.

Pat. 2,141,546. Acryloxy Carboxylic Acids and Their Esters. Dec. 27, 1938. Synthesis of acryloxy carboxylic

Pat. 2,341,334. Interpolymers of Alkylidene Esters of Alpha-Methylene Monocarboxylic Acids With Vinyl and Vinylidene Compounds. Feb. 8, 1944. Interpolymers of methylene dimethacrylate with vinyl and vinylidene com-

Pat. 1,963,892. Ornamentation of Toilet Articles. June 19, 1934. Process for producing ornamental edges on toilet articles.

Pat. 1,968,882. Treatment of Cellulose Esters. Aug. 7, 1934. Reducing viscosity of cellulose nitrate by subjecting the nitrate to the action of an acid in the presence of a salt of an alkaline metal or alkaline earth metal

Pat. 2,136,450. Preparation of Pigmented Plastics. Nov. 15, 1938. Paraffin wax as a white pigment.

Pat. 2,141,546. Acryloxy Carboxylic Acids and Their Esters. Dec. 27, 1938. Synthesis of acryloxy carboxylic acids and their esters and the polymerization products derived therefrom.

Pat. 2,146,306. Treatment of Polymeric Synthetic Resins. Feb. 7, 1939. Cutting solid polymer with a heated tool.

Pat. 2,180,818. Apparatus for Maintaining Constant Hydrostatic Pressure Upon a Liquid. Nov. 21, 1939. Bellows apparatus for maintaining constant hydrostatic pressure upon a liquid being polymerized.

Pat. 2,201,395. Modified Polymers of Methacrylic Acid Esters and Preparation of the Same. May 21, 1940. Alpha terpineol as a modifier for molding compositions.

Pat. 2,238,443. Apparatus for Polymerization. Apr. 15, 1941. Rod casting mold and process for heating same.

Pat. 2,238,446. Opacification of Resins. Apr. 15, 1941. Water-opacification of resins.

Pat. 2,265,242. Preparation of Ethenoid Resins. Dec. 9, 1941. Washing granular polymer with an aqueous solution of an alkali metal phosphate.

Pat. 2,268,177. Interpolymers of Methyl Alpha-Chloroacrylate and Styrene and Preparation of Same. Dec. 30, 1941. Homogeneous, stable interpolymers of methyl alpha-chloroacrylate and styrene.

Pat. 2,286,251. Interpolymers and Preparation of Same. June 16, 1942. Interpolymers of alpha-chloroacrylate with maleic or fumaric esters; monohydric saturated alcohols or monohydric phenols may be added as third component.

Pat. 2,289,765. Process of Polymerization. July 14, 1942. Intermittent agitation process of producing monomer-polymer sirups.

Pat. 2,301,204. Apparatus for Polymerization Processes. Nov. 10, 1942. Agitator in a kettle for producing monomer-polymer sirups.

Pat. 2,309,522. Manufacture of Molding Compounds. Jan. 26, 1943. Rolling wet emulsion polymer with color to increase bulk density.

Pat. 2,311,548. Polymers of Amides of Alpha-Methylene Monocarboxylic Acids. Feb. 16, 1943. Copolymer of N-methyl methacrylamide and methyl methacrylate.

Pat. 2,312,193. Process for Preparing Alkylidene Derivatives of Alpha-Methylene Monocarboxylic Acids. Feb. 23, 1943. Preparation of alkylidene derivatives of alpha-methylene monocarboxylic acids and polymerization of same.

Pat. 2,321,048. Opalescent Synthetic Resins. June 8, 1943. Opalescent resins resulting from polymerization of a mixture comprising methyl methacrylate polymer, styrene monomer, and an unsaturated monomeric ester.

Pat. 2,321,759. Molding Compounds. June 15, 1943. Molding compounds by malaxating to reduce molecular weight of copolymers of methyl methacrylate with vinyl acetate, styrene or methyl acrylate.

Pat. 2,325,067. Process and Apparatus for Polymerisation. July 27, 1943. Pressure controller for granular polymerization.

Pat. 2,326,543. Methyl Methacrylate Molding Composition. Aug. 10, 1943. Copolymer of methyl methacrylate and styrene or vinyl acetate mixed with a polyvinyl acetal resin.

Pat. 2,335,133. Tooth Reconstruction. Nov. 23, 1943. Material for tooth reconstruction consisting of methyl methacrylate and methallyl methacrylate.

Pat. 2,336,493. Distillation of Organic Liquids Polymerisable by Heat. Dec. 14, 1943. Flash distillation of organic liquids polymerizable by heat.

Pat. 2,341,282. Purification of Methyl Methacrylate. Feb. 8, 1944. Distillation of monomer from cracked polymer.

Pat. 2,341,334. Interpolymers of Alkylidene Esters of Alpha-Methylene Monocarboxylic Acids With Vinyl and Vinylidene Compounds. Feb. 8, 1944. Interpolymers of methylene dimethacrylate with vinyl and vinylidene compounds.

Pat. 2,345,939. Flock-Coated Die. Apr. 4, 1944. Flock coated die for use in forming a plastic sheet into articles having a three dimensional curved surface.

Pat. 2,346,036. Bonding of Methacrylate Polymers. Apr. 4, 1944. Methacrylic acid as methyl methacrylate cement.

Pat. 2,354,210. Polymerization of Acrylic Compounds. July 25, 1944. Polymerisation of acrylic compounds in the presence of N-chlorinated hydantoin.

Pat. 2,367,670. Cementing Process. Jan. 23, 1945. Light activated cement for bonding transparent polymeric sheets.

Pat. 2,369,057. Process for Treating Acrylic Resins. Feb. 6, 1945. Debubbling a shaped mass by immersing in aqueous salt bath and heating under pressure.

Pat. 2,377,928. Stretching Cast Elongate Bodies. June 12, 1945. Process for the uniform caliper reduction of cast tubes and rods.

Pat. 2,377,946. Method of and Apparatus for Shaping Thermoplastic Sheets. June 12, 1945. Vacuum drawing of thermoplastic sheets to form three dimensional curved articles of uniform thickness.

Pat. 2,377,952. Purification of Alkyl Methacrylate Monomers. June 12, 1945. Chlorine treatment of monomer derived from cracked polymer.

Pat. 2,377,962. Cementing Jig. June 12, 1945. Pressure jig for cementing curved, mated parts.

Pat. 2,413,973. Photopolymerization of Vinyl and Vinylidene Compounds. Jan. 7, 1947. Photopolymerization of polymerisable coatings on plastic articles.

Pat. 2,417,238. Polymerisation of Alpha-Methylene Monocarboxylic Acid Esters. Mar. 11, 1947. Polymerisation of methyl methacrylate in presence of a peroxide, sulfur dioxide and dioxolane.

Pat. 2,417,837. Laminating Plastic Sheets. Mar. 25, 1947. Laminating methacrylate sheets and a polyvinyl acetal sheet using a specific polysilicic acid adhesive.

Pat. 2,418,018. Methyl Methacrylate Polymer Laminated to a Polyvinyl Butyral by Means of a Silicic Adhesive. Mar. 25, 1947. Laminating polymethyl methacrylate and polyvinyl butyral with polysilicic acid adhesive.

Pat. 2,426,072. Blast Cleaning. Aug. 19, 1947. Granular methyl methacrylate for blast cleaning.

Pat. 2,436,201. Production of Strain-Free, Extruded Shapes From Organic Thermoplastic Materials. Feb. 17, 1948. Extruding into a gas stream to produce strands for cutting into molding powder.

Manufacture of Plastic Articles

Pat. 1,913,863. Brush Holder for Brush-Making Machine. June 13, 1933. A mechanism for holding brush blanks during the drilling of successive holes therein and during the insertion of tufts of bristles into said holes.

Pat. 1,914,037. Molding Process and Apparatus. June 13, 1933. Process and apparatus for molding and casting dies to be used in molding hollow plastic articles.

Pat. 1,937,101. Drilling and Inserting Mechanism for Brush Machines. Nov. 28, 1933. A brush making machine comprising a brush blank holder, a plurality of drilling and bristle inserting mechanisms, and a single cam shaft centrally located for operating same.

Pat. 1,950,230. Silhouette Ornamentation on Articles of Manufacture. Mar. 6, 1934. Silhouette ornamentation on toilet articles having a body portion formed of contrasting layers.

Pat. 1,950,231. Attaching Means for Ornamental Devices. June 3, 1934. Process for attaching a medallion or other device in a recess previously formed in the surface to be ornamented.

Pat. 1,963,892. Ornamentation of Toilet Articles. June 19, 1934. Process for producing ornamental edges on toilet articles.

Pat. 1,969,323. Shaping Machine. Aug. 7, 1934. Molding machine with a rotary standard.

Pat. 1,984,697. Machine for Blowing Hollow Articles. Dec. 18, 1934. Machine for production of hollow articles by introducing fluid under pressure between two sheets of plastic material in a die.

Pat. 1,996,062. Comb Finishing Apparatus and Method. Apr. 2, 1935. Apparatus and method for removing fins and webs produced on molded objects.

Pat. 2,044,339. Brush Drilling Machine. June 16, 1936. Brush drilling machine comprising a plurality of drills and a manually operated device for retracting any particular drill spindle.

Pat. 2,083,676. Floating Die Head for Molding Presses. June 15, 1937. A die press having a series of cylinders with means for applying independent, uniform pressure to the plate, one of which has been cushioned so as to transmit uniform molding pressure.

Pat. 2,109,569. Bandeau. Mar. 1, 1938. Bandeau with two comb sections made from one integral piece.

Pat. 2,120,834. Boudoir Accessory. June 14, 1938. A frame and back for brushes or mirrors provided with an inside groove for receiving mirror or solid part of brush.

Pat. 2,122,289. Display Card. June 28, 1938. Display card designed to exhibit hairpins.

Pat. 2,182,200. Display Case for Boudoir Accessories. Dec. 5, 1939. Pasteboard case having provisions for holding a boudoir set with most of them displayed on edge.

Pat. 2,272,847. Molding of Organic Plastics. Feb. 10, 1942. External mold lubricant comprising a di-substituted ester of phosphoric acid.

Pat. 2,279,055. Automatic Needle Stop for Bristling Machine. Apr. 7, 1942. Automatic needle stop for a brush tuft setting machine.

Pat. 2,338,735. Manufacture of Toothed Articles. Jan. 11, 1944. Injection molding of combs.

Pat. 2,346,247. Optical Apparatus. Apr. 11, 1944. Light polarizing lens.

Cellulose Derivative Plastics

Re. Pat. 19,705. Cellulose Derivative Composition. Sept. 17, 1935. Esters of monoaryl ethers of a polyglycol as plasticizers for cellulose derivatives.

Pat. 1,915,043. Roller. June 20, 1933. Cellulose acetate covered textile roller.

Pat. 1,915,075. Plastic Tubing. June 20, 1933. Process of molding seamless tubing.

Pat. 1,915,085. Safety Glass. June 20, 1933. Mixtures of cellulose esters and ethers as safety glass interlayer.

Pat. 1,936,351. Decorated Plastic Sheeting. Nov. 21, 1933. Roughened surface sheeting produced by passing a dulled separating blade through a block of plastic.

Pat. 1,946,067. Reduction of the Viscosity of Cellulose Nitrate. Feb. 6, 1934. Reduction of viscosity of cellulose nitrate by adding a pyridine base and thereafter removing base by treating with formaldehyde.

Pat. 1,947,008. Cellulose Derivative Composition. Feb. 13, 1934. Polyesters of halogenated acids as plasticizers.

Pat. 1,953,398. Treatment of Cellulose Esters. Apr. 3, 1934. Hydrogen peroxide treatment of cellulose esters to effect stabilization, viscosity reduction, bleaching and clarification thereof.

Pat. 1,965,608. Organo-Metallic Protective Agent. July 10, 1934. Metallic salts of aromatic half esters in nitrocellulose.

Pat. 1,968,882. Treatment of Cellulose Esters. Aug. 7, 1934. Reducing viscosity of cellulose nitrate by subjecting the nitrate to the action of an acid in the presence of a salt of an alkaline metal or alkaline earth metal and a halogen containing acid.

Pat. 1,972,091. Cellulose Derivative Composition. Sept. 4, 1934. Dilauryl esters as plasticisers.

Pat. 1,972,092. Cellulose Derivative Composition. Sept. 4, 1934. Polycarboxylic acid esters as plasticisers.

Pat. 1,980,988. Solvents for Etherification of Cellulose. Nov. 20, 1934. Water soluble polyethers and cyclic ethers as solvents in the etherification of cellulose.

Pat. 1,984,284. Cellulose Derivative Composition and Softener Therefor. Dec. 11, 1934. Aryl alkyl mixed esters as plasticisers.

Pat. 1,986,854. Cellulose Derivative Compositions. Jan. 8, 1935. Polyalkylamides as plasticisers.

Pat. 1,990,904. Manufacture of Cellulose Ethers. Feb. 12, 1935. Process for the manufacture of cellulose ethers in which some water and a dispersing agent such as turkey red oil is added prior to steam distillation.

Pat. 1,994,164. Manufacture of Decorative Plastic. Mar. 12, 1935. Method for producing a patterned rod in which pattern is spread cross-wise and extending longitudinally therethrough.

Pat. 1,995,117. Process for Treating Cellulose Nitrate. Mar. 19, 1935. Washing of cellulose nitrate to remove the fines and acid.

Pat. 2,003,295. Cellulose Derivative Composition. June 4, 1935. Bis-aryl ethers of glycols as plasticisers.

Pat. 2,005,414. Cellulose Derivative Composition. June 18, 1935. Polycarboxylic acid esters as plasticisers.

Pat. 2,008,716. Cellulose Derivative Compositions. July 23, 1935. Methoxyethyl benzoyl benzoate as a plasticiser.

Pat. 2,010,818. Etherification of Cellulose. Aug. 13, 1935. Etherification of cellulose by converting the cellulose to an alkali cellulose, then mixing with a caustic alkali slurry before etherifying.

Pat. 2,013,298. Cellulose Ether Composition. Sept. 3, 1935. Thiotriaryl phosphates as cellulose ether plasticizers.

Pat. 2,017,070. Plastic Composition. Oct. 15, 1935. Dihydric alcohol esters as plasticizers.

Pat. 2,019,115. Removal of Solvent From Cellulosic Plastics. Oct. 29, 1935. Process for removing water soluble volatile solvents from cellulosic mass comprising subjecting the mass to air treatment, to a water treatment, then to a final air treatment.

Pat. 2,021,121. Plastic Compositions. Nov. 12, 1935. Esters of phthalyl glycollic acid as plasticisers.

Pat. 2,025,048. Cellulose Derivative Composition. Dec. 24, 1935. Esters of lauryl ethers of polyhydric alcohols as plasticizers.

Pat. 2,030,568. Laminated Record. Feb. 11, 1936. Sound record composed of a thick core of filled cellulose acetate upon which is superposed a thin playing surface of unfilled cellulose acetate.

Pat. 2,031,206. Compound and Compositions Containing Same. Feb. 18, 1936. Alkoxy alkyl aryl sulfonamides as plasticizers.

Pat. 2,032,091. Plasticizer Composition. Feb. 25, 1936. Diethylene glycol esters as plasticizers.

Pat. 2,036,271. Cellulose Acetate Compositions. Apr. 7, 1936. Polyesters of aroyl benzoic acid as plasticisers.

Pat. 2,036,309. Seal for Stirring Devices in Chemical Apparatus. Apr. 7, 1936. Seal for stirring device which comprises an outer cup, an inner cup and a sealing liquid within said outer cup and into which inner cup dips.

Pat. 2,037,740. Cellulose Derivative Compositions. Apr. 21, 1936. Sugar ethers as plasticizers.

Pat. 2,040,937. Laminated Article and Manufacture of Same. May 19, 1936. Safety glass interlayer of a cellulose ester plasticized with a polyglycol ester.

Pat. 2,109,587. Laminated Article. Mar. 1, 1938. Safety glass interlayer of cellulose nitrate and dibutyl hexahydrophthalate.

Extrusion of Safety Glass Interlayer Sheeting

Pat. 1,956,564. Method of Producing Plastic Sheeting. May 1, 1934. Method of producing a continuous web by

Pat. 2,122,716. Hydroxy Carboxylic Acid Esters of Long Chain Alcohols. July 5, 1938. Preparation of esters of long chain alcohols and saturated aliphatic hydroxy carboxylic acids.

Pat. 2,040,937. Laminated Article and Manufacture of Same. May 19, 1936. Safety glass interlayer of a cellulose ester plasticized with a polyglycol ester.

Pat. 2,041,715. Cellulose Derivative Compositions. May 26, 1936. Levulinic esters of ether alcohols as plasticizers.

Pat. 2,041,738. Plastic Composition. May 26, 1936. Carbamic acid esters as plasticizers.

Pat. 2,044,181. Fountain Pen Barrel. June 16, 1936. Partially transparent fountain pen barrel made of a cellulose plastic having an interior coating of water-insoluble cellulose ether.

Pat. 2,044,356. Method of Making Celluloid Articles. June 16, 1936. Method of mounting a plurality of strips of cellulose material to produce a tube having a polygonal cross section.

Pat. 2,044,585. Preparation of Molded Articles. June 16, 1936. Preparation of mottled molded articles characterized by continuous bands or zones of contrasting color.

Pat. 2,045,628. Refining Cellulose Acetate. June 30, 1936. Process for refining cellulose acetate comprising dissolving the cellulose acetate in an alcohol-water mixture, heating, clarifying the solution, and separating the cellulose acetate from solvent liquor.

Pat. 2,047,972. Cellulose Derivative Composition. July 21, 1936. Ethers of hexahydric alcohols as plasticizers.

Pat. 2,049,565. Cellulose Derivative Compositions. Aug. 4, 1936. Tetrahydronaphthalenedicarboxylates as plasticizers.

Pat. 2,049,567. Manufacture of Paper Pulp. Aug. 4, 1936. Manufacture of paper pulp from wood chips using organic sulfonates and sulfates as wetting agents.

Pat. 2,051,877. Modified Compositions. Aug. 25, 1936. Benzyl ether of hydroxy acid esters as plasticizers.

Pat. 2,053,289. Cellulose Derivative Compositions. Sept. 8, 1936. Dialkoxy alkyl esters as plasticizers.

Pat. 2,056,795. Cellulose Ether Compositions and Process of Preparing Same. Oct. 6, 1936. Preparation of cellulose ether molding powders by kneading and then breaking said mass into granular form.

Pat. 2,056,797. Cellulose Ester Compositions and Process of Preparing Same. Oct. 6, 1936. Semi-colloiding cellulose esters in a Banbury mixer, then breaking the mass into granular form.

Pat. 2,059,324. Safety Device. Nov. 3, 1936. Safety device for stopping a set of mixing rolls instantly.

Pat. 2,059,326. Manufacture of Nitrocellulose. Nov. 3, 1936. Nitration of dense cellulose using an aqueous mixture of nitric and sulfuric acids.

Pat. 2,059,394. Plastic Composition. Nov. 3, 1936. Non-uniform coloring of plastics in a Banbury mixer by terminating the kneading before coloring matter has been uniformly distributed.

Pat. 2,061,732. Cellulose Derivative Compositions. Nov. 24, 1936. Binary mixture of water and a dimethyl ether of a glycol as solvent.

Pat. 2,071,917. Process of Preparing N-Alkoxyalkyl Aryl Sulphonamides. Feb. 23, 1937. Process for preparing sulfonamides comprising reacting an aryl sulphonamide with an alkoxyalkyl halide.

Pat. 2,071,921. Laminated Structure. Feb. 23, 1937. Ornamental laminated structure comprising a transparent sheet and two opaque sheets of different colors.

Pat. 2,082,797. Cellulose Ethers. June 8, 1937. Alcohol-soluble crotonyl ether of cellulose.

Pat. 2,097,269. Pigment and Process of Preparing Same. Oct. 26, 1937. Manufacture of lead pearl.

Pat. 2,109,587. Laminated Article. Mar. 1, 1938. Safety glass interlayer of cellulose nitrate and dibutyl hexahydrophthalate.

Pat. 2,109,593. Cellulose Acetate Molding Compositions. Mar. 1, 1938. Cellulose acetate mixed plasticiser composition consisting of camphor, a fire retarding plasticiser and a toughening exuding plasticiser.

Pat. 2,109,594. Molding Compositions. Mar. 1, 1938. Cellulose acetate mixed plasticiser composition consisting of camphor, triphenyl phosphate, an aryl sulphonamide and a mold lubricant.

Pat. 2,115,514. Laminated Article. Apr. 26, 1938. Safety glass interlayer of cellulose acetate and dimethyl phthalate.

Pat. 2,136,436. Laminated Article. Nov. 15, 1938. Safety glass interlayer of cellulose nitrate with octadecanediol diacetate as plasticiser.

Pat. 2,161,815. Chemical Process. June 13, 1939. Process for preparing cellulose ether wherein granulated wood pulp is mixed with an emulsion of caustic alkali solution in an inert organic liquid and an etherifying agent.

Pat. 2,163,085. Flameproofed Cellulosic Materials. June 20, 1939. Fire retardant comprising the reaction product of phosphorous pentoxide and anhydrous liquid ammonia.

Pat. 2,190,450. Cellulose Ethers. Feb. 13, 1940. Process for the uniform incorporation of a wetting agent in cellulose prior to treatment with etherifying agent.

Pat. 2,203,869. Cellulose Etherification Process. June 11, 1940. Cellulose ether manufacture using a wetting agent comprising the alkali salts of a mixture of aliphatic acids obtained by the oxidation of higher alcohols obtainable by the catalytic hydrogenation of carbon oxides.

Pat. 2,217,904. Alkyl Ethers of Cellulose. Oct. 15, 1940. Process of preparing cellulose ethers by treating cellulose with concentrated caustic alkali in the presence of an inert diluent and then contacting the wet cellulose with an aqueous solution of caustic soda and the etherifying agent.

Pat. 2,218,146. Chemical Composition. Oct. 15, 1940. Tributyrin as plasticizer.

Pat. 2,231,818. Plasticized Cellulose Acetate Compositions. Feb. 11, 1941. Composite plasticizers consisting of trialkyl phosphates, dimethyl phthalate and a glycol ester.

Pat. 2,236,523. Cellulose Ethers. Apr. 1, 1941. Manufacture of low substituted cellulose ethers comprising treating alkali cellulose with a mist of an etherifying agent.

Pat. 2,236,533. Cellulose Ethers. Apr. 1, 1941. Process for preparing an alkali cellulose and treating said cellulose with an etherifying agent.

Pat. 2,238,714. Purification of Alkyl Ethers of Cellulose. Apr. 15, 1941. Process for the manufacture, precipitation and purification of cellulose ethers.

Pat. 2,401,236. Apparatus for Producing Subdivided Molding Material. May 28, 1946. Cutter for screw stuffer method of producing cellulose acetate molding powder.

Pat. 2,401,272. Plasticized Cellulose Acetate Composition. May 28, 1946. Dimethyl azelate as cellulose acetate plasticizer.

Pat. 2,419,035. Manufacture of Molding Powders. Apr. 15, 1947. Screw stuffer method for making cellulose acetate molding powder.

Pat. 2,422,722. Extrusion Apparatus. June 24, 1947. Modification of the hopper assembly in screw stuffers.

Extrusion of Safety Glass Interlayer Sheeting

Pat. 1,956,564. Method of Producing Plastic Sheeting. May 1, 1934. Method of producing a continuous web by extruding a mass of cellulose derivative plastic, immersing the web in solvent removing liquid and cooling the mass.

Pat. 2,019,119. Extrusion Apparatus. Oct. 29, 1935. Apparatus for extruding a continuous thin web of cellulose derivative plastics.

Pat. 2,028,502. Seasoning Plastic. Jan. 21, 1936. Method of seasoning extruded cellulose ester sheeting comprising running the sheeting through a series of sodium chloride brine baths.

Pat. 2,083,557. Extrusion Apparatus. June 15, 1937. Extrusion apparatus having means for accurately measuring the caliper of the sheet and means for controlling the caliper of the extruded sheet.

Pat. 2,097,287. Wind-Up Mandrel. Oct. 26, 1937. Wind-up mandrel with means whereby the effective circumference of mandrel may be reduced so that materials may be slipped therefrom.

Pat. 2,122,259. Filter Press. June 28, 1938. Construction of plates and frames for a filter press adapted for filtering colloids for extrusion.

Pat. 2,146,532. Extrusion Process. Feb. 7, 1939. Extrusion process in which dissolved and entrapped air is removed from the plastic dough.

Miscellaneous Plasticizers

Pat. 1,936,093. Sorbitol Ethers. Nov. 21, 1933. Synthesis of ethers of sorbitol and other six carbon atoms hexahydric alcohols.

Pat. 1,984,283. Ester of Polycarboxylic Acids. Dec. 11, 1934. Preparation of aryl ethyl mixed esters of polycarboxylic acids.

Pat. 1,991,391. Ester of Polycarboxylic Acids. Feb. 19, 1935. Synthesis of polycarboxylic acid esters of monohydric ether alcohols.

Pat. 2,004,115. Levulinic Acid Esters and Their Preparation. June 11, 1935. Preparation of levulinic acid esters of modified polyhydric alcohols.

Pat. 2,006,555. Esters of Polycarboxylic Acids and Their Production. July 2, 1935. Production of dicarboxylic acid esters of monohydric ether alcohols.

Pat. 2,008,720. Levulinic Acid Ester. July 23, 1935. Levulinic acid ester of a monohydric open chain aliphatic alcohol.

Pat. 2,014,381. Ester of Isobutyric Acid. Sept. 17, 1935. Synthesis of polyhydric ether alcohol esters of isobutyric acid.

Pat. 2,031,603. Propionic Acid Esters and Their Production. Feb. 25, 1936. Production of propionic acid esters of polyhydric alcohols.

Pat. 2,047,664. Naphthenyl Esters of Polycarboxylic Acids and Their Production. July 14, 1936. Polybasic carboxylic acid ester wherein at least one carboxylic group is replaced by a napthenyl radical.

Pat. 2,062,917. Polycarboxylic Acid Esters. Dec. 1, 1936. Mixed polycarboxylic acid esters of aliphatic unsaturated alcohols.

Pat. 2,062,918. Polyhydric Alcohol Esters. Dec. 1, 1936. Polyhydric alcohol esters of a monocarboxylic acid.

Pat. 2,063,144. Ether Alcohol Esters of Alicyclic Carboxylic Acids. Dec. 8, 1936. Ether alcohol esters of an alicyclic carboxylic acid containing only one carbocyclic ring.

Pat. 2,118,506. Long Chain Alkoxy Alkanol Esters. May 24, 1938. A carboxylic ester of a long chain alkyl ether of a dihydric alcohol.

Pat. 2,122,716. Hydroxy Carboxylic Acid Esters of Long Chain Alcohols. July 5, 1938. Preparation of esters of long chain alcohols and saturated aliphatic hydroxy carboxylic acids.

Miscellaneous Plastics

Pat. 1,915,048. Safety Glass. June 20, 1933. Vegetable protein as safety glass adhesive.

Pat. 1,961,579. Composition of Matter. June 5, 1934. Urea-sulfonamid-aldehyde resin.

Pat. 1,978,533. Process of Preparing Molded Products. Oct. 30, 1934. Molded products from a composition comprising a polyester resin and casein.

Pat. 1,991,765. Aldehyde-Hydrogen Sulphide Reaction Product. Feb. 19, 1935. Process for thionating an aldehyde in aqueous solution.

Pat. 2,019,354. Urea-Condensation Resinous Compositions. Oct. 29, 1935. Urea-formaldehyde-hydrogen sulfide condensation product.

Pat. 2,022,001. Moldable Composition. Nov. 26, 1935. Formaldehyde treated casein-polyester mixture.

Pat. 2,035,515. Manufacture of Resins. Mar. 31, 1936. Phenol-formaldehyde cast resin.

Pat. 2,035,578. Synthetic Resin. Mar. 31, 1936. Resin comprising the condensation product of a polyhydric phenol and organic polybasic acid derivative.

Pat. 2,058,394. Resinous Compositions. Oct. 27, 1936. Polyhydric phenol-inorganic polybasic acid resin.

Pat. 2,058,649. Manufacture of Phenol-Aldehyde Resins. Oct. 27, 1936. Reduction of discoloration of phenol-formaldehyde resin by polymerizing in presence of ferrocyanide and salicylic acid.

Pat. 2,084,393. Treatment of Resins. June 22, 1937. Surface ornamentation of phenol-formaldehyde resin by immersing first in potassium hydroxide solution, then in hot water, then in cold.

Pat. 2,122,270. Pigmentation of Resinous Condensation Products. June 28, 1938. Pigmented resin produced by condensing phenol and formaldehyde in the presence of solid calcium hydroxide and calcium carbonate together.

Pat. 2,138,584. Polysulphones and Their Preparation. Nov. 29, 1938. Production of polysulphones by reacting sulfur dioxide with acetylenic hydrocarbons.

Pat. 2,146,209. Preparation of Resinous Imides of Substituted Acrylic Acids. Feb. 7, 1939. Resinous polyacrylic acid imides and N-substituted polymethacrylimides.

Pat. 2,190,829. Phenol Carboxylic Acid Amide-Formaldehyde Resins. Feb. 20, 1940. Resinous condensation products of formaldehyde and amides obtained by reacting an amino phenol and a polycarboxylic acid or its derivative.

Pat. 2,190,836. Treatment of Olefin-Sulphur Dioxide Resins. Feb. 20, 1940. Digesting olefin sulfone resins to produce stable and transparent products.

Pat. 2,327,985. Acyl Isothiocyanate and Polymer Thereof. Aug. 31, 1943. Synthesis of acyl alpha-beta-unsaturated isothiocyanates and the preparation of polymers and copolymers thereof.

Polytetrafluoroethylene

Pat. 2,392,388. Electrical Apparatus. Jan. 8, 1946. Electric motors with polytetrafluoroethylene insulation.

Pat. 2,396,629. Fabrication of Polytetrafluoroethylene Articles. Mar. 19, 1946. Sintering and cooling pressed articles in a definite cycle.

Pat. 2,400,099. Process for Obtaining Shaped Articles. May 14, 1946. Pressing and sintering molding articles.

Vinyl Polymers

Pat. 1,841,637. Azo Dyestuffs. Jan. 19, 1932.

Pat. 1,868,300. Dyeing, Printing and Like Process. July 19, 1932.

Pat. 1,880,169. Manufacture and Production of Aromatic Acid Chlorides. Sept. 27, 1932.

Vinyl Polymers

Pat. 1,896,504. Protective Agent for Meta Styrene. Feb. 7, 1933. Di-o-tolyl-guanidine as a stabiliser for polystyrene.

Pat. 1,982,676. Polymerisation of Vinyl Naphthalene. Dec. 4, 1934. Polymerisation of vinyl naphthalene by application of heat and/or catalysts.

Pat. 2,019,118. Laminated Article. Oct. 29, 1935. Polyvinyl ethinyl carbinol as a safety glass interlayer.

Pat. 2,056,796. Polyvinyl Resin Compositions and Process of Preparing Same. Oct. 6, 1936. Semi-colloiding a polyvinyl resin in a Banbury mixer.

Pat. 2,109,573. Modified Resin Composition. Mar. 1, 1938. Benzyl ether of ethyl lactate as a plasticiser for polyvinyl acetal resins.

Pat. 2,113,764. Manufacture of Laminated Glass. Apr. 12, 1938. Treatment of safety glass interlayer sheeting with water soluble material to prevent self-adhesion.

Pat. 2,122,277. Preparation of Resins. June 28, 1938. Alkyl secondary amines for the neutralization of the acid catalysts used in preparation of polyvinyl acetal resins.

Pat. 2,182,528. Stabilization of Vinyl Acetate. Dec. 5, 1939. Copper resinate as a polymerization inhibitor for monomeric vinyl acetate.

Pat. 2,202,160. Plastic Composition for Use in Interlayer Sheets. May 28, 1940. Safety glass interlayer sheeting of polyvinyl butyral containing triethylene glycol dipelargonate as a plasticizer.

Pat. 2,217,163. Plastic Composition. Oct. 8, 1940. Higher alkyl phthalates as plasticisers for polyvinyl formal resins.

Pat. 2,231,905. Aliphatic Vinyl Tertiary Amides. Feb. 18, 1941. Production and polymerization of vinyl tertiary amides.

Pat. 2,317,187. Polystyrene Plastic. Apr. 20, 1943. Pearl polystyrene produced from oriented polystyrene plastic containing an aluminum salt of an aliphatic acid.

Pat. 2,321,748. Separation of Mixtures of Methanol and Butyraldehyde. June 15, 1943. Separation of mixtures of methanol and butyraldehyde by applying heat to the aqueous mixture in a fractionating column.

Pat. 2,374,078. Vinyl Compounds and Polymers Therefrom. Apr. 17, 1945. Copolymer of divinyl formal and vinyl acetate.

Pat. 2,413,931. Pressure-Sensitive Adhesive Fabrics. Jan. 7, 1947. Adhesive fabric with polyvinyl butyral resin as pressure sensitive adhesive.

Imperial Chemical Industries, Ltd., London, England, has placed more than 1100 U. S. patents on the Register of Patents as available for license on reasonable terms. The following patents (Reg. Nos. 16,816 through 17,522) are in Group 28. Additional lists of these patents will appear in subsequent issues of the OFFICIAL GAZETTE.

Inquiries concerning these patents should be addressed to Cushman, Darby & Cushman, American Security Bldg., 730 15th St., N. W., Washington 5, D. C.

Pat. 1,840,558. New Basic and Acid Dyes of the Rhodamine Type. Jan. 12, 1932.

Pat. 1,841,621. Manufacture of Pyrazolone Compounds. Jan. 19, 1932.

Pat. 1,841,622. Intermediates and Dyes Therefrom. Jan. 19, 1932.

Pat. 1,841,623. New Pyrazolones and Dyes Therefrom. Jan. 19, 1932.

Pat. 1,841,636. Amino and Nitro Derivatives of Ortho-Hydroxy-Carboxy-Diphenyl Sulphides, and Process of Preparing Same. Jan. 19, 1932.

Pat. 1,841,637. Azo Dyestuffs. Jan. 19, 1932.

Pat. 1,842,604. Manufacture of Halogenated Dyes and Halogenated Intermediates for Dyes. Jan. 26, 1932.

Pat. 1,842,711. Manufacture of N-Thio Derivatives of Amines. Jan. 26, 1932.

Pat. 1,845,742. Method for Crystal Growth. Feb. 16, 1932.

Pat. 1,845,744. Production of Quicklime and Sulphur Dioxide. Feb. 16, 1932.

Pat. 1,848,227. Manufacture and Use of Vat Dyes of the Benzanthrone Series. Mar. 8, 1932.

Pat. 1,848,228. Method of Making Black and Grey Vat Dyes and the Products Thereof. Mar. 8, 1932.

Pat. 1,848,988. Apparatus for Carrying Out Gas Reactions at High Temperatures. Mar. 8, 1932.

Pat. 1,850,511. Manufacture of Anthraquinone Derivatives. Mar. 22, 1932.

Pat. 1,850,551. Dyeing or Printing. Mar. 22, 1932.

Pat. 1,851,419. Vulcanization of Rubber. Mar. 29, 1932.

Pat. 1,851,832. Manufacture and Production of Benzoyl Chloride. Mar. 29, 1932.

Pat. 1,855,676. Compositions Containing Alkali Metal Peroxides. Apr. 26, 1932.

Pat. 1,858,334. Production of Ortho-Amino-Halogen-Anthraquinones. May 17, 1932.

Pat. 1,858,[illegible]. Purification of Gases Containing Hydrogen Sulphid[illegible] May 17, 1932.

Pat. 1,[illegible]. Dyestuffs of the Urea-Azine Series and Process of Preparing the Same. May 24, 1932.

Pat. 1,859,527. Manufacture of Compounds of the Morpholine Series and the Products. May 24, 1932.

Pat. 1,860,560. Production of the Acid Sulphate and the Normal Sulphate of Alpha-Naphthylamine. May 31, 1932.

Pat. 1,860,751. New Triarylmethane Dyestuffs. May 31, 1932.

Pat. 1,860,753. Manufacture of Triarylmethane Dyes. May 31, 1932.

Pat. 1,861,382. Production and Manufacture of Stable Leuco-Indigo Preparations. May 31, 1932.

Pat. 1,862,786. Production of Anthraquinone Derivatives. June 14, 1932.

Pat. 1,863,265. Production of Anthraquinone Derivatives. June 14, 1932.

Pat. 1,863,331. Process of Making Colloidal Dispersions of Insoluble Colors in Organic Materials. June 14, 1932.

Pat. 1,863,332. Process of Making Colloidal Dispersions of Insoluble Colors. June 14, 1932.

Pat. 1,863,501. Storing Acetylene. June 14, 1932.

Pat. 1,866,439. Dividing Cords of Plastic or Gelatinous Material into Lengths. July 5, 1932.

Pat. 1,866,632. Manufacture of Aromatic Acids. July 12, 1932.

Pat. 1,867,076. Distillation of Water. July 12, 1932.

Pat. 1,867,962. Manufacture of M-Z-Xylidine. July 19, 1932.

Pat. 1,867,970. Means of Introducing Chemicals into Rubber or Cellulosic Materials. July 19, 1932.

Pat. 1,867,982. Morpholine Derivatives of Thiuram Tetrasulphide and the Process of Making the Same. July 19, 1932.

Pat. 1,868,300. Dyeing, Printing and Like Process. July 19, 1932.

Pat. 1,868,936. Dyeing Regenerated Cellulose Rayon. July 26, 1932.

Pat. 1,869,286. Dyes and Dyeing. July 26, 1932.

Pat. 1,869,930. Azo Dyestuffs and Method of Preparing Same. Aug. 2, 1932.

Pat. 1,872,080. Separating Gases or Vapors. Aug. 16, 1932.

Pat. 1,872,227. Manufacture of Benzyl Chloride. Aug. 16, 1932.

Pat. 1,873,277. Azo Dyes Adapted for Dyeing Regenerated Cellulose Materials. Aug. 23, 1932.

Pat. 1,873,278. Dyeing of Regenerated Cellulose Materials. Aug. 23, 1932.

Pat. 1,873,290. Manufacture of Triarylcarbinols. Aug. 23, 1932.

Pat. 1,873,300. Manufacture of Sulphonated Amino Anthraquinone. Aug. 23, 1932.

Pat. 1,873,344. Manufacture of Anthraquinone Derivatives. Aug. 23, 1932.

Pat. 1,873,345. Manufacture of Anthraquinone Derivatives. Aug. 23, 1932.

Pat. 1,873,542. Process of Producing Thermoplastic Products. Aug. 23, 1932.

Pat. 1,873,564. Production of 2-Aminoanthrahydroquinone 9:10-Disulphuric Ester and its Salts. Aug. 23, 1932.

Pat. 1,873,580. Manufacture of Emulsions. Aug. 23, 1932.

Pat. 1,874,686. Vulcanization of Rubber and New Compound Therefor. Aug. 30, 1932.

Pat. 1,875,272. Production of Anthracene Derivatives. Aug. 30, 1932.

Pat. 1,875,920. Treatment of Coal Distillation Gases. Sept. 6, 1932.

Pat. 1,875,924. Process for Separating and Recovering Olefines from Gases Containing Same. Sept. 6, 1932.

Pat. 1,875,926. Carrying out Chemical Reactions in Which Reaction Gases Are Circulated. Sept. 6, 1932.

Pat. 1,875,937. Apparatus for Degreasing Materials. Sept. 6, 1932.

Pat. 1,876,218. Catalyst for Production of Hydrocyanic Acid. Sept. 6, 1932.

Pat. 1,876,560. Process of Dyeing Viscose Rayon and the Dyed Material Thus Obtained. Sept. 13, 1932.

Pat. 1,876,848. Manufacture of New Azo Dyes. Sept. 13, 1932.

Pat. 1,877,130. Resinous Composition and Process of Making Same. Sept. 13, 1932.

Pat. 1,877,145. Apparatus for Carrying Out Reactions Continuously in the Liquid Phase Under Increased Pressure. Sept. 13, 1932.

Pat. 1,877,664. Production of Lubricating Oils. Sept. 13, 1932.

Pat. 1,877,800. Azo Dyes and Their Preparation. Sept. 20, 1932.

Pat. 1,877,847. Manufacture of Esters. Sept. 20, 1932.

Pat. 1,878,390. Production of Methanol and Other Oxygenated Organic Compounds and Preparation of Catalysts Therefor. Sept. 20, 1932.

Pat. 1,879,068. Vulcanisation of Rubber. Sept. 27, 1932.

Pat. 1,880,169. Manufacture and Production of Aromatic Acid Chlorides. Sept. 27, 1932.

Pat. 1,881,751. Manufacture of Anthraquinone Derivatives. Oct. 11, 1932.

Pat. 1,881,752. Manufacture of Anthraquinone Derivatives. Oct. 11, 1932.

Pat. 1,883,325. Secondary Disazo Dyestuffs. Oct. 18, 1932.

Pat. 1,884,880. Apparatus for Carrying Out Reactions Continuously in the Liquid Phase Under Increased Pressure. Oct. 25, 1932.

Pat. 1,885,449. Coloring Matters and Intermediates of the Benzanthrone Series. Nov. 1, 1932.

Pat. 1,885,591. Process for the Manufacture of New Xanthen Dyes. Nov. 1, 1932.

Pat. 1,885,592. Process for the Manufacture of New Xanthen Dyes. Nov. 1, 1932.

Pat. 1,886,441. Dyeing Cellulose Acetate. Nov. 8, 1932.

Pat. 1,886,947. Dye and Dyeing. Nov. 8, 1932.

Pat. 1,887,989. Shotgun Cartridge. Nov. 15, 1932.

Pat. 1,887,990. Shotgun Cartridge. Nov. 15, 1932.

Pat. 1,890,098. Production of Flavanthrone Dyestuff Intermediates. Dec. 6, 1932.

Pat. 1,890,099. Production of Dyestuff Intermediates of the Anthraquinone Series. Dec. 6, 1932.

Pat. 1,891,159. Manufacture of Amides of the Benzene, Naphthalene and Acenaphthene Series. Dec. 13, 1932.

Pat. 1,891,820. Descaling of Tubes. Dec. 20, 1932.

Pat. 1,891,843. Production of Halogenated Phthalic Anhydride. Dec. 20, 1932.

Pat. 1,891,859. Production of Carbon and Hydrogen Chloride. Dec. 20, 1932.

Pat. 1,893,530. Production of Dibenzanthrone Derivatives and the Like. Jan. 10, 1938.

Pat. 1,893,812. Production of Catalytic Material. Jan. 10, 1933.

Pat. 1,895,019. Art of Coloring. Jan. 24, 1933.

Pat. 1,895,336. Vat Dyestuff Derivatives. Jan. 24, 1933.

Pat. 1,895,382. Direct Dyeing Water Soluble Stable Derivatives of Vat Dyestuffs and Process of Making Same. Jan. 24, 1933.

Pat. 1,896,051. Shotgun Cartridge. Jan. 31, 1933.

Pat. 1,898,693. Dyes of the Anthraquinone Series. Feb. 21, 1933.

Pat. 1,898,748. Dyes of the Anthraquinone Series. Feb. 21, 1933.

Pat. 1,898,750. Manufacture of Anthraquinone Derivatives. Feb. 21, 1933.

Pat. 1,899,562. Process for the Removal of Arsenic from Sulphur. Feb. 28, 1933.

Pat. 1,901,278. Secondary Disazo Dyestuffs. Mar. 14, 1933.

Pat. 1,901,288. Manufacture of Vat Dyestuffs and of Intermediate Products Relating Thereto. Mar. 14, 1933.

Pat. 1,903,636. Production of Solid Calcium Nitrate. Apr. 11, 1933.

Pat. 1,904,240. Manufacture of Electric Detonators, Percussion Caps and Like Articles. Apr. 18, 1933.

Pat. 1,904,721. Manufacture of Sulphuric Esters of Anthrahydroquinones. Apr. 18, 1933.

Pat. 1,904,820. Azo Dye. Apr. 18, 1933.

Pat. 1,904,821. Disazo Dyestuffs and Method of Pre-

Pat. 1,925,641. Light Producing Ignitible Composition. Sept. 5, 1933.

Pat. 1,948,589. Compositions and Solutions for Use in Dyeing and Textile Printing. Feb. 27, 1934.

Pat. 1,975,223. Azo Dyes and Method for Their Preparation. Oct. 2, 1934.

Pat. 1,904,820. Aso Dye. Apr. 18, 1933.

Pat. 1,904,821. Disazo Dyestuffs and Method of Preparing Same. Apr. 18, 1933.

Pat. 1,904,822. Aso Dyestuffs and Method of Preparing Same. Apr. 18, 1933.

Pat. 1,905,290. Production of Aldol. Apr. 25, 1933.

Pat. 1,905,901. Collection of Sulphur from Gases or Vapors. Apr. 25, 1933.

Pat. 1,907,274. Process for Producing Benzene and Carbon Disulphide. May 2, 1933.

Pat. 1,908,314. Shotgun Cartridge Wad. May 9, 1933.

Pat. 1,908,372. Fusehead. May 9, 1933.

Pat. 1,908,731. Recovery of Sulphur Dioxide from Gases. May 16, 1933.

Pat. 1,908,878. Production of Sulphur from Sulphur Dioxide. May 16, 1933.

Pat. 1,911,667. Manufacture of Benzyl Chloride. May 30, 1933.

Pat. 1,911,716. Manufacture of Mercaptobenzthiazol. May 30, 1933.

Pat. 1,911,717. Manufacture of Nitroaminobenzene. May 30, 1933.

Pat. 1,914,872. Manufacture of Dyestuff Intermediates of the Anthraquinone Series. June 20, 1933.

Pat. 1,915,871. Production of Dyestuffs of the Anthraquinone Series. June 27, 1933.

Pat. 1,915,901. Manufacture of Vat Dyes. June 27, 1933.

Pat. 1,916,295. Artificial Resinous Substance. July 4, 1933.

Pat. 1,917,118. Shotgun Cartridge. July 4, 1933.

Pat. 1,917,311. Dyestuff Intermediates of the Benzoyl-Bensoic Acid Series. July 11, 1933.

Pat. 1,917,466. Compounds of the Amino-Halo-Indanthrene Series and Process of Making Them. July 11, 1933.

Pat. 1,918,624. Process for the Production of Chlorinated Hydrocarbons. July 18, 1933.

Pat. 1,919,773. Indophenols and Sulphur Dyestuffs Therefrom. July 25, 1933.

Pat. 1,920,828. Amino-Xylenols and Process of Producing Same. Aug. 1, 1933.

Pat. 1,920,829. Manufacture of Basic Dyestuffs. Aug. 1, 1933.

Pat. 1,921,078. Dyeing. Aug. 8, 1933.

Pat. 1,921,496. Production of Bensanthrone Derivatives. Aug. 8, 1933.

Pat. 1,921,497. Production of Sulphuric Anhydride Compounds of Pyridine. Aug. 8, 1933.

Pat. 1,923,625. Typewriting and Multiple-Copying Process. Aug. 22, 1933.

Pat. 1,923,911. Process of Treating Rubber and the Improved Age-Resisting Rubber Produced Thereby. Aug. 22, 1933.

Pat. 1,923,932. Vulcanisation of Rubber and Rubber-like Substances. Aug. 22, 1933.

Pat. 1,923,944. Aso Dyestuffs for Leather. Aug. 22, 1933.

Pat. 1,924,664. Production of Anthraquinone Derivatives. Aug. 29, 1933.

Pat. 1,924,774. Production of Dyestuffs and Intermediates. Aug. 29, 1933.

Pat. 1,925,641. Light Producing Ignitible Composition. Sept. 5, 1933.

Pat. 1,925,947. Manufacture of Resins Primarily Obtained from Polyhydric Alcohols and Polybasic Acids. Sept. 5, 1933.

Pat. 1,926,631. Wool Dye of the Triphenylmethane Series. Sept. 12, 1933.

Pat. 1,926,769. Sulphonated Oil Compound. Sept. 12, 1933.

Pat. 1,929,866. Production of Sulphuric Esters of Anthrahydroquinone and its Derivatives. Oct. 10, 1933.

Pat. 1,929,875. Dyestuffs and Intermediates of the Anthraquinone Series. Oct. 10, 1933.

Pat. 1,929,876. Vat Dyestuffs of the Anthraquinone Naphthacridone Series and Process of Making Them. Oct. 10, 1933.

Pat. 1,929,912. Dyes of the Pyranthrone Series. Oct. 10, 1933.

Pat. 1,930,409. Process of Preparing Anhydrous Leuco Vat Dyestuffs. Oct. 10, 1933.

Pat. 1,933,206. Manufacture of Amidines. Oct. 31, 1933.

Pat. 1,933,585. Aso Dyes and Their Production. Nov. 7, 1933.

Pat. 1,933,754. Process for Purification of Pentaerythritol Tetranitrate. Nov. 7, 1933.

Pat. 1,934,610. Process of Producing Hydrogen Cyanide. Nov. 7, 1933.

Pat. 1,936,474. Disulphuric Ester of Dihydro-3.3'-Dichlor-Dianthraquinone-1.2.2'.1'-Dihydroazine. Nov. 21, 1933.

Pat. 1,936,809. Production of Sulphur. Nov. 28, 1933.

Pat. 1,936,983. Process of Mold Fermentation and Apparatus Therefor. Nov. 28, 1933.

Pat. 1,937,718. Production of Dyestuffs and Intermediates. Dec. 5, 1933.

Pat. 1,938,162. Production of Compounds from Propylene. Dec. 5, 1933.

Pat. 1,938,360. Manufacture of Alkyl Ethers of Cellulose. Dec. 5, 1933.

Pat. 1,939,068. Recovery of Copper Minerals or Values by Froth Flotation. Dec. 12, 1933.

Pat. 1,939,218. Acylamino-Anthraquinones and Process of Producing the Same. Dec. 12, 1933.

Pat. 1,941,059. Treatment of Filling and Reinforcing Materials Used in Plastic Compositions. Dec. 26, 1933.

Pat. 1,942,889. Process of Performing Endothermic Gas Reactions. Jan. 9, 1934.

Pat. 1,943,461. Cellulose Ether and Method of Making Same. Jan. 16, 1934.

Pat. 1,943,787. Dyeing and the Like. Jan. 16, 1934.

Pat. 1,944,161. Production of Addition Product of Unsaturated Hydrocarbons. Jan. 23, 1934.

Pat. 1,944,896. Manufacture of Cellulose Ethers. Jan. 30, 1934.

Pat. 1,945,256. Deposition of Rubber. Jan. 30, 1934.

Pat. 1,947,433. Manufacture of Soluble Compositions and Their Use in Dyeing and Printing. Feb. 13, 1934.

Pat. 1,947,725. Agents for Diminishing or Suppressing Foaming and Frothing and the Application Thereof. Feb. 20, 1934.

Pat. 1,948,116. Dyestuff and Dyestuff Intermediate. Feb. 20, 1934.

Pat. 1,948,589. Compositions and Solutions for Use in Dyeing and Textile Printing. Feb. 27, 1934.

Pat. 1,949,240. Preservation of Oxidisable Organic Compounds. Feb. 27, 1934.

Pat. 1,949,299. Sulphuric Ester of the Anthraquinone Series and Process Suitable for Making the Same. Feb. 27, 1934.

Pat. 1,951,794. Shotgun Tracer Cartridge. Mar. 20, 1934.

Pat. 1,952,057. Catalyst and Method of Making the Same. Mar. 27, 1934.

Pat. 1,955,802. Manufacture of Aromatic Arylides. Apr. 24, 1934.

Pat. 1,955,890. Oxidation of Organic Compounds. Apr. 24, 1934.

Pat. 1,959,182. Cooling of Coke and Obtaining a Nitrogen Hydrogen Mixture. May 15, 1934.

Pat. 1,960,756. Production of Hydrated Lime. May 29, 1934.

Pat. 1,961,196. Sulphonation of Aromatic Amines. June 5, 1934.

Pat. 1,961,663. Sulphonation of Squalene and Oil Containing Squalene. June 5, 1934.

Pat. 1,961,867. Process for Degreasing Metallic Articles. June 5, 1934.

Pat. 1,962,142. Dyes and Dyeing. June 12, 1934.

Pat. 1,964,788. Delay Action Electric Detonator. July 3, 1934.

Pat. 1,967,551. Manufacture of Esters. July 24, 1934.

Pat. 1,967,674. Purification of Sulphur. July 24, 1934.

Pat. 1,967,912. Color Lake. July 24, 1934.

Pat. 1,968,905. Production of Aryl Mercapto Compounds. Aug. 7, 1934.

Pat. 1,968,906. Production of Aryl Mercapto Compounds. Aug. 7, 1934.

Pat. 1,969,044. Dyestuff of the Anthraquinone Series and Process of Preparing the Same. Aug. 7, 1934.

Pat. 1,969,246. Priming Composition. Aug. 7, 1934.

Pat. 1,970,083. Sulphuric Acid Ester of Anthranols. Aug. 14, 1934.

Pat. 1,970,090. Floor Covering or Like Material. Aug. 14, 1934.

Pat. 1,970,654. Sulphuric Ester of 3.3'-Difluoro-Dianthrahydroquinone-Azines. Aug. 21, 1934.

Pat. 1,970,710. Ketonic Perylene Derivative and Process of Preparing Same. Aug. 21, 1934.

Pat. 1,972,142. Process for the Production of Carboxylic Acid Amides. Sept. 4, 1934.

Pat. 1,972,918. Vulcanization Accelerator and Process of Preparing the Same. Sept. 11, 1934.

Pat. 1,972,960. Production and Use of Anthracene Dyes. Sept. 11, 1934.

Pat. 1,973,426. Apparatus for the Degreasing of Materials by Means of Volatile Solvents. Sept. 11, 1934.

Pat. 1,974,817. Vat Dyestuffs of the Dibensanthrone Series and Process of Making Same. Sept. 25, 1934.

Pat. 1,974,886. Roasting of Sulphide Ores. Sept. 25, 1934.

Pat. 1,975,061. Anthraquinone Dyestuffs and Their Application. Sept. 25, 1934.

Pat. 1,975,166. Aso Dyes and Method for Their Preparation. Oct. 2, 1934.

Pat. 1,975,223. Aso Dyes and Method for Their Preparation. Oct. 2, 1934.

Pat. 1,975,233. Aso Dyes and Method for Their Preparation. Oct. 2, 1934.

Pat. 1,975,609. Aso Dye and Method for Its Preparation. Oct. 2, 1934.

Pat. 1,975,611. Aso Dye. Oct. 2, 1934.

Pat. 1,976,689. Tetra Sulphuric Acid Esters of Indanthrones and Their Production. Oct. 9, 1934.

Pat. 1,977,627. Process of Producing Diphenylolpropane. Oct. 23, 1934.

Pat. 1,977,628. Production of Fertilisers. Oct. 23, 1934.

Pat. 1,977,632. Production of Ethyl Alcohol from Ethylene. Oct. 23, 1934.

Pat. 1,977,633. Process for Producing Alcohols. Oct. 23, 1934.

Pat. 1,977,634. Production of Alcohols from Olefines. Oct. 23, 1934.

Pat. 1,977,635. Process for the Catalytic Hydration of Olefines. Oct. 23, 1934.

Pat. 1,977,652. Manufacture of Resins for Lacquers, Varnishes and the Like. Oct. 23, 1934.

Pat. 1,977,659. Process of Recovering Ethylene from Gaseous Olefine Mixtures Containing the Same. Oct. 23, 1934.

Pat. 1,978,197. Manufacture and Application of Special Pigments Suited for the Coloring of Rubber. Oct. 23, 1934.

Pat. 1,978,247. Manufacture of Adhesive Materials from Rubber Latex. Oct. 23, 1934.

Pat. 1,978,820. Manufacture of Leuco Indigo. Oct. 30, 1934.

Pat. 1,979,505. Coloring. Nov. 6, 1934.

Pat. 1,980,483. Resin and Resin Forming Compound. Nov. 13, 1934.

Pat. 1,981,027. Textile Printing Process and Composition. Nov. 20, 1934.

Pat. 1,981,292. Emulsifying Agent. Nov. 20, 1934.

Pat. 1,981,901. Alkali Metal Salt of Elaidyl Sulphuric Ester. Nov. 27, 1934.

Pat. 1,981,926. Insecticide. Nov. 27, 1934.

Pat. 1,982,407. Process of Producing Hydrogen Cyanide. Nov. 27, 1934.

Pat. 1,983,541. Manufacture of Acetic Anhydride. Dec. 11, 1934.

Pat. 1,985,287. Production of Fast Dyeings on Textile Fibers. Dec. 25, 1934.

Pat. 1,985,424. Alkylene-Oxide Derivatives of Polyhydroxyalkyl-alkylamides. Dec. 25, 1934.

Pat. 1,986,808. Sulphonated Oil. Jan. 8, 1935.

Pat. 1,986,876. Production of Unsaturated Compounds. Jan. 8, 1935.

Pat. 1,987,260. Manufacture of Glycerine. Jan. 8, 1935.

Pat. 1,988,493. Production of Nitro-Naphthalenes. Jan. 22, 1935.

Pat. 1,990,906. Vulcanization of Rubber. Feb. 12, 1935.

Pat. 1,991,999. Squalene Derivative and Process of Making the Same. Feb. 19, 1935.

Pat. 1,992,049. Roasting of Plumbiferous Pyrites. Feb. 19, 1935.

Pat. 1,992,060. Process for Treating Cyanide Solutions. Feb. 19, 1935.

Pat. 1,993,067. Manufacture of New Green Sulphur

Pat. 2,013,295. Dentures. Sept. 3, 1935.

Pat. 2,013,300. Detergent Compositions. Sept. 3, 1935.

Pat. 2,027,150. Derivatives of Urea. Jan. 7, 1936.

Pat. 2,027,178. Disazo Dyestuffs and Their Production. Jan. 7, 1936.

Pat. 2,042,127. Apparatus for the Treatment of Gases or Vapors with Liquids. May 26, 1936.

Pat. 2,042,458. Production of Esters of Methacrylic Acid. June 2, 1936.

Pat. 1,992,060. Process for Treating Cyanide Solutions. Feb. 19, 1935.

Pat. 1,993,067. Manufacture of New Green Sulphur Dyestuffs. Mar. 5, 1935.

Pat. 1,993,089. Production of Unsaturated Esters. Mar. 5, 1935.

Pat. 1,994,641. Nitrophenylthioglycollic Acids. Mar. 19, 1935.

Pat. 1,994,931. Manufacture of Flexible Electrical Insulating Material. Mar. 19, 1935.

Pat. 1,996,937. Production of Chlorinated Rubber Products. Apr. 9, 1935.

Pat. 1,998,463. Process of Preparing Cellulose Derivatives. Apr. 23, 1935.

Pat. 1,999,315. Production of Ethers. Apr. 30, 1935.

Pat. 1,999,576. Production of Glyoxals. Apr. 30, 1935.

Pat. 2,000,051. Metal Compound Containing an Isoindole Nucleus and Process of Making the Same. May 7, 1935.

Pat. 2,000,052. Process for the Manufacture of Colored Compounds and the Product Thereof. May 7, 1935.

Pat. 2,000,118. Pyrolysis of Hydrocarbons. May 7, 1935.

Pat. 2,000,559. Wetting Preparations and Their Manufacture. May 7, 1935.

Pat. 2,003,291. Resinous Composition. June 4, 1935.

Pat. 2,003,928. Stripping and Discharging Dyed Textiles. June 4, 1935.

Pat. 2,003,960. Printing. June 4, 1935.

Pat. 2,004,728. Hydroxy Aryl Mercapto Compounds and Processes for Preparing the Same. June 11, 1935.

Pat. 2,005,499. Resinous Compounds. June 18, 1935.

Pat. 2,006,216. Inhibitor. June 25, 1935.

Pat. 2,006,538. Nitro-Amino-Alkoxy-Diphenyl. July 2, 1935.

Pat. 2,006,718. Manufacture of Indoles. July 2, 1935.

Pat. 2,008,157. Anthraquinone-Acridone Dyestuff. July 16, 1935.

Pat. 2,008,450. Manufacture of Sensitized Photographic Emulsions. July 16, 1935.

Pat. 2,008,469. Production of Fertilizers. July 16, 1935.

Pat. 2,008,489. Stable Gas-Generating Compositions. July 16, 1935.

Pat. 2,008,766. Dyeing Process. July 23, 1935.

Pat. 2,008,808. Explosive Composition. July 23, 1935.

Pat. 2,009,396. Diaminostilbene Derivatives and Methods for Their Preparation. July 30, 1935.

Pat. 2,009,397. Azo Dye and Its Preparation. July 30, 1935.

Pat. 2,011,589. Process of Producing Pentaerythrite. Aug. 20, 1935.

Pat. 2,012,991. Azo Dyes and Methods for Their Preparation. Sept. 3, 1935.

Pat. 2,012,994. Azo Dyestuff and Its Production. Sept. 3, 1935.

Pat. 2,013,052. Production of Aromatic Amines. Sept. 3, 1935.

Pat. 2,013,081. Treatment of Textile Materials. Sept. 3, 1935.

Pat. 2,013,295. Dentures. Sept. 3, 1935.

Pat. 2,013,300. Detergent Compositions. Sept. 3, 1935.

Pat. 2,013,652. Method for the Production of Nitrogen and Hydrogen by the Thermal Decomposition of Ammonia. Sept. 10, 1935.

Pat. 2,013,809. Production of Nitrogen. Sept. 10, 1935.

Pat. 2,014,207. Azo Dye and Method for Its Preparation. Sept. 10, 1935.

Pat. 2,014,421. Accelerator for the Vulcanization of Rubber. Sept. 17, 1935.

Pat. 2,014,428. Azo Derivatives and Their Use in Dyeing. Sept. 17, 1935.

Pat. 2,014,433. Azo Dye. Sept. 17, 1935.

Pat. 2,014,434. Azo Dye and Method for Its Production. Sept. 17, 1935.

Pat. 2,014,450. Azo Dye and Method for Its Preparation. Sept. 17, 1935.

Pat. 2,014,790. Compound of the Anthraquinone-Acridone Series and Process of Preparing the Same. Sept. 17, 1935.

Pat. 2,014,810. Anthraquinone Derivatives. Sept. 17, 1935.

Pat. 2,015,011. Anthraquinone Dyestuffs and Process of Preparing Them. Sept. 17, 1935.

Pat. 2,015,073. Process of Hydrating Olefines. Sept. 24, 1935.

Pat. 2,015,094. Production of Ketones. Sept. 24, 1935.

Pat. 2,015,223. Recovery of Ethylene. Sept. 24, 1935

Pat. 2,016,836. Heterocyclic Nitrogen Compounds. Oct. 8, 1935.

Pat. 2,018,764. Azo Dye and Method for Its Preparation. Oct. 29, 1935.

Pat. 2,019,124. Stripping Agent. Oct. 29, 1935.

Pat. 2,019,530. Enolic Ethereal Salts Derived from Indanthrone. Nov. 5, 1935.

Pat. 2,019,539. Manufacture of Benzyl Cellulose. Nov. 5, 1935.

Pat. 2,020,335. Degreasing. Nov. 12, 1935.

Pat. 2,020,345. Sulphur Dye and Method for Its Preparation. Nov. 12, 1935.

Pat. 2,020,385. Chemical Products. Nov. 12, 1935.

Pat. 2,021,680. Preparation of Methylene Ethers. Nov. 19, 1935.

Pat. 2,021,917. Azo Dye and Method for Its Preparation. Nov. 26, 1935.

Pat. 2,021,926. Treatment of Waxes. Nov. 26, 1935.

Pat. 2,023,614. Process of Dyeing with Azo Dyes and Cellulosic Material Dyed Therewith. Dec. 10, 1935.

Pat. 2,023,615. Green Azo Dyestuffs and Process of Making Same. Dec. 10, 1935.

Pat. 2,024,389. Manufacture of Laminated Non-splintering Glass. Dec. 17, 1935.

Pat. 2,024,406. Priming Composition. Dec. 17, 1935.

Pat. 2,025,211. Azo Dyestuffs and Process of Making the Same. Dec. 24, 1935.

Pat. 2,025,791. Production of Derivatives of an Ortho-Cyano-Aryl Amido. Dec. 31, 1935.

Pat. 2,026,629. Dyestuff Intermediates. Jan. 7, 1936.

Pat. 2,026,804. Manufacture of Acrylic Acid. Jan. 7, 1936.

Pat. 2,027,150. Derivatives of Urea. Jan. 7, 1936.

Pat. 2,027,178. Disazo Dyestuffs and Their Production. Jan. 7, 1936.

Pat. 2,027,208. Ignition Composition. Jan. 7, 1936.

Pat. 2,027,955. Intermediates for Dyes. Jan. 14, 1936.

Pat. 2,029,351. Dyeing Process. Feb. 4, 1936.

Pat. 2,029,509. Arylamides of 2,3-Hydroxynaphthoic Acids. Feb. 4, 1936.

Pat. 2,030,214. Azo Dyes and Methods for Their Preparation. Feb. 11, 1936.

Pat. 2,031,023. Rhodamine Coloring Matters and Process for Preparing the Same. Feb. 18, 1936.

Pat. 2,031,084. Blasting Assembly. Feb. 18, 1936.

Pat. 2,031,801. Burning of Pyrites. Feb. 25, 1936.

Pat. 2,031,802. Recovery of Sulphur Dioxide from Gas Mixtures. Feb. 25, 1936.

Pat. 2,032,097. Waterproofing Leather. Feb. 25, 1936.

Pat. 2,032,465. Amino-Hydroxy-Naphthonitriles and Processes of Preparing Same. Mar. 3, 1936.

Pat. 2,032,502. Polymethine Dyes Containing a Pyrazolone Nucleus and Process of Producing Them. Mar. 3, 1936.

Pat. 2,033,276. Rubber and Rubber-Like Preparations. Mar. 10, 1936.

Pat. 2,034,449. Seed Disinfectant. Mar. 17, 1936.

Pat. 2,035,190. Manufacture of Thermoplastic Resinous Materials. Mar. 24, 1936.

Pat. 2,035,459. Manufacture of Chlorinated Indanthrone Compounds. Mar. 31, 1936.

Pat. 2,035,520. Emulsions of Resins of the Polyhydric Alcohol Polybasic Acid Type and the Application Thereof. Mar. 31, 1936.

Pat. 2,036,159. Manufacture of New Azo Dyestuff. Mar. 31, 1936.

Pat. 2,036,196. Application of Dyestuffs. Apr. 7, 1936.

Pat. 2,036,202. Anthraquinone Lactam Dyestuffs. Apr. 7, 1936.

Pat. 2,036,257. Cellulose Derivative Solutions and Process of Making the Same. Apr. 7, 1936.

Pat. 2,037,909. Monoazo Dye and Its Production. Apr. 21, 1936.

Pat. 2,037,910. Dyeing Cellulose Esters and Ethers. Apr. 21, 1936.

Pat. 2,038,705. Ethers of Polyhydric Alcohols. Apr. 28, 1936.

Pat. 2,038,772. Blasting Charge. Apr. 28, 1936.

Pat. 2,041,402. Manufacture of New Enolic Sulphuric Esters of Hydroindanthrones. May 19, 1936.

Pat. 2,041,697. Azo Dyes and Method for Their Preparation. May 26, 1936.

Pat. 2,041,698. Azo Dyes and Method for Their Preparation. May 26, 1936.

Pat. 2,041,705. Amino Derivatives of O-Nitro-Phenyllactic and Thiolactic Acids. May 26, 1936.

Pat. 2,041,716. Amino-Ortho-Nitro-Aryl-Thiocarboxylic Acids and Process of Preparing Same. May 26, 1936.

Pat. 2,041,820. Production of Esters. May 26, 1936.

Pat. 2,041,838. 1-(β-Hydroxyethylamino)-5-Naphthol and Process of Preparing Same. May 26, 1936.

Pat. 2,041,851. Azo Dyestuffs and Their Preparation. May 26, 1936.

618 O. G.—43

Pat. 2,042,127. Apparatus for the Treatment of Gases or Vapors with Liquids. May 26, 1936.

Pat. 2,042,458. Production of Esters of Methacrylic Acid. June 2, 1936.

Pat. 2,042,484. Process for the Preparation of Low Substituted Cellulose Sulphates. June 2, 1936.

Pat. 2,043,078. Dichloro-Anthraquinone-Acridones and Process for Preparing the Same. June 2, 1936.

Pat. 2,044,045. N,N-Dialkylol Anilines and Process of Producing Same. June 16, 1936.

Pat. 2,044,082. Azo Dyes and Method for their Preparation. June 16, 1936.

Pat. 2,044,083. Aminohydroquinone-Di-(Beta-Hydroxyethyl) Ether and Method of Producing Same. June 16, 1936.

Pat. 2,044,084. Secondary Disazo Dyestuffs and Their Production. June 16, 1936.

Pat. 2,044,099. Treatment of Leather. June 16, 1936.

Pat. 2,044,960. Production of Sulphur, Sulphur Dioxide and Iron Oxide. June 23, 1936.

Pat. 2,045,651. Polymerization Product and Process for Molding Same. June 30, 1936.

Pat. 2,045,979. Plastic and Coating Composition. June 30, 1936.

Pat. 2,046,015. Adhesives and Products Derived Therefrom. June 30, 1936.

Pat. 2,046,174. Cellulose Derivative Solutions and Process of Making the Same. June 30, 1936.

Pat. 2,046,194. Blasting Charge. June 30, 1936.

Pat. 2,046,356. Manufacture of Diarylamine Derivatives. July 7, 1936.

Pat. 2,046,375. p-Halogen-o-Alkoxy-Aniline Derivatives and Process of Preparing the Same. July 7, 1936.

Pat. 2,047,611. Manufacture of Hydrochloric Acid. July 14, 1936.

Pat. 2,047,647. Cupriferous Azo Dyestuffs and Their Production. July 14, 1936.

Pat. 2,047,657. Manufacture of N-Substituted Cyano-Formarylides. July 14, 1936.

Pat. 2,048,038. Delay Action Electric Fuse. July 21, 1936.

Pat. 2,048,827. Blasting Charge. July 28, 1936.

Pat. 2,048,831. Blasting Explosive Cartridge. July 28, 1936.

Pat. 2,048,885. Nicotinium Salts and Process for Their Production. July 28, 1936.

Pat. 2,049,299. Azo Dyestuffs and Their Production. July 28, 1936.

Pat. 2,049,510. Azo-Anthranilic Acid and Its Production. Aug. 4, 1936.

Pat. 2,049,512. Dispersing and Emulsifying Agents. Aug. 4, 1936.

Pat. 2,049,648. Anthraquinone Dyestuffs. Aug. 4, 1936.

Pat. 2,049,657. Process and Composition for Coloring Organic Derivatives of Cellulose. Aug. 4, 1936.

Pat. 2,050,160. Gas Washing. Aug. 4, 1936.

Pat. 2,051,046. Production of Ethyl Alcohol from Ethylene. Aug. 18, 1936.

Pat. 2,052,192. Boric Acid Esters. Aug. 25, 1936.

Pat. 2,052,386. Zinc Derivatives of Diazo Salts and a Process of Making Them. Aug. 25, 1936.

Pat. 2,052,424. Azo Dyes and Their Production. Aug. 25, 1936.

Pat. 2,063,286. Naphthalene Polycarboxylic Acid Derivative and Process for Preparing the Same. Dec. 8, 1936.

Pat. 2,077,575. Azo Dyes and Their Production. Apr. 20, 1937.

Pat. 2,091,145. Dyeing Process. Aug. 24, 1937.

Pat. 2,091,182. Apparatus for Degreasing Metal and Like Non-Absorbent Articles by Means of Volatile Sol-

Pat. 2,052,424. Azo Dyes and Their Production. Aug. 25, 1936.

Pat. 2,052,612. Stripping Dyed Textiles. Sept. 1, 1936.

Pat. 2,053,343. Anthraquinone Dyestuffs. Sept. 8, 1936.

Pat. 2,053,424. Manufacture of Alkyl Sulphonic Acids. Sept. 8, 1936.

Pat. 2,054,088. Manufacture of O- and Peri-Aryl Dinitriles. Sept. 15, 1936.

Pat. 2,054,242. Manufacture of Esters of Methacrylic Acid. Sept. 15, 1936.

Pat. 2,054,628. Fuel Oil. Sept. 15, 1936.

Pat. 2,054,740. Polymerisation of Derivatives of Unsaturated Organic Acids. Sept. 15, 1936.

Pat. 2,055,607. Tri-Aryl-Methane Dyes. Sept. 29, 1936.

Pat. 2,055,929. Production of Hydrocarbon Derivatives. Sept. 29, 1936.

Pat. 2,056,255. Para-Para'-Dinitro-Diphenylureas and Process of Producing Same. Oct. 6, 1936.

Pat. 2,056,299. Derivatives of Hydroquinone. Oct. 6, 1936.

Pat. 2,056,429. Apparatus for Treating Gases with Liquids. Oct. 6, 1936.

Pat. 2,056,430. Gas Scrubber. Oct. 6, 1936.

Pat. 2,056,473. Anthraquinone Derivatives and Process of Making the Same. Oct. 6, 1936.

Pat. 2,056,593. 3.3'-Dichlorindanthrone and Process of Producing the Same. Oct. 6, 1936.

Pat. 2,056,771. Production of Esters of Methacrylic Acid. Oct. 6, 1936.

Pat. 2,056,944. Coloring Matters of the Lead Phthalocyanine Series and Their Manufacture. Oct. 13, 1936.

Pat. 2,057,063. Azo Dyes and Their Production. Oct. 13, 1936.

Pat. 2,057,600. A Coating Composition. Oct. 13, 1936.

Pat. 2,057,685. Azo Dyestuffs and Their Production. Oct. 20, 1936.

Pat. 2,059,230. Apparatus for Granulating Molten Materials. Nov. 3, 1936.

Pat. 2,059,273. Chemical Compounds Derivable from Urea and Ethylene Oxide and Useful as Textile Assistants. Nov. 3, 1936.

Pat. 2,059,619. Treatment of Benzyl Cellulose. Nov. 3, 1936.

Pat. 2,059,842. Synthetic Resinous Product. Nov. 3, 1936.

Pat. 2,060,845. N-Ethyl, N-Ethylol Cresidine and Process of Producing Same. Nov. 17, 1936.

Pat. 2,061,621. Color Stripping Process. Nov. 24, 1936.

Pat. 2,061,627. Manufacture of Nitronaphthylamines. Nov. 24, 1936.

Pat. 2,061,728. Nitration of Glycerin. Nov. 24, 1936.

Pat. 2,062,957. Process of Preparing Aliphatic Sulpho-Ethers. Dec. 1, 1936.

Pat. 2,062,958. Ether Compounds. Dec. 1, 1936.

Pat. 2,063,211. Naphthalene Derivatives. Dec. 8, 1936.

Pat. 2,063,246. Anthraquinone Dyestuffs. Dec. 8, 1936.

Pat. 2,063,286. Naphthalene Polycarboxylic Acid Derivative and Process for Preparing the Same. Dec. 8, 1936.

Pat. 2,063,594. Sulphuric Acid Esters of Indanthrone. Dec. 8, 1936.

Pat. 2,063,634. Dianthraquinonyl Dicarboxylic Acids and the Process for Preparing the Same. Dec. 8, 1936.

Pat. 2,063,982. Stabilised Rubber Latex. Dec. 15, 1936.

Pat. 2,064,116. Hydration of Olefines. Dec. 15, 1936.

Pat. 2,065,588. Fuel Oil. Dec. 29, 1936.

Pat. 2,067,237. Manufacture of Aromatic Aldehydes. Jan. 12, 1937.

Pat. 2,067,946. Process of Making Cellulose Derivatives. Jan. 19, 1937.

Pat. 2,067,971. Manufacture of Chlorinated Rubber. Jan. 19, 1937.

Pat. 2,068,124. Anthraquinone Dyes and Process for Preparing the Same. Jan. 19, 1937.

Pat. 2,069,262. Manufacture of Chlorinated Rubber. Feb. 2, 1937.

Pat. 2,069,836. Monoazo Dyestuffs and Their Production. Feb. 9, 1937.

Pat. 2,069,919. Printing Process. Feb. 9, 1937.

Pat. 2,070,292. Cupriferous Azo Dyestuffs and Their Production. Feb. 9, 1937.

Pat. 2,070,318. Manufacture of Alcohols. Feb. 9, 1937.

Pat. 2,071,898. Sensitised Photographic Silver Halide Emulsions. Feb. 23, 1937.

Pat. 2,071,899. Sensitised Photographic Film, Plate and Emulsion. Feb. 23, 1937.

Pat. 2,071,907. Preparation of Polymers in Sheet or Block Form. Feb. 23, 1937.

Pat. 2,072,237. Manufacture of Aromatic Carboxylic Derivatives. Mar. 2, 1937.

Pat. 2,072,238. Manufacture of Naphthalene Derivatives. Mar. 2, 1937.

Pat. 2,072,259. Anthraquinone Dyestuffs. Mar. 2, 1937.

Pat. 2,073,797. Manufacture of Glycerides of Fatty Acids. Mar. 16, 1937.

Pat. 2,074,032. Cartridge for Blasting. Mar. 16, 1937.

Pat. 2,074,179. Anthraquinone Dyestuffs. Mar. 16, 1937.

Pat. 2,074,181. Benzanthrone Derivatives. Mar. 16, 1937.

Pat. 2,074,197. Textile Printing. Mar. 16, 1937.

Pat. 2,074,641. Measurement of High Temperatures. Mar. 23, 1937.

Pat. 2,075,013. Acylamino Alkyl-Aryl Ethers and Their Sulphonation Products. Mar. 30, 1937.

Pat. 2,075,043. A Process for Producing a Copper Phthalocyanine Compound. Mar. 30, 1937.

Pat. 2,075,958. Quaternary Ammonium Compounds and Process of Preparing the Same. Apr. 6, 1937.

Pat. 2,075,969. Blasting Explosive Cartridge and Borehole Charge. Apr. 6, 1937.

Pat. 2,077,546. Process for Dyeing Leather. Apr. 20, 1937.

Pat. 2,077,548. Production of Dinaphthylene Oxide. Apr. 20, 1937.

Pat. 2,077,575. Azo Dyes and Their Production. Apr. 20, 1937.

Pat. 2,077,591. Mercurated Salicyl Aryl Amides. Apr. 20, 1937.

Pat. 2,078,240. Manufacture of Safety Explosives. Apr. 27, 1937.

Pat. 2,078,298. Blasting. Apr. 27, 1937.

Pat. 2,078,960. Manufacture of Naphthylamine Derivatives. May 4, 1937.

Pat. 2,079,347. Process of Preparing Unsaturated Sulphate Esters. May 4, 1937.

Pat. 2,079,350. Pigmented Products. May 4, 1937.

Pat. 2,079,606. Process for Producing Resins. May 11, 1937.

Pat. 2,079,626. Synthetic Resin Varnishes and Synthetic Resins. May 11, 1937.

Pat. 2,079,756. Acid Resisting Composition. May 11, 1937.

Pat. 2,079,777. Safety Igniter for Blasting Explosive Devices. May 11, 1937.

Pat. 2,080,419. Process for Producing Higher Fatty Alcohols. May 18, 1937.

Pat. 2,081,736. Coloring Matters. May 25, 1937.

Pat. 2,081,755. Anthraquinone Dyestuffs. May 25, 1937.

Pat. 2,081,756. Acid Dyestuffs of the Anthraquinone Series. May 25, 1937.

Pat. 2,083,012. Degreasing Apparatus. June 8, 1937.

Pat. 2,083,214. Preparing 4,4'-Dialkoxy Diphenylamines. June 8, 1937.

Pat. 2,084,386. Plastic and Coating Compositions. June 22, 1937.

Pat. 2,086,879. Gas Absorption Process. July 6, 1937.

Pat. 2,087,706. Azo Dyes and Their Production. July 20, 1937.

Pat. 2,088,327. Azo Dyestuffs and Process of Preparing Them. July 27, 1937.

Pat. 2,088,333. Azo Dyes and Their Production. July 27, 1937.

Pat. 2,088,667. Amino-Aroylamino-Benzoic Acid and Process of Making It. Aug. 3, 1937.

Pat. 2,088,726. Azo Dye. Aug. 3, 1937.

Pat. 2,088,829. Naphthalene Polycarboxylic Acid Arylides and a Process for Preparing the Same. Aug. 3, 1937.

Pat. 2,089,102. Apparatus for Cleaning or Degreasing Materials. Aug. 3, 1937.

Pat. 2,089,293. Safety Paper. Aug. 10, 1937.

Pat. 2,089,413. Production of Novel Effects on Textiles. Aug. 10, 1937.

Pat. 2,090,142. Wet Purification of Gases. Aug. 17, 1937.

Pat. 2,090,148. Gas Washing. Aug. 17, 1937.

Pat. 2,090,608. Gas-Generating Charge. Aug. 17, 1937.

Pat. 2,090,890. Textile Printing. Aug. 24, 1937.

Pat. 2,091,105. Textile Assistants and Process for Preparing the Same. Aug. 24, 1937.

Pat. 2,091,106. Compounds of the Dimethylolurea-ethylene-Oxide Condensation-Product Series. Aug. 24, 1937.

Pat. 2,091,143. Dyeing by Means of Sulphuric Esters of Indanthrones. Aug. 24, 1937.

Pat. 2,091,145. Dyeing Process. Aug. 24, 1937.

Pat. 2,091,182. Apparatus for Degreasing Metal and Like Non-Absorbent Articles by Means of Volatile Solvents. Aug. 24, 1937.

Pat. 2,091,187. Degreasing Apparatus. Aug. 24, 1937.

Pat. 2,091,367. Azo Dyestuffs and Their Production. Aug. 31, 1937.

Pat. 2,092,075. Monoazo Dyestuffs and Their Production. Sept. 7, 1937.

Pat. 2,092,076. Disazo Dyestuffs and Their Production. Sept. 7, 1937.

Pat. 2,092,795. Process for Separating Mixtures of Chlor-Phthalic Acid and Anhydrides. Sept. 14, 1937.

Pat. 2,092,902. Manufacture of New Phenanthrone Derivatives. Sept. 14, 1937.

Pat. 2,093,265. Process for the Manufacture of Diaryl Ureas. Sept. 14, 1937.

Pat. 2,094,078. Dyestuff Intermediate. Sept. 28, 1937.

Pat. 2,094,082. Dyeing of Cellulosic Materials. Sept. 28, 1937.

Pat. 2,094,085. Polymercurated Aromatic Hydrocarbons. Sept. 28, 1937.

Pat. 2,094,090. Benzothiazyl Sulphonium Compounds. Sept. 28, 1937.

Pat. 2,095,028. Treating Textile Materials and Articles Made Therefrom. Oct. 5, 1937.

Pat. 2,097,064. Process for the Manufacture of Hydrocyanic Acid. Oct. 26, 1937.

Pat. 2,097,264. Methyl Alpha-Beta-Dichloroiso-Butyrate and Process of Preparation of Same. Oct. 26, 1937.

Pat. 2,097,290. Roller Apparatus. Oct. 26, 1937.

Pat. 2,097,432. Acetate Artificial Silk Dyestuffs. Nov. 2, 1937.

Pat. 2,097,586. Production of Polymerised Unsaturated Compounds. Nov. 2, 1937.

Pat. 2,097,634. Method for the Production of Porous Silica Gel. Nov. 2, 1937.

Pat. 2,097,640. Quaternary Ammonium Compounds. Nov. 2, 1937.

Pat. 2,097,672. Anthraquinone Derivatives. Nov. 2, 1937.

Pat. 2,097,675. Coloring Acetate Artificial Silk. Nov. 2, 1937.

Pat. 2,098,276. Azo Dyes and Methods for Their Preparation. Nov. 9, 1937.

Pat. 2,098,964. Artificial Resins. Nov. 16, 1937.

Pat. 2,100,297. Solubilised Higher Aliphatic Sulphides and Process for Their Production. Nov. 23, 1937.

Pat. 2,100,392. Alkylarylanthraquinone Dyestuffs. Nov. 30, 1937.

Pat. 2,100,401. Manufacture of Ortho- and Peri-Aryl Dinitriles. Nov. 30, 1937.

Pat. 2,101,223. Chemical Process. Dec. 7, 1937.

Pat. 2,101,664. Diazo Salt Preparations. Dec. 7, 1937.

Pat. 2,101,821. Manufacture of Unsaturated Organic Compounds. Dec. 7, 1937.

Pat. 2,101,822. Manufacture of Unsaturated Organic Amines. Dec. 7, 1937.

Pat. 2,101,831. Sulphated Selachyl Alcohol. Dec. 14, 1937.

Pat. 2,101,910. Process for the Manufacture of Alkoxy-anthraquinones. Dec. 14, 1937.

Pat. 2,117,334. Monoazo Dyestuffs and Their Production. May 17, 1938.

Pat. 2,117,476. Anthraquinone Dyestuffs and Their Manufacture. May 17, 1938.

Pat. 2,129,677. Manufacture of New Azine Dyestuffs. Sept. 13, 1938.

Pat. 2,129,678. Azine Dyestuffs. Sept. 13, 1938.

Pat. 2,129,690. n-Propylmethacrylate. Sept. 13, 1938.

Pat. 2,143,956. Soluble Azo Dyestuffs. Jan. 17, 1939.

Pat. 2,144,647. Treatment of Leather. Jan. 24, 1939.

Pat. 2,145,954. Anthraquinone Derivatives. Feb. 7, 1939.

Pat. 2,101,831. Sulphated Selachyl Alcohol. Dec. 14, 1937.

Pat. 2,101,910. Process for the Manufacture of Alkoxyanthraquinones. Dec. 14, 1937.

Pat. 2,102,104. Manufacture of Isatin Derivatives. Dec. 14, 1937.

Pat. 2,104,068. Quaternary Ammonium Salts of Mercapto-Arylenethiazoles. Jan. 4, 1938.

Pat. 2,104,069. Process for Treatment of Solutions of Chlorinated Rubber. Jan. 4, 1938.

Pat. 2,104,695. Manufacture of Halogenated Derivatives of Methane. Jan. 4, 1938.

Pat. 2,104,760. Plastic Materials. Jan. 11, 1938.

Pat. 2,104,960. Process for the Manufacture of Dihydroxy Isodibenzanthrone. Jan. 11, 1938.

Pat. 2,105,674. Delay Action Detonator and Fuse and Delay Composition for Use Therein. Jan. 18, 1938.

Pat. 2,107,264. Process for the Production of Carbon Disulphide. Feb. 1, 1938.

Pat. 2,108,044. Plastic Materials and to Methods of Production Thereof. Feb. 15, 1938.

Pat. 2,108,489. Apparatus for Cleaning Metal Pipes. Feb. 15, 1938.

Pat. 2,109,295. Textile Fabric and Process of Making the Same. Feb. 22, 1938.

Pat. 2,109,299. Chemical Composition. Feb. 22, 1938.

Pat. 2,109,369. Dyestuff of the Indigoid Type. Feb. 22, 1938.

Pat. 2,109,599. Plastic Compositions Containing Gelatinised Nitrocellulose. Mar. 1, 1938.

Pat. 2,109,952. Method of Preparing Aminosulphonic Acid. Mar. 1, 1938.

Pat. 2,110,081. Textile Printing. Mar. 1, 1938.

Pat. 2,110,785. Production of Solid Chlorinated Rubber Products. Mar. 8, 1938.

Pat. 2,110,973. Compounds of the Triarylmethane Series and Process of Preparing Them. Mar. 15, 1938.

Pat. 2,111,183. Dyes of the Polymethine Series and Preparation of the Same. Mar. 15, 1938.

Pat. 2,111,692. Stabilized Diazo Compounds. Mar. 22, 1938.

Pat. 2,112,919. Azo Dyestuffs and Their Production. Apr. 5, 1938.

Pat. 2,112,920. Azo Dyestuffs and Their Production. Apr. 5, 1938.

Pat. 2,113,054. Anthraquinone Derivatives. Apr. 5, 1938.

Pat. 2,113,198. Wet Purification of Gases. Apr. 5, 1938.

Pat. 2,115,136. Dyeing. Apr. 26, 1938.

Pat. 2,115,149. Manufacture and Application of Azo Dyes. Apr. 26, 1938.

Pat. 2,115,758. Sulphonated Alkoxy Substituted Arylides of the Higher Fatty Acids. May 3, 1938.

Pat. 2,115,780. Treatment of Metallic Sulphides to Recover Sulphur and Metallic Oxides Therefrom. May 3, 1938.

Pat. 2,116,131. Diazo Salt Preparations. May 3, 1938.

Pat. 2,116,553. Dyeing Process. May 10, 1938.

Pat. 2,116,602. Coloring Matters of the Phthalocyanine Type. May 10, 1938.

Pat. 2,117,321. Manufacture of New Polymerisation Products. May 17, 1938.

Pat. 2,117,334. Monoazo Dyestuffs and Their Production. May 17, 1938.

Pat. 2,117,476. Anthraquinone Dyestuffs and Their Manufacture. May 17, 1938.

Pat. 2,117,699. Dyeing of Leather. May 17, 1938.

Pat. 2,118,088. Monoazo Dyestuffs and Their Production. May 24, 1938.

Pat. 2,118,089. Sulphated Polyethenoxy-Alkyl-Arylamines. May 24, 1938.

Pat. 2,118,493. Manufacture of Aniline Derivatives. May 24, 1938.

Pat. 2,118,494. Mononitroalkylanilines, Mononitroalkylacylanilines and Derivatives Thereof and Their Manufacture. May 24, 1938.

Pat. 2,118,495. Alkylanilinemonosulphonic Acids and Their Manufacture. May 24, 1938.

Pat. 2,118,807. Dyeing Apparatus. May 31, 1938.

Pat. 2,120,222. Non-Inflammable Plastic Mass. June 7, 1938.

Pat. 2,120,814. Azo Dyestuffs. June 14, 1938.

Pat. 2,121,695. Polymerization Process. June 21, 1938.

Pat. 2,121,823. Manufacture of Sulphonium Compounds. June 28, 1938.

Pat. 2,123,439. Method of Degreasing. July 12, 1938.

Pat. 2,123,562. Treating Textile Materials and Articles Made Therefrom. July 12, 1938.

Pat. 2,124,288. Fire-Resistant Composition. July 19, 1938.

Pat. 2,124,419. Process of Producing Phthalocyanine Compounds. July 19, 1938.

Pat. 2,124,742. Process for Producing Copper Phthalocyanine. July 26, 1938.

Pat. 2,125,462. Detonator, for Example, Blasting Detonator. Aug. 2, 1938.

Pat. 2,125,527. Coating of Absorbent Materials. Aug. 2, 1938.

Pat. 2,125,901. Finishing Textile Materials. Aug. 9, 1938.

Pat. 2,126,048. Intermediates for Azo Dyes. Aug. 9, 1938.

Pat. 2,127,437. Degreasing Metal Strip. Aug. 16, 1938.

Pat. 2,127,603. Gasless Igniter. Aug. 23, 1938.

Pat. 2,128,027. Recovery of Sulphur Dioxide from Gas Mixtures. Aug. 23, 1938.

Pat. 2,128,101. Manufacture and Application of Carbazole Derivatives. Aug. 23, 1938.

Pat. 2,128,107. Process for the Conversion of Metal Sulphides. Aug. 23, 1938.

Pat. 2,128,108. Manufacture of Sulphuric Acid. Aug. 23, 1938.

Pat. 2,128,325. Copper Containing Monoazo Dyestuffs and Process for Preparing Them. Aug. 30, 1938.

Pat. 2,128,576. Blasting Explosive Cartridge or Borehole Charge. Aug. 30, 1938.

Pat. 2,129,013. Copper Monochlorophthalocyanine and a Process of Making It. Sept. 6, 1938.

Pat. 2,129,014. Dyestuffs of the Anthracene Series. Sept. 6, 1938.

Pat. 2,129,367. Gelatinous or Semi-Gelatinous Blasting Explosives. Sept. 6, 1938.

Pat. 2,129,388. Blasting Explosive Device. Sept. 6, 1938.

Pat. 2,129,677. Manufacture of New Azine Dyestuffs. Sept. 13, 1938.

Pat. 2,129,678. Azine Dyestuffs. Sept. 13, 1938.

Pat. 2,129,690. n-Propylmethacrylate. Sept. 13, 1938.

Pat. 2,129,917. Manufacture of Bromonaphthoic Acid. Sept. 13, 1938.

Pat. 2,129,934. Manufacture of a New Anthraquinone Vat Dyestuff. Sept. 13, 1938.

Pat. 2,130,460. Treating Cellulosic Fiber. Sept. 20, 1938.

Pat. 2,130,878. Leucoindigo. Sept. 20, 1938.

Pat. 2,130,952. Manufacture of Derivatives of Paraffin Wax. Sept. 20, 1938.

Pat. 2,131,210. Accelerator for the Vulcanisation of Rubber. Sept. 27, 1938.

Pat. 2,131,362. Methylene Halide Derivatives of Carboxylic Acid Amides and Carbamic Esters, Respectively, and Process of Making the Same. Sept. 27, 1938.

Pat. 2,131,894. Azo Dyestuffs and Their Production. Oct. 4, 1938.

Pat. 2,132,456. Dyeing Cellulose Esters and Ethers. Oct. 11, 1938.

Pat. 2,132,458. Purification and Granulation of Pentaerythritol Tetranitrate. Oct. 11, 1938.

Pat. 2,132,468. Printing Inks. Oct. 11, 1938.

Pat. 2,132,619. Process of Coloring Oxide Films on Aluminum and Its Alloys. Oct. 11, 1938.

Pat. 2,132,620. Process for the Coloration of Artificially Produced Oxide Films on Aluminum and Its Alloys. Oct. 11, 1938.

Pat. 2,132,822. Manufacture of Gelatin. Oct. 11, 1938.

Pat. 2,133,246. Automatic Control of Variable Physical Characteristics. Oct. 11, 1938.

Pat. 2,134,521. Azo Dyestuffs and Their Production. Oct. 25, 1938.

Pat. 2,136,020. Emulsions and Process of Making Same. Nov. 8, 1938.

Pat. 2,136,217. Condensation Process. Nov. 8, 1938.

Pat. 2,136,270. Manufacture of Plastic Masses. Nov. 8, 1938.

Pat. 2,136,298. Manufacture of Sulphuric Acid by the Contact Process. Nov. 8, 1938.

Pat. 2,137,350. Manufacture of Cartridge Cases. Nov. 22, 1938.

Pat. 2,137,686. New Rubber Article and Material and the Manufacture Thereof. Nov. 22, 1938.

Pat. 2,138,602. Dyeing of Hardened Casein. Nov. 29, 1938.

Pat. 2,139,866. Production of Aqueous Dispersions of Cellulose Derivatives. Dec. 13, 1938.

Pat. 2,140,469. Production of Methacryl-Containing Compounds. Dec. 18, 1938.

Pat. 2,140,495. Bis(2,3-Hydroxy-Naphthoyl-M-Aminophenyl) Urea. Dec. 20, 1938.

Pat. 2,140,897. Manufacture of Explosives. Dec. 20, 1938.

Pat. 2,142,406. Apparatus for the Wet Purification of Gases. Jan. 3, 1939.

Pat. 2,143,924. Manufacture of Anhydrides of Unsaturated Aliphatic Monobasic Acids. Jan. 17, 1939.

Pat. 2,143,941. Process for Inhibiting Polymerisation. Jan. 17, 1939.

Pat. 2,143,956. Soluble Azo Dyestuffs. Jan. 17, 1939.

Pat. 2,144,647. Treatment of Leather. Jan. 24, 1939.

Pat. 2,145,954. Anthraquinone Derivatives. Feb. 7, 1939.

Pat. 2,146,392. Quaternary Ammonium Salts. Feb. 7, 1939.

Pat. 2,146,406. Manufacture of New Quaternary Ammonium Salts. Feb. 7, 1939.

Pat. 2,146,760. Annealing Process. Feb. 14, 1939.

Pat. 2,147,811. Quaternary Ammonium Salts. Feb. 21, 1939.

Pat. 2,149,926. Chlorinated Rubber Products. Mar. 7, 1939.

Pat. 2,150,380. Azo Dyestuffs. Mar. 14, 1939.

Pat. 2,150,389. Coloring of Leather. Mar. 14, 1939.

Pat. 2,150,741. Manufacture of Phthalocyanine Coloring Matter Soluble in Organic Media. Mar. 14, 1939.

Pat. 2,152,218. Coloring Rubber. Mar. 28, 1939.

Pat. 2,153,012. New Anthraquinone Dyestuffs. Apr. 4, 1939.

Pat. 2,153,620. Coloring Matters of Phthalocyanine Type. Apr. 11, 1939.

Pat. 2,153,627. New Monoazo Dyestuffs. Apr. 11, 1939.

Pat. 2,154,221. Charge for Gas Pressure Operated Blasting Devices. Apr. 11, 1939.

Pat. 2,154,416. Non-Detonating Blasting Explosive. Apr. 11, 1939.

Pat. 2,155,009. Manufacture of Polymerized Drying Oils. Apr. 18, 1939.

Pat. 2,155,038. Compounds of the Phthalocyanine Series. Apr. 18, 1939.

Pat. 2,155,054. Coloring Matters. Apr. 18, 1939.

Pat. 2,155,493. Monoazo Dyestuffs. Apr. 25, 1939.

Pat. 2,155,704. Stabilization of Per Compounds. Apr. 25, 1939.

Pat. 2,158,283. Dyestuffs. May 16, 1939.

Pat. 2,159,229. Manufacture of Fuse Heads for Electrical Firing. May 23, 1939.

Pat. 2,159,234. Gas-Producing Non-Detonating Composition. May 23, 1939.

Pat. 2,160,708. Electrical Apparatus. May 30, 1939.

Pat. 2,161,038. Manufacture of Rubber-Like Polymerisation Products. June 6, 1939.

Pat. 2,161,039. Manufacture of Polymerisation Products. June 6, 1939.

Pat. 2,161,627. Azo Dyestuffs. June 6, 1939.

Pat. 2,161,746. Apparatus for Decomposing Ammonia. June 6, 1939.

Pat. 2,162,507. Manufacture of Azo Dyestuffs. June 13, 1939.

Pat. 2,163,807. Basic Reaction Products. June 27, 1939.

Pat. 2,164,229. Symmetrical Aromatic Urea Suitable for Medicinal Purposes. June 27, 1939.

Pat. 2,164,248. Production of Laminated Fabrics. June 27, 1939.

Pat. 2,165,257. Coloring Acetate Artificial Silk. July 11, 1939.

Pat. 2,165,263. Cartridge for the Generation of Gas Pressures. July 11, 1939.

Pat. 2,165,356. Dry-Cleaning Fluid. July 11, 1939.

Pat. 2,165,784. Treatment of Acid Gases. July 11, 1939.

Pat. 2,166,198. Chemical Compounds. July 18, 1939.

Pat. 2,192,705. Colored Rubberized Fabrics. Mar. 5, 1940.

Pat. 2,193,337. Catalytic Oxidation of Carboniferous Materials. Mar. 12, 1940.

Pat. 2,194,351. Safety Device for Distillation Appa-

Pat. 2,204,749. Anthraquinone Dyestuffs. June 18, 1940.

Pat. 2,206,351. Preparation of Aliphatic Acid Nitriles. July 2, 1940.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 18, 1949

[VOL. 618. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 489,644. BOL, LTD., New York, N. Y. Filed Oct. 9, 1945.

INJEX

FOR BOTTLES AND CANS MADE OF PLASTIC AND METAL AND SOLD EMPTY IN TRADE.

Claims use since Aug. 1, 1945.

Ser. No. 500,082. HERVEY ASSOCIATES, New York, N. Y. Filed Apr. 12, 1946.

The expression "Hervey Associates" is disclaimed apart from the mark as shown.

FOR CLOSET ACCESSORIES—NAMELY, STORAGE CASES, STORAGE BAGS, AND STORAGE BOXES MADE OF TEXTILES, PLASTICS, CARDBOARD, LEATHER, AND COMBINATIONS OF SAID MATERIALS AND SERVING FOR STORING HATS, SHOES, HANDKERCHIEFS, HOSIERY, GARMENTS, BLOUSES, AND LINGERIE.

Claims use since Mar. 18, 1946.

Ser. No. 524,638. UNITED STATES ENVELOPE COMPANY, Springfield, Mass. Filed June 21, 1947. Under 10-year proviso.

COLUMBIAN

FOR MERCHANDISE ENVELOPES EQUIPPED WITH METAL FASTENERS.

Claims use since the year 1893.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOCKS

Ser. No. 510,107. THE PENNSYLVANIA MANUFACTURING CO., Brooklyn, N. Y. Filed Oct. 2, 1946.

PEMCO

FOR POCKET BOOK AND HAND BAG FRAMES.

Claims use since May 15, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 509,990. GERALD J. LE BLANC, doing business as Le Blanc Laboratories & Distributing Co., Grand Rapids, Mich. Filed Sept. 30, 1946.

PERMA

SUDS

Applicant disclaims the word "Suds" except in connection with the mark.

FOR SOAP.

Claims use since Oct. 12, 1945.

Ser. No. 514,413. FRENCH VENEER MANUFACTURING CO. INC., Los Angeles, Calif. Filed Dec. 17, 1946.

Ser. No. 521,716. FREDERIK WILLEM ROLF VAN DEN BAUMEN, doing business as "Roter", Hilversum, The Netherlands. Filed May 2, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 525,978. SUN OIL COMPANY, Philadelphia, Pa. Filed July 8, 1947.

SUNSOL

Ser. No. 514,413. FRENCH VENEER MANUFACTURING CO. INC., Los Angeles, Calif. Filed Dec. 17, 1946.

FCVM

FOR SILVER AND METAL POLISHES.
Claims use since April 1913.

Ser. No. 518,553. THE MYSTIC FOAM CORPORATION, Cleveland, Ohio. Filed Mar. 5, 1947.

MYSTIC DRI-QUIK

The term "Dri-Quik" is disclaimed apart from the mark as shown.
FOR DRY CLEANER.
Claims use since Nov. 22, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,062. IVAN SERIC, doing business as Carah-Carah Cosmetic Co., Los Angeles, Calif. Filed July 22, 1946.

CARAH-CARAH

FOR PREPARATION FOR FACE BEAUTIFIER FOR THE TREATMENT OF THE SKIN AND RUBBING COMPOUNDS FOR USE IN MASSAGE.
Claims use since May 8, 1946.

Ser. No. 519,844. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Mar. 29, 1947.

APPRATEX

FOR ANIONIC SURFACE ACTIVE ORGANIC SUBSTANTIVE SOFTENER FOR USE IN THE FINISHING OF TEXTILES.
Claims use since Feb. 12, 1947.

Ser. No. 520,677. THE BAKER CASTOR OIL COMPANY, Bayonne, N. J., and New York, N. Y. Filed Apr. 15, 1947.

PARICIN

FOR SUBSTANTIALLY SATURATED FATTY ACID ESTERS, FOR USE IN PLASTICIZING, EXTENDING, AND DILUTING PAINTS, VARNISHES, RESINS, PLASTICS, AND RUBBER, AND AS STARTING MATERIALS FOR THE PREPARATION OF SULFONATED OILS AND THE LIKE.
Claims use since Mar. 11, 1947.

Ser. No. 521,716. FREDERIK WILLEM ROLF VAN DEN BAUMEN, doing business as "Roter", Hilversum, The Netherlands. Filed May 2, 1947.

ROTER

FOR TABLETS FOR ULCER IN THE STOMACH.
Claims use since June 1, 1939.

Ser. No. 525,017. OREFRACTION INCORPORATED, Pittsburgh, Pa. Filed June 27, 1947.

FOR MINERAL CHEMICALS, PARTICULARLY ZIRCON, RUTILE, ILMENITE, GARNET, MONAZITE, TOURMALINE, AND CHROMITE.
Claims use since May 14, 1940.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 522,007. TRI-SULEX CORPORATION, Nashville, Tenn. Filed May 7, 1947.

TRI•SULEX

FOR HEAT AND SOUND INSULATING AND PROTECTIVE MATERIALS FOR METALS, APPLIED IN LIQUID OR PASTE FORM AND HAVING AN ASPHALT BASE.
Claims use since Dec. 27, 1946.

Ser. No. 524,839. UNITED DISTRIBUTORS, INC., Boston, Mass. Filed June 25, 1947.

United PLASTIC-TILE

No registration rights are claimed for the words "Plastic-Tile" apart from the mark.
FOR PLASTIC WALL TILE AND FLOOR TILE.
Claims use since May 29, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 516,099. ROBERT W. THOMPSON, Berkley, Calif. Filed Jan. 21, 1947.

E-Z

FOR KEY GUIDES FOR CONTROL VALVES FOR SPRINKLER SYSTEMS.
Claims use since July 1, 1946.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 491,311. BUDDS AERO CASTINGS, INCORPORATED, Canaan, Conn. Filed Nov. 9, 1945.

BACCO

FOR METAL CASTINGS.
Claims use since Sept. 20, 1945.

Ser. No. 517,940. WESTINGHOUSE ELECTRIC CORPORATION, East Pittsburgh, Pa. Filed Feb. 21, 1947.

K42B

FOR HIGH TEMPERATURE ALLOYS AS PRECIPITATION HEAT RESISTANT STEEL.
Claims use since Dec. 6, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 514,507. SUN OIL COMPANY, Philadelphia, Pa. Filed Dec. 18, 1946.

SUNICUT

FOR NON-SOLUBLE CUTTING OIL.
Claims use since December 1935.

Ser. No. 525,978. SUN OIL COMPANY, Philadelphia, Pa. Filed July 3, 1947.

SUNSOL

FOR UPPER CYLINDER LUBRICATING OIL.
Claims use since June 20, 1947.

Ser. No. 525,979. SUN OIL COMPANY, Philadelphia, Pa. Filed July 3, 1947.

SUNTUNE

FOR UPPER CYLINDER LUBRICATING OIL.
Claims use since June 20, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 524,660. EDWARD E. MENDONCA, doing business as Eddy Manufacturing Co., Hayward, Calif. Filed June 23, 1947.

EDY

FOR CHRISTMAS TREE LIGHTING OUTFITS COMPRISED OF A SERIES OF SOCKET BEARING WIRES FOR HOLDING ELECTRIC BULBS THEREIN FOR THE PURPOSE OF ILLUMINATING CHRISTMAS TREES.
Claims use since Mar. 4, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 460,460. U. S. AUTOMATIC CORPORATION, Amherst, Ohio. Filed May 6, 1943.

AUTOMATIC

No claim is made to the word "Automatic" apart from the mark shown.
FOR SCREW MACHINE PRODUCTS—NAMELY, THE FOLLOWING GOODS FOR GAS AND DIESEL EN-

GINES: LEVER BALLS, BEARINGS, CONNECTING ROD BOLTS, HYDRAULIC DUMP MANIFOLD BODIES, OIL PUMP STRAINER BODIES, BUSHINGS, CLUTCH RELEASE SLEEVE BUTTONS, SHIFTER CHECK CAPS, COVER RINGS, TIRE INFLATING DEVICE DIAPHRAGM RINGS, DRIVE SHAFT RODS, MECHANICAL SHAFTING, CLUTCH FORK BALL SUPPORT SCREWS, GREASE SCREWS, OIL PAN DRAIN SCREWS, SPIDER

Ser. No. 524,555. MODELS & PATENTS CORPORATION, New York, N. Y. Filed June 20, 1947.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

GINES: LEVER BALLS, BEARINGS, CONNECTING ROD BOLTS, HYDRAULIC DUMP MANIFOLD BODIES, OIL PUMP STRAINER BODIES, BUSHINGS, CLUTCH RELEASE SLEEVE BUTTONS, SHIFTER CHECK CAPS, CONNECTION CLEVISES, VALVE SPRING COLLARS, CRANKSHAFT CLUTCHES, WHEEL AND CLUTCH COUPLING STUD COLLETS, GOVERNOR CONTROL SPRING RETAINING CUPS, TRANSMISSION OIL PUMP DRIVE GEARS, CLUTCH SPRING ROD GUIDES, GAS VALVE DISC GUIDES, PUMP VALVE DISC HOLDERS, TRANSMISSION INTERLOCKS, STARTING CRANK JAWS, PUSHER POST LEVERS, DOG OPERATING LEVER LOCKS, SHIFT YOKE SHAFT LOCKS, ENGINE SIDE SHIELD LATCH PINS, PISTON PINS, PUSHER SHAFT PINS, REVERSE GEAR SHIFT LOCK PINS, WRIST PINS, BREATHER PIPES, FUEL PUMP DRIVE PLUGS, VACUUM PUMP DRIVE PLUGS, OIL PRESSURE REGULATOR PLUNGERS, OIL RELIEF PLUNGERS, VALVE SPRING RETAINERS, VALVE SEAT RETAINERS, PUSH RODS, TAPPET RODS, CAM ROLLERS, AND CAM SHAFT THRUST SCREWS; ALSO, THE FOLLOWING GOODS FOR COAL MINING MACHINERY: ROLLER BEARING COVER PLATES, CATERPILLAR TAKE-UP SCREWS, STARTING CRANK PAWL SCREWS, THROTTLE STOP SCREWS, BRAKE PEDAL SHAFTS, CLUTCH SHAFTS, IDLER PULLEY SHAFTS, FAN IDLER PULLEY BRACKET SHAFTS, FORCE FEED LUBRICATOR CAM SHAFTS, SAW SHAFTS, WATER PUMP SHAFTS, GOVERNOR CONTROL SPRING RETAINER SLEEVES, NECK RING ROLLER SLEEVES, CLUTCH PEDAL STUDS, CLUTCH SHAFT COUPLING STUDS, CLUTCH SHIFTER ARM SUPPORT STUDS, DRAW BAR SIDE RAIL TRANSMISSION CASE STUDS, MAIN DRIVE CHAIN TIGHTENER SPROCKET STUDS, ROCKER SHAFT STUDS, REAR WHEEL DRIVE SHAFT STUDS, TRANSMISSION STUDS, TURNBUCKLE STUDS, WEB DRIVE CHAIN IDLER SPROCKET STUDS, AND OIL SEAL RETAINER WASHERS; ALSO, THE FOLLOWING GOODS: ADAPTERS FOR MECHANICAL JOINTS, AXLES IN THE NATURE OF MECHANICAL SHAFTS FOR MACHINERY, AUTOMOTIVE BRAKE CONTROL CABLE END BALLS, BALLS FOR SPECIAL MECHANICAL USES, BALL, ROLLER, AND JOURNAL BEARINGS, BALLS AND BALL RACES (FOR BALL BEARINGS), BEARING SPACER BLOCKS FOR PUMP MACHINERY, BUSHINGS (FOR MECHANICAL JOINTS), VALVE SPRING CAPS, COLLARS (FOR MECHANICAL SHAFTS), BICYCLE ADJUSTING CONES, BICYCLE CRANK HANGER CONES, COUPLINGS (FOR MECHANICAL SHAFTS), BIB SEAT CUTTERS (FOR METAL-WORKING MACHINERY), END PIECES OR SPACERS FOR POSITIVE STOPS IN LOCATING MECHANICAL ASSEMBLIES, THREADED FERRULES (FOR USE WITH MECHANICAL SHAFTS), CYLINDER BLOCK INLET PIPE FITTINGS, ADJUSTMENT FLANGES AS PARTS OF MECHANICAL SHAFTS, GOVERNOR CAM FOLLOWERS, GEARS AND GEAR BLANKS, IDLER COMPRESSION GEARS, ROCKER-ARM SHAFT GOVERNORS, SAW GUIDES, GUIDES (FOR SPRING RODS AND VALVE STEMS OF INTERNAL COMBUSTION ENGINES), BALL HANDLES FOR ACTUATING ARMS OF MACHINES, HANGERS (FOR MECHANICAL ASSEMBLIES), HUBS FOR PRESSED STEEL PULLEYS, MOUNTING PAD INSERTS (FOR RUBBER MOLDING MACHINES), MAGAZINE MAIN SHAFT JOURNALS, CRANK KEYS, LOCKING KEYS (FOR MECHANICAL SHAFTS AND GEARS), ADJUSTING KNOBS (FOR TENSION SPRINGS FOR MACHINERY), LATCHES (FOR POSITIONING PARTS OF MECHANICAL APPARATUS), LEVERS, MANIFOLDS (FOR PUMPS AND GAS ENGINES), CYLINDER BLOCK WATER JACKET COVER STUD NUTS, CRANKSHAFT GEAR RETAINING NUTS, DIFFERENTIAL NUTS, FLYWHEEL BOLT NUTS, FUEL PUMP BODY AND BRACKET NUTS, IDLER BEARING NUTS, MAIN SHAFT BEARING LOCK NUTS, PAWLS, CAM ROLLER PINS, CLUTCH DRIVING PINS, PULLEYS, OIL PAN COVER RINGS, TIRE INFLATING DEVICE DIAPHRAGM RINGS, DRIVE SHAFT RODS, MECHANICAL SHAFTING, CLUTCH FORK BALL SUPPORT SCREWS, GREASE SCREWS, OIL PAN DRAIN SCREWS, SPIDER SET SCREWS, WEARING PLATE SCREWS, SPRING CLUTCH SEATS, (VALVE) GUIDE SOCKETS, SOCKETS (FOR SAW GUIDES), AXLE SLEEVE SPACERS, ENGINE SLIDE SHIELD LOCK PLATE SPACERS, FRESH WATER PUMP BOLT GUARD SPACERS, PUSH ROD SPACERS, SPACERS FOR USE IN FIRST SPEED GEAR NEEDLE BEARINGS, SPINDLES (FOR MACHINERY), AXLE SPINDLES, BUSHING SPINDLES, WHEEL SPINDLES, BREATHER VALVE STOPS, MOVEMENT STOPS FOR TOOLS SUCH AS LATHES AND MILLERS, BREATHER VALVE STUDS, CAM SHAFT THRUST STUDS, CARRIER HINGE STUDS, CYLINDER HEAD STUDS, FRONT WHEEL ADJUSTING SCREW BRACKET STUDS, PACKER CRANK CONNECTION STUDS, PAWL STUDS, GOVERNOR WEIGHT SUPPORTS, GEAR HOUSING TUBES AS CONDUITS FOR FLEXIBLE CABLES, CRANKSHAFT TIMING GEAR HOUSING TUBES, STRAIGHT CONNECTION ENGINE VENTILATING TUBES, HYDRAULIC CYLINDER VALVES, MECHANICAL VALVES, ROCKER ARM BRACKET STUD WASHERS, AND ROLLER WEBS AS PARTS OF PULLEYS FOR OVERHEAD CRANES.

Claims use on or about June 24, 1942.

Ser. No. 517,475. GILBERT & BARKER MANUFACTURING COMPANY, West Springfield, Mass. Filed Feb. 14, 1947.

Gilbarco

FOR REGULATED FLOW TYPE FLUID DISPENSING PUMPS NOT INCLUDING SELF-MEASURING PUMPS.

Claims use since May 10, 1934.

Ser. No. 518,704. SUGAR SHELL CORPORATION, New York, N. Y. Filed Mar. 7, 1947.

SUGARSHELL

FOR AUTOMATIC ICE CREAM CONE MACHINES AND PARTS THEREOF.

Claims use since January 1941.

Ser. No. 523,333. STEPHENS-ADAMSON MFG. CO., Aurora, Ill. Filed May 31, 1947.

JFS

FOR VARIABLE GEAR AND BELT REDUCERS FOR USE BETWEEN PRIME MOVERS AND LOADS.

Claims use since June 4, 1927.

Ser. No. 524,555. MODELS & PATENTS CORPORATION, New York, N. Y. Filed June 20, 1947.

FIRE WATCHMAN

The word "Fire" is disclaimed apart from the mark.

FOR PORTABLE, MECHANICALLY OPERATED FIRE ALARMS FOR HOUSEHOLD OR DOMESTIC USE OF THE TYPE WHICH INDICATES THE LOCATION OF A FIRE BY MAKING A NOISE AT THE LOCATION OF THE FIRE.

Claims use since Sept. 23, 1946.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 525,696. SPAULDING CHINA COMPANY, INC., New York, N. Y. Filed July 2, 1947.

Royal COPLEY

The surname "Copley" is disclaimed apart from the mark.

FOR CHINAWARE—NAMELY, JUGS, PLANTERS IN THE NATURE OF FLOWER CONTAINERS, FLOWER POTS, AND VASES.

Claims use since January 1947.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 502,685. HUGH J. GAULEY, San Francisco, Calif. Filed May 23, 1946.

GAME BAR

FOR WHEELED CABINET FOR RETAINING THEREIN CARD TABLES AND EMBODYING SHELVES ON WHICH GAME ACCESSORIES, ETC. ARE STORED.

Claims use since Nov. 1, 1945.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 520,288. LOS ANGELES GAS APPLIANCE COMPANY, INC., Los Angeles, Calif. Filed Apr. 7, 1947.

Thermolux

FOR GAS-FUELED WATER HEATERS.

Claims use since October 1928.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 486,812. DONALD S. REINHARDT, New York, N. Y. Filed Aug. 6, 1945.

PIVOT SYSTEM

FOR MOUTH-PIECES AND REEDS FOR MUSICAL INSTRUMENTS.

Claims use since July 30, 1945.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 522,863. RICHARD HUDNUT, New York, N. Y. Filed May 22, 1947.

Hair-O-Scope

Registration rights in the word "Hair," apart from the mark as shown are disclaimed.

FOR CHARTS FOR INDIVIDUAL ANALYSIS FOR BEAUTY AND GROOMING.

Claims use since Oct. 8, 1946.

Ser. No. 523,852. NORCROSS, INC., New York, N. Y. Filed June 9, 1947.

SQUEAK

FOR GREETING CARDS AND PRINTED GREETING FOLDERS.

Claims use since June 2, 1947.

CLASS 39

CLOTHING

Ser. No. 492,474. STILLMAN & KAGAN INC., New York, N. Y. Filed Nov. 30, 1945.

Ser. No. 513,175. GANTNER & MATTERN COMPANY, San Francisco, Calif. Filed Nov. 25, 1946.

COLEFYRE

Ser. No. 525,816. FIFTH CARPET COMPANY, New York, N. Y. Filed July 3, 1947.

WOOLTURE

CHIAN AND MASTOID; NASAL INSTRUMENTS—NAMELY, KNIVES, POLYPUS FORCEPS, PROBES, PUNCHES (ANTRUM), (SEPTUM) AND (SPHENOID), RASPATORIES, RASPS, RETRACTORS (SUBMUCOUS), RONGEURS, SAWS, SCISSORS, SNARES, SPECULAE, SPLINTS, SUCTION NOZZLES, SUTURING INSTRUMENTS, SYRINGES, TUBES (ANAESTHETIC), APPLI-

CLASS 39

CLOTHING

Ser. No. 492,474. STILLMAN & KAGAN INC., New York, N. Y. Filed Nov. 30, 1945.

Gracette

FOR MISSES' AND WOMEN'S LINGERIE—NAMELY, NIGHT GOWNS OF WOVEN RAYON FABRICS.
Claims use since February 1934.

Ser. No. 494,675. JNO. W. HENSON & SONS, Greenville, Tex. Filed Jan. 12, 1946.

"CHEK"

FOR MEN'S HANDKERCHIEFS MADE OF PLAIN WHITE MATERIAL.
Claims use since Oct. 1, 1945.

Ser. No. 506,102. FALCHICK DRESS CO., INC., New York, N. Y. Filed July 23, 1946.

Bernetti

FOR LADIES' DRESSES.
Claims use since December 1933.

Ser. No. 510,976. I. SCHNEIERSON & SONS, INC., New York, N. Y. Filed Oct. 16, 1946.

Synchro-SIZED

The word "Sized" is disclaimed apart from the mark.
FOR LADIES' CHEMISES, PANTIES, PAJAMAS, DRESSES, SLIPS, BLOOMERS, STEP-INS (UNDERDRAWERS), NIGHTGOWNS, AND LADIES' UNIFORMS FOR WORK PURPOSES, AND CHILDREN'S CHEMISES, PANTIES, PAJAMAS, DRESSES, SLIPS, BLOOMERS, STEP-INS, AND NIGHTGOWNS, AND BOYS' WASH SUITS OF A TEXTILE FABRIC.
Claims use since Sept. 19, 1945.

Ser. No. 513,175. GANTNER & MATTERN COMPANY, San Francisco, Calif. Filed Nov. 25, 1946.

COLEFYRE

FOR MEN'S, WOMEN'S, AND CHILDREN'S SWIMSUITS, COATS, JACKETS, SPORT SHIRTS, SHORTS, AND SWEATERS; WOMEN'S PLAYSUITS AND BRASSIÈRES; WOMEN'S AND CHILDREN'S SLACKS, UNDERWEAR, APPAREL BELTS, AND MEN'S SWIMMING TRUNKS.

Kenrose

FOR WOMEN'S WASH DRESSES.
Claims use since October 1945.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 478,749. THE FIRESTONE TIRE & RUBBER COMPANY, doing business as Firestone Industrial Products Company, Akron, Ohio. Filed Jan. 18, 1945.

VELOPHANE

FOR TRANSPARENT OR TRANSLUCENT PLASTIC FILMS IN THE NATURE OF PIECE GOODS TO BE USED IN MAKING UP INTO HOUSEHOLD ARTICLES, WINDOW CURTAINS, TABLE COVERS, AND THE LIKE.
Claims use since Feb. 4, 1944.

Ser. No. 525,816. FIFTH CARPET COMPANY, New York, N. Y. Filed July 3, 1947.

WOOLTURF

FOR CARPETS AND RUGS, COMPOSED IN SUBSTANTIAL PART OF WOOL.
Claims use since Sept. 19, 1945.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 489,194. AKTIEBOLAGET SVENSKA DENTALINSTRUMENT, Stockholm, Sweden. Filed Oct. 1, 1945.

JOSPI

FOR DENTAL ALLOYS, DENTAL CEMENTS, DENTAL ROOT FILLINGS, DENTAL VARNISH, DENTAL INSTRUMENTS FOR DRILLING, FILLING, AND CLEANING TEETH, DENTAL ROOT CANAL INSTRUMENTS, DENTAL FORCEPS, DENTAL SYRINGES, DENTAL PLIERS, DENTAL WOUND RETRACTORS, DENTAL WOUND CURETTES, DENTAL ARTERIAL CLAMPS, DENTAL BURS, DENTAL NIPPERS, DENTAL NEEDLE CARRIERS, DENTAL SCISSORS, DENTAL KNIVES, DENTAL IMPRESSION TRAYS, DENTAL COMPOSITIONS FOR MAKING IMPRESSIONS; DENTAL DRILLS, GRINDING AND POLISHING IMPLEMENTS; DENTAL REGULATING APPLIANCES, DENTAL CHAIRS, DENTAL ENGINES; DENTAL SWITCHBOARDS USED FOR ELECTRICALLY HEATING DENTAL MOUTH WASHES, DENTAL HOT AIR SYRINGES AND DENTAL CAUTERY INSTRUMENTS AND FOR SUPPLYING ELECTRICITY TO DENTAL MOUTH LAMPS AND INSTRUMENTS; DENTAL SPITOONS, DENTAL BUR AND INSTRUMENTS STANDS, DENTAL MEDICINE BOTTLES, DENTAL MERCURY CONTAINERS, DENTAL WASTE RECEIVERS, DENTAL COTTON HOLDERS AND RECEIVERS, DENTAL GLASS WARE, DENTAL ALCOHOL LAMPS AND DENTAL LATHES.
Claims use since May 19, 1941.

Ser. No. 520,409. MISDOM-FRANK CORPORATION, New York, N. Y. Filed Apr. 9, 1947.

M-F

FOR SURGICAL AND DENTAL INSTRUMENTS AND SUPPLIES—NAMELY, INHALER FACE PIECES AND MASKS; PLASTER PARIS KNIVES; PLASTER CUTTERS, SAWS AND SCISSORS; GALL BLADDER FORCEPS; GALL STONE FORCEPS, PROBES AND SCOOPS; DUODENAL TUBES, AMPUTATING KNIVES AND SAWS; RIB SHEARS AND RONGEURS; BULLET EXTRACTING INSTRUMENTS, DERMIS INSTRUMENTS; FIXATION INSTRUMENTS—NAMELY, EYE FORCEPS AND HOOKS; ANTRUM, CRANIAL, EUSTACHIAN AND MASTOID; NASAL INSTRUMENTS—NAMELY, KNIVES, POLYPUS FORCEPS, PROBES, PUNCHES (ANTRUM), (SEPTUM) AND (SPHENOID), RASPATORIES, RASPS, RETRACTORS (SUBMUCOUS), RONGEURS, SAWS, SCISSORS, SNARES, SPECULAE, SPLINTS, SUCTION NOZZLES, SUTURING INSTRUMENTS, SYRINGES, TUBES (ANAESTHETIC), APPLICATORS, CHISELS, CLAMPS; CURETTES, CUTTING FORCEPS, DISSECTORS, DRESSING FORCEPS, ELEVATORS, FORCEPS, GOUGES, AND HEMOSTATIC FORCEPS; MOUTH GAGS, TONGUE DEPRESSORS, AND CHEEK RETRACTORS; ESOPHAGEAL INSTRUMENTS—NAMELY, BOUGIES, DILATORS, RETRACTORS, AND SUCTION TIPS; STAPHYLORRHAPY INSTRUMENTS—NAMELY, PERIOSTEOTOMES, RASPATORIES, FORCEPS, AND KNIVES; CIRCUMCISION SHIELDS, AND SCISSORS; LITHOTOMY INSTRUMENTS—NAMELY, RETRACTORS, FORCEPS, AND SPOONS; GYNECOLOGIC INSTRUMENTS—NAMELY, APPLICATORS, PACKERS, SPECULAE, RETRACTORS, DRESSING FORCEPS, SOUNDS, CURETTES, DILATORS, HYSTERESTOMY, UTERINE TENACULUM, VULSELLUM FORCEPS, POLYPUS FORCEPS, UTERINE ELEVATING FORCEPS, BIOPSY INSTRUMENTS, TENACULA, KNIVES, OVARIAN TROCARS AND SCISSORS; POST MORTEM INSTRUMENTS—NAMELY, KNIVES, SCISSORS, HOOKS, PROBES, SHEARS AND CUTTERS, BONE HOLDING FORCEPS, HAMMERS, CHISELS, SAWS, AND THUMB FORCEPS; AIRWAYS—NAMELY, NASAL AND MOUTH, INTESTINAL FORCEPS; SUTURE CLIPS FORCEPS; SUTURE FORCEPS, EYE INTRANASAL AND TONSIL; SUTURE HOOKS; SUTURE NEEDLES, ABDOMINAL, CLEFT PALATE, EYE FISTULA, GENERAL, GOITRE, HERNIA, INTESTINAL, INTRANASAL, POST MORTEM, STAPHYLORRHAPHY AND TONSILS; SUTURE SCISSORS AND SETS; BONE INSTRUMENTS—NAMELY, CHISELS, CURETTES, CUTTING FORCEPS, DRILLS, ELEVATORS, FILES, GOUGES, GOUGING FORCEPS, HOLDING CLAMPS AND FORCEPS, NAILS, PLATE HOLDING CLAMPS AND FORCEPS, RETRACTORS, RONGEURS, SAWS, SHEARS; EYE INSTRUMENTS—NAMELY, CURETTES, DILATORS, FORCEPS, KNIVES, GOUGES, LID CLAMPS (CHALAZION), NEEDLE HOLDERS, NEEDLES, PROBES, RETRACTORS, SCISSORS, SPATULAE, SPECULA, SPOONS, SPUDS, SUTURE FORCEPS AND NEEDLES, SYRINGES; EAR INSTRUMENTS—NAMELY, APPLICATORS, CURETTES, KNIVES, TIPS, SPECULA, BOUGIES, CATHETERS, DIAGNOSTIC INSTRUMENTS, FORCEPS, HOOKS, KNIVES, PERFORATORS, PROBES, SNARES, SPOONS, SPOUTS, SPUDS, SYRINGES; SINUS INSTRUMENTS—NAMELY, CANULAE, CURETTES, IRRIGATING TUBES, PROBES, AND RASPS; LARYNGEAL INSTRUMENTS—NAMELY, APPLICATORS, FORCEPS, MIRRORS, PUNCHES, SYRINGES; TRACHEOTOMY INSTRUMENTS—NAMELY, CANULAE, DILATORS, SCISSORS, HOOKS, FORCEPS, PROBES, AND DIRECTORS; DENTAL INSTRUMENTS, AMALGAM AND PLASTIC INSTRUMENTS, BURNISHERS, CARVERS, CHISELS, CURETTES, ELEVATORS, EXCAVATORS, EXPLORERS, BONE FILES, GAUZE PACKERS, SCALERS, SPATULAS; BLADDER INSTRUMENTS—NAMELY, EVACUATORS, FORCEPS, RETRACTORS, SCISSORS, SCOOPS, SNARES, AND TROCARS; OBSTETRIC INSTRUMENTS—NAMELY, DILATORS, FORCEPS, HOOKS, SCISSORS, RETRACTORS, AND PROBES; BIOPSY INSTRUMENTS—NAMELY, CURETTES, FORCEPS; AUTOPSY KNIVES AND SCISSORS; BRAIN INSTRUMENTS—NAMELY, SUTURING INSTRUMENTS, OPERATING INSTRUMENTS, CLIPS (READY FORMED), MASTOID INSTRUMENTS—NAMELY, CHISELS, CURETTES, GOUGES, MALLETS, RETRACTORS, AND RONGEURS; TONSIL INSTRUMENTS—NAMELY, FORCEPS, KNIVES, NEEDLES, SCISSORS, SEIZING FORCEPS, SNARES, CURETTES, DISSECTORS, ENUCLEATORS, FORCEPS FOR SUTURE CLIPS, HEMOSTATS, INJECTION CANULAE, LIGATURE FORCEPS, NEEDLE HOLDERS, INJECTION

NEEDLES, SUTURE NEEDLES, PUNCHES, RETRACTORS, SEPARATORS, SPONGE FORCEPS, SUCTION CUPS, SUTURING INSTRUMENTS, SYRINGES, TENACULA, WIRES FOR SNARES, TONSILLECTOMES AND TONSILLOTOMES; URETHAL INSTRUMENTS—

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 504,011. TWIN PEAKS FOOD PRODUCTS COMPANY,

Ser. No. 524,242. JOHN A. FORMAN, doing business as Philadelphia Soda Fountain Supply, Philadelphia, Pa. Filed June 16, 1947.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Ser. No. 511,186. ETABLISSEMENTS VITRY-VAUCLUSE, SOCIETE RESPONSABILITE LIMITEE, Seine, France. Filed

NEEDLES, SUTURE NEEDLES, PUNCHES, RETRACTORS, SEPARATORS, SPONGE FORCEPS, SUCTION CUPS, SUTURING INSTRUMENTS, SYRINGES, TENACULA, WIRES FOR SNARES, TONSILLECTOMES AND TONSILLOTOMES; URETHAL INSTRUMENTS—NAMELY, BOUGHIES, CATHETER STYLETS, CATHETERS (MALE AND FEMALE), CLAMPS, COOLERS, DILATING SOUNDS, DILATORS, DIRECTORS, FILIFORM GUIDES, FORCEPS, GUIDES (GROOVED), IRRIGATORS, SCISSORS, SHIELDS, SOUNDS, SPECULA, SYRINGES; PROSTATECTOMY INSTRUMENTS, PROSTATIC CATHETERS, COOLERS; CAESAREAN INSTRUMENTS—NAMELY, FORCEPS AND DILATORS; DISSECTING INSTRUMENTS POST MORTEM—NAMELY, KNIVES, SCISSORS, FORCEPS, FORCEPS (VEIN), NEEDLES, PROBES TENACULA; DISSECTORS—NAMELY, LACHRYMAL SAC, LID, PERIOSTEAL, SUBMUCOUS AND TONSIL DISSECTORS; DIAGNOSTIC INSTRUMENTS—NAMELY, BLOOD, EAR, EYE, GENERAL, AND STOMACH INSTRUMENTS, STETHOSCOPES, PERCUSSION HAMMERS, BLOOD LANCETS, HEAD MIRRORS, HEAD BANDS; NEURO-SURGICAL INSTRUMENTS—NAMELY, NEEDLES, SOUNDS, HEMOSTATS, SCISSORS, SAWS, SPOONS, KNIVES, FORCEPS, RETRACTORS, CLIPS, CLIP FORCEPS; MANICURE INSTRUMENTS—NAMELY, NAIL AND CUTICLE NIPPERS, SCISSORS, AND FILES; TOURNIQUETS, FORCEPS, DIRECTORS; TUBES—NAMELY, TRACHEA TUBES, SUCTION TUBES, STOMACH TUBES, INFUSION TUBES, RECTAL TUBES; PUNCHES—NAMELY, EAR PUNCHES, NOSE PUNCHES, TONSIL PUNCHES, BIOPSY PUNCHES, AND RECTAL PUNCHES; SUTURE NEEDLES, LIGATURE CARRIERS; SYRINGES—NAMELY, ANTRUM SYRINGES, EAR SYRINGES, LACHRYMAL SYRINGES, LARYNGEAL SYRINGES, TRANSFUSION SYRINGES, WOUND AND BLADDER SYRINGES, HYPODERMIC SYRINGES, DENTAL SYRINGES; SCISSORS, TROCARS, SPECULA, RETRACTORS, ANEURISM NEEDLES, SAWS, MALLETS, RONGEURS, SPATULAE, CATHETERS, SNARES, TONGUE SEIZING FORCEPS, HYPODERMIC NEEDLES, KNIVES, SHEARS, SCOOPS, PROBES, CLAMPS, AND DILATORS.

Claims use since 1939.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Ser. No. 522,422. A-1 BEVERAGE CORP., Philadelphia, Pa. Filed May 15, 1947.

The term "Mixer . . . Fixer" is disclaimed apart from the mark shown.

FOR MALTLESS SOFT DRINK.

Claims use since Jan. 2, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 504,011. TWIN PEAKS FOOD PRODUCTS COMPANY, Fort Worth, Tex. Filed June 15, 1946.

The drawing is lined for shading only. The woman is fanciful. The phrase "Lunch in a Minute" is disclaimed.

FOR BREAD SANDWICHES MADE OF MEAT, CHEESE, AND SANDWICH SPREADS.

Claims use since May 1, 1946.

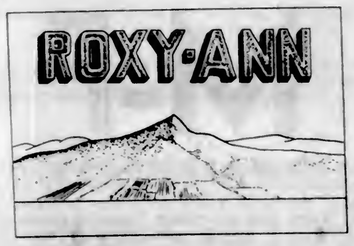
Ser. No. 515,651. BEN-GEE PRODUCTS, INC., Chicago, Ill. Filed Jan. 13, 1947.

BEN-GEE

FOR FOODS AND INGREDIENTS OF FOODS—NAMELY, CANNED CHOP SUEY, CHOW MEIN, CANNED CHOW MEIN NOODLES, CANNED BEAN SPROUTS, BEAD MOLASSES, AND SOY SAUCES FOR FOOD FLAVORING PURPOSES.

Claims use since on or about July 30, 1940.

Ser. No. 520,932. RALPH L. COOK, Medford, Oreg. Filed Apr. 18, 1947.



No claim is made to the representation of a label apart from the mark as shown.

FOR FRESH PEARS.

Claims use since Aug. 1, 1944.

Ser. No. 524,242. JOHN A. FORMAN, doing business as Philadelphia Soda Fountain Supply, Philadelphia, Pa. Filed June 16, 1947.

P.S.F.S.

FOR TOPPINGS FOR SUNDAES—NAMELY, BUTTERSCOTCH FUDGE, CARAMEL FUDGE, CRUSHED AND WHOLE CHERRIES, COLD AND HOT CHOCOLATE FUDGE, MIXED FRUITS, MARSHMALLOW, PECAN, CRUSHED PINEAPPLE, STRAWBERRIES, AND WALNUT; AND FOOD FLAVORING SYRUPS—NAMELY, IMITATION CHERRY, CHOCOLATE, MILK CHOCOLATE, COFFEE, GRAPE, LEMON, LEMON AND LIME, LIME, LIME RICKEY, PINEAPPLE, ORANGE, IMITATION RASPBERRY, ROOT BEER, STRAWBERRY, AND VANILLA.

FOR CELLULOSE ETHERS AND SALTS THEREOF.
Claims use since Apr. 4, 1947.

Ser. No. 529,969. THE DAVISON CHEMICAL CORPORATION, Baltimore, Md. Filed July 30, 1947.

DA-5

FOR MAGNESIA-SILICA GEL CATALYST USED IN THE CATALYTIC CRACKING OF HYDROCARBONS.
Claims use since July 8, 1947.

Ser. No. 529,970. THE DAVISON CHEMICAL CORPORATION, Baltimore, Md. Filed July 30, 1947.

M-S

FOR GEL CATALYST IN SPHEROIDAL FORM USED IN THE CATALYTIC CRACKING OF HYDROCARBONS.
Claims use since July 8, 1947.

Ser. No. 530,880. WARNER F. WILHELM, doing business as Blu Bru Company, Chicago, Ill. Filed Aug. 8, 1947.

VIOLITE

FOR PREPARATION FOR THE TREATMENT OF DIARRHEA.
Claims use since Apr. 17, 1947.

Ser. No. 536,836. RHODE ISLAND LABORATORIES, INC., West Warwick, R. I. Filed Oct. 4, 1947.

BLU BRU

Applicant claims ownership of registration No. 399,944.
FOR COSMETICS—NAMELY, FACE AND HAND LOTIONS, LIPSTICK, MASCARA OR EYE SHADOW, CREAM OR PASTE ROUGE, FOUNDATION OR PAN CAKE, NAIL POLISH, FACE POWDER, TALCUM POWDER AND COLD CREAM.
Claims use since Sept. 11, 1947.

Ser. No. 537,217. L. A. MOSHER COMPANY, Atlanta, Ga. Filed Oct. 8, 1947.

Lamco

FOR VETERINARY PREPARATIONS IN TABLET, LIQUID, AND POWDERED FORM FOR THE TREATMENT OF INTESTINAL INFECTIONS, FEVERISHNESS AND PHYSICAL WEAKNESS; PREPARATIONS FOR THE CONTROL OF FLEAS, TICKS, AND OTHER INSECTS; PURGATIVES AND SULFANILAMIDE TABLETS.
Claims use since September 1945.

Ser. No. 539,311. GOLD MEDAL HAARLEM OIL CORPORATION, Jersey City, N. J. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

GOLD MEDAL HAARLEM OIL CAPSULES

The words "Haarlem Oil" and "Capsules" are disclaimed apart from the mark. Applicant claims ownership of registration No. 146,465.
FOR HAARLEM OIL FOR KIDNEY, LIVER, BLADDER, RHEUMATIC, AND URIC-ACID TROUBLES.
Claims use since Jan. 1, 1914.

Ser. No. 541,505. BRISTOL LABORATORIES INC., Syracuse, N. Y. Filed Nov. 18, 1947.

Vytinic

FOR TONIC PREPARATION.
Claims use since Aug. 21, 1947.

Ser. No. 541,506. BRISTOL LABORATORIES INC., Syracuse, N. Y. Filed Nov. 18, 1947.

INTRAFOLIC

FOR FOLIC ACID PARENTERAL PRODUCT.
Claims use since Oct. 8, 1947.

Ser. No. 545,874. NATIONAL REMEDY COMPANY, INC., White Plains, N. Y. Filed Dec. 31, 1947.

EN-AR-CO

FOR MEDICINAL OIL, USED AS AN ANTISEPTIC, CARE OF SCALP, RELIEF OF COLDS, AND BRONCHIAL IRRITATION, AND INSECT BITES.
Claims use since Apr. 3, 1908.

Ser. No. 547,161. SOCIETE ANONYME, BIENAIME, Paris, France. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

LES CARNATIONS DE BIENAIMÉ

No claim is made to the words "Les Carnations" apart from the mark. Applicant claims ownership of French registration No. 345,425, dated May 20, 1943.
FOR PERFUMES, FACE CREAMS, ROUGE.

Ser. No. 547,454. HOWE-LEWIS, INC., Los Angeles, Calif. Filed Jan. 19, 1948. Under section 2f of the act of 1946.

fashion of hollywood

Applicant claims ownership of registration No. 309,704.
FOR FACIAL AND HAND CREAMS, SKIN LOTION,

ASTRINGENT LOTION, HAIR POMADE, HAIR CREAM, HAIR TONIC, BRILLIANTINE, BODY DEODORANT, WAVE SET, SHAMPOO, TOILET WATER, COLOGNE, LIQUID NAIL POLISH REMOVER, FACIAL PACK, AND CAKE MAKE-UP.
Claims use since Nov. 1, 1932.

Ser. No. 549,804. HENRY LABORATORIES, INC., Nashville, Tenn. Filed Feb. 16, 1948.

H.L.

Ser. No. 554,147. ARNOLD PALM, doing business as Palm Pharmacal Co., New York, N. Y. Filed Apr. 8, 1948.

Cholinoplex

Ser. No. 558,975. WESTVACO CHEMICAL CORPORATION, New York, N. Y., assignor to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware. Filed June 10, 1948.

FOOMEX

ASTRINGENT LOTION, HAIR POMADE, HAIR CREAM, HAIR TONIC, BRILLIANTINE, BODY DEODORANT, WAVE SET, SHAMPOO, TOILET WATER, COLOGNE, LIQUID NAIL POLISH REMOVER, FACIAL PACK, AND CAKE MAKE-UP.
Claims use since Nov. 1, 1932.

Ser. No. 548,418. THE SCHOLL MFG. CO., INC., Chicago, Ill. Filed Jan. 30, 1948. Under section 2f of the act of 1946.

Dr Scholl's

Applicant claims ownership of registrations Nos. 158,584, 275,209, 278,423, 327,406, and 341,542.
FOR ANTISEPTIC AND MEDICATED FOOT POWDERS AND LOTIONS, BALMS, AND SALVES FOR THE RELIEF OF CORNS, BUNIONS, CALLOUSES, INGROWING NAILS, CHILBLAINS, SWEATING, ITCHING, AND OTHER FOOT TROUBLES AND IRRITATIONS.
Claims use since May 1, 1916.

Ser. No. 549,138. JOHN T. BERDAN, doing business as Drought Products, La Mirada, Calif. Filed Feb. 9, 1948.

DROUGHT

Applicant claims ownership of registration No. 431,868.
FOR INSECTICIDAL CHEMICAL.
Claims use since July 1946.

Ser. No. 549,484. VAN PELT AND BROWN, INCORPORATED, Richmond, Va. Filed Feb. 11, 1948.

VIFOLIRON

FOR PREPARATION FOR THE TREATMENT OF VARIOUS TYPES OF ANEMIA IN TABLET FORM.
Claims use since Dec. 29, 1947.

Ser. No. 549,740. MICHAEL A. MAFFEY, doing business as The Mara Laboratories, East Newark, N. J. Filed Feb. 14, 1948.

Triasul

FOR MEDICINAL PREPARATION FOR USE IN THE TREATMENT OF PNEUMOCACCIC, STREPTOCOCCIC, MENINGOCOCCIC, AND STAPHYLOCOCCIC INFECTIONS, SCARLET FEVER, RHEUMATIC FEVER, ERYSIPELAS, OTITIS MEDIA, TONSILLITIS, URINARY INFECTIONS DUE TO E. COLI, STAPHYLOCOCCUS ALBUS, PROTEUS, AND PSEUDOMONAS.
Claims use since Sept. 1, 1946.

Ser. No. 549,804. HENRY LABORATORIES, INC., Nashville, Tenn. Filed Feb. 16, 1948.

H.L. Feminine Hygiene Powder

No claim is made to the words "Feminine Hygiene Powder" apart from the mark.
FOR DOUCHE POWDER FOR FEMININE HYGIENE.
Claims use since Dec. 15, 1947.

Ser. No. 550,190. WARNER F. WILHELM, doing business as D-String Co., Chicago, Ill. Filed Feb. 19, 1948.

D- STRING

The word "String" is disclaimed apart from the entire combination.
FOR INSECT REPELLENTS.
Claims use since Dec. 6, 1947.

Ser. No. 550,294. BEAUTYMASTERS OF BEVERLY HILLS, INC., Milwaukee, Wis. Filed Feb. 21, 1948.

BHB

FOR LIPSTICKS, EYEBROW PENCILS, MASCARA, EYESHADOW, EYELID CREAM AND EYE LOTION, CREAM ROUGE, FACE POWDER, CREAM POWDER BASE, ALL-PURPOSE CREAM, NIGHT CREAM, FACE LOTION, HORMONE CREAM, FACE PACK, HAND-CREAM, CREAM SHAMPOO, BATH OIL, COLOGNE, CREAM DEODORANT, AND FOOT-SCALP-FACE-AND-HAND CREAM.
Claims use since March 1946.

Ser. No. 553,895. OPTIMUS PHARMACEUTICALS CO., INC., Taylors, S. C. Filed Apr. 5, 1948.

V-H

FOR VAGINAL HYGIENE POWDER.
Claims use since November 1947.

Ser. No. 554,063. MARVIN R. THOMPSON, INC., Stamford, Conn. Filed Dec. 5, 1947.

ELIXIR FERROUS GLYCINATE-MRT

The words "Elixir Ferrous Glycinate" are disclaimed.
FOR MEDICINAL PREPARATION USED IN THE TREATMENT OF NUTRITIONAL ANEMIA.
Claims use since October 1946.

Ser. No. 554,147. ARNOLD PALM, doing business as Palm Pharmacal Co., New York, N. Y. Filed Apr. 8, 1948.

Cholinoplex

FOR PHARMACEUTICAL PREPARATIONS FOR USE IN AILMENTS OF THE LIVER, IN PARTICULAR FATTY INFILTRATION OF THE LIVER, TOXIC LIVER EFFECTS, CYRRHOSIS OF THE LIVER, DIABETES MELLITUS.
Claims use since Jan. 12, 1948.

Ser. No. 554,460. ALLIED CHEMICAL & DYE CORPORATION, New York, N. Y. Filed Apr. 13, 1948.

STIMULIZER

FOR AQUEOUS SULFURIC ACID SOLUTIONS FOR APPLICATION TO TURPENTINE FACES (I. E. THE SLASHES IN THE BARK OF THE TRUNKS OF TURPENTINE PRODUCING TREES) TO INCREASE THE TURPENTINE FLOW FROM THE TREE.
Claims use since Feb. 4, 1948.

Ser. No. 554,690. THE NEW JERSEY ZINC COMPANY, New York, N. Y. Filed Apr. 15, 1948.

XX

FOR ZINC OXIDE, HAVING A GENERAL UTILITY IN THE INDUSTRIAL ARTS, PARTICULARLY IN COMPOUNDING RUBBER AND IN THE PRODUCTION OF ZINC YELLOW, ZINC SULFATE, AND ZINC CYANIDE SOLUTIONS.
Claims use since 1897.

Ser. No. 555,399. WALTER A. FANSLER, doing business as Fuller Pharmaceutical Company, Minneapolis, Minn. Filed Apr. 23, 1948.

BARBATIN

FOR ANALGESIC AND SEDATIVE IN TABLET FORM FOR HUMAN USE.
Claims use since Jan. 12, 1948.

Ser. No. 558,650. GREEN'S FUEL, INC., Sarasota, Fla. Filed June 7, 1948. Under section 2f of the act of 1946.

GREEN'S FUEL

Applicant disclaims the exclusive right to the use of the word "Fuel" apart from the mark as shown.
FOR LIQUIFIED PETROLEUM GASES.
Claims use since May 4, 1939.

Ser. No. 558,975. WESTVACO CHEMICAL CORPORATION, New York, N. Y., assignor to Food Machinery and Chemical Corporation, New York, N. Y., a corporation of Delaware. Filed June 10, 1948.

FOSVEX

FOR INSECTICIDE.
Claims use since Nov. 21, 1947.

Ser. No. 558,985. AMERICAN GUM PRODUCTS COMPANY, New York, N. Y. Filed June 11, 1948.

COULAG

Applicant claims ownership of registration No. 92,500 (renewed).
FOR FILLING AGENT USEFUL IN THE MANUFACTURE OF LEATHER FROM HIDES AND SKINS CONSISTING OF A LIGNIN PITCH WHICH IS DERIVED FROM THE SULFITE PROCESS OF MAKING WOOD PULP.
Claims use since June 15, 1916.

Ser. No. 559,047. JOSEPH PECORA, doing business as Joseph's S-F-X Shampoo, Buffalo, N. Y. Filed June 11, 1948.

S-F-X Joseph's

FOR HAIR SHAMPOO.
Claims use since June 1936.

Ser. No. 559,737. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed June 19, 1948.

ULSATE

FOR PROTEINIC PREPARATION USEFUL IN THE TREATMENT AND PREVENTION OF METABOLIC DEFICIENCIES.
Claims use since June 15, 1948.

Ser. No. 559,968. THE WALTERISATION COMPANY LIMITED, Croydon, Surrey, England. Filed June 22, 1948.

CLASS 10
FERTILIZERS

Ser. No. 533,937. THE STADLER PRODUCTS COMPANY, Cleveland, Ohio, assignor to The Stadler Fertilizer Company, Cleveland, Ohio. Filed Sept. 9, 1947. Under

Ser. No. 547,175. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

GOLDSHEEN

CLASS 12
CONSTRUCTION MATERIALS

Ser. No. 500,657. HIGGINS INDUSTRIES, INC., New Orleans, La., assignor to Higgins Resources, Inc., New Orleans, La., a corporation of Louisiana. Filed May

Ser. No. 559,968. THE WALTERISATION COMPANY LIMITED, Croydon, Surrey, England. Filed June 22, 1948.

Applicant claims ownership of British registration No. 573,200, dated Nov. 25, 1936.
FOR CHEMICAL SOLUTIONS FOR THE PREVENTION OF CORROSION OF METAL AND ALLOYS AND FOR BONDING PAINT AND LACQUERS TO METAL SURFACES.

Ser. No. 560,028. ALEXANDER M. LECCAS, Jersey City, N. J. Filed June 23, 1948.

FOR LAXATIVES.
Claims use since 1926.

Ser. No. 560,103. HAAS-MILLER CORPORATION, Philadelphia, Pa. Filed June 24, 1948.

HAMIDRAW

FOR VISCOUS LIGHT BROWN, SELF-EMULSIFIABLE LUBRICATING PASTE USED FOR LUBRICATING THE DIE AND TO PREVENT METAL TO METAL CONTACT IN DRAWING STEEL AND ALLOYS.
Claims use since Sept. 16, 1937.

Ser. No. 564,061. CUTTER LABORATORIES, Berkeley, Calif. Filed June 11, 1948.

K-R-S

Applicant claims ownership of registration No. 434,382.
FOR VETERINARY ANTISEPTIC.
Claims use since May 1938.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 540,853. THE NAPIER COMPANY, Meriden, Conn. Filed Nov. 12, 1947. Under section 2f of the act of 1946.

NAPIER

Applicant claims ownership of registrations Nos. 144,870, 180,484, 218,316, 245,879, and 427,224.
FOR PYROPHORIC POCKET AND DESK-TYPE LIGHTERS.
Claims use since June 15, 1927.

CLASS 10

FERTILIZERS

Ser. No. 533,937. THE STADLER PRODUCTS COMPANY, Cleveland, Ohio, assignor to The Stadler Fertilizer Company, Cleveland, Ohio. Filed Sept. 9, 1947. Under section 2f of the act of 1946.

The exclusive right to the use of the word "Superior" is disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 238,916.
FOR FERTILIZER.
Claims use since Sept. 1, 1940.

Ser. No. 554,435. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Apr. 12, 1948.

ANCHOR BRAND

No claim is made to use of the word "Brand." Applicant claims ownership of registration No. 58,091.
FOR SUPER PHOSPHATE FERTILIZER.
Claims use since Dec. 31, 1903.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 547,169. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

AURORAL

FOR PIGMENT COLORS USED IN THE MANUFACTURE OF INK.
Claims use since December 1935.

Ser. No. 547,172. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

DEEPTONE

Applicant claims ownership of registration No. 38,689.
FOR PRINTING INK.
Claims use since August 1938.

Ser. No. 547,175. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

GOLDSHEEN

FOR PRINTING INK.
Claims use since Dec. 27, 1940.

Ser. No. 547,176. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

GOLVENEER

Applicant claims ownership of registration No. 347,812.
FOR PRINTING INK.
Claims use since July 18, 1941.

Ser. No. 547,184. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

SILVENEER

Applicant claims ownership of registration No. 347,812.
FOR PRINTING INK.
Claims use since July 18, 1941.

Ser. No. 547,185. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

SILVERSHEEN

FOR PRINTING INK.
Claims use since Nov. 29, 1937.

Ser. No. 547,188. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

ULTRAOPAQUE

FOR PRINTING INK.
Claims use since Jan. 6, 1938.

Ser. No. 553,967. MARKEM MACHINE COMPANY, Keene, N. H. Filed Apr. 6, 1948.

PLASTIROLL

FOR INK ROLLS FOR MARKING MACHINES.
Claims use since May 20, 1947.

Ser. No. 554,705. REICHHOLD CHEMICALS, INC., Detroit, Mich. Filed Apr. 15, 1948.

REVEILLE RED

Applicant disclaims the word "Red" apart from the mark.
FOR PIGMENTS FOR USE IN COLORING INKS.
Claims use since Aug. 1, 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 500,657. HIGGINS INDUSTRIES, INC., New Orleans, La., assignor to Higgins Resources, Inc., New Orleans, La., a corporation of Louisiana. Filed May 7, 1948; originally filed, act of 1905, Apr. 22, 1946.

"THERMO-CON"

FOR MIXTURE OF PORTLAND CEMENT AND OTHER MATERIALS USED IN MAKING CONSTRUCTION BLOCKS, AND FOR OTHER PURPOSES—NAMELY, INSULATING MATERIAL, AS PLASTER, AS A MORTAR, AND AS A MOISTURE REPELLANT.
Claims use since July 1943.

Ser. No. 531,323. THE FORMICA INSULATION COMPANY, Cincinnati, Ohio, now by change of name The Formica Company, a corporation of Ohio. Filed Aug. 14, 1947. Under section 2f of the act of 1946.

Pregwood

FOR LAMINATED IMPREGNATED WOOD FOR USE AS PARTS FOR MACHINES, AIRPLANES, AND TOOLS.
Claims use since Dec. 15, 1938.

Ser. No. 537,635. THE TILE-TEX COMPANY, Chicago, Heights, Ill. Filed Oct. 11, 1947.

MURA-TEX

FOR PLASTIC WALL TILE MADE FROM RESINOUS BINDER, ASBESTOS FIBER, AND MINERAL COLORING PIGMENTS.
Claims use since July 22, 1947.

Ser. No. 542,343. PEASE WOODWORK COMPANY, Cincinnati, Ohio. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

Richtone

Applicant claims ownership of registration No. 379,955.
FOR IMITATION TILE BOARD AND ASPHALT SLATE SURFACED ROOFING.
Claims use since Mar. 18, 1939.

Ser. No. 544,005. TEXAS HOUSING COMPANY, Dallas, Tex. Filed Dec. 10, 1947.

THE HOMESTEAD COTTAGE

The words "The" and "Cottage" are disclaimed apart from the mark.
FOR PREFABRICATED HOUSES.
Claims use since Apr. 1, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

GROUNDING CLAMPS WHICH CLAMP THE CABLE IN THE EYE OF A GUY ROD TO USE THE ASSEMBLY AS A GROUND, GROUND ROD CLAMPS AND CABLE WIRE CLIPS COMPRISING SPECIALLY SHAPED WIRES FOR HOOKING OVER A MESSENGER CABLE TO A SUPPORTING LEAD-COVERED CONDUCTOR.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,438. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Filed Feb. 25, 1948; originally filed, act of 1905,

CLASS 19

VEHICLES

Ser. No. 560,917. JOSEPH POWER, doing business as Power Equipment Company, Kansas City, Mo. Filed July 8, 1948.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 509,788. NIXDORFF-KREIN MFG. CO., St. Louis, Mo. Filed July 10, 1947; originally filed, act of 1905, Sept. 26, 1946.

ELEPHANT BRAND

The word "Brand" is disclaimed apart from the mark as shown.

FOR CHAINS FOR GENERAL USE, NOT INCLUDING POWER TRANSMISSION CHAINS, AND TIRE CHAINS FOR MOTOR VEHICLES.

Claims use since 1885.

Ser. No. 535,942. DARLING VALVE & MANUFACTURING COMPANY, Williamsport, Pa. Filed Sept. 27, 1947. Under section 2f of the act of 1946.

QUIKFIX

FOR HYDRANTS.

Claims use since June 5, 1940.

Ser. No. 536,235. A. B. CHANCE COMPANY, Centralia, Mo. Filed Sept. 30, 1947.

The word "Industries" is disclaimed apart from the mark.

FOR EARTH ANCHORS—NAMELY, CURVED PLATE, EXPANDING TWO BLADE, EXPANDING FOUR BLADE AND SCREW TYPE; GUY RODS—NAMELY, SINGLE CABLE, TWO CABLE, THREE CABLE, THREADED TYPE WITH NUT AND POINTED HEAD TYPE; ANCHORS OF THE EXPANDING ROCK TYPE TO BE INSERTED IN A BORE IN A ROCK AND EXPANDED, ANCHORS OF THE CONE TYPE TO BE COVERED WITH ROCK WHICH IS SPREAD BY THE ANCHOR TO INCREASE RESISTANCE OF THE ANCHOR, ANCHORS OF THE EXPANDING POLE KEY TYPE FOR INCREASING THE LATERAL RESISTANCE OF THE BUTT END OF A LINE POLE IN THE GROUND; GUY FIXTURES—NAMELY, ANGLE EYES, EYE NUTS, STRAIGHT EYES FOR RECEIVING A BOLT, LOOP AND SADDLE FIXTURE, STRAIGHT-AWAY LOOP FIXTURE, MESSENGER DEAD-END FIXTURE, THREADED EYE BOLTS AND ANGLE EYE BOLTS; GUY CLAMPS, LOAD PLATES, BACK TRUSS HARDWARE CONSISTING OF RODS AND FIXTURES FOR FORMING A TEMPORARY CONDUCTOR SUPPORTING TRUSS, TERMINAL BRACKETS, GUY GROUNDING CLAMPS WHICH CLAMP THE CABLE IN THE EYE OF A GUY ROD TO USE THE ASSEMBLY AS A GROUND, GROUND ROD CLAMPS AND CABLE WIRE CLIPS COMPRISING SPECIALLY SHAPED WIRES FOR HOOKING OVER A MESSENGER CABLE TO A SUPPORTING LEAD-COVERED CONDUCTOR.

Claims use since Aug. 1, 1936.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 557,050. THE LINCOLN ELECTRIC COMPANY, Cleveland, Ohio. Filed May 14, 1948. Under section 2f of the act of 1946.

LINCOLN

FOR WELDING WIRE AND METALLIC WELDING ELECTRODES.

Claims use since Jan. 1, 1915.

CLASS 15

OILS AND GREASES

Ser. No. 527,353. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

Tiolene

Applicant claims ownership of registrations Nos. 84,440, 104,271, 243,164, 291,123, and 302,485.

FOR LUBRICATING OILS AND GREASES.

Claims use since January 1907.

Ser. No. 528,509. QUAKER PETROLEUM COMPANY,, also doing business as The Quaker Petroleum Co. Inc., Omaha, Nebr. Filed July 12, 1947. Under section 2f of the act of 1946.

Pennfield

Applicant claims ownership of registration No. 233,122.

FOR LUBRICATING OILS.

Claims use since June 15, 1925.

Ser. No. 538,199. TOPP OIL & CHEMICAL CO., Milwaukee, Wis. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

Glo-Green

The word "Green" is disclaimed apart from the mark.

Applicant claims ownership of registration No. 270,252.

FOR LUBRICATING OILS AND GREASES.

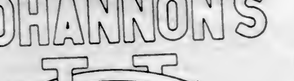
Claims use since Feb. 13, 1929.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,438. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Filed Feb. 25, 1948; originally filed, act of 1905, July 1, 1947. Under section 2f of the act of 1946.

BOHANNON'S



HOME COMFORT

FOR PLUG, TWIST, AND SMOKING TOBACCO.

Claims use since Jan. 1, 1900.

Ser. No. 527,796. THE B. P. TOPPER CIGAR COMPANY, McSherrystown, Pa., assignor to Curtis R. Topper, Meriden, Conn. Filed July 5, 1947.

Applicant disclaims all wording which appears on the drawing except the words "Old Hermitage."

FOR CIGARS.

Claims use since June 1, 1896.

Ser. No. 544,418. WOLF BROTHERS & CO., Red Lion, Pa. Filed Dec. 15, 1947.

Rum River

No claim is made to the word "Rum" apart from the mark.

FOR CIGARS.

Claims use since June 15, 1939.

CLASS 19

VEHICLES

Ser. No. 560,917. JOSEPH POWER, doing business as Power Equipment Company, Kansas City, Mo. Filed July 8, 1948.

The CONTROLATOR

FOR COMBINATION PRESSURE BOOSTERS AND LOCKING VALVE FOR HYDRAULIC AUTOMOBILE BRAKE SYSTEMS.

Claims use since November 1941.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 499,185. AJAX ELECTRIC COMPANY, INC., Philadelphia, Pa. Filed Aug. 26, 1947; originally filed, act of 1905, Mar. 29, 1946. Under section 2f of the act of 1946.

AJAX-HULTGREN

FOR ELECTRIC FURNACES.

Claims use since Mar. 1, 1931.

Ser. No. 513,692. SPRAGUE ELECTRIC COMPANY, North Adams, Mass. Filed Nov. 14, 1947; originally filed, act of 1905, Dec. 4, 1946.

The expression "Kilo-Volt-Oil" is disclaimed apart from the mark shown on the drawing.

FOR ELECTRICAL CAPACITORS.

Claims use since Nov. 26, 1946.

Ser. No. 516,483. IDEAL INDUSTRIES, INC., Sycamore, Ill. Filed Jan. 6, 1948; originally filed, act of 1905, Jan. 28, 1947.

No claim is made to the word "Air" apart from the mark as shown.

FOR PORTABLE ELECTRIC INDUSTRIAL VACUUM CLEANERS AND BLOWERS.

Claims use since Jan. 2, 1947.

Ser. No. 526,734. DYER-GRAM MFG., CO., INC., Tampa, Fla. Filed July 5, 1947.

Ser. No. 532,863. JOHN OSTER MANUFACTURING COMPANY, Racine, Wis. Filed Aug. 29, 1947. Under section 2f of the act of 1946.

Oster

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,767. ARMOUR AND COMPANY, Chicago, Ill. Filed July 5, 1947.

Ser. No. 541,037. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 13, 1947.

BIRDIE

Ser. No. 526,734. DYER-GRAM MFG., CO., INC., Tampa, Fla. Filed July 5, 1947.

No claim is made to the words "Mfg.," "Co.," and "Tampa, Florida", apart from the mark as shown. The drawing is lined for blue, gold, and red.

FOR ELECTRICAL DISPLAY AND ADVERTISING SIGNS.

Claims use since October 1946.

Ser. No. 527,434. DYNAMATIC CORPORATION, Kenosha, Wis. Filed July 5, 1947.

VARIO-MOTOR

Applicant makes no claim to the word "Motor" apart from the mark. Applicant claims ownership of registration No. 365,866.

FOR ELECTRIC MOTORS.

Claims use since May 25, 1938.

Ser. No. 527,899. ROBBINS & MYERS, INC., Springfield, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

Robbins & Myers

FOR ELECTRIC FANS FOR CIRCULATING PURPOSES; ELECTRIC HOISTS, ELECTRIC WINCHES; ELECTRIC MOTORS, DYNAMOS, GENERATORS, AND COMBINATIONS THEREOF.

Claims use since Jan. 1, 1898.

Ser. No. 532,145. THE MAGNAVOX COMPANY, Fort Wayne, Ind. Filed Aug. 22, 1947.

Modern Symphony

No claim is made to the word "Modern" apart from the mark.

FOR RADIO RECEIVING SETS AND RADIO PHONOGRAPH COMBINATION SETS, INCLUDING CABINETS THEREFOR.

Claims use since Aug. 2, 1946.

Ser. No. 532,863. JOHN OSTER MANUFACTURING COMPANY, Racine, Wis. Filed Aug. 29, 1947. Under section 2f of the act of 1946.

Oster

Applicant claims ownership of registrations Nos. 207,269 and 368,541.

FOR PORTABLE ELECTRIC HAND OPERATED GRINDERS; ELECTRIC LATHER DISPENSING MACHINES; PORTABLE ELECTRIC HAND DRILLS; ELECTRIC MOTORS; ELECTRIC TOASTERS; ELECTRIC FOOD MIXERS; ELECTRIC DRINK MIXERS; ELECTRIC FOOD CHOPPERS; ELECTRIC FOOD LIQUIFIERS; ELECTRIC FOOD BLENDERS; ELECTRIC HAIR STYLING IRONS; ELECTRIC MARCEL IRON HEATERS; ELECTRIC FLAT IRONS; ELECTRIC FANS; ELECTRIC VACUUM CLEANERS; AND REPAIR AND REPLACEMENT PARTS FOR THE ABOVE GOODS.

Claims use since Nov. 1, 1924.

Ser. No. 535,063. MIDWEST RADIO CORPORATION, Cincinnati, Ohio. Filed Sept. 19, 1947.

MIDWEST

Applicant claims ownership of registration No. 322,011.

FOR RADIO RECEIVING SETS, COMBINATION RADIO RECEIVING SETS AND PHONOGRAPHS, RADIO CHASSIS, RADIO CABINETS, AND PORTABLE RADIO RECEIVING SETS.

Claims use since 1930.

Ser. No. 539,811. THE RAJAH COMPANY, Bloomfield, N. J. Filed July 8, 1947.

Rajah

Applicant claims ownership of registration No. 63,884.

FOR ELECTRICAL APPARATUS—NAMELY, TERMINALS, HOODS, AND RUBBER SAFETY NIPPLES FOR SPARK PLUGS.

Claims use since April 1904.

Ser. No. 545,620. DEENA PRODUCTS COMPANY, Chicago, Ill. Filed Dec. 29, 1947.

Deena

FOR ELECTRIC LAMPS.

Claims use since Jan. 15, 1941.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,767. ARMOUR AND COMPANY, Chicago, Ill. Filed July 5, 1947.

DAVIS CUP

The word "Davis" is disclaimed apart from the mark.

FOR STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS.

Claims use since July 1, 1924.

Ser. No. 527,870. ARMOUR AND COMPANY, Chicago, Ill. Filed July 5, 1947.

GOLD STAR

FOR STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS.

Claims use since 1918.

Ser. No. 540,326. KENNETH SMITH, Kansas City, Mo. Filed Nov. 6, 1947. Under section 2f of the act of 1946.

Kenneth Smith
HANDMADE To Fit You

The words "Hand Made to Fit You" are disclaimed apart from their association with the remaining part of the mark as shown. Applicant claims ownership of registration No. 386,360.

FOR GOLF CLUBS.

Claims use since May 1933.

Ser. No. 541,035. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 13, 1947.

05

FOR FOOTBALLS.

Claims use since 1938.

Ser. No. 541,036. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 13, 1947.

The words "The Sign of Quality" are disclaimed. Applicant claims ownership of registration No. 247,545.

FOR BASEBALLS, BASEBALL MITTS, BASEBALL GLOVES, SOFTBALLS, SOFTBALL MITTS, SOFTBALL GLOVES, VOLLEY BALLS, BASKETBALLS, FOOTBALLS, HELMETS, SHOULDER PADS, BOXING GLOVES, SOCCER BALLS, BASEBALL BATS, AND SOFTBALL BATS.

Claims use since June 1, 1907.

Ser. No. 541,037. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 13, 1947.

BIRDIE

Applicant claims ownership of registration No. 112,083.

FOR GOLF BALLS AND GOLF CLUBS.

Claims use since Mar. 22, 1916.

Ser. No. 541,038. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 13, 1947.

VICTOR

Applicant claims ownership of registration No. 123,512.

FOR GOLF BALLS, GOLF CLUBS, TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, BASKETBALLS, VOLLEYBALLS, SOCCERBALLS, FOOTBALLS, TENNIS BALLS, TABLE TENNIS BATS AND TABLE TENNIS BALLS.

Claims use since Feb. 15, 1918.

Ser. No. 541,299. INDUSTRIAL LACQUER AND CHEMICAL CORPORATION, Newark, N. J. Filed Nov. 15, 1947.

"BLO-ME"

FOR PLASTIC MATERIALS ADAPTED TO BE BLOWN INTO HOLLOW BODIES AND USED FOR AMUSEMENT OR TOY PURPOSES.

Claims use since Aug. 30, 1947.

Ser. No. 541,596. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed Nov. 18, 1947.

The drawing is lined for shading purposes only.

FOR TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, VOLLEY BALLS, SOCCER BALLS, FOOTBALLS, BASKETBALLS, TABLE TENNIS BATS, AND TABLE TENNIS BALLS.

Claims use since Sept. 1, 1947.

Ser. No. 541,796. ALADDIN SALES CO., New York, N. Y. Filed Nov. 20, 1947.

ALADDIN

FOR TOY PLASTIC BALLOONS, AND TOY BUBBLE-FORMING LIQUIDS AND PASTES.

Claims use since June 15, 1945.

Ser. No. 548,635. JOHN S. CAMPEN, Fort Lauderdale, Fla. Filed Feb. 3, 1948.

SHOOT

ownership of registrations Nos. 233,969, 240,932, 253,114, 253,115, 253,116, 407,390, 408,900, and 409,212.

FOR QUICK-RELEASE PORTABLE WIRE SLACK PULLERS FOR TENSIONING ELECTRIC WIRE AND CABLE, PORTABLE ADJUSTABLE REEL MACHINES FOR PAYING OUT AND TAKING UP WIRE, LAMP

Ser. No. 536,039. CHARLES BOND COMPANY, Philadelphia, Pa. Filed Sept. 29, 1947. Under section 2f of the act of 1946.

Grundy

FOR THE PHOTOGRAPHING OF PROJECTED RÖNTGEN-IMAGES; PHOTOGRAPHIC AND CINEMATOGRAPHIC APPARATUS—NAMELY, CAMERAS, CINE-CAMERAS, FILTERS, SCREENS, LENSES AND DEVELOPING FRAMES.

Ser. No. 548,635. JOHN S. CAMPEN, Fort Lauderdale, Fla. Filed Feb. 3, 1948.

SHOOT
7 or 11

FOR BOARD GAME.
Claims use since Dec. 1, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 502,679. AMERICAN MACHINERY CORPORATION, Orlando, Fla. Filed Aug. 8, 1947; originally filed, act of 1905, May 24, 1946.

SPIRAL TEMP

The word "Temp" is disclaimed apart from the mark.
FOR INDUSTRIAL PLANT PASTEURIZERS OF THE HEAT-EXCHANGE TYPE, FOR THE TREATING OF LIQUID.
Claims use since Nov. 24, 1945.

Ser. No. 517,168. RUDD-MELIKIAN, INC., Philadelphia, Pa. Filed Aug. 4, 1948; originally filed, act of 1905, Feb. 7, 1947.

Kwik Kafe

The term "Kwik" is disclaimed apart from the mark.
FOR BEVERAGE VENDING MACHINES.
Claims use since Nov. 18, 1946.

Ser. No. 527,180. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947.

W N MATTHEWS

Applicant makes no claim to the representation of its name-plate and the word "Corporation." Applicant claims ownership of registrations Nos. 233,969, 240,932, 253,114, 253,115, 253,116, 407,390, 408,900, and 409,212.
FOR QUICK-RELEASE PORTABLE WIRE SLACK PULLERS FOR TENSIONING ELECTRIC WIRE AND CABLE, PORTABLE ADJUSTABLE REEL MACHINES FOR PAYING OUT AND TAKING UP WIRE, LAMP CHANGERS, AND INSTALLATION TOOLS FOR EARTH ANCHORS—NAMELY, AUGERS AND WRENCHES.
Claims use since about January 1905 by applicant's predecessor in title on installation tools for earth anchors including augers and wrenches, and lamp changers; since about September 1923 on wire reels; and since about 1925 on wire slack pullers.

Ser. No. 530,178. DEERE & COMPANY, Moline, Ill. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

DEERE

Applicant claims ownership of registration No. 60,812.
FOR PLOW SHARES AND CULTIVATOR SHOVELS.
Claims use since January 1877.

Ser. No. 530,310. HEWITT'S INCORPORATED, Medicine Lodge, Kans. Filed Aug. 2, 1947.

JIBO

FOR TIRE TOOLS—NAMELY, BEAD BREAKERS, AND TIRE PRESSES, JACK SADDLES, AND COIL SPRING SPACERS.
Claims use since Mar. 27, 1947.

Ser. No. 532,043. PETER J. MICHELS, INC., Brooklyn, N. Y. Filed Aug. 21, 1947. Under section 2f of the act of 1946.

MERIT

Applicant claims ownership of registration No. 169,699.
FOR CUTLERY—NAMELY, RAZORS AND SHEARS.
Claims use since Apr. 1, 1922.

Ser. No. 535,329. J. R. KRAMER MANUFACTURING COMPANY, Los Angeles, Calif. Filed Sept. 23, 1947.

KUB

FOR PENCIL SHARPENING MACHINES AND REPLACEABLE CUTTERS USED IN THE SAID MACHINES.
Claims use since Aug. 1, 1947.

Ser. No. 536,039. CHARLES BOND COMPANY, Philadelphia, Pa. Filed Sept. 29, 1947. Under section 2f of the act of 1946.

Grundy

Applicant claims ownership of registration No. 224,776.
FOR SHAFT COUPLINGS AS USED IN POWER TRANSMISSIONS.
Claims use since November 1909.

Ser. No. 536,040. CHARLES BOND COMPANY, Philadelphia, Pa. Filed Sept. 29, 1947. Under section 2f of the act of 1946.

MATHER

Applicant claims ownership of registration No. 224,777.
FOR SHAFT COUPLINGS AS USED IN POWER TRANSMISSIONS.
Claims use since April 1919.

Ser. No. 536,566. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo. Filed Oct. 2, 1947.

WESTLINE

FOR DITCHING SPADES, SHOVELS, FURNACE SCOOPS, HAY FORKS, LOPPING SHEARS, SPADES, HOES, HEDGE SHEARS, MANURE FORKS, HAND LAWN MOWERS, POWER LAWN MOWERS, RAKES, CULTIVATORS, GRASS WHIPS, SICKLES, SPADING FORKS, AND PRUNING SHEARS.
Claims use since Apr. 7, 1941.

Ser. No. 536,694. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill. Filed Oct. 3, 1947.

FARMALL CUB

Applicant claims ownership of registration No. 404,814.
FOR TRACTORS AND PARTS THEREOF.
Claims use since July 15, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 520,508. GEVAERT PHOTO PRODUCTEN, Antwerp, Belgium. Filed Jan. 30, 1948; originally filed, act of 1905, Apr. 11, 1947.

AMPLEX

Applicant claims ownership of Belgian registration No. 13,577 (Antwerp), dated Jan. 28, 1947.
FOR PHOTOGRAPHIC PRODUCTS—NAMELY, SENSITIZED PHOTOGRAPHIC PAPERS; LITHOGRAPHIC AND PHOTOGRAPHIC LITHO PAPERS; PHOTOGRAPHIC AND GRAPHIC PLATES; ROLLFILMS; STUDIO FILMS; PORTRAIT FILMS; FLAT FILMS; PACKFILMS; X-RAY FILMS; PHOTOGRAPHIC, GRAPHIC AND CINEMATOGRAPHIC FILMS; FILMS FOR THE PHOTOGRAPHING OF PROJECTED RÖNTGEN-IMAGES; PHOTOGRAPHIC AND CINEMATOGRAPHIC APPARATUS—NAMELY, CAMERAS, CINE-CAMERAS, FILTERS, SCREENS, LENSES AND DEVELOPING FRAMES.

Ser. No. 521,010. ARTHUR A. FRIESTEDT, Chicago, Ill. Filed Feb. 13, 1948; originally filed, act of 1905, Apr. 19, 1947.

GYRO—NIZER

FOR APPARATUS FOR DETERMINING THE ANGULAR RELATION BETWEEN THE AXES OF VEHICLE WHEELS.
Claims use since Sept. 17, 1943.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 528,769. CHINA & GLASS DISTRIBUTORS, INC., New York, N. Y. Filed July 17, 1947.

The Pantry Parade Co

The representation of a teapot is disclaimed apart from the mark.
FOR CHINAWARE, POTTERY, CROCKERY, PORCELAINS AND COMBINATIONS OF THE SAME—NAMELY, COOKIE JARS, SALT SHAKERS, PEPPER SHAKERS, SUGAR BOWLS, CREAMERS, ICEBOX SETS, BEAN POTS, TEAPOTS, AND PITCHERS.
Claims use since Feb. 26, 1947.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 523,053. A. BRANDWEIN & COMPANY, Chicago, Ill. Filed Nov. 25, 1947; originally filed, act of 1905, May 26, 1947.

Bran Divan

No claim is made to the exclusive right of the word "Divan" except as a part of the mark.
FOR SOFA BEDS.
Claims use since July 15, 1940.

Ser. No. 530,386. DIEBOLD, INCORPORATED, Canton, Ohio. Filed Aug. 4, 1947.

REVELDEX

FOR ROTARY TYPE VISIBLE CARD FILING DEVICES.
Claims use since Dec. 16, 1938.

Ser. No. 536,176. UNIVERSAL MERCANTILE CORP., Newark, N. J. Filed Sept. 29, 1947.

CLASS 34

HEATING, LIGHTING, AND VENTILATING

Ser. No. 515,724. SOUTHWESTERN HEATER CORPORATION, Hillsboro, Tex. Filed Dec. 1, 1947; originally filed, act of 1905, Jan. 14, 1947.

Ser. No. 532,355. SOUTHERN HEATER CORPORATION, Compton, Calif. Filed Aug. 25, 1947.

Ser. No. 536,176. UNIVERSAL MERCANTILE CORP., Newark, N. J. Filed Sept. 29, 1947.

Marvel

FOR BRIDGE TABLE PADS, CHAIR PADS, AND TABLE PADS.
Claims use since June 6, 1947.

Ser. No. 536,735. VERSAL INC., South Bend, Ind. Filed Oct. 3, 1947.

shamp-ette

FOR SHAMPOO CHAIRS.
Claims use since Apr. 6, 1946.

Ser. No. 536,783. JOANNA WESTERN MILLS COMPANY, Chicago, Ill. Filed Oct. 4, 1947.

ANCHOR

Applicant claims ownership of registration No. 251,477.
FOR WINDOW SHADES AND WINDOW SHADE ROLLERS.
Claims use since 1897.

Ser. No. 541,347. THE STEARNS & FOSTER COMPANY, Cincinnati, Ohio. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

LENOX

Applicant claims ownership of registration No. 155,584.
FOR MATTRESSES.
Claims use since Oct. 23, 1900.

Ser. No. 541,348. THE STEARNS & FOSTER COMPANY, Cincinnati, Ohio. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

YORK

Applicant claims ownership of registration No. 155,586.
FOR MATTRESSES.
Claims use since July 28, 1904.

Ser. No. 545,911. TAYLOR BEDDING MFG. CO., Taylor, Tex. Filed Dec. 31, 1947.

MORNING GLORY

Applicant claims ownership of registration No. 323,855.
FOR UPHOLSTERED BOX SPRINGS, SOFA BEDS, PILLOWS, AND MATTRESSES.
Claims use since 1904 on mattresses; and since 1934 on box springs, sofa beds, and pillows.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 493,911. BELL & GOSSETT COMPANY, Morton Grove, Ill. Filed Aug. 15, 1947; originally filed, act of 1905, Dec. 27, 1945.

B G Bell & Gossett Company

The term "Bell & Gossett Company" is disclaimed apart from the mark.

Filed Nov. 20, 1947; originally filed, act of 1905, Feb. 27, 1947, Serial No. 518,195. Published Oct. 5, 1948. Class 1.

505,686. BURNER SYSTEMS FOR GAS STOVES AND RANGES COMPRISING BURNERS, VALVES, AND LIGHTERS. HARPER-WYMAN COMPANY, Chicago, Ill.
Filed July 5, 1947; originally filed, act of 1905, Mar. 6, 1947, Serial No. 518,596. Published Oct. 12, 1948. Class 34.

505,687. GAS VALVES FOR GAS STOVE AND GAS RANGE BURNERS. HARPER-WYMAN COMPANY, Chicago, Ill.
Filed July 5, 1947; originally filed, act of 1905, Mar. 8, 1947, Serial No. 518,723. Published Oct. 12, 1948. Class 34.

505,688. GAS BURNERS AND PARTS THEREOF FOR GAS STOVES AND GAS RANGES. HARPER-WYMAN COMPANY, Chicago, Ill.
Filed July 5, 1947; originally filed, act of 1905, Mar. 13, 1947, Serial No. 518,951. Published Sept. 28, 1948. Class 34.

505,689. LEMON CREAM FOR USE AS A COSMETIC SKIN CREAM. MORTON MANUFACTURING CORPORATION, doing business as Snow White Products Company, Lynchburg, Va.
Filed Dec. 18, 1947; originally filed, act of 1905, Apr. 15, 1947, Serial No. 520,761. Published Oct. 19, 1948. Class 6.

505,690. MOTOR LUBRICATING OIL. ILLINOIS FARM SUPPLY COMPANY, Chicago, Ill.
Filed Jan. 6, 1948; originally filed, act of 1905, May 7, 1947, Serial No. 522,009. Published Sept. 14, 1948. Class 15.

505,691. LAUNDRY STARCH. THE PERFEX COMPANY, Shenandoah, Iowa.
Filed Dec. 18, 1947; originally filed, act of 1905, June 2, 1947, Serial No. 523,418. Published Oct. 12, 1948. Class 6.

505,692. MOTOR LUBRICATING OIL. FRONTIER OIL REFINING CORPORATION, Buffalo, N. Y.
Filed Apr. 5, 1948; originally filed, act of 1905, June 10, 1947, Serial No. 523,893. Published Oct. 12, 1948. Class 15.

505,693. HYDROCARBON SOLVENTS PREPONDERATELY COMPOSED OF AROMATIC HYDROCARBONS. VELSICOL CORPORATION, Chicago, Ill.
Filed Mar. 11, 1948; originally filed, act of 1905, July 2, 1947, Serial No. 525,717. Published Oct. 5, 1948. Class 6.

505,694. LIQUID CHEMICAL DEODORIZER, BLEACH, DISINFECTANT, AND STERILIZER. H. M. SINCLAIR, JR., Toledo, Ohio, trustee for The Sinclair Manufacturing Company.
Filed July 5, 1947, Serial No. 526,987. Published Mar. 30, 1948. Class 6.

505,695. SEWAGE TREATMENT EQUIPMENT—NAMELY, ROTARY DISTRIBUTORS HAVING REVOLVING SPRAY DISTRIBUTION ARMS FOR DEPOSITING SEWAGE ON A FILTER BED, SEWAGE SLUDGE DIGESTERS IN THE FORM OF TANKS HAVING COVERS AND ADAPTED TO RECEIVE AND STORE SEWAGE SLUDGE WHILE IT UNDERGOES BACTERIAL DECOMPOSITION KNOWN AS DIGESTION, ETC. PACIFIC FLUSH-TANK COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,141. Published Sept. 28, 1948. Class 23.

505,696. FERTILIZER. RUHM PHOSPHATE & CHEMICAL COMPANY, Mount Pleasant, Tenn.
Filed July 5, 1947, Serial No. 527,199. Published Sept. 28, 1948. Class 10.

505,697. LUBRICATING OILS AND GREASES. THE PURE OIL COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,282. Published Sept. 7, 1948. Class 15.

505,698. FERTILIZERS, MORE PARTICULARLY COMPLETE FERTILIZERS. JOHN R. SIMPLOT, Pocatello, Idaho.
Filed July 5, 1947, Serial No. 527,437. Published Sept. 28, 1948. Class 10.

505,699. FERTILIZERS, MORE PARTICULARLY AMMONIATED PHOSPHATE. JOHN R. SIMPLOT, Pocatello, Idaho.
Filed July 5, 1947, Serial No. 527,467. Published Sept. 28, 1948. Class 10.

505,700. FERTILIZERS, MORE PARTICULARLY SUPERPHOSPHATE. JOHN R. SIMPLOT, Pocatello, Idaho.
Filed July 5, 1947, Serial No. 527,468. Published Sept. 28, 1948. Class 10.

505,701. BATH SALTS. ROBERT H. CLARK, doing business as Robert H. Clark Company, Beverly Hills, Calif.
Filed July 5, 1947, Serial No. 527,534. Published Oct. 5, 1948. Class 6.

505,702. DAIRY PRODUCTS PROCESSING EQUIPMENT COMPRISING HOMOGENIZERS, MILK CONCENTRATORS, ICE CREAM BRICK CUTTERS, ICE CREAM PACKAGE FILLERS, AND ICE CREAM FRUIT FEEDERS. THE CREAMERY PACKAGE MFG. COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,591. Published Sept. 28, 1948. Class 23.

505,703. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Filed July 5, 1947, Serial No. 527,681. Published Sept. 14, 1948. Class 4.

505,704. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Filed July 5, 1947, Serial No. 528,016. Published Sept. 28, 1948. Class 4.

505,705. DRAWING ROOM GAME IN THE PLAYING OF WHICH THE PARTICIPANTS MANIPULATE TOKENS OR THE EQUIVALENT THEREOF ON A BOARD. ABE HENRY COHEN, Pittsburgh, Pa.
Filed July 7, 1947, Serial No. 528,086. Published Sept. 21, 1948. Class 22.

505,706. MECHANICAL RAZORS AND RAZOR BLADES. STANLY, INC., South Bend, Ind.
Filed July 8, 1947, Serial No. 528,115. Published Sept. 28, 1948. Class 23.

505,707. REFLECTIVE HEAT INSULATION MATERIALS—NAMELY, REINFORCED COATED HEAT-REFLECTIVE PAPER SHEET COATED ON ONE OR BOTH SIDES, ASPHALT LAMINATED SHEET WITH HEAT-REFLECTIVE COATED PAPER ON BOTH SIDES THEREOF, ETC. SILVERCOTE PRODUCTS, INC., Chicago, Ill.
Filed July 10, 1947, Serial No. 528,317. Published Aug. 31, 1948. Class 12.

505,708. ½ MONOPOTASSIUM PHOSPHATE AND ½ DIAMMONIUM PHOSPHATE FOR A STARTER SOLUTION FOR TRANSPLANTING VEGETABLES AND FRUITS. VICTOR CHEMICAL WORKS, Chicago, Ill.
Filed July 12, 1947, Serial No. 528,543. Published Sept. 28, 1948. Class 10.

505,709. JEWELRY, NOT INCLUDING WATCHES—NAMELY, COLLAR PINS, COLLAR HOLDERS, COLLAR BUTTONS, BELT CHAINS, BELT BUCKLES, CUFF BUTTONS, SHIRT STUDS, TIE CLASPS, SCARF PINS, KEY CHAINS, TIE CHAINS, AND MONEY CLIPS MADE IN WHOLE OR IN PART OF PRECIOUS METALS. DOLAN & BULLOCK Co., Providence, R. I.
Filed July 16, 1947, Serial No. 528,705. Published Oct. 19, 1948. Class 28.

505,710. MECHANICALLY OPERATED DOMESTIC AND COMMERCIAL REFRIGERATORS COMPRISING WALK-IN COOLERS, REACH-IN CABINETS, AND CLOSED AND OPEN TYPE DISPLAY CASES, AND MECHANICALLY OPERATED LIQUID COOLERS. MCCRAY REFRIGERATOR COMPANY, Kendallville, Ind.
Filed July 16, 1947, Serial No. 528,732. Published Sept. 28, 1948. Class 31.

505,711. CHEMICALLY TREATED PARAFFIN FOR USE IN RESTORING FINISHING OILS TO AND IN SIZING SILK, WOOL, AND LIKE GARMENTS AFTER DRY CLEANING. COBAR LABORATORIES, INC., Akron, Ohio.
Filed July 17, 1947, Serial No. 528,778. Published Oct. 5, 1948. Class 6.

505,712. OYSTER COCKTAIL GLASSES, SHERBET GLASSES, GLASS TUMBLERS, AND OTHER GLASS ARTICLES—NAMELY, GOBLETS, JUGS, ICE TUBS, ICE TEA COASTERS, COLONIAL PERCOLATOR TOPS, AND CASTER CUPS. BARTLETT-COLLINS COMPANY, Sapulpa, Okla.
Filed July 19, 1947, Serial No. 528,906. Published Sept. 14, 1948. Class 33.

505,713. INSECTICIDES—TO WIT, INSECT SPRAY, INSECTICIDAL CONCENTRATES, AND INSECT POWDER. W. H. BULL MEDICINE COMPANY, St. Louis, Mo.
Filed July 19, 1947, Serial No. 528,908. Published Oct. 19, 1948. Class 6.

505,714. NICKEL PLATED STEEL BRACELETS. ALFRED L. WINKLER, doing business as A. L. Winkler Co., Detroit, Mich.
Filed July 19, 1947, Serial No. 528,976. Published Oct. 12, 1948. Class 28.

505,715. BITUMINOUS COAL. FRANKLIN COUNTY COAL CORPORATION, Chicago, Ill.
Filed July 21, 1947, Serial No. 528,999. Published Oct. 5, 1948. Class 1.

505,716. METAL BALLS USED IN GAMES, BEING ROLLING BALLS FOR USE IN PIN BALL MACHINES, PUZZLES, BOWLING GAMES, BASEBALL GAMES, HOCKEY GAMES, AND GOLF GAMES OF THE MACHINE TYPE. S K F INDUSTRIES, INC., Philadelphia, Pa., and elsewhere.
Filed July 21, 1947, Serial No. 529,091. Published Sept. 21, 1948. Class 22.

505,717. METAL BALLS USED IN GAMES, BEING ROLLING BALLS FOR USE IN PIN BALL MACHINES, PUZZLES, BOWLING GAMES, BASEBALL GAMES, HOCKEY GAMES, AND GOLF GAMES OF THE MACHINE TYPE. S K F INDUSTRIES, INC., Philadelphia, Pa., and elsewhere.
Filed July 21, 1947, Serial No. 529,094. Published Sept. 21, 1948. Class 22.

505,718. STEEL. INLAND STEEL COMPANY, Chicago, Ill.
Filed July 23, 1947, Serial No. 529,264. Published Sept. 21, 1948. Class 14.

505,719. SODA FOUNTAINS. ROBERT M. GREEN & SONS, INC., Philadelphia, Pa.
Filed July 26, 1947, Serial No. 529,638. Published Sept. 28, 1948. Class 23.

505,720. SOAP. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 29, 1947, Serial No. 529,852. Published Oct. 5, 1948. Class 4.

505,721. SOAP. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 29, 1947, Serial No. 529,854. Published Oct. 5, 1948. Class 4.

505,722. SOAP. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 29, 1947, Serial No. 529,855. Published Oct. 5, 1948. Class 4.

505,723. MECHANICAL SIRENS. THE SIRENO COMPANY, INC., New York, N. Y.
Filed July 30, 1947, Serial No. 530,033. Published Sept. 28, 1948. Class 23.

505,724. MOTH PREVENTATIVE AND INSECTICIDE. GALBRE PRODUCTS CO., INC., New York, N. Y.
Filed Aug. 4, 1947, Serial No. 530,397. Published Oct. 5, 1948. Class 6.

505,725. ELECTRONIC MACHINES FOR USE IN THE TREATMENT OF MUSCULAR, ARTHRITIC, RHEUMATIC, AND SIMILAR AILMENTS OF THE BODY. SOUTHEASTERN DEVELOPMENT CORPORATION, Jacksonville, Fla.
Filed Aug. 4, 1947, Serial No. 530,443. Published Oct. 12, 1948. Class 44.

505,726. PLANT FOOD OR FERTILIZER. GEO. TAIT & SONS, INC., Norfolk, Va.
Filed Aug. 5, 1947, Serial No. 530,591. Published Sept. 28, 1948. Class 10.

505,727. LIQUID RADIATOR SOLDER. JULIUS GOLDNER, doing business as Warwick Laboratories Company, Brooklyn, N. Y.
Filed Aug. 9, 1947, Serial No. 530,932. Published Sept. 28, 1948. Class 6.

505,728. AUTOMOBILE AND BICYCLE TIRES AND TUBES, AND FAN BELTS. AFFILIATED RETAILERS, INC., New York, N. Y.
Filed Aug. 13, 1947, Serial No. 531,175. Published Oct. 5, 1948. Class 35.

505,730. BOTTLES AND JARS MADE OF GLASS. OWENS-ILLINOIS GLASS COMPANY, Toledo, Ohio.
Filed Aug. 13, 1947, Serial No. 531,235. Published Oct. 12, 1948. Class 33.

505,730. WATCH MOVEMENTS AND WRIST AND POCKET WATCHES. JEAN R. GRAEF, INC., New York, N. Y.
Filed Aug. 15, 1947, Serial No. 531,465. Published Oct. 19, 1948. Class 27.

505,731. TUBES AND TIRES COMPOSED OF RUBBER AND RUBBER AND FABRIC; V-BELTS; PATCHES FOR TIRES AND TUBES; RUBBER AND FABRIC PACKING ROR TIRES AND TUBES; TIRE SECTIONS; CAMEL BACK TREAD SHEETS; TIRE BOOTS, RUBBER HOSE, ETC. INLAND RUBBER CORPORATION, Chicago, Ill.
Filed Aug. 16, 1947, Serial No. 531,598. Published Oct. 5, 1948. Class 35.

505,732. TUBES AND TIRES COMPOSED OF RUBBER AND RUBBER AND FABRIC; V-BELTS; PATCHES FOR TIRES AND TUBES; RUBBER AND FABRIC PACKING FOR TIRES AND TUBES; TIRE SECTIONS; CAMEL BACK TREAD SHEETS; TIRE BOOTS, RUBBER HOSE, ETC. INLAND RUBBER CORPORATION, Chicago, Ill.
Filed Aug. 16, 1947, Serial No. 531,601. Published Oct. 5, 1948. Class 35.

505,733. VEHICLE TIRES COMPOSED OF RUBBER AND FABRIC. INLAND RUBBER CORPORATION, Chicago, Ill.
Filed Aug. 16, 1947, Serial No. 531,606. Published Oct. 5, 1948. Class 35.

505,734. SILVER-PLATED FLAT-WARE. THE INTERNATIONAL SILVER COMPANY, Meriden, Conn.
Filed Aug. 16, 1947, Serial No. 531,607. Published Aug. 24, 1948. Class 28.

505,735. FUEL PUMPS USED ON INTERNAL COMBUSTION ENGINES, ETC. ATLAS SUPPLY COMPANY, Newark, N. J.
Filed Aug. 19, 1947, Serial No. 531,759. Published Sept. 28, 1948. Class 23.

505,736. CLEANSER FOR TERRAZZO, MARBLE, CEMENT, HARD TILE AND TRAVERTINE FLOORING. WALTER G. LEGGE COMPANY, INC., New York, N. Y.
Filed Aug. 22, 1947, Serial No. 532,140. Published Oct. 5, 1948. Class 4.

505,737. COFFEE BREWING URNS AND STOVES SPECIALLY ADAPTED FOR THE HEATING OR BREWING OF COFFEE. UNIVERSAL COFFEE COMPANY, Chicago, Ill.
Filed Aug. 22, 1947, Serial No. 532,178. Published Sept. 28, 1948. Class 34.

505,738. GRANULATED SOAP AND LAUNDRY SOAP. PAUL M. COOTER, doing business as The Cooter Company, Chicago, Ill.
Filed Aug. 26, 1947, Serial No. 532,429. Published Aug. 17, 1948. Class 4.

505,739. GUM ARABIC SOLUTION USED TO PROTECT LITHOGRAPHIC PLATES WHEN NOT IN USE, ETC. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill.
Filed Aug. 30, 1947, Serial No. 532,914. Published Oct. 19, 1948. Class 6.

505,740. GLASS JARS FOR USE IN PRESERVING FOODS. KERR GLASS MANUFACTURING CORPORATION, Sand Springs, Okla.
Filed Sept. 3, 1947, Serial No. 533,173. Published Sept. 7, 1948. Class 33.

505,741. CHEMICAL COMPOUND FOR USE AS A DRAIN CLEANER. SERVICE INDUSTRIES, Philadelphia, Pa.
Filed Sept. 4, 1947, Serial No. 533,409. Published Oct. 19, 1948. Class 6.

505,742. DETERGENTS FOR INDUSTRIAL USAGE—NAMELY, FOR CLEANING THE SURFACES OF GLASS, MARBLE, MASONRY, WOOD, AND ALL TYPES OF METAL. HAMPDEN COLOR AND CHEMICAL COMPANY, Springfield, Mass.
Filed Sept. 5, 1947, Serial No. 533,563. Published Oct. 5, 1948. Class 4.

505,743. AUTOMOBILE PLATE AND LAMINATED GLASS SOLD IN THE FORM OF RECTANGULAR SHEETS OR PLATES, AS WELL AS FINISHED PANES SHAPED TO SIZE FOR AUTOMOBILE WINDOW REPLACEMENT. GLOBE AUTO GLASS COMPANY, Chicago, Ill.
Filed Sept. 8, 1947, Serial No. 533,729. Published Sept. 14, 1948. Class 33.

505,744. FIELD SEEDS—NAMELY, SORGHUM, SORGO, CANE, SACCHARINE SORGHUM, AND NON-SACCHARINE SORGHUM. WACONIA SORGHUM COMPANY, Cedar Rapids, Iowa.
Filed Sept. 8, 1947, Serial No. 533,798. Published Aug. 10, 1948. Class 1.

505,745. FINGER RINGS. J. FIDDELMAN & SON, INC., New York, N. Y.
Filed Sept. 11, 1947, Serial No. 534,099. Published Oct. 19, 1948. Class 28.

505,746. HERB TEA TO BE USED AS A LAXATIVE. JOHN E. RESPONDEK, doing business as Noxruma Products Co., Detroit, Mich.
Filed Sept. 11, 1947, Serial No. 534,190. Published Oct. 19, 1948. Class 6.

505,747. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE PROCTER & GAMBLE COMPANY, doing business as The Globe Soap Company, Cincinnati, Ohio.
Filed Sept. 12, 1947, Serial No. 534,339. Published Sept. 28, 1948. Class 4.

505,748. LUBRICATING OILS AND GREASES. THE OHIO OIL COMPANY, Findlay, Ohio.
Filed Sept. 13, 1947, Serial No. 534,460. Published Sept. 14, 1948. Class 15.

505,749. STERLING SILVER FLAT-WARE AND HOLLOW-WARE. THE INTERNATIONAL SILVER COMPANY, Meriden, Conn.
Filed Sept. 17, 1947, Serial No. 534,785. Published Aug. 31, 1948. Class 28.

505,750. LUBRICATING MOTOR OILS. THE OHIO OIL COMPANY, Findlay, Ohio.
Filed Sept. 17, 1947, Serial No. 534,803. Published Oct. 5, 1948. Class 15.

505,751. MOTOR FUEL OIL, FUEL OIL FOR HEATING AND ILLUMINATING PURPOSES, LUBRICATING OILS, AND GREASES. THE OHIO OIL COMPANY, Findlay, Ohio.
Filed Sept. 17, 1947, Serial No. 534,804. Published Oct. 5, 1948. Class 15.

505,752. COAL. WEST KENTUCKY COAL COMPANY, Earlington, Ky.
Filed Sept. 17, 1947, Serial No. 534,846. Published Oct. 5, 1948. Class 1.

505,753. GROOVED PHONOGRAPH RECORDS. CATECHETICAL GUILD, St. Paul, Minn.
Filed Sept. 18, 1947, Serial No. 534,872. Published Oct. 5, 1948. Class 36.

505,754. TOP-OF-STOVE HEAT RESISTANT GLASS SAUCE PANS, DOUBLE BOILERS, TEA POTS, TEA KETTLES, DRIP COFFEE MAKERS, PERCOLATORS, VACUUM COFFEE MAKERS. CLUB ALUMINUM PRODUCTS COMPANY, Chicago, Ill.
Filed Sept. 23, 1947, Serial No. 535,884. Published Oct. 19, 1948. Class 33.

505,755. GLASS COOKINGWARE—NAMELY, VACUUM COFFEE MAKERS. CLUB ALUMINUM PRODUCTS COMPANY, Chicago, Ill.
Filed Sept. 23, 1947, Serial No. 535,387. Published Oct. 19, 1948. Class 33.

505,756. COPPER SHEET, COPPER IN ROLLS, COPPER WIRE, COPPER ANODES, BRASS SHEET, BRASS WIRE, ENGRAVERS' COPPER PLATES, COPPER AND BRASS RODS AND BARS. COPPER RANGE COMPANY, doing business under the name and style of C. G. Hussey & Company, Painesdale, Mich., and Pittsburgh, Pa.
Filed Sept. 24, 1947, Serial No. 535,490. Published Sept. 28, 1948. Class 14.

505,757. MOTOR LUBRICATING OILS. PENNSYLVANIA REFINING COMPANY, Butler, Pa.
Filed Sept. 30, 1947, Serial No. 536,280. Published Oct. 19, 1948. Class 15.

505,758. INHALERS. SMITH, KLINE & FRENCH LABORATORIES, Philadelphia, Pa.
Filed Oct. 3, 1947, Serial No. 536,717. Published Oct. 5, 1948. Class 44.

505,759. FACIAL CREAMS. ELMO, INC., Philadelphia, Pa.
Filed Oct. 7, 1947, Serial No. 537,026. Published Oct. 19, 1948. Class 6.

505,760. FACE PACKS. ELMO, INC., Philadelphia, Pa.
Filed Oct. 7, 1947, Serial No. 537,027. Published Oct. 19, 1948. Class 6.

505,761. POWDER OF IRON OR OTHER BASE METAL FOR USE IN METAL POWDER COMPACTING, CHEMICAL REDUCTION, AND CONCRETE FLOOR HARDENING. GEORGE COHEN SONS & COMPANY LIMITED, London, England.
Filed Oct. 8, 1947, Serial No. 537,157. Published Sept. 21, 1948. Class 14.

505,762. RUBBING ALCOHOL COMPOUND, VITAMIN B1, SYRUP OF COCILLANA, MINERAL OIL, ASPIRIN, HAIR TONIC, AFTER SHAVE LOTION, WAVE SET AND EPSOM SALTS. NATIONAL PACKAGE DRUGS, INC., St. Louis, Mo.
Filed Oct. 8, 1947, Serial No. 537,220. Published Oct. 12, 1948. Class 6.

505,763. ARTIFICIAL LIMB PARTS—NAMELY, BELOW KNEE JOINTS, ANKLE JOINTS, BACK CHECKS FOR ABOVE KNEE LIMBS, KNEE JOINTS FOR ABOVE KNEE LIMBS, AND FOR STUMP SOCKS. W. E. ISLE COMPANY, also doing business under the name and style of Knit-Rite Company, Kansas City, Mo.
Filed Oct. 9, 1947, Serial No. 537,379. Published Oct. 26, 1948. Class 44.

505,764. METAL LATH. WHEELING CORRUGATING COMPANY, Wheeling, W. Va.
Filed Oct. 10, 1947, Serial No. 537,529. Published Sept. 7, 1948. Class 12.

505,765. SHEET STEEL AND ENAMELING IRON SHEETS. THE NILES ROLLING MILL COMPANY, Niles, Ohio.
Filed Oct. 13, 1947, Serial No. 537,719. Published Sept. 21, 1948. Class 14.

505,766. MEDICAMENTS FOR USE IN VETERINARY THERAPEUTICS. SOCIETE DES USINES CHIMIQUES RHONE-POULENC, Paris, France.
Filed Oct. 16, 1947, Serial No. 538,049. Published Oct. 5, 1948. Class 6.

505,767. HYBRID SEED CORN. THOMPSON HYBRID CORN COMPANY, INC., Belmond, Iowa.
Filed Oct. 20, 1947, Serial No. 538,468. Published Oct. 5, 1948. Class 1.

505,768. HAIR SHAMPOOS, HAIR WAVING SOLUTIONS, HAIR RINSES, HAIR TONICS, AND HAIR DRESSING. SAMUEL BONAT & BRO., INC., New York, N. Y.
Filed Oct. 22, 1947, Serial No. 538,596. Published Oct. 19, 1948. Class 6.

505,769. WELDING COMPOUND USED IN OXY-ACETYLENE PROCESS WITH CAST IRON RODS IN ORDER TO HARD-SURFACE OR HARD FACE MACHINERY PARTS OR TOOLS SUCH AS CRUSHER JAWS, DIPPER TEETH, AND THE LIKE. H. L. P. MANUFACTURING COMPANY, Houston, Tex.
Filed Oct. 25, 1947, Serial No. 539,051. Published Oct. 5, 1948. Class 6.

505,770. GALVANIZED STEEL IN SHEET FORM. INLAND STEEL COMPANY, Chicago, Ill.
Filed Oct. 28, 1947, Serial No. 539,322. Published Sept. 21, 1948. Class 14.

505,771. MEDICINAL LINIMENT RECOMMENDED FOR MUSCLE SORENESS, MUSCLE STIFFNESS, OR MUSCLE CRAMPS, DUE TO EXERTION, EXPOSURE, OR FATIGUE, NEURALGIA OR MUSCULAR STIFF NECK FROM DRAFTS OR EXPOSURE. THE C. F. SAUER COMPANY, Richmond, Va.
Filed Oct. 29, 1947, Serial No. 539,443. Published Oct. 5, 1948. Class 6.

505,772. WATER SOFTENER WITH INCIDENTAL CLEANING PROPERTIES. THE MORTON S. PINE Co., Cleveland, Ohio.
Filed Oct. 30, 1947, Serial No. 539,561. Published Sept. 21, 1948. Class 6.

505,773. LIGHTWEIGHT PLASTER AGGREGATE, LIGHTWEIGHT CONCRETE AGGREGATE, ACOUSTICAL PLASTER, HARDWALL PLASTER, AND FINE AND COARSE EXPANDED PERLITE. DANT & RUSSELL, INC., Portland, Oreg.
Filed Oct. 31, 1947, Serial No. 539,668. Published Sept. 7, 1948. Class 12.

505,774. WATCHES AND WATCH MOVEMENTS. FRECO WATCH CORPORATION, New York, N. Y.
Filed Oct. 31, 1947, Serial No. 539,691. Published Oct. 2, 1948. Class 27.

505,775. OIL BURNERS, PARTS THEREOF, AND ACCESSORIES THERETO. HAYWARD MANUFACTURING COMPANY INC., Brooklyn, N. Y.
Filed Oct. 31, 1947, Serial No. 539,698. Published Oct. 12, 1948. Class 34.

505,776. WATCHES AND WATCH MOVEMENTS. SILENA WATCH CORPORATION, New York, N. Y.
Filed Oct. 31, 1947, Serial No. 539,765. Published Oct. 12, 1948. Class 27.

505,777. TENNIS RACKETS, BADMINTON RACKETS, SQUASH RACKETS, AND TABLE TENNIS BATS. A. G. SPALDING & BROS. INC., Chicopee, Mass.
Filed Nov. 5, 1947, Serial No. 540,210. Published Sept. 21, 1948. Class 22.

505,778. TENNIS RACKETS, SQUASH RACKETS, AND BADMINTON RACKETS. A. G. SPALDING & BROS. INC., Chicopee, Mass.
Filed Nov. 5, 1947, Serial No. 540,211. Published Sept. 21, 1948. Class 22.

Filed Dec. 20, 1947, Serial No. 544,993. Published Sept. 28, 1948. Class 28.

505,810. LIQUID DANDRUFF REMOVER. FELTS AND GUNNELS, Clovis, N. Mex.
Filed Dec. 22, 1947, Serial No. 545,114. Published Oct. 5, 1948. Class 6.

505,811. CASTINGS AND FORGINGS MADE OF CARBON STEEL, MANGANESE STEEL AND IRON; WELDING RODS; ETC. AMERICAN BRAKE SHOE COMPANY, New York, N. Y.
Filed Feb. 3, 1948; originally filed, act of 1905, Apr. 15, 1947, Serial No. 520,666. Published Nov. 2, 1948. Class 14.

505,812. GAS FIRED FLOOR FURNACES, GAS FIRED SUSPENDED UNIT HEATERS, EVAPORATIVE AIR CONDITIONERS AND VENTILATING WINDOW FANS. CENTRAL STATES MFG. CO., INC., Arkansas City, Kans.
Filed Dec. 23, 1947, Serial No. 545,234. Published Oct. 5, 1948. Class 34.

505,813. CHEMICAL COMPOSITION FOR THE PREVENTION OF CORROSION. THE MCCAMBRIDGE & MCCAMBRIDGE CO., Baltimore, Md.
Filed Dec. 24, 1947, Serial No. 545,383. Published Oct. 5, 1948. Class 6.

505,814. RUG, FABRIC, AND AUTOMOBILE CLEANING PREPARATION. THE CUDAHY PACKING COMPANY, Chicago, Ill.
Filed Dec. 26, 1947, Serial No. 545,453. Published Oct. 5, 1948. Class 4.

505,815. ANALGESIC PREPARATIONS. STANBACK COMPANY, LTD., Salisbury, N. C.
Filed Dec. 26, 1947, Serial No. 545,553. Published Oct. 5, 1948. Class 6.

505,816. WINDOWS AND DOOR FRAMES. CARR, ADAMS & COLLIER COMPANY, Dubuque, Iowa.
Filed Dec. 27, 1947, Serial No. 545,582. Published Sept. 21, 1948. Class 12.

505,817. MEDICATED LOZENGES. HUDSON'S EUMENTHOL CHEMICAL COMPANY PTY. LIMITED, Glebe, Sydney, New South Wales, Australia.
Filed Dec. 29, 1947, Serial No. 545,627. Published Oct. 5, 1948. Class 6.

505,818. SOLVENT FOR USE IN DUPLICATING PROCESSES OF THE TYPE WHEREIN COPY SHEETS ARE MOISTENED WITH THE SOLVENT AND BROUGHT INTO CONTACT WITH DATA APPEARING ON MASTER SHEETS. DITTO, INCORPORATED, Chicago, Ill.
Filed Jan. 7, 1948, Serial No. 546,374. Published Oct. 5, 1948. Class 6.

505,819. BRAKE LINING SETS. THERMOID COMPANY, Trenton, N. J.
Filed Jan. 7, 1948, Serial No. 546,438. Published Oct. 5, 1948. Class 35.

505,820. DENTIFRICE. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Filed Jan. 9, 1948, Serial No. 546,605. Published Oct. 5, 1948. Class 6.

505,821. CUTTING ELECTRODES COMPOSED OF METAL. EUTECTIC WELDING ALLOYS CORPORATION, New York, N. Y.
Filed Jan. 10, 1948, Serial No. 546,684. Published Sept. 21, 1948. Class 14.

505,822. MECHANICAL PACKINGS AND ROD PACKINGS MADE OF ASBESTOS, FIBRE, RUBBER, SYNTHETIC PLASTIC, TEXTILE MATERIAL AND/OR COMBINATIONS THEREOF. A. W. CHESTERTON COMPANY, Everett, Mass.
Filed Jan. 13, 1948, Serial No. 546,823. Published Oct. 5, 1948. Class 35.

505,823. POWDERED SOAP AND WASHING COMPOUNDS FOR LAUNDRY PURPOSES. SCIENTIFIC SUPPLY CO., INC., Denver, Colo.
Filed Jan. 13, 1948, Serial No. 546,880. Published Oct. 12, 1948. Class 4.

Putnam, Conn.
Filed Nov. 8, 1947, Serial No. 540,511. Published Sept. 14, 1948. Class 36.

METALS BY STARTING OR WELDING. METALLIZING ENGINEERING CO. INC., Long Island City, N. Y.
Filed Nov. 28, 1947, Serial No. 542,614. Published Sept. 21, 1948. Class 14.

CHAIN COMPANY, INC., North Attleboro, Mass.
Filed Dec. 20, 1947, Serial No. 544,993. Published Sept. 28, 1948. Class 28.

Filed Jan. 13, 1948, Serial No. 546,880. Published Oct. 12, 1948. Class 4.

505,824. SULPHUR. STAUFFER CHEMICAL COMPANY, San Francisco, Calif.
Filed Jan. 22, 1948, Serial No. 547,786. Published Aug. 31, 1948. Class 6.

505,825. FERTILIZERS. PACIFIC CHEMICAL AND FERTILIZER COMPANY, Honolulu, Territory of Hawaii.
Filed Jan. 27, 1948, Serial No. 548,099. Published Sept. 28, 1948. Class 10.

505,826. DRY ROUGE, CREAM ROUGE, LIPSTICKS, AND NAIL POLISH. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J.
Filed Feb. 10, 1948, Serial No. 549,261. Published June 22, 1948. Class 6.

505,827. SURFACE ACTIVE DETERGENTS FOR USE IN GENERAL, HOUSEHOLD, PROFESSIONAL, COMMERCIAL, AND INDUSTRIAL CLEANING, WASHING, AND POLISHING. ORONITE CHEMICAL COMPANY, San Francisco, Calif., and Wilmington, Del.
Filed Feb. 16, 1948, Serial No. 549,836. Published Oct. 5, 1948. Class 4.

505,828. SURFACE ACTIVE DETERGENTS FOR USE IN GENERAL HOUSEHOLD, PROFESSIONAL, COMMERCIAL, AND INDUSTRIAL CLEANING, WASHING, AND POLISHING. ORONITE CHEMICAL COMPANY, San Francisco, Calif., and Wilmington, Del.
Filed Feb. 16, 1948, Serial No. 549,837. Published Oct. 5, 1948. Class 4.

505,829. FERTILIZERS. AGRICULTURAL MINERALS COMPANY, Montgomery, Ala.
Filed Feb. 17, 1948, Serial No. 549,865. Published Aug. 24, 1948. Class 10.

505,830. INSECTICIDES. PENOLA INC., Chicago, Ill.
Filed Feb. 18, 1948, Serial No. 550,067. Published Oct. 19, 1948. Class 6.

505,831. INSECTICIDES AND MOTH PREVENTIVES. SEARS, ROEBUCK AND CO., Chicago, Ill.
Filed Feb. 18, 1948, Serial No. 550,086. Published Oct. 19, 1948. Class 6.

505,832. LIQUID PREPARATION FOR CLEANING GLASS, AND A GENERAL HOUSEHOLD CLEANSER IN POWDER FORM. THE GREAT AMERICAN TEA COMPANY, New York, N. Y.
Filed Feb. 25, 1948, Serial No. 550,501. Published Oct. 12, 1948. Class 4.

505,833. PREPARATION IN POWDER FORM FOR CLEANING CLOSET BOWLS. THE GREAT AMERICAN TEA COMPANY, New York, N. Y.
Filed Feb. 25, 1948, Serial No. 550,502. Published Oct. 12, 1948. Class 4.

505,834. CLEANSER PADS CONTAINING SOAP FOR CLEANING KITCHENWARE AND ALUMINUM, ETC. THE GREAT AMERICAN TEA COMPANY, New York, N. Y.
Filed Feb. 25, 1948, Serial No. 550,503. Published Oct. 12, 1948. Class 4.

505,835. CLEANING FLUID FOR WEARING APPAREL, FABRICS, UPHOLSTERY, AND CARPETS; AND LIQUID PREPARATION FOR CLEANING AND POLISHING SHOES. GRIFFIN MANUFACTURING COMPANY, INC., Brooklyn, N. Y.
Filed Feb. 27, 1948, Serial No. 550,693. Published Oct. 12, 1948. Class 4.

505,836. SOAP POWDER COMBINED WITH MINERAL INGREDIENTS. THE CUDAHY PACKING COMPANY, Chicago, Ill.
Filed Feb. 28, 1948, Serial No. 550,792. Published Oct. 12, 1948. Class 4.

505,837. CLEANSER AND RENOVATOR FOR TERRAZZO FLOORS. CARBOLITE CORPORATION, Maywood, Ill.
Filed Mar. 4, 1948, Serial No. 551,167. Published Oct. 12, 1948. Class 4.

505,838. HAND AND SKIN BALM. MORTON MANUFACTURING CORPORATION, doing business as Chap Stick Co., Lynchburg, Va.
Filed Mar. 9, 1948, Serial No. 551,573. Published Oct. 19, 1948. Class 6.

505,839. SOAP. THE M. WERK COMPANY, St. Bernard, Ohio.
Filed Mar. 18, 1948, Serial No. 552,294. Published Oct. 12, 1948. Class 4.

505,840. CLEANING COMPOUND FOR GENERAL LAUNDRY, TEXTILE, AND SIMILAR INDUSTRIAL USES. THE M. WERK COMPANY, St. Bernard, Ohio.
Filed Mar. 18, 1948, Serial No. 552,295. Published Oct. 5, 1948. Class 4.

505,841. SHAMPOO. WHITEHALL PHARMACAL COMPANY, New York, N. Y.
Filed Mar. 18, 1948, Serial No. 552,526. Published Oct. 5, 1948. Class 6.

505,842. ANTACID PREPARATION. BURROUGHS WELLCOME & Co. (U. S. A.) INC., New York, N. Y.
Filed Mar. 23, 1948, Serial No. 552,742. Published Oct. 19, 1948. Class 6.

505,843. POWDER FOR CLEANING SILVERWARE. ROSS SCHRAGER, doing business as Silver Chemical Co., Brooklyn, N. Y.
Filed Apr. 17, 1948, Serial No. 554,923. Published Oct. 5, 1948. Class 4.

505,844. SULFONAMIDE PREPARATION. SMITH, KLINE & FRENCH LABORATORIES, Philadelphia, Pa.
Filed May 12, 1948, Serial No. 556,922. Published Oct. 5, 1948. Class 6.

505,845. FUNGICIDAL OINTMENT AND FUNGICIDAL POWDER. WILLIAM C. DABNEY, JR., doing business as Dabney Pharmacal Company, Louisville, Ky.
Filed May 15, 1948, Serial No. 557,120. Published Oct. 12, 1948. Class 6.

505,846. PHARMACEUTICAL PREPARATION OF AMINO ACIDS AND POLYPEPTIDES FROM HYDROLYSED PROTEIN FOODS. THE ARLINGTON CHEMICAL COMPANY, Yonkers, N. Y.
Filed May 19, 1948, Serial No. 557,335. Published Oct. 12, 1948. Class 6.

505,847. LIQUID PETROLATUM, ALSO KNOWN AS WHITE OIL. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif.
Filed May 24, 1948, Serial No. 557,697. Published Oct. 12, 1948. Class 6.

505,848. FACE LOTIONS. WILLIAM SAVIOU, Warren, Ohio.
Filed Apr. 16, 1948, Serial No. 557,982. Published Oct. 12, 1948. Class 6.

505,849. DRUG TO BE USED IN THE TREATMENT OF CARDIAC CONDITIONS AND ASTHMA. PHYSICIANS' DRUG & SUPPLY CO., Philadelphia, Pa.
Filed May 28, 1948, Serial No. 558,064. Published Oct. 19, 1948. Class 6.

505,850. DRUG TO BE USED IN THE TREATMENT OF THYROID DISEASES. PHYSICIANS' DRUG & SUPPLY CO., Philadelphia, Pa.
Filed May 28, 1948, Serial No. 558,065. Published Oct. 19, 1948. Class 6.

505,851. SULFONAMIDE PREPARATION. AMERICAN CYANAMID COMPANY, New York, N. Y.
Filed June 2, 1948, Serial No. 558,265. Published Oct. 19, 1948. Class 6.

505,852. SULFONAMIDE PREPARATION FOR VETERINARY USE. AMERICAN CYANAMID COMPANY, New York, N. Y.
Filed June 2, 1948, Serial No. 558,266. Published Oct. 19, 1948. Class 6.

505,853. ALL-PURPOSE CLEANSER IN POWDER FORM. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va.
Filed June 9, 1948, Serial No. 558,830. Published Oct. 5, 1948. Class 4.

505,854. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio.
Filed June 17, 1948, Serial No. 559,545. Published Oct. 12, 1948. Class 4.

505,855. SOAP. ARMOUR AND COMPANY, Chicago, Ill.
Filed June 25, 1948, Serial No. 560,157. Published Oct. 12, 1948. Class 4.

505,856. TOILET SOAP. NETTIE ROSENSTEIN, INC., New York, N. Y.
Filed June 25, 1948, Serial No. 560,221. Published Oct. 12, 1948. Class 4.

505,857. TOILET SOAP. NETTIE ROSENSTEIN, INC., New York, N. Y.
Filed June 25, 1948, Serial No. 560,222. Published Oct. 12, 1948. Class 4.

505,858. STOVE AND LAMP NAPHTHAS AND GASOLINE. THE PURE OIL COMPANY, Chicago, Ill.
Filed Aug. 19, 1948, Serial No. 563,751. Published Oct. 19, 1948. Class 15.

ACT OF 1946, SUPPLEMENTAL REGISTER

These registrations are not subject to opposition.

505,859. (CLASS 33. GLASSWARE.) POLAN INDUSTRIES, Huntington, W. Va. Filed Aug. 7, 1948; originally filed, act of 1905, Aug. 17, 1945, Serial No. 487,210.

FIREGLAS

FOR GLASS COOKING UTENSILS AND KITCHEN WARE—NAMELY, COFFEE MAKERS AND SAUCEPANS.
Claims use since July 26, 1945.

505,860. (CLASS 21. ELECTRICAL APPARATUS, MACHINES AND SUPPLIES.) R & W WILEY, INC., Buffalo, N. Y. Filed Dec. 19, 1947; originally filed, act of 1905, Oct. 12, 1945, Serial No. 489,889.

E-Z SERVICER

505,862. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) MOTTY EITINGON, INC., New York, N. Y. Filed Aug. 26, 1947; originally filed, act of 1905, Feb. 16, 1946, Serial No. 496,725.

BONMOUTON

FOR DYED LAMBSKINS.
Claims use since Jan. 24, 1946.

505,863. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) MOTTY EITINGON, INC., New York, N. Y. Filed Aug. 26, 1947; originally filed, act of 1905, Feb. 16, 1946, Serial No. 496,726.

BONMOUTON

FOR DYED LAMBSKINS.

ACT OF 1946, SUPPLEMENTAL REGISTER

These registrations are not subject to opposition.

ADDITIONAL REGISTRATIONS

506,586. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) BARNES MANUFACTURING CO., Mansfield, Ohio. Filed Jan. 6, 1949; originally filed, act of 1905, May 13, 1947, Serial No. 522,325.

STREAMLUXE Barnes LINE

FOR SINK FAUCETS.
Claims use since Mar. 5, 1947.

506,587. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) BARNES MANUFACTURING CO., Mansfield, Ohio. Filed Jan. 6, 1949; originally filed, act of 1905, May 13, 1947, Serial No. 522,333.

Barnes

FOR KITCHEN, BATH, AND LAUNDRY FAUCETS, AND OVERFLOW VALVES.
Claims use since Mar. 5, 1947.

Cellappret

FOR COMPOSITIONS FOR SIZING, STIFFENING, AND FINISHING THREAD, YARNS, AND OTHER TEXTILE MATERIALS, INCLUDING ARTIFICIAL SILKS.
Claims use since about August 1926.

Reg. No. 230,756. Registered Aug. 2, 1927. W. D. CARPENTER CO. INC., Syracuse, N. Y., a corporation of New York. Republished by registrant.

NOX-TOX

FOR INSECTICIDES.
Claims use since Mar. 10, 1927.

Reg. No. 232,438. Registered Sept. 6, 1927. BAIRD & MCGUIRE, INC., Holbrook, Mass., a corporation of Massachusetts. Republished by registrant.

CRESTALL

FOR DISINFECTANTS AND INSECTICIDES.
Claims use since Apr. 1, 1918.

Reg. No. 238,824. Registered Feb. 14, 1928. THE FRANK TEA & SPICE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

BULL DOG

FOR INSECTICIDE.
Claims use since 1912.

Reg. No. 241,918. Registered May 8, 1928. GENERAL DYESTUFF CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

Violamine

FOR DYESTUFFS.
Claims use since April 1894.

Reg. No. 243,312. Registered June 19, 1928. DE SOTO CHEMICAL CO., INC., Arcadia, Fla., a corporation of Florida. Republished by registrant.

The word "Brand" is disclaimed apart from the mark as shown.
FOR ROACH, ANT, RAT, AND MOUSE EXTERMINATOR.
Claims use since November 1919.

Reg. No. 258,363. Registered July 2, 1929. AMERICAN COMPANY OF ARKANSAS, Little Rock, Ark. Republished by Edward S. Carmack, doing business as Zip Manufacturing Company, Little Rock, Ark.

"ZIP"
THE INSECT -GONE!!

FOR INSECTICIDES.
Claims use since Jan. 5, 1927.

Reg. No. 280,107. Registered Feb. 10, 1931. A. J. KRANK COMPANY, St. Paul, Minn. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

FACE-VALUE

FOR FACE LOTION.
Claims use since Sept. 1, 1930.

Reg. No. 299,639. Registered Dec. 13, 1932. BAIRD & MCGUIRE, INC., Holbrook, Mass., a corporation of Massachusetts. Republished by registrant.

Baird's

FOR INSECTICIDES.
Claims use since Apr. 1, 1932.

Reg. No. 315,767. Registered Aug. 7, 1934. THE KENDALL COMPANY, Boston, Mass. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

VELURE

FOR HAND LOTION.
Claims use since Mar. 8, 1934.

Reg. No. 325,881. Registered July 9, 1935. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SOLFAST

FOR DYESTUFFS, DYES, AND DRY COLORS FOR USE IN THE MANUFACTURE OF DYES.
Claims use since Dec. 6, 1934.

Reg. No. 333,669. Registered Mar. 31, 1936. BATTLE CREEK DRUGS, INC., Battle Creek, Mich. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

BonKora

FOR TONICS FOR STIMULATING THE APPETITE AND PROMOTING GASTRIC DIGESTION AND TONIC LAXATIVES.
Claims use since Feb. 1, 1931.

Reg. No. 336,486. Registered July 7, 1936. THE BIRD-ARCHER COMPANY, New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

Claims use since June 1908.

Reg. No. 72,679. Registered Feb. 9, 1909. THE ACME WIRE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

ENAMELITE

FOR INSULATED ELECTRICAL CONDUCTORS.
Claims use since June 1908.

Reg. No. 73,129. Registered Mar. 16, 1909. THE ACME WIRE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

C A M E

FOR ELECTROMAGNETS.
Claims use since Oct. 17, 1908.

Reg. No. 214,612. Registered June 29, 19'6. ELEVATOR SUPPLIES CO., INC., Hoboken, N. J., a corporation of New Jersey. Republished by registrant, present address Perth Amboy, N. J.

FADELITE

FOR ELECTRIC POSITION INDICATOR FOR ELEVATORS.
Claims use since about Jan. 1, 1925.

Reg. No. 275,645. Registered Sept. 23, 1930. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

PABCO

FOR INSULATING VARNISHES AND INSULATING TAPE.
Claims use since May 1918.

Reg. No. 364,271. Registered Jan. 24, 1939. THE ACME WIRE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

PAPERITE

FOR INSULATED ELECTRIC WIRE.
Claims use since June 17, 1938.

Reg. No. 364,272. Registered Jan. 24, 1939. THE ACME WIRE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

CELENITE

FOR INSULATED ELECTRIC WIRE.
Claims use since Apr. 15, 1935.

Reg. No. 364,764. Registered Feb. 14, 1939. THE ACME WIRE COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant, present address Hamden, Conn.

HEATEX

FOR INSULATED ELECTRIC WIRE.
Claims use since July 8, 1938.

Reg. No. 398,176. Registered Oct. 13, 1942. OVINGTON'S GIFT SHOP, INC., New York, N. Y., a corporation of New York. Republished by registrant.

OVINGTON'S

FOR ELECTRIC LAMPS WITH SHADES.
Claims use since about Jan. 1, 1895.

Reg. No. 411,192. Registered Jan. 9, 1945. THE HOTSTREAM HEATER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DAMPERTROL

FOR PRESSURE RESPONSIVE ELECTRIC CONTROLLERS FOR THE AUTOMATIC CONTROL OF DAMPERS AND THE LIKE OF HEATING, VENTILATING, AND AIR-CONDITIONING APPARATUS.
Claims use since Aug. 28, 1943.

Reg. No. 415,518. Registered Aug. 7, 1945. CORDAGE, INCORPORATED, Chicago, Ill. Republished by Koiled Kords Incorporated, Hamden, Conn., a corporation of Illinois.

FLEXELF

FOR RETRACTABLE EXTENSION CORDS.
Claims use since on or about Nov. 1, 1944.

Reg. No. 415,519. Registered Aug. 7, 1945. CORDAGE, INCORPORATED, Chicago, Ill. Republished by Koiled Kords Incorporated, Hamden, Conn., a corporation of Illinois.

SPIREX

FOR RETRACTABLE EXTENSION CORDS.
Claims use since on or about Nov. 1, 1944.

Reg. No. 434,723. Registered Dec. 2, 1947. WEBSTER ELECTRIC COMPANY, Racine, Wis., a corporation of Delaware. Republished by registrant.

TELEPAGE

FOR INTERCOMMUNICATING SOUND AMPLIFYING AND TRANSMITTING SYSTEMS AND PARTS THEREOF, COMPRISING SPEAKERS, AMPLIFIERS, MICROPHONES, INTERCONNECTING CIRCUITS, AND ENERGIZING DEVICES, WHEREBY CONVERSATION AT EITHER POINT MAY BE HEARD AT THE OTHER POINT OF COMMUNICATION.
Claims use since Nov. 4, 1946.

Reg. No. 435,055. Registered Dec. 9, 1947. THE WHITNEY BLAKE COMPANY, Hamden, Conn., a corporation of Connecticut. Republished by registrant.

TELESEAL

FOR INSULATED ELECTRIC WIRE.
Claims use since Mar. 11, 1947.

Reg. No. 435,056. Registered Dec. 9, 1947. THE WHITNEY BLAKE COMPANY, Hamden, Conn., a corporation of Connecticut. Republished by registrant.

THERMOPRENE

FOR INSULATED ELECTRIC WIRE.
Claims use since Feb. 5, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 167,680. Registered May 8, 1923. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

FRANKLIN

FOR TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, FOOD PUSHERS, TONGS, LADLES, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, CUPS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOTTLES, MUGS, COASTERS, JARS, BOTTLE OPENERS, CORWSCREWS, BABY RATTLES, BELLS, ALL OF SAID ARTICLES BEING MADE OF OR ORNAMENTED WITH STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD, AND GOLD PLATE.
Claims use since 1912.

Reg. No. 230,453. Registered July 26, 1927. JAMES HEDDON'S SONS, Dowagiac, Mich., a corporation of Michigan. Republished by registrant.

QUEEN

FOR ARTIFICIAL BAITS.
Claims use since about Sept. 1, 1926.

Reg. No. 249,951. Registered Nov. 27, 1928. GUSTAVE E. KOPPE, doing business as The Elkloid Company, Providence, R. I. Republished by The Elkloid Company, Providence, R. I., a corporation of Rhode Island.

ELK BRAND

The word "Brand" is disclaimed apart from the mark as shown.
FOR DICE, DICE SHAKERS, DOMINOES, POKER CHIPS, SPINNING TOPS, HOLLOW BALLS, SCORE PADS; PLAYING CARD CASES, AND TRUMP INDICATORS FOR CARDS.
Claims use since July 1921.

Reg. No. 377,845. Registered May 14, 1940. DRISCOLL-BRUCK COMPANY, LTD., Portland, Oreg. Republished by Spearhead Fishhook Company, Bellingham, Wash., a partnership.

FOR FISHHOOKS.
Claims use since June 30, 1938.

Reg. No. 398,177. Registered Oct. 13, 1942. OVINGTON'S GIFT SHOP, INC., New York, N. Y., a corporation of New York. Republished by registrant.

OVINGTON'S

FOR PLAYING CARDS AND PLAYING CARD CASES, POKER CHIPS, GAMES—NAMELY, TABLE GAMES PLAYED WITH MOVABLE PIECES AND A SPINNER; AND GAME SETS—NAMELY, GAMES PLAYED WITH DARTS AND A TARGET; CHESS, BACKGAMMON, AND MAHJONG.
Claims use since about Jan. 1, 1895.

FOR INSULATED ELECTRIC WIRE.
Claims use since June 17, 1938.

FOR RETRACTABLE EXTENSION CORDS.
Claims use since on or about Nov. 1, 1944.

SHEFFIELD PLATE, GOLD, AND GOLD PLATE.
Claims use since 1912.

MAHJONG.
Claims use since about Jan. 1, 1895.

Reg. No. 418,761. Registered Jan. 8, 1946. LESTER M. DAVIS, Tacoma, Wash. Republished by registrant.

COWBELL

FOR FISHING TROLLS.
Claims use since June 30, 1944.

Reg. No. 421,765. Registered June 18, 1946. PENNSYLVANIA RUBBER COMPANY, Jeannette, Pa., a corporation of Pennsylvania. Republished by registrant.

P

FOR TENNIS BALLS, HAND BALLS, AND SHUTTLECOCKS.
Claims use since September 1937.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 30,910. Registered Nov. 30, 1897. H. MUELLER MANUFACTURING COMPANY, Decatur, Ill. Republished by Mueller Co., Decatur, Ill., a corporation of Illinois.

H M

FOR VALVES, COCKS, PRESSURE REGULATORS, AND TAPPING MACHINES.
Claims use since about the middle or 15th of February, 1887.

Reg. No. 67,254. Registered Jan. 28, 1908. FORTUNA MACHINE COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

FORTUNA

FOR SKIVING-MACHINES AND MACHINES FOR DRILLING IRON AND STEEL.
Claims use since about Jan. 1, 1903.

Reg. No. 122,123. Registered July 2, 1918. ALUMINUM GOODS MFG. COMPANY, Manitowoc, Wis., a corporation of New Jersey. Republished by registrant.

MIRRO

A. G. M. Co.

FOR ALUMINUM COOKING UTENSILS AND HOUSEHOLD GOODS, COMPRISING PERCOLATING COFFEE-POTS, COFFEE-POTS, TEAPOTS, DOUBLE BOILERS, TEA-KETTLES, LIPPED SAUCEPANS, BERLIN SAUCEPANS, WINDSOR SAUCEPANS, STOCKPANS, PUDDING-PANS, LIPPED FRY-PANS, MIXING-BOWLS, PRESERVING-POTS, BERLIN POTS, STOCK-POTS, PRESERVING-KETTLES, STEW-PANS, BERLIN KETTLES, STOCK-KETTLES, PIE-PLATES, JELLY-CAKE PANS, BREAD-PANS, TUBED CAKE-PANS, COLANDERS, ROASTERS, DOUBLEFRY-PANS, MUFFIN-PANS, CORN-CAKEPANS, MOUNTAIN-CAKE PANS, DRIP-PANS, DAIRY-PANS, SHALLOWCAKE-PANS, BISCUIT-PANS, TRIPLICATE SAUCEPANS, FIRELESS-COOKER POTS, DISH-PANS, KETTLE AND POT COVERS, GRIDDLES, BREAD-BOARDS, STRAINERS, COOKY-PANS, WATER-PITCHERS, GRIDDLE-CAKE COVERS, PAILS, BUCKETS, WASHBASINS, LADLES, DIPPERS, SKIMMERS, POTATO-MASHERS, CAKE-TURNERS, FUNNELS, JELLY MOLDS, SALT AND PEPPER-SHAKERS, LEMONADE-SHAKERS, CUPS, AND BREAD-RAISERS.
Claims use since Aug. 20, 1917.

Reg. No. 164,992. Registered Feb. 27, 1923. SULLIVAN MACHINERY COMPANY, Boston, Mass., and Chicago, Ill. Republished by Joy Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania.

TURBINAIR

FOR MINING MACHINES, HOISTING MECHANISM, AND ROTARY ENGINES.
Claims use since Jan. 24, 1922.

Reg. No. 166,037. Registered Mar. 27, 1923. STANDARD STEEL WORKS COMPANY, Philadelphia, Pa. Republished by The Baldwin Locomotive Works, Eddystone, Pa., a corporation of Pennsylvania.

FOR RINGS AND ROLLED SHELLS FOR CRUSHERS FOR REDUCING AND PULVERIZING SOLID MATERIALS.
Claims use since June 1893.

Reg. No. 167,680. Registered May 8, 1923. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

FRANKLIN

FOR TABLEWARE—NAMELY, KNIVES, FORKS, SPOONS, FOOD PUSHERS, TONGS, LADLES, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, CUPS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOTTLES, MUGS, COASTERS, JARS, BOTTLE OPENERS, CORKSCREWS, BABY RATTLES, BELLS, ALL OF SAID ARTICLES BEING MADE OF OR ORNAMENTED WITH STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD, AND GOLD PLATE.
Claims use since 1912.

Reg. No. 208,520. Registered Feb. 2, 1926. THE GOOD ROADS MACHINERY COMPANY, INC., Kennett Square, Pa. Republished by Good Roads Machinery Corporation, Kennett Square, Pa., a corporation of Pennsylvania.

GOOD ROADS

FOR ROCK CRUSHERS, ELEVATORS, CONVEYERS, SCREENS, GRADERS, DRAGS, ROLLERS, AND SNOW PLOWS.
Claims use since on or about Nov. 1, 1896.

Reg. No. 248,039. Registered Oct. 16, 1928. BURNOYL HEATING CORPORATION, doing business as Automatic Equipment Co., Providence, R. I. Republished by Firetox Company, Amherst, Mass., a corporation of Rhode Island.

FIRETOX

FOR PORTABLE HAND FIRE EXTINGUISHERS AND AUTOMATIC FIRE EXTINGUISHERS.
Claims use since Dec. 29, 1927.

Reg. No. 327,290. Registered Aug. 20, 1935. MOTO-SWAY CORPORATION OF AMERICA, Chicago, Ill., a corporation of California. Republished by registrant, present address South Pasadena, Calif.

AUTO-ROCK

FOR VEHICLE ROCKING MACHINES.
Claims use since June 20, 1932.

Reg. No. 351,296. Registered Oct. 26, 1937. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

ABK

FOR COMPOSITION BEARINGS, MACHINERY SHAFT COUPLINGS, AND SLIDES FOR USE WITH RECIPROCATING PARTS OF MACHINERY, ON ELEVATORS AND THE LIKE.
Claims use since on or about Dec. 21, 1936.

Reg. No. 358,155. Registered June 28, 1938. THE IRWIN AUGER BIT COMPANY, Wilmington, Ohio, a corporation of Ohio. Republished by registrant.

HI-LITE

FOR AUGER BITS.
Claims use since Jan. 19, 1938.

Reg. No. 360,963. Registered Oct. 4, 1938. M. R. C. LIMITED, London, England. Republished by Teleflex Incorporated, Philadelphia, Pa., a corporation of Delaware.

TELEFLEX

FOR MECHANICAL REMOTE CONTROL DEVICES WITH A FLEXIBLE CABLE RUNNING THROUGH A CONDUIT, THE FLEXIBLE CABLE CONNECTED UP TO LEVER SYSTEMS AT THE ENDS AND BEING ABLE TO TRANSMIT PUSH, PULL, AND ROTARY MOTION.
Claims use since 1935.

Reg. No. 368,737. Registered June 27, 1939. THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY, New York, N. Y. Republished by American Brake Shoe Company, New York, N. Y., a corporation of Delaware.

A-B-K

FOR COMPOSITION BEARINGS, MACHINERY SHAFT COUPLINGS, AND SLIDES FOR USE WITH RECIPROCATING PARTS OF MACHINERY, ON ELEVATORS AND THE LIKE.
Claims use since on or about Dec. 21, 1936.

CLASS 26

Reg. No. 425,926. Registered Dec. 10, 1946. BENDIX

FOR SKIVING-MACHINES AND MACHINES FOR DRILLING IRON AND STEEL.
Claims use since about Jan. 1, 1903.

FOR REDUCING AND PULVERIZING SOLID MATERIALS.
Claims use since June 1893.

Reg. No. 368,863. Registered July 4, 1939. HERBERT H. MACK, Topeka, Kans. Republished by registrant.

MO-MAK

FOR TURNTABLES.
Claims use since on or about Jan. 18, 1937.

Reg. No. 372,414. Registered Oct. 31, 1939. ALABAMA APPLIANCE COMPANY, INC., doing business as Alabama Manufacturing Company, Birmingham, Ala. Republished by Alabama Manufacturing Company, Inc., Birmingham, Ala., a corporation of Alabama.

GEM DANDY

FOR ELECTRIC CHURNS.
Claims use since Apr. 28, 1938.

Reg. No. 377,764. Registered May 14, 1940. MUELLER Co., Decatur, Ill., a corporation of Illinois. Republished by registrant.

CEM-RES

FOR COMBINATION TOOL FOR DRILLING, TAPPING, AND REAMING IN METAL AND OTHER MATERIAL WORKING.
Claims use since on or about Dec. 2, 1938.

Reg. No. 387,820. Registered June 3, 1941. RAPID ROLLER CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

MERCURY

FOR PRINTERS' ROLLERS, COMPOSITION COATED ROLLERS, OFFSET AND LITHOGRAPH ROLLERS, ROTOGRAVURE ROLLERS, AND RUBBER ROLLERS.
Claims use since Jan. 1, 1929.

Reg. No. 399,867. Registered Feb. 2, 1943. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Kem-Tone

FOR ROLLING DEVICE FOR THE APPLICATION OF PAINTS AND KINDRED PRODUCTS.
Claims use since Apr. 15, 1942.

Reg. No. 419,119. Registered Feb. 5, 1946. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

"ADJUSTO"

FOR WRENCHES AND WRENCH SETS.
Claims use since March 1939.

Reg. No. 422,172. Registered July 9, 1946. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Bantam

FOR HYDRAULIC POWER UNITS FOR PERFORMING DIVERSE TYPES OF VEHICLE SERVICING, RECONDITIONING, AND REPAIR WORK; ATTACHMENTS FOR SUCH WORK PERFORMING UNITS INCLUDING SPREADERS, CLAMPS, PRESSES, AND PUSHING AND PULLING TOOLS FOR ADJACENT ELEMENTS; WORK ENGAGING SADDLES, BASES, BLOCKS AND HEADS; WORK PERFORMING SPOONS, WEDGES, AND TOES; FORCE TRANSMITTING TUBULAR AND SOLID STRUTS; HYDRAULIC RAMS; HYDRAULIC PUMPS; METALLIC HYDRAULIC TRANSMISSION TUBING; AND BENDING AND STRAIGHTENING TOOLS FOR PIPES, TUBES, BARS, AND PLATES.
Claims use since December 1940.

Reg. No. 424,871. Registered Oct. 29, 1946. BLACKHAWK MFG. CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

BLACKHAWK

FOR SOCKET WRENCHES; BOX WRENCHES; OPEN END WRENCHES; RATCHET WRENCHES; SCREW DRIVING WRENCHES; TORQUE INDICATING WRENCHES; TIRE RIM WRENCHES; UNIVERSAL JOINT WRENCHES; PLIERS; HYDRAULIC JACKS; HYDRAULIC RAMS; HYDRAULIC PUMPS; SWIVEL JOINTS; PORTABLE SERVICE JACKS; HYDRAULIC LIFTS; METAL STRAIGHTENING, BENDING, CLAMPING, AND SPREADING MECHANISMS AND TOOLS; PIPE, TUBE, AND ROD BENDERS; SPREADING WEDGES; REMOTE CONTROL APPARATUS FOR HYDRAULIC PRESSURE APPLYING UNITS; WHEEL PULLERS; MACHINE ELEMENT PULLERS AND PUSHERS FOR REMOVING AND INSERTING PARTS; TOOL RACKS; METAL WORKING SAWS, SHEARS, DRILLS, AND HAMMERS; METAL DRESSING FILES, SANDING, ABRADING, GRINDING, AND BUFFING TOOLS; DRIVING MECHANISMS FOR PORTABLE HYDRAULICALLY ACTUATED TOOLS; AND DRIVING MECHANISMS FOR PORTABLE MECHANICALLY ACTUATED ROTARY, RECIPROCATORY, AND OSCILLATORY TOOLS.
Claims use since about May 31, 1919.

FOR VEHICLE ROCKING MACHINES.
Claims use since June 20, 1932.

Reg. No. 425,926. Registered Dec. 10, 1946. BENDIX AVIATION CORPORATION, doing business as Eclipse-Pioneer Division, Teterboro, N. J., a corporation of Delaware. Republished by registrant.

ECLIPSE

FOR ENGINE STARTING MECHANISMS OF THE INERTIA, DIRECT CRANKING, MANUAL, FLUID PRESSURE AND CARTRIDGE TYPES, AIR PUMPS, VACUUM PUMPS, ENGINE DRIVEN PUMPS, ENGINE DRIVEN HYDRAULIC PUMPS, HAND HYDRAULIC PUMPS, HYDRAULIC REMOTE CONTROL UNITS COMPRISING ACTUATORS AND SLAVE PARTS FOR AIRCRAFT, OIL SEPARATORS FOR USE IN REMOVING OIL FROM AIR PRESSURE LINES IN AIRCRAFT, ELECTRO-MECHANICAL ACTUATORS FOR ACCESSORIAL USE IN AIRCRAFT OPERATION, AUTOMATIC THROTTLE AND FUEL MIXTURE CONTROLS FOR ENGINES, PROPELLER PITCH GOVERNOR CONTROLS, AUXILIARY ENGINES, AUXILIARY POWER SUPPLY SYSTEMS COMPRISING GAS ENGINES, GENERATORS, PUMPS AND THE LIKE, ACCESSORY GEAR BOXES, GEAR REDUCTION UNITS, SUPERCHARGERS, AUTOMATIC SUPERCHARGER REGULATORS, AND MECHANISM FOR THE OPERATION OF INFLATABLE ELEMENTS USEFUL IN THE PREVENTION OF THE ACCUMULATION OF ICE ON OR THE REMOVAL OF ICE FROM EXPOSED SURFACES OF AIRCRAFT, SAID OPERATING MECHANISM COMPRISING AIR PUMPS, OIL SEPARATORS, DISTRIBUTING VALVES, CONTROL VALVES, AIR VALVES, AND PRESSURE RELIEF VALVES.
Claims use since Dec. 30, 1925.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 363,564. Registered Jan. 3, 1939. HORTON MANUFACTURING COMPANY, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

Kleenette

FOR WASHING MACHINES.
Claims use since Sept. 7, 1937.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 128,449. Registered Jan. 6, 1920. MARTIN-COPELAND COMPANY, Providence, R. I., a trusteeship. Republished by registrant.

FOR SPECTACLES, SPECTACLE-FRAMES, AND MOUNTINGS FOR EYEGLASSES.
Claims use since May 1, 1898.

Reg. No. 349,248. Registered Aug. 24, 1937. FROBER FAYBOR COMPANY, Cleveland, Ohio. Republished by William O. Frohring, Chagrin Falls, Ohio.

BIO-PHOTOMETER

The word "Photometer" is disclaimed apart from the mark as shown.
FOR PHOTOMETERS.
Claims use since July 16, 1936.

Reg. No. 410,180. Registered Nov. 14, 1944. THE BALDWIN LOCOMOTIVE WORKS, Eddystone, Pa., a corporation of Pennsylvania. Republished by registrant.

SR-4

FOR STRAIN GAGES, STRAIN INDICATING AND RECORDING INSTRUMENTS AND CONTROL OF THE SAME OPERATED IN RESPONSE TO A CHANGE IN ELECTRICAL RESISTANCE ARISING FROM A CHANGE OF STRAIN IN A MEMBER.
Claims use since May 1940.

Reg. No. 423,229. Registered Aug. 27, 1946. THE COLEMAN COMPANY, INC., Wichita, Kans., a corporation of Kansas. Republished by registrant.

MODUMATIC

FOR THERMOSTATICALLY CONTROLLED REGULATING APPARATUS FOR CONTROLLING AND REGULATING THE OPERATION OF GAS, OR OTHER FURNACES.
Claims use since June 18, 1945.

Reg. No. 354,160. Registered Feb. 1, 1938. H. E. LIND-

CLASS 30

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 156,826. Registered July 11, 1922. OVINGTON BROS. COMPANY, New York, N. Y. Republished by Ovington's Gift Shop, Inc., New York, N. Y., a corporation of New York.

OVINGTON'S

FOR SCARFPINS, WATCH CHAINS, CUFF LINKS; JEWELRY FOR PERSONAL WEAR, NOT INCLUDING WATCHES; PLATTERS AND PLATES MADE OF PRECIOUS METAL, SHEFFIELD WARE; VASES, BOWLS, PLATTERS, AND PLAQUES OF ENAMEL WARE ORNAMENTED WITH PRECIOUS METALS NOT INCLUDING WARE MADE OF STEEL; TABLE KNIVES, FORKS, AND SPOONS OF PRECIOUS METALS FOR HOUSEHOLD USE; MATCH BOXES OF PRECIOUS METALS, CIGAR AND CIGARETTE HOLDERS OF PRECIOUS METALS, CIGAR AND CIGARETTE CASES OF PRECIOUS METALS, HUMIDORS AND ASH TRAYS OF PRECIOUS METALS, CANDLESTICKS AND CANDELABRA OF PRECIOUS METALS, INKSTANDS OF PRECIOUS METALS, PEN POINTS OF PRECIOUS METALS, PEN HOLDERS OF PRECIOUS METALS, PEN STANDS AND PEN RACKS OF PRECIOUS METALS, DESK SETS OF PRECIOUS METALS, BOOKMARKS OR PRECIOUS METALS, PAPER WEIGHTS AND PAPER CUTTERS OF PRECIOUS METALS, FOUNTAIN PENS AND PENCILS OF PRECIOUS METALS.
Claims use since Jan. 1, 1895.

Reg. No. 167,680. Registered May 8, 1923. FRANKLIN SILVER PLATE COMPANY, Greenfield, Mass. Republished by Rogers, Lunt & Bowlen Company, Greenfield, Mass., a corporation of Massachusetts.

FRANKLIN

FOR TABLEWARE — NAMELY, KNIVES, FORKS, SPOONS, FOOD PUSHERS, TONGS, LADLES, NAPKIN RINGS, NAPKIN MARKERS, NAPKIN BANDS, SALT AND PEPPER SHAKERS, MUFFINEERS, TEA BALLS, CUPS, BOWLS, PITCHERS, CANDLESTICKS, DISHES, POTS, PLATTERS, SERVERS, VASES, TRAYS, BOTTLES, MUGS, COASTERS, JARS, BOTTLE OPENERS, CORKSCREWS, BABY RATTLES, BELLS, ALL OF SAID ARTICLES BEING MADE OF OR ORNAMENTED WITH STERLING SILVER, SILVER PLATE, SHEFFIELD PLATE, GOLD, AND GOLD PLATE.
Claims use since 1912.

Reg. No. 262,573. Registered Oct. 15, 1929. GENERAL CHAIN COMPANY, Providence, R. I. Republished by General Chain Company, Inc., North Attleboro, Mass., a corporation of Massachusetts.

GENCO

FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT, NOT INCLUDING WATCHES.
Claims use since August 1925.

Reg. No. 359,463. Registered Aug. 23, 1938. PITMAN & KEELER, Attleboro, Mass. Republished by Pitman & Keeler, Inc., Attleboro, Mass., a corporation of Massachusetts.

American Queen

FOR BRACELETS, VANITY CASES, AND COMPACTS, MADE WHOLLY OR IN PART OF, OR PLATED WITH, PRECIOUS METAL.
Claims use since Mar. 1, 1917.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 182,922. Registered Apr. 22, 1924. OX FIBRE BRUSH COMPANY, New York, N. Y., and Frederick, Md. Republished by Ox Fibre Brush Company, Inc., Frederick, Md., a corporation of Delaware.

OX FIBRE

The word "Fibre" is disclaimed apart from the mark as shown.
FOR BRUSHES FOR SCRUBBING, DUSTING, SWEEPING, AND CLEANING, INCLUDING HOUSEHOLD BRUSHES, HORSE BRUSHES, HAIR BRUSHES, AND HAND AND NAIL BRUSHES.
Claims use since about Feb. 1, 1896.

Reg. No. 182,923. Registered Apr. 22, 1924. OX FIBRE BRUSH COMPANY, New York, N. Y., and Frederick, Md. Republished by Ox Fibre Brush Company, Inc., Frederick, Md., a corporation of Delaware.

FOR BRUSHES FOR SCRUBBING, DUSTING, SWEEPING, AND CLEANING, INCLUDING HOUSEHOLD BRUSHES, HORSE BRUSHES, HAIR BRUSHES, AND HAND AND NAIL BRUSHES, AND ALSO FOR BROOMS.
Claims use since about Jan. 1, 1900.

Reg. No. 336,169. Registered June 30, 1936. HARRY L. WELKER, Williamsport, Pa. Republished by registrant.

BEAUTY GLOW

FOR LATEX BATH BRUSHES.
Claims use since Jan. 24, 1936.

Reg. No. 354,160. Registered Feb. 1, 1938. H. E. LINDSTROM, doing business as Acme Broom Company, Sedalia, Mo. Republished by Zephyr Manufacturing Co., Sedalia, Mo., a corporation of Missouri.

ZEPHYR

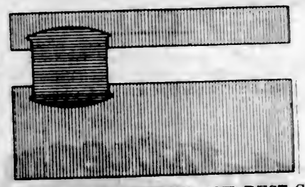
FOR BROOMS.
Claims use since on or about June 24, 1937.

Reg. No. 378,747. Registered June 18, 1940. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Quali-Craft

FOR PAINT BRUSHES, VARNISH BRUSHES, KALSOMINE BRUSHES, WHITEWASH BRUSHES, ROOF BRUSHES, STIPPLING BRUSHES, RADIATOR BRUSHES, SMOOTHING BRUSHES, MARKING BRUSHES, FLOWING BRUSHES, MOTTLING BRUSHES, FINISHING BRUSHES, TOUCH-UP BRUSHES, SHOWCARD BRUSHES, SIGNWRITERS' BRUSHES, LETTERING BRUSHES, STRIPING BRUSHES, ARTISTS' BRUSHES, SIGN PAINTERS' BRUSHES, STENCIL BRUSHES, WATER-COLOR BRUSHES, GILDING TIP BRUSHES, OUTLINING BRUSHES, ONE-STROKE BRUSHES, POSTER BRUSHES, MUSLIN BRUSHES, FITCHES, LINERS AND CUTTERS.
Claims use since Oct. 2, 1939.

Reg. No. 395,475. Registered May 26, 1942. RUBON WOODFINISHING AND PRODUCTS COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.



FOR FLOOR MOPS, DUSTERS, AND DUST CLOTHS.
Claims use since on or about Dec. 19, 1941.

Reg. No. 422,393. Registered July 23, 1946. OX FIBRE BRUSH COMPANY, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

The fragmentary representation of the back of the brush is disclaimed apart from the mark as shown.
FOR STREET BRUSHES AND BROOMS.
Claims use since on or about Apr. 20, 1939.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Reg. No. 157,169. Registered July 25, 1922. OVINGTON BROS. COMPANY, New York, N. Y. Republished by Ovington's Gift Shop, Inc., New York, N. Y., a corporation of New York.

OVINGTON'S

FOR CHINAWARE, EARTHENWARE, AND PORCELAIN.
Claims use since Jan. 1, 1895.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 414,219. Registered May 29, 1945. CARL J. WAGNER, doing business as Marvel Trailer Parts Company, Detroit, Mich. Republished by Marvel Industries, Inc., Detroit, Mich., a corporation of Michigan.

The MARVEL LINE

FOR COMBINATION ICE AND ELECTRIC REFRIGERATORS, ICE REFRIGERATORS AND PARTS THEREOF.
Claims use since on or about Nov. 1, 1939.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 157,732. Registered Aug. 15, 1922. OVINGTON BROS. COMPANY, New York, N. Y. Republished by Ovington's Gift Shop, Inc., New York, N. Y., a corporation of New York.

OVINGTON'S
